Transmission Mode: Half-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C
Bell-Compatible: 208
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Diagnostics, Fallback
Distribution Method: Third-party
Price: $1,750
Number Installed to Date: 50
Date First Installed: December 1983

NEC TELEPHONE, INC.
DSP 224
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Diagnostics, Clock Calendar, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $1,195
Number Installed to Date: 45
Date First Installed: December 1983

NEC TELEPHONE, INC.
DSP 4800-U
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Diagnostics, Clock Calendar, Fallback
Distribution Method: Third-party
Price: $1,695
Number Installed to Date: 800
Date First Installed: December 1982

NEC TELEPHONE, INC.
DSP 9600-U
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 9,600 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Diagnostics, Clock Calendar, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $2,695
Number Installed to Date: 400
Date First Installed: December 1982

NEC TELEPHONE, INC.
N113C-DR
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 113
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Standard Diagnostics
Distribution Method: Third-party
Price: $430
Number Installed to Date: 350
Date First Installed: October 1982

NEC TELEPHONE, INC.
N201C
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Autoanswer, Clock Calendar, Fallback, Switchable Data Rates, Standard Diagnostics
Distribution Method: Third-party
Price: $845
Number Installed to Date: 1,200
Date First Installed: January 1983

NEC TELEPHONE, INC.
N201CR
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Autoanswer, Clock Calendar, Fallback, Switchable Data Rates, Standard Diagnostics
Distribution Method: Third-party
Price: $895
Number Installed to Date: 1,500
Date First Installed: July 1982

NEC TELEPHONE, INC.
N2023R
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Autoanswer, Reverse Channel, Standard Diagnostics
Distribution Method: Third-party
Price: $495
Date First Installed: December 1982

NEC TELEPHONE, INC.
N202T
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 1,800 bps

Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Autoanswer, Reverse Channel, Standard Diagnostics
Distribution Method: Third-party
Price: $400
Number Installed to Date: 300
Date First Installed: December 1983

NEC TELEPHONE, INC.
N212AR
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Switchable Data Rates, Standard Diagnostics
Distribution Method: Third-party
Price: $695
Number Installed to Date: 3,000
Date First Installed: July 1982

NEC TELEPHONE, INC.
N212BR
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212A
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Fallback, Switchable Data Rates, Standard Diagnostics
Distribution Method: Third-party
Price: $795
Number Installed to Date: 1,200
Date First Installed: October 1982

NEC TELEPHONE, INC.
SP1440-U
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 19,200 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Diagnostics, Multiport, Clock Calendar, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $7,800
Number Installed to Date: 200
Date First Installed: October 1983

NEC TELEPHONE, INC.
SP9600-FAST-U
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 9,600 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Diagnostics, Clock Calendar, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $2,000
Date First Installed: April 1984

NEC TELEPHONE, INC.
SPN 4800-U
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Diagnostics, Multiport, Clock Calendar, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $3,500

NEC TELEPHONE, INC.
SPN 9600-U
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 9,600 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Diagnostics, Multiport, Clock Calendar, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $7,000
Date First Installed: April 1984

NESCO
DSU/CSU 1600 R-4
Modem Class: Digital
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 56,000 bps
Interface: V.35
Bell-Compatible: 501
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Alternate Voice/Data, Reverse Channel, Diagnostics, Multiport
Distribution Method: End user
Price: $1,125
(See Vendor Profile Page V-21)

NESCO
DSU/CSU 1600R-3
Modem Class: Digital
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C
Bell-Compatible: 5008
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $795
Number Installed to Date: Under 100
Date First Installed: 1982

NESCO
DSU/CSU 1600R-6
Modem Class: Digital (DSU)
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 2,400 bps, Asynchronous - 4,800 bps, Asynchronous - 9,600 bps
Interface: RS-232C
Bell-Compatible: 500, 501
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $700 to $900
Number Installed to Date: 500 - 1,000

NETWORK PRODUCTS, INC.
NP-48
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics
Distribution Method: End user, Third-party
Price: $1,800
Number Installed to Date: 500 - 1,000
Date First Installed: January 1978
(See Vendor Profile Page V-21)

NETWORK PRODUCTS, INC.
NP-96
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps, Asynchronous/Synchronous - 7,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user, Third-party
Price: $2,750
Number Installed to Date: 1,000 - 5,000
Date First Installed: January 1978

NOAKES DATA COMMUNICATIONS, INC.
N76/5-1
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C, 20 MA Current Loop
Bell-Compatible: 103, 113
Transmission Medium: Switch Network
Distribution Method: End user
Price: $155
Number Installed to Date: 1,000 - 5,000
(See Vendor Profile Page V-22)

NOAKES DATA COMMUNICATIONS, INC.
N76/5-2
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C, 20 MA Current Loop
Bell-Compatible: 103, 113
Transmission Medium: Switch Network
Distribution Method: End user
Price: $170
Number Installed to Date: 1,000 - 5,000

NOAKES DATA COMMUNICATIONS, INC.
N103-3
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C, 20 MA Loop
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Features: Autoanswer
Distribution Method: End user
Price: $365
Number Installed to Date: 1,000 - 5,000

NOAKES DATA COMMUNICATIONS, INC.
N103-4
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C, 20 MA Current Loop
Bell-Compatible: 103, 113

Transmission Medium: Voice-Grade Lines
Features: Autodial, Autoanswer, TWX Option
Distribution Method: Third-party
Number Installed to Date: 1,000 - 5,000

NORTHERN TELECOM, INC.
2230
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 600 bps, 1,200 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics, Multiport, Switchable Data Rates
Distribution Method: End user
Price: $675
Number Installed to Date: 500 - 1,000
Date First Installed: June 1982
(See Vendor Profile Page V-22)

NORTHERN TELECOM, INC.
2240
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics
Distribution Method: End user
Price: $850
Number Installed to Date: 100 - 500
Date First Installed: April 1981

NORTHERN TELECOM, INC.
2250
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 208
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics
Distribution Method: End user
Price: $1,995
Number Installed to Date: 100 - 500
Date First Installed: 1982

NORTHERN TELECOM, INC.
2260
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 9,600 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 209
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics
Distribution Method: End user
Price: $2,995
Number Installed to Date: Under 100
Date First Installed: 1982

NOVATION, INC.
CAT
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Diagnostics, Originate/Answer
Distribution Method: OEM, Third-party
Price: $189
(See Vendor Profile Page V-22)

NOVATION, INC.
CCITT CAT
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Originate/Answer
Distribution Method: OEM, Third-party
Price: $299
Date First Installed: 1980

NOVATION, INC.
21 APPLE-CAT II
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps
Interface: Apple Parallel Bus
Bell-Compatible: 103, 113, 202, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: OEM, Third-party
Price: $369 to $725
Date First Installed: September 1982

NOVATION, INC.
103 SMART-CAT
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: OEM, Third-party
Price: $249
Date First Installed: 1982

NOVATION, INC.
103/212 SMART-CAT
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: OEM, Third-party
Price: $595
Date First Installed: 1982

NOVATION, INC.
212 AUTO-CAT
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps: Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: OEM, Third-party
Price: $695
Date First Installed: 1982

NOVATION, INC.
APPLE-CAT II
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: Apple Parallel Bus
Bell-Compatible: 103, 113, 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: OEM, Third-party
Price: $369

NOVATION, INC.
D-CAT
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Alternate Voice/Data, Diagnostics
Distribution Method: OEM, Third-party
Price: $199
Date First Installed: 1980

NOVATION, INC.
J-CAT
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C, TTL
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: OEM, Third-party
Price: $149
Date First Installed: 1982

NOVATION, INC.
PC1200B
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchrdnous - 300 bps, 1,200 bps
Interface: IBM PC Parallel Bus
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: OEM, Third-party
Price: $595

NU DATA CORP.
108
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 103, 208
Transmission Medium: Voice-Grade Lines

Features: Autoequalizer, Autoanswer, Switchable Data Rates
Distribution Method: End user, Third-party
(See Vendor Profile Page V-22)

OPTELECOM
4116
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 100M bps
Interface: RS-232C, MIL 188C
Transmission Medium: Fiber Optics
Features: Diagnostics, Multiport
Distribution Method: End user, OEM
Price: $160
Number Installed to Date: 100 - 500
(See Vendor Profile Page V-22)

OPTELECOM
4121
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 100M bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Features: Multiport, Status Lights
Price: $160
Number Installed to Date: 100
Date First Installed: April 1982

OPTICAL COMMUNICATIONS CORP.
FD-10K
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 10,000 bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Diagnostics: Yes; Add-on
Features: Reverse Channel, Diagnostics, Switchable Data Rates
Price: $1,200
(See Vendor Profile Page V-22)

OPTICAL COMMUNICATIONS CORP.
FD-20K
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 20,000 bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Diagnostics: Yes; Add-on
Features: Reverse Channel, Diagnostics, Switchable Data Rates
Price: $1,600

OPTICAL COMMUNICATIONS CORP.
FD-56K
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 20,000 bps, 56,000 bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Diagnostics: Yes; Add-on
Features: Reverse Channel, Diagnostics, Switchable Data Rates
Distribution Method: End user

OPTICAL COMMUNICATIONS CORP.
FD-1200
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Diagnostics: Yes; Add-on
Features: Reverse Channel, Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $1,040
Date First Installed: 1980

PARADYNE CORP.
CHALLENGER 2400
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 1,200 bps, 2,400 bps
Interface: CCITT V.28, CCITT V.27, CCITT V.29
Transmission Medium: Voice-Grade Lines
Features: Diagnostics, Fallback
Price: $700
(See Vendor Profile Page V-23)

PARADYNE CORP.
CHALLENGER 4800
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 2,400 bps, 4,800 bps
Interface: CCITT V.28, CCITT V.27, CCITT V.29
Transmission Medium: Voice-Grade Lines
Features: Diagnostics, Fallback
Price: $1,500

PARADYNE CORP.
CHALLENGER 9600
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 4,800 bps, 9,600 bps; 7,200 bps
Interface: CCITT V.24, CCITT V.28, CCITT V.27, CCITT V.29
Transmission Medium: Voice-Grade Lines
Features: Diagnostics, Fallback
Price: $2,600

PARADYNE CORP.
DTU-1200
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Features: Autodial

PARADYNE CORP.
LSI 24C
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous/Synchronous - 1,200 bps, Asynchronous/Synchronous - 2,400 bps
Interface: RS-232C
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Date First Installed: 1981

PARADYNE CORP.
MP 14.4
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 9,600 bps, 19,200 bps; Asynchronous/Synchronous - 12K bps
Interface: RS-232C, CCITT V.24, CCITT V.28, MIL 188C
Transmission Medium: Voice-Grade Lines
Features: Autodial, Diagnostics, Fallback, 6 Port Mux
Date First Installed: 1980

PARADYNE CORP.
MP 14.4 SB
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 9,600 bps, 19,200 bps; Asynchronous/Synchronous - 12K bps
Interface: RS-232C, CCITT V.28, CCITT V.28, MIL 188C
Transmission Medium: Voice-Grade Lines
Features: 16 Port Statistical Multiplexer

PARADYNE CORP.
MP 16.8
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 9,600 bps; Asynchronous/Synchronous - 16,000 bps
Interface: RS-232C, CCITT V.24, MIL 188C
Transmission Medium: Voice-Grade Lines
Features: Autodial, Diagnostics, Fallback
Date First Installed: 1981

PARADYNE CORP.
MP 48/2088
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous/Synchronous - 4,800 bps
Interface: CCITT V.27
Bell-Compatible: 208
Transmission Medium: Voice-Grade Lines
Features: Autoanswer
Date First Installed: 1986

PARADYNE CORP.
MPX 2400
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 1,200 bps, 2,400 bps
Interface: CCITT V.28, CCITT V.27, CCITT V.29
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Diagnostics, Fallback
Price: $950
Date First Installed: 1988

PARADYNE CORP.
MPX 4800
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 2,400 bps, 4,800 bps
Interface: CCITT V.28, CCITT V.27, CCITT V.29
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Diagnostics, Fallback, Multiplexer Option
Price: $2,000
Date First Installed: 1988

PARADYNE CORP.
MPX 9600
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 4,800 bps, 9,600 bps; Synchronous - 7,200 bps
Interface: CCITT V.28, CCITT V.27, CCITT V.29
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Multiplexer Option
Price: $3,400
Date First Installed: 1988

Modems

PEDA, INC.
EXT-1212
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex
Transmission Rate: Synchronous - 56,000 bps
Interface: CCITT V.24
Transmission Medium: Cable
Diagnostics: No
Features: Reverse Channel, Multiport, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $1,800
(See Vendor Profile Page V-53)

PEIREL CORP.
300/1200
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $525
Number Installed to Date: 5,000 - 10,000
Date First Installed: February 1979
(See Vendor Profile Page V-23)

PEIREL CORP.
300/1200 AUTO DIAL
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $650
Number Installed to Date: 5,000 - 10,000
Date First Installed: January 1982

PEIREL CORP.
1800 DED
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Distribution Method: Third-party
Price: $1,695
Number Installed to Date: Under 100
Date First Installed: September 1983

PEIREL CORP.
2129
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Alternate Voice/Data; Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $2,595

PEIREL CORP.
9201 A/B
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 208
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoanswer
Distribution Method: Third-party
Price: $1,750
Number Installed to Date: 500 - 1,000
Date First Installed: January 1982

PEIREL CORP.
9201 DN/PL
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.24; CCITT V.26, CCITT V.28
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoanswer, Alternate Voice/Data, Switchable Data Rates
Distribution Method: Third-party
Price: $785 to $795
Number Installed to Date: 1,000 - 5,000
Date First Installed: February 1981

PEIREL CORP.
9202
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Nonloaded Cable
Features: Autoequalizer, Diagnostics
Distribution Method: Third-party
Price: $535
Number Installed to Date: 500 - 1,000
Date First Installed: October 1981

PEIREL CORP.
PEH-66A
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Interface: RS-232C, CCITT V.24, CCITT V.28, 20 mA Current Loop
Transmission Medium: Nonloaded Cable
Diagnostics: No
Distribution Method: Third-party
Price: $250
Number Installed to Date: 5,000 - 10,000
Date First Installed: September 1978

PEIREL CORP.
9801C
Modem Class: Autocall Unit
Interface: RS 366
Bell-Compatible: 801C
Transmission Medium: Voice-Grade Lines
Features: Autodial
Distribution Method: Third-party
Price: $675
Number Installed to Date: Under 100
Date First Installed: June 1980

PEIREL CORP.
MCU 48
Modem Class: Port-Sharing
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Interface: RS-232C, CCITT V.24
Diagnostics: No
Distribution Method: OEM
Price: $440
Number Installed to Date: Under 100
Date First Installed: June 1974

PHALO CORP.
ODS-201
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - Up to 100K bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Features: Diagnostics, Remote/Local Loopback
Distribution Method: End user
Price: $625
Date First Installed: 1981
(See Vendor Profile Page V-23)

PHALO CORP.
ODS-209
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps; Synchronous - 56,000 bps
Interface: RS-232C, RS-449, V.35
Transmission Medium: Fiber Optics
Diagnostics: No
Features: Remote/Local Loopback
Distribution Method: End user
Price: $725
Date First Installed: 1981

PHALO CORP.
ODS-308
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,000 to 40K bps
Interface: RS-449, V.35
Transmission Medium: Fiber Optics
Diagnostics: No
Features: Remote/Local Loopback
Distribution Method: End user, OEM
Price: $1,750
Date First Installed: 1982

PRENTICE CORP.
ALD/1
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps; 4,800 bps, 9,600 bps

Interface: RS-232C, CCITT V.24, 20 MA Current Loop
Transmission Medium: Twisted-Pair
Features: Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $200 to $300
Number Installed to Date: 10,000 - 50,000
Date First Installed: June 1977
(See Vendor Profile Page V-34)

PRENTICE CORP.
H8LD/1
Modem Class: Line Driver
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Twisted-Pair
Diagnostics: Yes; Built-In
Features: Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $390 to $490
Number Installed to Date: 5,000 - 10,000
Date First Installed: January 1977

PRENTICE CORP.
212 TCM
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates, Stored Autodial Directory
Distribution Method: Third-party
Price: $695 to $795
Number Installed to Date: 500 - 1,000
Date First Installed: 1982

PRENTICE CORP.
9600A/B
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $2,995
Date First Installed: January 1984

PRENTICE CORP.
9629
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $2,650 to $2,750
Number Installed to Date: Under 100
Date First Installed: November 1983

PRENTICE CORP.
P-V.22
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 600 bps, 1,200 bps
Interface: RS-232C, CCITT V.22, CCITT V.24, CCITT V.28
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoanswer, Alternate Voice/Data, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: OEM
Price: $695 to $795
Number Installed to Date: 1,000 - 5,000
Date First Installed: March 1981

PRENTICE CORP.
P-201C
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: Third-party
Price: $695 to $795
Number Installed to Date: 1,000 - 5,000
Date First Installed: April 1981

PRENTICE CORP.
P-202T
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $295 to $395
Number Installed to Date: 1,000 - 5,000
Date First Installed: September 1980

PRENTICE CORP.
P-208A/B
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 208
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: Third-party
Price: $1,650 to $1,750
Number Installed to Date: Under 100
Date First Installed: September 1983

PRENTICE CORP.
P-212
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 103, 208
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $495 to $595
Number Installed to Date: 5,000 - 10,000
Date First Installed: June 1980

PRENTICE CORP.
TRIMODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 103, 212, VA 3400
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $850 to $950
Number Installed to Date: 500 - 1,000
Date First Installed: February 1982

PULSECOM
4011-10 (108C) RECEIVER
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - Up to 300 bps
Interface: RS-232C, MIL 188-100
Bell-Compatible: 108C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Diagnostics, Line Impedance Match
Distribution Method: End user, OEM, Third-party
Price: $351
Number Installed to Date: 1,000 - 5,000
Date First Installed: 1979
(See Vendor Profile Page V-34)

PULSECOM
4012-10 (108A) TRANSMITTER
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - Up to 300 bps
Interface: RS-232C, MIL 188-100
Bell-Compatible: 108A
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Switchable Data Rates, Line Impedance Match
Distribution Method: End user, OEM, Third-party
Price: $351
Number Installed to Date: 1,000 - 5,000
Date First Installed: 1979

RACAL-MILGO, INC.
24 LSI MARK II
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 201B, 201
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Autoanswer, Diagnostics
Distribution Method: End user
Price: $1,450 to $2,050
(See Vendor Profile Page V-34)

RACAL-MILGO, INC.
CMS 12
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade Lines

Modems

Diagnostics: Yes; Built-in
Features: Diagnostics, Dial Back-up
Distribution Method: End user
Price: $1,900 to $2,050

RACAL-MILGO, INC.
CMS 24
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Diagnostics, Dial Back-up
Distribution Method: End user
Price: $2,200

RACAL-MILGO, INC.
MODEM 96K
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 56,000 bps
Interface: CCITT V.35
Transmission Medium: Wide-Band Lines
Diagnostics: Yes; Built-in
Features: Statistical Equalizer
Distribution Method: End user
Price: $8,000 to $8,250

RACAL-MILGO, INC.
MODEM 112K
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 112K bps
Interface: CCITT V.35
Transmission Medium: Wide-Band Lines
Diagnostics: Yes; Built-in
Features: Diagnostics, Fallback, Statistical Equalizer
Distribution Method: End user
Price: $16,500 to $17,400

RACAL-MILGO, INC.
MPS 14.4K
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 19,200 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Multiport, Fallback, Switchable Data Rates, Individual Port Carrier Center
Distribution Method: End user
Price: $10,000 to $12,400

RACAL-MILGO, INC.
OMNIMODE CS (CENTRAL SITE)
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.27, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $2,100 to $3,600
Date First Installed: 1983

RACAL-MILGO, INC.
OMNIMODE 48
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Diagnostics, Multiport, Fallback, Switchable Data Rates, Front Panel Information
Distribution Method: End user
Price: $2,450 to $4,150
Number Installed to Date: 500 - 1,000
Date First Installed: 1982

RACAL-MILGO, INC.
OMNIMODE 96
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Features: Autoequalizer, Diagnostics, Multiport, Fallback, Switchable Data Rates, Front Panel Information
Distribution Method: End user
Price: $4,150 to $5,850
Number Installed to Date: 500 - 1,000
Date First Installed: 1983

RACAL-MILGO, INC.
COM LINK III
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Rate: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps; Asynchronous/Synchronous - 1,200 bps, 19,200 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: 4-Wire Twisted-Pair
Diagnostics: Yes; Built-in
Features: Diagnostics
Distribution Method: End user
Price: $920 to $945

RACAL-VADIC
VA3413
Modem Class: Coupler
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Features: Diagnostics
Distribution Method: Third-party
Price: $695
(See Vendor Profile Page V-25)

RACAL-VADIC
VA103 MODEMPHONE
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: Third-party
Price: $250 to $380
Date First Installed: 1980

RACAL-VADIC
VA212 AUTO DIAL
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Features: Autodial, Autoanswer, Diagnostics
Distribution Method: Third-party
Price: $695
Date First Installed: 1983

RACAL-VADIC
VA212 PAR AUTO DIAL
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Features: Autodial, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $695
Date First Installed: 1983

RACAL-VADIC
VA212LC
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Features: Autodial, Autoanswer, Diagnostics, Handshaking
Distribution Method: Third-party
Price: $495
Date First Installed: September 1983

RACAL-VADIC
VA318
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Features: Autodial, Autoanswer, Diagnostics
Distribution Method: End user
Price: $375
Date First Installed: 1981

RACAL-VADIC
VA317
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 113
Transmission Medium: Voice-Grade Lines
Features: Autoanswer, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $250
Date First Installed: 1976

RACAL-VADIC
VA355
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C, 20 mA Current Loop
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Features: Alternate Voice/Data, Diagnostics
Distribution Method: Third-party
Price: $375
Date First Installed: 1977

RACAL-VADIC
VA1205/30 SERIES
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex

Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade
Features: Reverse Channel, Diagnostics
Distribution Method: Third-party
Date First Installed: 1971

RACAL-VADIC
VA1240
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 600 bps, 1,200 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Features: Diagnostics
Distribution Method: Third-party
Price: $290

RACAL-VADIC
VA1250 SERIES DIRECT-CONNECT
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Features: Alternate Voice/Data, Reverse Channel, Diagnostics
Distribution Method: Third-party
Date First Installed: 1978

RACAL-VADIC
VA1250 SERIES OF LEASED-LINE MODEMS
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Features: Autoanswer, Reverse Channel, Diagnostics
Distribution Method: Third-party
Price: $425 to $550
Date First Installed: 1978

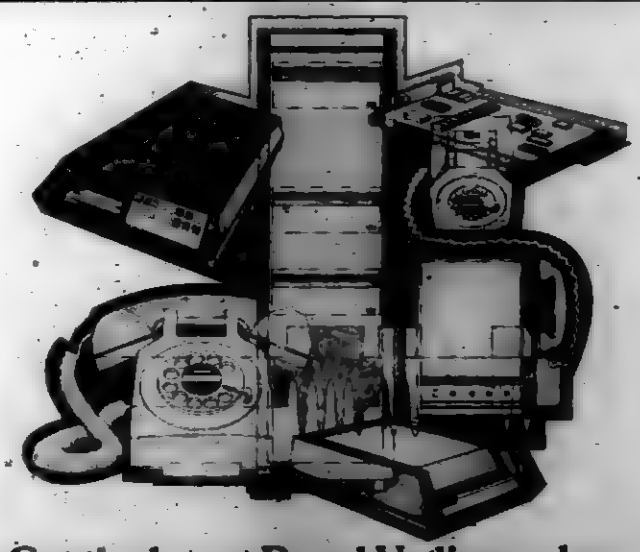
RACAL-VADIC
VA2430 G/K
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C, CCITT V.28
Bell-Compatible: 201

Features: Autoequalizer, Reverse Channel, Diagnostics
Distribution Method: Third-party
Price: $500
Date First Installed: 1976

RACAL-VADIC
VA2440/45
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.26
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Features: Reverse Channel, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $575 to $725

RACAL-VADIC
VA2480 SERIES
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 2,400 bps
Bell-Compatible: 201
Transmission Medium: Voice-Grade
Features: Alternate Voice/Data, Reverse Channel, Diagnostics
Distribution Method: Third-party
Price: $725 to $875

RACAL-VADIC
VA3451 TRIPLE MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous



Get the latest Racal-Vadic modems and couplers from MTI Systems Corp.

We are authorized distributors for Racal-Vadic, so we get their latest equipment first. We sell, rent and lease modems, acoustic couplers, line drivers, multiplexors, data switchers, protocol converters, everything you could need for data communications. We supply cables, switches, and all the rest.

MTI has the expertise to answer your questions and help you configure your network. In the New York, New Jersey and Ohio areas, our field sales engineers will provide on-site consultation, and our service engineers will install the equipment and maintain it with expert service.

What about price? We want your business and we intend to be very competitive. Call us today for all your data communications needs.

New York: 516/621-6200, 212/767-0677, 518/449-5959
Outside N.Y.S.: 800/645-6530
New Jersey: 201/227-5552
Ohio: 216/464-6688

mti
systems corp

Applications Specialists & Distributors, New York, New Jersey and Ohio.
DEC, Intel, Texas Instruments, Dataproducts, Lear Siegler, Diablo, Esprit Intecolor, Racal-Vadic, MICOM, Ventel, Develcon, Dig. Eng., U.S.Design Cipher, Protocol Computers, MicroPro, Microsoft, Polygon and Select.

Modems

Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Bell-Compatible: 103, 212-
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: Third-party
Price: $675

RACAL-VADIC
VA3455
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Features: Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: Third-party
Price: $775
Number Installed to Date: 5,000 - 10,000
Date First Installed: 1977

RACAL-VADIC
VA3467
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoanswer, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Date First Installed: 1977

RACAL-VADIC
VA3400 SERIES
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Features: Autoanswer, Diagnostics
Distribution Method: Third-party
Price: $950
Date First Installed: 1981

RACAL-VADIC
VA4400 SERIES
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Features: Autodial, Autoequalizer, Autoanswer, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $1,745 to $1,945
Date First Installed: 1982

RACAL-VADIC
VA4840 SERIES
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 208
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoequalizer, Autoanswer, Diagnostics
Distribution Method: Third-party
Price: $1,350
Date First Installed: 1982

RAYCOM SYSTEMS, INC.
2000
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps, 100K bps
Interface: RS-232C
Transmission Medium: Fiber Optics
Diagnostics: Yes; Built-In
Features: Diagnostics
Distribution Method: OEM
Price: $250
Number Installed to Date: Under 100
Date First Installed: October 1983
(See Vendor Profile Page V-00)

RAYCOM SYSTEMS, INC.
2200
Modem Class: Fiber-Optic
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps; Asynchronous/Synchronous - 2,500 bps
Interface: Coaxial Connector RG-62
Transmission Medium: Fiber Optics
Diagnostics: Yes; Built-In
Features: Diagnostics
Distribution Method: OEM
Price: $350
Number Installed to Date: Under 100
Date First Installed: March 1984

RAYCOM SYSTEMS, INC.
3000
Modem Class: Fiber-Optic
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps; Asynchronous/Synchronous - 2,500 bps
Interface: RS-232C, RS-422
Transmission Medium: Fiber Optics
Features: Diagnostics, Clock Calendar, Switchable Data Rates
Distribution Method: OEM
Price: $320
Number Installed to Date: Under 100

RFL INDUSTRIES
6365
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Distribution Method: OEM
Price: $390
Number Installed to Date: 1,000 - 5,000
Date First Installed: January 1977
(See Vendor Profile Page V-25)

RFL INDUSTRIES
6960
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Alternate Voice/Data
Distribution Method: OEM
Price: $3,600
Number Installed to Date: Under 100
Date First Installed: January 1981

RIXON, INC.
OEM 212A FOR CUSTOM APPLICATIONS
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300; Synchronous - 1,200 bps
Interface: RS-232C, TTL
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Alternate Voice/Data, Diagnostics
Distribution Method: End user, Third-party
(See Vendor Profile Page V-25)

RIXON, INC.
PC 212A MODEM FOR IBM PC AND PC-XT
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoanswer, Alternate Voice/Data, Switchable Data Rates
Distribution Method: End user, Third-party
Price: $499
Date First Installed: March 1983

RIXON, INC.
R14.4 MODEM
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 9,600 bps, 19,200 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoequalizer, Diagnostics, Multiport, Fallback
Distribution Method: End user, Third-party

RIXON, INC.
R103J LSI MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: End user, Third-party

RIXON, INC.
R212A INTELLIGENT MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-In
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: End user, Third-party

RIXON, INC.
R212A LSI MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps; Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade

Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: Third-party

RIXON, INC.
R9434 LSI MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: End user, Third-party

RIXON, INC.
RV .29/2 MODEM SYSTEM
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Multiport, Fallback
Distribution Method: End user, Third-party

RIXON, INC.
T103J LSI MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoanswer, Reverse Channel, Diagnostics
Distribution Method: End user, Third-party

RIXON, INC.
T106 LSI DATA MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 100
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Alternate Voice/Data, Diagnostics
Distribution Method: End user, Third-party

RIXON, INC.
T113C LSI DATA MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Alternate Voice/Data, Diagnostics
Distribution Method: End user, Third-party

RIXON, INC.
T202S LSI DATA MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics
Distribution Method: End user, Third-party

RIXON, INC.
T202T LSI DATA MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 1,800 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Reverse Channel, Diagnostics
Distribution Method: End user, Third-party

RIXON, INC.
T212A LSI DATA MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps; Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Fallback
Distribution Method: End user, Third-party

RIXON, INC.
TA 208A/B LSI MODEM
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C
Bell-Compatible: 208, 208B
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: End user, Third-party

RIXON, INC.
LDM 710 LIMITED-DISTANCE DATA MODEM
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 9,600 bps
Interface: RS-232C
Transmission Medium: Nonload Metallic Cable Pair
Diagnostics: Yes; Built-in
Features: Diagnostics
Distribution Method: End user, Third-party

RIXON, INC.
LDM 720 LIMITED-DISTANCE DATA MODEM
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps; Asynchronous/Synchronous - 3,600 bps
Interface: RS-232C
Transmission Medium: Nonload Metallic Cable Pair
Diagnostics: Yes; Built-in
Features: Autoequalizer
Distribution Method: End user, Third-party

ROCKWELL INTERNATIONAL
R24 THREE MODULE SET
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.28
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Switchable Data Rates
Distribution Method: OEM, Third-party
Date First Installed: 1980
(See Vendor Profile Page V-25)

ROCKWELL INTERNATIONAL
R24DC
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.28
Bell-Compatible: 201, 201 B/C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Switchable Data Rates
Distribution Method: OEM, Third-party
Date First Installed: 1982

ROCKWELL INTERNATIONAL
R48DP
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.27
Bell-Compatible: 208
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Switchable Data Rates
Distribution Method: OEM, Third-party

ROCKWELL INTERNATIONAL
R96DP
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.27, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Switchable Data Rates
Distribution Method: OEM, Third-party

ROCKWELL INTERNATIONAL
R96FAX
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.28
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Switchable Data Rates
Distribution Method: OEM, Third-party
Date First Installed: 1981

ROCKWELL INTERNATIONAL
R24LL
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.28
Bell-Compatible: 201, 201 B/C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Switchable Data Rates
Distribution Method: OEM, Third-party
Date First Installed: 1982

ROCKWELL INTERNATIONAL
R48DP
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.27
Bell-Compatible: 208
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Switchable Data Rates
Distribution Method: OEM, Third-party

ROCKWELL INTERNATIONAL
R96DP
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.27, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Switchable Data Rates
Distribution Method: OEM, Third-party

ROCKWELL INTERNATIONAL
R96FAX
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex
Transmission Rate: Synchronous -

Modems

300 bps, 2,400 bps, 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.27, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Date First Installed: 1983

ROCKWELL INTERNATIONAL R96FT
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 110 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24, CCITT V.27, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Switchable Data Rates
Distribution Method: OEM

ROCKWELL INTERNATIONAL R24M
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 300 bps, 600 bps, 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.22, CCITT V.24, CCITTV.22bis
Bell-Compatible: 103, 212, 212A
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: OEM, Third-party

ROCKWELL INTERNATIONAL R1212DC
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 300 bps, 600 bps, 1,200 bps
Interface: RS-232C, CCITT V.22, CCITT V.24
Bell-Compatible: 103, 212, 212A
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: OEM, Third-party

ROCKWELL INTERNATIONAL R1212M
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 300 bps, 600 bps, 1,200 bps
Interface: RS-232C, CCITT V.22, CCITT V.24
Bell-Compatible: 103, 212, 212A
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: OEM, Third-party
Date First Installed: 1981

ROCKWELL INTERNATIONAL R2424DC
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 300 bps, 600 bps, 1,200 bps, 2,400 bps
Interface: RS-232C, CCITT V.22, CCITT V.24, CCITT V.22bis
Bell-Compatible: 103, 212, 212A
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: OEM, Third-party

ROCKWELL INTERNATIONAL V27P/1
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 300 bps, 2,400 bps, 4,800 bps
Interface: RS-232C, T.30
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autoequalizer, Switchable Data Rates
Distribution Method: OEM
Date First Installed: 1981

ROCKWELL INTERNATIONAL V96P/1
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 300 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.27, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autoequalizer, Switchable Data Rates
Distribution Method: OEM
Date First Installed: September 1981

SCHNEIDER INSTRUMENT CO. SICT-2
Modem Class: Digital
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoanswer, Clock Calendar, Switchable Data Rates
Distribution Method: End user
Price: $3,425
Number Installed to Date: Under 100
Date First Installed: January 1980
(See Vendor Profile Page V-28)

SCIENTIFIC ATLANTA, INC. 9402
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - T-1
Interface: RS-449, RS-422, DS1
Transmission Medium: Coaxial Lines
Diagnostics: Yes; Built-in
Features: Diagnostics
Distribution Method: End user, OEM
Price: $4,000
Number Installed to Date: Under 100
Date First Installed: December 1982
(See Vendor Profile Page V-28)

SCIENTIFIC RADIATION CORP. 5010 SERIES OPTICAL DATA LINK
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 2,400 bps
Interface: RS-232C
Transmission Medium: Free Air
Diagnostics: No
Distribution Method: End user, Third-party
Price: $269 to $338
Number Installed to Date: Under 100
Date First Installed: 1980
(See Vendor Profile Page V-28)

SEIKOSHA, INC. IDSC 9000 SERIES
Modem Class: Short-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/ Synchronous - 9,600 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Multiport, Fallback, Switchable Data Rates, Simultaneous Voice/Data
Distribution Method: End user
Price: $500
Number Installed to Date: 100 - 500
Date First Installed: January 1983
(See Vendor Profile Page V-28)

SOREX, INC. 2103
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoanswer, Reverse Channel
Distribution Method: OEM
Price: $250
Number Installed to Date: Under 100
Date First Installed: January 1972
(See Vendor Profile Page V-28)

SOREX, INC. 2202
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps, 1,800 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoanswer
Distribution Method: OEM
Price: $400
Number Installed to Date: Under 100
Date First Installed: January 1972

SOREX, INC. 2407
Modem Class: Long-Haul
Interface: RS-232C
Bell-Compatible: 407E
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autoanswer
Distribution Method: OEM
Price: $500
Number Installed to Date: 500 - 1,000

SPERRY CORP. DATA COMMUNICATION MODULE (TYPE 5610)
Modem Class: Modem Eliminator
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps; Asynchronous/ Synchronous - 2,400 bps, 4,800 bps, 9,600 bps; Synchronous - 7,200 bps, 14,400 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $952

Number Installed to Date: 1,000 - 5,000
Date First Installed: 1981
(See Vendor Profile Page V-28)

TANDY CORP.
AC- 26-1174
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Distribution Method: End user
Price: $149
(See Vendor Profile Page V-28)

TANDY CORP.
26-1006/1009 (ACU)
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps; Asynchronous/ Synchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoanswer, Switchable Data Rates
Distribution Method: End user
Price: $699 to $849

TANDY CORP.
DC MODEM III 26-1176
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Features: Direct Connect
Distribution Method: End user
Price: $99

TANDY CORP.
DC MODEM II 26-1173
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autodial, Autoanswer, Remote/Local Loopback
Distribution Method: End user
Price: $199

TEK-COM, INC.
TC3001
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C, 20 MA Current Loop
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Distribution Method: End user
Price: $195 to $265
Date First Installed: 1979
(See Vendor Profile Page V-32)

TEK-COM, INC.
TC3002
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C, 20 MA Current Loop
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Features: Autodial
Distribution Method: OEM
Price: $265
Date First Installed: 1979

TEK-COM, INC.
TC3008
Modem Class: Coupler
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Features: Autoanswer
Price: $195
Date First Installed: September 1979

TEK-COM, INC.
4700
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoanswer, Alternate Voice/Data, Diagnostics, Fallback
Distribution Method: OEM, Third-party
Price: $365
Number Installed to Date: 500 - 1,000
Date First Installed: May 1982

TEK-COM, INC.
TC3001
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps
Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Diagnostics

TELEBYTE TECHNOLOGIES, INC.
720, VT-100 COMPATIBLE SMM
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 14,400 bps
Interface: RS-232C
Bell-Compatible: 43401
Transmission Medium: Metallic Pairs
Diagnostics: No
Features: Reverse Channel, Switchable Data Rates, DEC VT-100 Compatible
Distribution Method: Third-party
Price: $130
Number Installed to Date: Under 100
Date First Installed: June 1983
(See Vendor Profile Page V-30)

TELEBYTE TECHNOLOGIES, INC.
74A SHORT-HAUL MODEM WITH HANDSHAKE
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 14,400 bps
Interface: RS-232C
Bell-Compatible: 43401
Transmission Medium: Metallic Pairs
Diagnostics: No
Features: Reverse Channel, Switchable Data Rates, Bidirectional Control
Distribution Method: OEM
Price: $165
Number Installed to Date: 100 - 500
Date First Installed: January 1983

TELEBYTE TECHNOLOGIES, INC.
79 DUAL SHORT-HAUL MODEM WITH HANDSHAKE
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 14,400 bps
Bell-Compatible: 43401
Transmission Medium: Metallic Pairs
Diagnostics: Yes; Built-in
Features: Reverse Channel, Diagnostics, Fallback, Switchable Data Rates, Bidirectional Control
Distribution Method: End user
Price: $225
Number Installed to Date: Under 100
Date First Installed: January 1984

TELEBYTE TECHNOLOGIES, INC.
71
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 14,400 bps
Interface: RS-232C
Bell-Compatible: 41403
Transmission Medium: Metallic Pairs
Diagnostics: No
Features: Reverse Channel, Switchable Data Rates
Distribution Method: End user
Number Installed to Date: 1,000 - 5,000
Date First Installed: February 1982

TELEBYTE TECHNOLOGIES, INC.
72
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 14,400 bps
Interface: RS-232C
Bell-Compatible: 43401
Transmission Medium: Metallic Pairs
Diagnostics: No
Features: Reverse Channel, Switchable Data Rates, DTE/DCE Selectable
Distribution Method: Third-party
Price: $125
Number Installed to Date: 1,000 - 5,000
Date First Installed: February 1982

TELEBYTE TECHNOLOGIES, INC.
73 REMOTELY CONTROLLED SMM
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 14,400 bps
Interface: RS-232C
Bell-Compatible: 43401
Transmission Medium: Metallic Pairs
Features: Reverse Channel, Switchable Data Rates, Host Powered
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: November 1982

TELEBYTE TECHNOLOGIES, INC.
75 DUAL SHORT-HAUL MODEM
Modem Class: Short-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 14,400 bps

Modems

Bell-Compatible: 43401
Transmission Medium: Metallic Pairs
Diagnostics: Yes; Built-in
Features: Reverse Channel, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $185
Number Installed to Date: 100 - 500
Date First Installed: October 1982

TELEPROCESSING PRODUCTS, INC.
TP-560
Modem Class: Digital (DSU)
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C
Transmission Medium: Digital Termination
Diagnostics: Yes; Built-in
Features: Diagnostics, Multiport, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $495 to $650
Number Installed to Date: 500 - 1,000
Date First Installed: June 1983
(See Vendor Profile Page V-30)

TELEPROCESSING PRODUCTS, INC.
TP-561
Modem Class: Digital
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C
Transmission Medium: Digital Termination
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Multiport, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $695 to $1,025
Number Installed to Date: Under 100
Date First Installed: January 1984

TELEPROCESSING PRODUCTS, INC.
TP-566
Modem Class: Digital
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 14,400 bps, 56,000 bps
Interface: V.35
Transmission Medium: Digital Termination
Diagnostics: Yes; Built-in
Features: Diagnostics, Multiport, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $595 to $750
Number Installed to Date: 100 - 500
Date First Installed: August 1983

TELEPROCESSING PRODUCTS, INC.
TP-567
Modem Class: Digital
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 14,400 bps, 56,000 bps
Interface: V.35
Transmission Medium: Digital Termination
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $890 to $1,095
Number Installed to Date: Under 100
Date First Installed: January 1984

TELEPROCESSING PRODUCTS, INC.
TP-232
Modem Class: Modem Eliminator
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Asynchronous/ Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C
Transmission Medium: Twisted-Pair
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $395
Number Installed to Date: 500 - 1,000
Date First Installed: September 1978

TELEPROCESSING PRODUCTS, INC.
TP-550
Modem Class: Channel Service Unit
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Transmission Medium: Digital Termination
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $415 to $540
Number Installed to Date: Under 100
Date First Installed: November 1983

TELEPROCESSING PRODUCTS, INC.
TP-561
Modem Class: Channel Service Unit
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex, Simplex
Transmission Rate: Synchronous - 14,400 bps, 56,000 bps
Transmission Medium: Digital Termination
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $625 to $630
Number Installed to Date: Under 100
Date First Installed: December 1983

TELLABS, INC.
3010
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, RJ11
Transmission Medium: Voice-grade Lines
Diagnostics: No
Distribution Method: End user
Price: $100
Number Installed to Date: Under 100
Date First Installed: March 1983
(See Vendor Profile Page V-30)

TELLABS, INC.
319 DATAVOICE SYSTEM
Modem Class: Simultaneous Data/ Voice
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, RJ11
Transmission Medium: Voice-grade Lines
Diagnostics: No
Features: Simultaneous Data/Voice
Distribution Method: End user, Third-party
Price: $450 - $500
Number Installed to Date: Under 500
Date First Installed: 1982

TELMAG, INC.
LDD-1
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Diagnostics
Distribution Method: End user
Price: $150
Number Installed to Date: Under 100
Date First Installed: June 1981
(See Vendor Profile Page V-30)

TELMAG, INC.
SLD-1
Modem Class: Line Driver
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Diagnostics
Distribution Method: End user
Price: $450
Number Installed to Date: Under 100
Date First Installed: 1983

TELTONE CORP.
TELEPORT 300
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Diagnostics, Clock Calendar, Switchable Data Rates, Touch-Tone to Ascii
Distribution Method: OEM
Price: $399
Date First Installed: December 1983
(See Vendor Profile Page V-30)

TIMEPLEX, INC.
202 C/D
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 1,800 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Distribution Method: End user
Price: $325
(See Vendor Profile Page V-31)

TIMEPLEX, INC.
AIM SERIES
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C, RS-449, CCITT V.26, CCITT V.27, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $1,080 to $2,625

TIMEPLEX, INC.
R103
Modem Class: Long-Haul

Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C, MIL 188C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Diagnostics
Distribution Method: End user
Price: $315

TIMEPLEX, INC.
R103 C/D
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C, MIL 188C
Bell-Compatible: 103, 113, 108
Transmission Medium: Voice-Grade
Diagnostics: Yes; Built-in
Features: Diagnostics
Distribution Method: End user
Price: $255 to $335

TIMEPLEX, INC.
R202 C/D
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C, MIL 188C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Reverse Channel, Diagnostics
Distribution Method: End user
Price: $360

TIMEPLEX, INC.
V.29 PLUS
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 9,600 bps
Interface: RS-232C, CCITT V.29
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Add-on
Features: Autoequalizer, Diagnostics, Multiport, Fallback, Switchable Data Rates
Distribution Method: End user
Price: $4,100 to $4,600
Date First Installed: January 1982

TIMEPLEX, INC.
SLDM
Modem Class: Short-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 14,400 bps
Interface: RS-232C
Bell-Compatible: 43401
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $850

TRW CORP.
OPERATOR 103
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Reverse Channel
Distribution Method: End user, OEM, Third-party
Price: $169
Date First Installed: June 1983
(See Vendor Profile Page V-31)

TRW CORP.
TRW-103
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: IEEE-488
Bell-Compatible: 103
Diagnostics: No
Features: Autodial, Autoanswer, Reverse Channel
Distribution Method: End user, OEM, Third-party
Price: $449
Date First Installed: January 1978

TRANSEND CORP.
MODEM CARD AMC-300
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: Third-party
Price: $325
Number Installed to Date: 100 - 500
Date First Installed: January 1983
(See Vendor Profile Page V-31)

TRANSEND CORP.
PC MODEM CARD 300
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: Third-party
Price: $349
Number Installed to Date: 100 - 500

TRANSEND CORP.
PC MODEM CARD 1200
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $549
Number Installed to Date: 100 - 500
Date First Installed: October 1983

TRANSEND CORP.
TRANS MODEM 1200
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $695
Number Installed to Date: 100 - 500
Date First Installed: February 1983

TRI-DATA
OZ 225
Modem Class: Long Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Features: Autodial, Autoanswer
Price: $1,375
Date First Installed: September 1982
(See Vendor Profile Page V-31)

TRI-DATA
OZ GUARDIAN
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Diagnostics, Fallback, Switchable Data Rates, Security Coding
Distribution Method: Third-party
Price: $750
Number Installed to Date: 100 - 500
Date First Installed: September 1983

TST DATA PRODUCTS
202
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Diagnostics, Fallback, Switchable Data Rates, Security Coding
Distribution Method: Third-party
Price: $750
Number Installed to Date: 100 - 500
Date First Installed: September 1983

TST DATA PRODUCTS
202
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: End user, OEM
Price: $175 to $200
Number Installed to Date: 100 - 500
(See Vendor Profile Page V-31)

TST DATA PRODUCTS
212
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics, Switchable Data Rates
Distribution Method: End user, OEM
Price: $250
Number Installed to Date: Under 100
Date First Installed: June 1983

TUCK ELECTRONICS, INC.
MODEC 1649
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Distribution Method: End user
Price: $242
Date First Installed: August 1974
(See Vendor Profile Page V-32)

TUCK ELECTRONICS, INC.
MODEL 1663
Modem Class: Long-Haul

Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Diagnostics
Distribution Method: End user
Price: $275
Date First Installed: March 1981

TYMSHARE, INC.
MODEL 912 MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Features: Autoanswer, Diagnostics
Price: $995
Date First Installed: 1980
(See Vendor Profile Page V-32)

GRIESEMANN-SASS, INC.
CATV-MODEM
Modem Class: Radio Frequency
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 14,400 bps
Interface: 1510 D-Type Connect
Transmission Medium: Wide-Band Lines
Diagnostics: No
Distribution Method: End user
Price: $750 to $950
Number Installed to Date: Under 100
Date First Installed: April 1982
(See Vendor Profile Page V-32)

GRIESEMANN-SASS, INC.
NETWORK MODEM 640
Modem Class: Radio Frequency
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex, Simplex
Transmission Rate: Asynchronous/Synchronous - 19,200 bps
Interface: RS-232C, CCITT V.35
Transmission Medium: Wide-Band Lines
Diagnostics: No
Features: Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $995
Number Installed to Date: 5,000 - 10,000
Date First Installed: February 1980

GRIESEMANN-SASS, INC.
NETWORK MODEM 670
Modem Class: Radio Frequency (RF)
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex, Simplex
Transmission Rate: Asynchronous/Synchronous - 14,400 bps
Interface: RS-232C
Transmission Medium: Wide-Band Lines
Diagnostics: No
Features: Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $1,990
Number Installed to Date: 5,000 - 10,000
Date First Installed: June 1978

UNIVERSAL DATA SYSTEMS, INC.
103 LP O/A
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Features: Alternate Voice/Data, Telco Line Powered
Distribution Method: Third-party
Price: $145
Date First Installed: 1978
(See Vendor Profile Page V-32)

UNIVERSAL DATA SYSTEMS, INC.
103J
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: Third-party
Price: $425
Date First Installed: 1982

UNIVERSAL DATA SYSTEMS, INC.
103JLP
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 103, 113
Transmission Medium: Voice-Grade Lines
Features: Autoanswer, Alternate Voice/Data, Telco Line Powered
Distribution Method: Third-party
Price: $195
Date First Installed: 1978

UNIVERSAL DATA SYSTEMS, INC.
108
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Alternate Voice/Data, Diagnostics, Multidrop
Distribution Method: Third-party
Price: $295
Date First Installed: 1982

UNIVERSAL DATA SYSTEMS, INC.
201B
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Diagnostics, Antistreaming
Distribution Method: Third-party
Price: $965
Date First Installed: 1981

UNIVERSAL DATA SYSTEMS, INC.
201C
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoanswer, Alternate Voice/Data, Diagnostics, Test Pattern Generator
Distribution Method: Third-party
Price: $775
Date First Installed: September 1981

UNIVERSAL DATA SYSTEMS, INC.
202LP
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Features: Alternate Voice/Data, Telco Line Powered
Distribution Method: Third-party
Price: $195
Date First Installed: September 1981

UNIVERSAL DATA SYSTEMS, INC.
202S
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: Third-party
Price: $475
Date First Installed: 1981

UNIVERSAL DATA SYSTEMS, INC.
202S/99
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps; Asynchronous/Synchronous - 1,200 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoanswer, Alternate Voice/Data, Diagnostics, Test Pattern Generator
Distribution Method: Third-party
Price: $550
Date First Installed: 1981

UNIVERSAL DATA SYSTEMS, INC.
202SLP
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Features: Autoanswer, Alternate Voice/Data
Distribution Method: Third-party
Price: $245
Date First Installed: 1982

UNIVERSAL DATA SYSTEMS, INC.
202T
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps; 1,200 bps, 1,800 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 202
Transmission Medium: Voice-Grade

Diagnostics: Yes; Built-in
Features: Alternate Voice/Data, Diagnostics, Antistreaming
Distribution Method: Third-party
Price: $425
Date First Installed: 1982

UNIVERSAL DATA SYSTEMS, INC.
208A/B
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 208
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoanswer, Alternate Voice/Data, Diagnostics, Antistreaming
Distribution Method: Third-party
Price: $1,750
Date First Installed: 1981

UNIVERSAL DATA SYSTEMS, INC.
212A
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps; Asynchronous/Synchronous - 1,200 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoanswer, Alternate Voice/Data, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $595
Date First Installed: 1982

UNIVERSAL DATA SYSTEMS, INC.
212A/D
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps; Asynchronous/Synchronous - 1,200 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 103, 113, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Switchable Data Rates, Phone Number Memory
Distribution Method: Third-party
Price: $845
Date First Installed: 1983

UNIVERSAL DATA SYSTEMS, INC.
212LP
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 1,200 bps
Interface: RS-232C, CCITT V.24
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Alternate Voice/Data, Telco Line Powered
Distribution Method: Third-party
Price: $445
Date First Installed: 1982

UNIVERSAL DATA SYSTEMS, INC.
9600
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 7,200 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Diagnostics, 100 msec Train Time
Distribution Method: Third-party
Price: $2,650
Date First Installed: 1983

UNIVERSAL DATA SYSTEMS, INC.
9600A/B
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 7,200 bps
Interface: RS-232C, CCITT V.24
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Fallback, Switchable Data Rates, Antistreaming
Distribution Method: Third-party
Price: $2,850
Date First Installed: 1983

U. S. ROBOTICS, INC.
IBM PC MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: Plug-in Board to IBM PC
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics
Distribution Method: End user, OEM
Price: $449
(See Vendor Profile Page V-32)

U. S. ROBOTICS, INC.
IBM PC 96
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: Plug-in Board to IBM PC
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Clock Calendar, Fallback, Parallel Port
Distribution Method: End user, OEM
Price: $599

U. S. ROBOTICS, INC.
IBM PC MODEM 288
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C, Plug-in Board to IBM PC
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Clock Calendar, Fallback, Switchable Data Rates, Parallel Port
Distribution Method: End user, OEM
Price: $1,149

U. S. ROBOTICS, INC.
OEM 4
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: PPI
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Fallback
Distribution Method: OEM
Price: $300

U. S. ROBOTICS, INC.
PASSWORD
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user, OEM
Price: $449
Number Installed to Date: 5,000 - 10,000
Date First Installed: May 1988

U. S. ROBOTICS, INC.
S100 BUS MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoequalizer, Autoanswer, Alternate Voice/Data, Fallback, Switchable Data Rates
Distribution Method: End user, OEM
Price: $449

VEN-TEL, INC.
ALD SERIES
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $205 to $320
Date First Installed: June 1977
(See Vendor Profile Page V-32)

VEN-TEL, INC.
SLD-SERIES
Modem Class: Line Driver
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $360 to $450
Date First Installed: January 1978

VEN-TEL, INC.
212 SERIES
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines

Modems

Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $425 to $675
Number Installed to Date: 5,000 - 10,000
Date First Installed: 1979

VEN-TEL, INC.
1200 - PLUS
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $499
Date First Installed: December 1983

VEN-TEL, INC.
MD 103-1/2E
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $245 to $315
Date First Installed: 1982

VEN-TEL, INC.
MD 103-I SERIES
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $345 to $415
Date First Installed: September 1982

VEN-TEL, INC.
MD 113 SERIES
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoanswer, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $245 to $315
Date First Installed: 1982

VEN-TEL, INC.
MD 201-1
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoanswer, Diagnostics
Distribution Method: Third-party
Price: $730 to $800
Date First Installed: January 1979

VEN-TEL, INC.
MD 201-3/4E
Modem Class: Long-Haul
Transmission Technique: Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Synchronous - 2,400 bps
Interface: RS-232C
Bell-Compatible: 201
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Diagnostics
Distribution Method: Third-party
Price: $605 to $675
Date First Installed: January 1979

VEN-TEL, INC.
MD 202-1/2E
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autoanswer, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $310 to $360

VEN-TEL, INC.
MD 202-5/6E
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps
Interface: RS-232C
Bell-Compatible: 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $280 to $350
Date First Installed: January 1979

VEN-TEL, INC.
PCM-H150P
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: HP150
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $425
Date First Installed: December 1983

VEN-TEL, INC.
PCM-XT
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: IBM PC
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $549
Date First Installed: December 1983

VEN-TEL, INC.
PCM-1202
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: IBM PC
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Diagnostics, Switchable Data Rates
Distribution Method: Third-party
Price: $499
Date First Installed: December 1983

VERSITRON, INC.
FOM-7
Modem Class: Fiber-Optic
Transmission Technique: Asynchronous, Synchronous, Isochronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps; Synchronous - 38.4K bps
Interface: RS-232C, MIL 188C
Transmission Medium: Fiber Optics
Price: $750
Date First Installed: 1982
(See Vendor Profile Page V-32)

VISIONARY ELECTRONICS, INC.
VISIONARY 199
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Reverse Channel, Multiport, Clock Calendar
Distribution Method: End user, OEM, Third-party
Price: $595
Number Installed to Date: Under 100
Date First Installed: November 1982
(See Vendor Profile Page V-32)

VISIONARY ELECTRONICS, INC.
VISIONARY 1200
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Reverse Channel, Diagnostics, Multiport, Clock Calendar, Switchable Data Rates
Distribution Method: End user, OEM, Third-party
Price: $795
Date First Installed: November 1983

WAMB LABORATORIES, INC.
CATV MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Interface: RS-232C
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: April 1983
(See Vendor Profile Page V-32)

WAMB LABORATORIES, INC.
WA 3451 MODEM
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps; Asynchronous/Synchronous - 1,200 bps

Interface: RS-232C, CCITT V.24
Bell-Compatible: 103, 212
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Autodial, Autoanswer, Diagnostics, Switchable Data Rates
Distribution Method: End user
Price: $1,050
Number Installed to Date: 100 - 500
Date First Installed: June 1981

WESTERN DATACOM
212 AUTODIAL
Modem Class: Long-Haul
Transmission Technique: Asynchronous, Synchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous/Synchronous - 1,200 bps; Asynchronous - Up to 300 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: End user, Third-party
Price: $825
Number Installed to Date: 200
Date First Installed: March 1984
(See Vendor Profile Page V-33)

WESTERN DATACOM
WORLDCOM 208
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 103, 202
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoanswer, Alternate Voice/Data, Reverse Channel, Diagnostics, Fallback, Switchable Data Rates
Distribution Method: Third-party
Price: $595
Number Installed to Date: 10
Date First Installed: September 1983

WESTERN TELECOMPUTING CORP.
103 MODEM #667
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines, Narrow-Band Lines, Radio Links
Diagnostics: Yes; Add-on
Features: Autodial
Distribution Method: End user
Price: $390
Number Installed to Date: Under 100
Date First Installed: September 1982
(See Vendor Profile Page V-33)

WESTERN TELECOMPUTING CORP.
103/12 MODEM #666
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines, Narrow-Band Lines, Radio
Diagnostics: Yes; Add-on
Features: Autodial
Distribution Method: End user
Price: $825
Number Installed to Date: Under 100
Date First Installed: January 1982

WESTERN TELECOMPUTING CORP.
SATELLITE MODEM #668
Modem Class: Line Driver
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps
Interface: RS-232C
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines, Narrow-Band Lines, Radio Links
Diagnostics: Yes; Add-on
Features: Autodial
Distribution Method: End user
Price: $275
Number Installed to Date: Under 100
Date First Installed: January 1982

WOLPERTA, INC.
WD-212A
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Full-Duplex
Transmission Rate: Asynchronous - 300 bps, 1,200 bps
Interface: RS-232C
Bell-Compatible: 212
Transmission Medium: Voice-Grade Lines
Diagnostics: Yes; Built-in
Features: Autodial, Autoequalizer, Autoanswer, Diagnostics, Switchable Data Rates
Distribution Method: OEM
Number Installed to Date: 1,000 - 5,000
Date First Installed: March 1982
(See Vendor Profile Page V-33)

ZOOM TELEPHONICS, INC.
NETWORKER
Modem Class: Long-Haul
Transmission Technique: Asynchronous
Transmission Mode: Half-Duplex, Full-Duplex
Transmission Rate: Asynchronous - 110 bps, 300 bps
Interface: Apple II
Bell-Compatible: 103
Transmission Medium: Voice-Grade Lines
Diagnostics: No
Features: Alternate Voice/Data
Distribution Method: End user
Price: $129
Date First Installed: August 1983
(See Vendor Profile Page V-33)

MULTIPLEXERS

Multiplexer Index by Class

The index to multiplexers has been grouped according to device type — concentrators, frequency-division, fiber-optic, network concentrators, statistical, time-division and wideband. The last section of the index includes all multiplexers which do not fit into any of the above categories. Within each section, products have been arranged alphabetically by vendor and include price information and the page number on which the complete product listing may be found. The actual product listings have been grouped alphabetically by vendor.

Concentrators

VENDOR	MODEL	PRICE	PAGE
Computer Systems	CS/88	$1,500 to $3,000	A-74
Integrated Design Engineering, Inc.	IDE-250BA, -250CA	$1,600 to $6,850	A-83
Multitronics	RDS-1600	$5,000	A-87
	SBR-700	$1,000	A-88
Northern Telecom	COMM-MULTIPLEXER	$2,000	A-89
Philips Electronics Instruments	FLEXPAC PAD	N/A	A-89
Tandy Corp.	COMMUNICATIONS MULTIPLEXER (71-3080)	$6,000 to $8,000	A-94

Fiber-Optic Multiplexers

VENDOR	MODEL	PRICE	PAGE
Belden Corp.	BIT-DRIVER 222-006	$1,950	A-69
Comgal Data Systems	CMX-320	$2,500	A-70
	CMX-808	$1,200	A-70
	CMX-816	$2,750	A-70
Fibronics International, Inc.	FM 814	$2,000 to $2,800	A-70
	FM 818	$3,300 to $4,900	A-70
	FM 832	$5,400 to $15,000	A-70
	FM 1608	$1,300 to $2,200	A-70
	FM 1632	$1,825 to $4,900	A-70
Micom, Inc.	MUX-S	N/A	A-86

Frequency-Division Multiplexers

VENDOR	MODEL	PRICE	PAGE
Black Box Catalog/Expander, Inc.	SYNCHRONOUS CHANNEL SPLITTER (SCS-2)	$355	A-69
Codequent Communications Systems Corp.	FSM-76	$7,200 to $11,400	A-72
	LINEMATE 192	$500	A-72
	SPM-94A	$475	A-72

Multiplexers

ABLE COMPUTER
DI/DM
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24, CCITT V.28
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Synchronous: 16
Output Transmission Mode: Full-Duplex
Features: Flow Control, Programmable
Diagnostic Features: Local
Price: $3,750 to $4,500
Date First Installed: 1981
(See Vendor Profile Page V-1)

ABLE COMPUTER
DV/16
Multiplexer Class: TDM
Maximum Input Channels:
Synchronous: 32
Asynchronous: 32
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,800 bps, 7,200 bps, 19,200 bps; Asynchronous/Synchronous - 1,200 bps; 2,400 bps, 3,600 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 300 bps
Maximum Output Lines:
Synchronous: 4
Asynchronous: 4
Output Transmission Mode: Half-Duplex, Full-Duplex
Diagnostic Features: Local
Distribution Method: Third-party
Price: $8,000 to $11,000
Date First Installed: 1980

ABLE COMPUTER
DZ16
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 16
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Maximum Output Lines:
Synchronous: 16
Output Transmission Mode: Full-Duplex
Features: Programmable
Diagnostic Features: Local
Distribution Method: Third-party
Price: $3,200 to $3,950
Date First Installed: 1980
Number Installed to Date: 100 - 500

ABLE COMPUTER
VMZ/32N
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 16
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Synchronous: 16
Output Transmission Mode: Full-Duplex
Features: Flow Control, Programmable
Diagnostic Features: Local
Distribution Method: Third-party
Price: $3,750 to $4,500
Date First Installed: 1982

ARDAKL CORP.
3211 TDM MULTIPLEXER
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28, V.35, MIL 188C, Bell 301/303
Maximum Input Channels:
Synchronous: 48
Asynchronous: 96
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 110 bps, 1,800 bps; Asynchronous/Synchronous - 300 bps; 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 14,400 bps, 19,200 bps, 460.8K bps
Aggregate Transmission Rate: 13,440 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Synchronous - 9,600 bps, 14,400 bps, 56,000 bps; Asynchronous - T-1; Asynchronous/Synchronous - 40,860 bps, 2,048K bps
Communications Protocols: Ascii, Protocol Transparent
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Operational and Statistical Reports, Programmable, Network Monitor, Soft Configurability
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $7,500 to $50,000
Date First Installed: May 1983
Number Installed to Date: Under 100
(See Vendor Profile Page V-2)

ASTROCOM CORP.
SQUEEZPLEXER-STAND ALONE
Multiplexer Class: IBM 3274 Coaxial Cable Eliminator
Input Interface: Coaxial Cable, RG-62A/U
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Half-Duplex
Input Transmission Rates:
Asynchronous - 2M bps
Aggregate Transmission Rate: 28K bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Half-Duplex
Output Line Transmission Rates:
Asynchronous - 2M bps
Features: Polling, Operational and Statistical Reports, Network Monitor
Diagnostic Features: Local
Distribution Method: Third-party
Price: $1,022
Date First Installed: January 1983
Number Installed to Date: 500 - 1,000
(See Vendor Profile Page V-3)

ASTROCOM CORP.
SQUEEZPLEXER-RACK MOUNT
Multiplexer Class: IBM 3274 Coaxial Cable Eliminator
Maximum Input Channels:
Synchronous: 32
Transmission Mode: Half-Duplex
Maximum Output Lines:
Synchronous: 4
Features: Polling, Operational and Statistical Reports, Network Monitor
Diagnostic Features: Local
Distribution Method: Third-party
Price: $2,860
Date First Installed: January 1983
Number Installed to Date: 500 - 1,000

AVANTI COMMUNICATIONS CORP.
ULTRAMUX
Multiplexer Class: Wideband (T-1)
Input Interface: RS-232C, MIL 188C, V.35, RS-449, Bell 303
Maximum Input Channels:
Synchronous: 128
Asynchronous: 64
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates:
Asynchronous/Synchronous - 2.5M bps
Aggregate Transmission Rate: 1M bps
Maximum Output Lines:
Asynchronous: 4
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Synchronous - 56,000 bps; Asynchronous/Synchronous - 16M bps
Communications Protocols: Transparent
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Port Contention; Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor, T-1 Capability, Dynamic Band Width
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM, Third-party
Price: $15,750
Date First Installed: March 1983
Number Installed to Date: Under 100
(See Vendor Profile Page V-3)

BACKUS DATA SYSTEMS
SWITCHABLE/STATISTICAL MULTIPLEXER
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Asynchronous: 5
Transmission Mode: Full-Duplex
Input Transmission Rates:
Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 9,600 bps
Communications Protocols: SDLC
Features: Switching, Operational and Statistical Reports, Programmable
Diagnostic Features: No
Distribution Method: End user
Price: $1,995
Date First Installed: September 1983
Number Installed to Date: Under 100
(See Vendor Profile Page V-3)

BAY TECHNICAL ASSOCIATES, INC.
524 AC 11
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: Ascii
Features: Flyback Buffering Delay, Polling, Programmable
Diagnostic Features: Local
Distribution Method: End user
Price: $279 to $649
Date First Installed: September 1982
Number Installed to Date: 5,000 - 10,000
(See Vendor Profile Page V-4)

BAY TECHNICAL ASSOCIATES, INC.
524E
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:

Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: Ascii
Features: Polling, Programmable
Diagnostic Features: Local
Distribution Method: End user
Price: $279 to $649
Date First Installed: September 1982
Number Installed to Date: 5,000 - 10,000

BAY TECHNICAL ASSOCIATES, INC.
828 AC 11
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 600 bps, - 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: Ascii
Features: Flyback Buffering Delay, Polling, Programmable
Diagnostic Features: Local
Distribution Method: End user
Price: $279 to $649
Date First Installed: September 1982
Number Installed to Date: 5,000 - 10,000

BAY TECHNICAL ASSOCIATES, INC.
828E
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: Ascii
Features: Polling, Programmable
Diagnostic Features: Local
Distribution Method: End user
Price: $279 to $649
Date First Installed: September 1982
Number Installed to Date: 5,000 - 10,000

BELDEN CORP.
BT-DRIVER 222-006
Multiplexer Class: Fiber-Optic
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 8
Asynchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 1,600 bps
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous/Synchronous - 1,200 bps, 4,800 bps
Communications Protocols: Transparent
Features: Independent Channel Loopback
Diagnostic Features: Local
Distribution Method: Third-party
Price: $1,950
Date First Installed: June 1983
Number Installed to Date: Under 100
(See Vendor Profile Page V-4)

BLACK BOX CATALOG/EXPANDOR, INC.
SYNCHRONOUS CHANNEL SPLITTER (SCS-2)
Multiplexer Class: FDM
Input Interface: RS-232C
Maximum Input Channels:
Asynchronous: 2
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous/Synchronous - Up to 9,600 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous/Synchronous - Up to 9,600 bps
Features: Automatic Speed Detection (Autobaud), Data Compression, Automatic Repeat Request, Port Contention, Operational and Statistical Reports, Flow Control
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $355
Date First Installed: August 1982
Number Installed to Date: 100 - 500
(See Vendor Profile Page V-4)

BLACK BOX CATALOG/EXPANDOR, INC.
DATA CONCENTRATOR 2
Multiplexer Class: Statistical
Input Interface: RS-232C, DCE
Maximum Input Channels:
Synchronous: 2
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 110 bps, 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 1,200 bps, 1,800 bps, 9,600 bps, Asynchronous/Synchronous - As Per Modem Speed
Communications Protocols: BSC
Features: Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flow Control
Diagnostic Features: Remote, Local
Price: $1,050
Date First Installed: 1978
Number Installed to Date: 10,000-50,000

BLACK BOX CATALOG/EXPANDOR, INC.
DATA CONCENTRATOR 2HP
Multiplexer Class: Statistical
Input Interface: RS-232C, DCE
Maximum Input Channels:
Synchronous: 2
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 110 bps, 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 1,200 bps, 1,800 bps, 9,600 bps;
Asynchronous/Synchronous - As per Modem Speed
Communications Protocols: BSC-Type
Features: Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flow Control
Diagnostic Features: Remote, Local
Price: $1,050
Date First Installed: 1978
Number Installed to Date: 10,000 - 50,000

BLACK BOX CATALOG/EXPANDOR, INC.
DATA CONCENTRATOR 4
Multiplexer Class: Statistical
Input Interface: RS-232C, DCE
Maximum Input Channels:
Synchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 110 bps, 9,600 bps
Aggregate Transmission Rate: 384 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Line Transmission Rates:
Asynchronous -1,200 bps, 1,800 bps, 9,600 bps;
Asynchronous/Synchronous - As per Modem Speed
Communications Protocols: BSC-Type
Features: Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flow Control, Tact
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,400
Number Installed to Date: 10,000 - 50,000

BLACK BOX CATALOG/EXPANDOR, INC.
DATA CONCENTRATOR 4HP
Multiplexer Class: Statistical
Input Interface: RS-232C, DCE
Maximum Input Channels:
Synchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 110 bps to 9,600 bps
Aggregate Transmission Rate: 384 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 1,200 bps, 1,800 bps, 9,600 bps;
Asynchronous/Synchronous - As per Modem Speed
Communications Protocols: BSC-Type
Features: Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flow Control, Terminal-Activated Communications Test
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,400
Date First Installed: 1978
Number Installed to Date: 10,000 - 50,000

BLACK BOX CATALOG/EXPANDOR, INC.
DATA CONCENTRATOR 8
Multiplexer Class: Statistical
Input Interface: RS-232C, DSC
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 110 bps, 3,600 bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 1,200 bps, 1,800 bps, 9,600 bps;
Asynchronous/Synchronous - As per Modem Speed
Communications Protocols: BSC-Type
Features: Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flow Control, Terminal-Activated Communications Test
Diagnostic Features: Remote, Local
Price: $2,200
Date First Installed: 1978
Number Installed to Date: 10,000 - 50,000

BLACK BOX CATALOG/EXPANDOR, INC.
DATA CONCENTRATOR 8HP
Multiplexer Class: Statistical

Input Interface: RS-232C, DSC
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 110 bps to 9,600 bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 1,200 bps, 1,800 bps, 9,600 bps;
Asynchronous/Synchronous - As per Modem Speed
Communications Protocols: BSC-Type
Features: Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flow Control and Terminal Activated Communications Test
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $2,200
Date First Installed: 1978
Number Installed to Date: 10,000 - 50,000

BLACK BOX CATALOG/EXPANDOR, INC.
GENERAL PURPOSE DATA CONCENTRATOR
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates:
Asynchronous - 300 bps, 600 bps, 1,200 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 384 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates:
Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 9,600 bps; Synchronous - 2,400 bps, 4,800 bps
Communications Protocols: Ascii, EWK/ACK (HP), XON-XOFF
Features: Automatic Speed Detection (Autobaud), Data Compression, Automatic Repeat Request, Port Contention, Operational and Statistical Reports, Flow Control, Statistical Convention Multiplexer
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,050 to $2,200
Date First Installed: August 1982
Number Installed to Date: 100 - 500

BLACK BOX CATALOG/EXPANDOR, INC.
ASYNCHRONOUS CHANNEL SPLITTER
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 2
Asynchronous: 2
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - Up to 38,400 bps
Features: Automatic Speed Detection (Autobaud), Data Compression, Automatic Repeat Request, Port Contention, Operational and Statistical Reports, Flow Control
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $835
Date First Installed: August 1982
Number Installed to Date: 100 - 500

BLACK BOX CATALOG/EXPANDOR, INC.
SYNCHRONOUS CHANNEL SPLITTER (SCS-4)
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Asynchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates:
Synchronous - 4,800 bps
Aggregate Transmission Rate: 300 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates:
Asynchronous/Synchronous - Up to 19,200 bps
Features: Automatic Speed Detection (Autobaud), Data Compression, Automatic Repeat Request, Port Contention, Operational and Statistical Reports, Flow Control
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,150
Date First Installed: August 1982
Number Installed to Date: Under 100

BO-GENERAL CO., INC.
MX-1
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 9,600 bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Synchronous: 8
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 9,600 bps
Communications Protocols: All (Transparent)
Diagnostic Features: Local
Distribution Method: End user
Price: $495
Date First Installed: December 1983
Number Installed to Date: Under 100
(See Vendor Profile Page V-4)

CANOGA DATA SYSTEMS
CMX-320
Multiplexer Class: Fiber-Optic
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 32
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates:
Asynchronous - 19,200 bps
Aggregate Transmission Rate: 6,144 bps
Maximum Output Lines:
Synchronous: 32
Asynchronous: 32
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates:
Asynchronous - 14,400 bps
Communications Protocols: Bit TDM
Features: Automatic Speed Detection (Autobaud), Continual Monitoring
Diagnostic Features: Local
Distribution Method: End user
Price: $2,500
Date First Installed: November 1981
Number Installed to Date: 100 - 500
(See Vendor Profile Page V-5)

CANOGA DATA SYSTEMS
CMX-808
Multiplexer Class: Fiber-Optic
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 16
Asynchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates:
Synchronous - 9,600 bps;
Asynchronous - 19,200 bps
Aggregate Transmission Rate: 1,536 bps
Maximum Output Lines:
Synchronous: 8
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 14,400 bps
Communications Protocols: Bit TDM
Features: Automatic Speed Detection (Autobaud), Continual Monitoring
Diagnostic Features: Local
Distribution Method: End user
Price: $1,200
Date First Installed: November 1982
Number Installed to Date: 100 - 500

CANOGA DATA SYSTEMS
CMX-816
Multiplexer Class: Fiber-Optic
Input Interface: RS-232C, RS-422, V.35
Maximum Input Channels:
Synchronous: 16
Asynchronous: 16
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 19,200 bps;
Asynchronous/Synchronous - 76.8K bps
Aggregate Transmission Rate: 10 bps
Maximum Output Lines:
Synchronous: 16
Asynchronous: 16
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 14,400 bps;
Asynchronous/Synchronous - 64K bps
Communications Protocols: Bit TDM
Features: Automatic Speed Detection (Autobaud), Programmable, Continual Monitoring
Diagnostic Features: Local
Distribution Method: End user
Price: $2,750
Date First Installed: September 1983
Number Installed to Date: Under 100

CANOGA DATA SYSTEMS
CMX-832
Multiplexer Class: Fiber-Optic TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 32
Asynchronous: 32
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous/Synchronous - 19,200 bps
Aggregate Transmission Rate: 61 bps
Maximum Output Lines:
Synchronous: 32
Asynchronous: 32
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous/Synchronous - 14,400 bps
Communications Protocols: Bit TDM
Features: Automatic Speed Detection (Autobaud), Continual Monitoring
Diagnostic Features: Local
Distribution Method: End user
Price: $2,700 to $8,700
Date First Installed: November 1980
Number Installed to Date: 500 - 1,000

CERMETEK MICROELECTRONICS
MUX-MATE 840
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 2
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps
Aggregate Transmission Rate: 24 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 2,400 bps

Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Repeat Request, Port Contention, Flow Control, Programmable
Diagnostic Features: Local
Distribution Method: End user, Third-party
Price: $695
(See Vendor Profile Page V-5)

CRUMB TELECOMMUNICATIONS TURBO MUX 2
Multiplexer Class: Statistical
Input Interface: RS-232C
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 2,400 bps
Aggregate Transmission Rate: 48 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 1,200 bps
Communications Protocols: Asynchronous - Protocol
Features: Data Compression, Automatic Repeat Request, Flow Control
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $995
Date First Installed: April 1983
(See Vendor Profile Page V-5)

COASTCOM D/I MUX
Multiplexer Class: Wideband (T-1)
Input Interface: RS-232C, RS-422, RS-449, CCITT V.35
Maximum Input Channels:
Synchronous: 16,800 bps
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 800 bps
Aggregate Transmission Rate: 154 bps
Maximum Output Lines:
Synchronous: 168
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 800 bps
Communications Protocols: DS1
Features: Protocol Conversion, Programmable, Network Monitor
Diagnostic Features: No
Distribution Method: End user, OEM, Third-party
Price: $6,000
Date First Installed: May 1982
Number Installed to Date: 100 - 500
(See Vendor Profile Page V-5)

CODEX CORP. 670 MULTIDROP STATISTICAL MULTIPLEXORS
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 16
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps
Aggregate Transmission Rate: 384 bps
Maximum Output Lines:
Other: Multidrop Line
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 1,200 bps, 2,400 bps; Synchronous - 1,800 bps, 4,800 bps, 9,600 bps; Asynchronous - 1,800
Communications Protocols: Ascii, Asynchronous Protocols
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Flow Control, Programmable
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,350 to $5,400
(See Vendor Profile Page V-5)

CODEX CORP. 6001 INTELLIGENT NETWORK PROCESSOR
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 134.5K bps, 150K bps, 200K bps
Aggregate Transmission Rate: 786 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Communications Protocols: Ascii, Most Asynchronous Protocols
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Flow Control, Programmable, Satellite Link Support
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,500 to $4,925
Date First Installed: 1981

CODEX CORP. 6005 INTELLIGENT NETWORK PROCESSOR
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 16
Asynchronous: 16
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 14,400 bps, 19,200 bps, 134.5K bps, 150K bps, 200K bps
Aggregate Transmission Rate: 1.536 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, BSC, Ascii, Many Synchronous Protocol
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Operational and Statistical Reports, Flow Control, Programmable, Satellite Capabilities Standard
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $2,600 to $7,000
Date First Installed: 1982

CODEX CORP. 6010 INTELLIGENT NETWORK PROCESSOR
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 30
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 75 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: CCITT X.25 (Level 2)
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Operational and Statistical Reports, Flow Control, Network Monitor, Configurable
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $4,500
Date First Installed: 1979

CODEX CORP. 6030 INTELLIGENT NETWORK PROCESSOR
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28, MIL 188C, Current Loop
Maximum Input Channels:
Synchronous: 128
Asynchronous: 129
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps; Asynchronous/Synchronous - 2,400 bps, 3,600 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 576 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, BSC, Ascii, Many Synchronous Protocols
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Operational and Statistical Reports, Flow Control, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $8,500
Date First Installed: 1977

CODEX CORP. 6040 INTELLIGENT NETWORK PROCESSOR
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28, MIL 188C, Current Loop
Maximum Input Channels:
Synchronous: 140
Asynchronous: 140
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps; Asynchronous/Synchronous - 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 576 bps
Maximum Output Lines:
Asynchronous: 16
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, BSC, Ascii, Many Synchronous Protocols
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Operational and Statistical Reports, Flow Control, Network Monitor, Multiple Protocols Configurable
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $17,000
Date First Installed: 1977

CODEX CORP. 6060 DISTRIBUTED COMMUNICATIONS PROCESSOR
Multiplexer Class: Statistical

Multiplexers

Input Interface: RS-232C
Asynchronous: 120
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps; Asynchronous - 300 bps, 600 bps, 1,200 bps
Aggregate Transmission Rate: 5,760 bps
Maximum Output Lines:
Asynchronous: 89
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps; Asynchronous/Synchronous - 7, 200 bps, 64,000 bps, 48,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, BSC, Ascii, Many Synchronous Protocols
Features: Automatic Speed Detection, Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Network Monitor, Configurable
Diagnostic Features: Remote, Local
Price: $45,000
Date First Installed: 1981

CODEX CORP.
604-605 SYNCHRONOUS MULTIPLEXORS
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Asynchronous: 4
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Synchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, CCITT X.25 (Level 3), BSC, All Synchronous Protocols
Features: Downline Loading (On-Line Reconfiguration)
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,850 to $2,250
Date First Installed: 1979

CODEX CORP.
900 SYNCHRONOUS MULTIPLEXOR
Multiplexer Class: TDM
Input Interface: MIL 188C
Maximum Input Channels:
Asynchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 7,200 bps, 9,600 bps; Asynchronous/Synchronous - 150 bps, 7,200 bps
Aggregate Transmission Rate: 960 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 600 bps, 7,200 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, CCITT X.25 (Level 3), BSC, All Synchronous Protocols
Features: Downline Loading (On-Line Reconfiguration), LED Indications, Configurable
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $4,500
Date First Installed: 1980

CODEX CORP.
8000 GROUP BAND MULTIPLEXOR
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Asynchronous - 20
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Synchronous - 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 640 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 4,800 bps, 56,000 bps; Asynchronous/Synchronous - 50,000 bps, 64,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, CCITT X.25 (Level 3), BSC, All Synchronous Protocols
Features: Configurable, LED Indicators
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $5,000
Date First Installed: 1974

COHERENT COMMUNICATIONS SYSTEMS CORP.
FSM-76
Multiplexer Class: FDM
Input Interface: CCITT V.24/V.28, Optional Office Telex
Maximum Input Channels:
Synchronous: 36
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 150 bps, 200 bps, 225 bps, 300 bps, 600 bps
Aggregate Transmission Rate: 228 bps
Maximum Output Lines:
Synchronous: 36
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 150 bps, 200 bps, 2,400 bps
Communications Protocols: Ascii
Features: Programmable, Voice-grade Circuit Use
Diagnostic Features: Local
Distribution Method: End user
Price: $7,200 to $11,400
Date First Installed: 1978
Number Installed to Date: 10,000 - 50,000
(See Vendor Profile Page V-5)

COHERENT COMMUNICATIONS SYSTEMS CORP.
LINEMATE 102
Multiplexer Class: FDM
Input Interface: RS-232C
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps; Asynchronous/Synchronous - 19,200 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 14,400 bps
Features: Simultaneous Voice/Data, 0/2 Wire Twisted Pair
Diagnostic Features: Local
Distribution Method: End user, OEM
Price: $500
Date First Installed: April 1982
Number Installed to Date: 100 - 500

COHERENT COMMUNICATIONS SYSTEMS CORP.
SPM-94A
Multiplexer Class: FDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 1
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 300 bps
Aggregate Transmission Rate: 3 bps
Maximum Output Lines:
Synchronous: 2
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates: Asynchronous - 300 bps
Communications Protocols: Any
Features: Simultaneous Voice/Data, Dial-up Network
Diagnostic Features: Local
Distribution Method: End user, OEM, Third-party
Price: $475
Date First Installed: July 1983
Number Installed to Date: Under 100

COMDESIGN, INC.
TC-500
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 32
Asynchronous: 32
Transmission Mode: Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous/Synchronous - 9,600 bps
Aggregate Transmission Rate: 3,072 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex, Echoplex
Output Line Transmission Rates: Asynchronous/Synchronous - 14,400 bps
Communications Protocols: User Selectable
Features: Automatic Speed Detection, Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor, Front Panel Security
Diagnostic Features: Remote
Distribution Method: End user, Third-party
Price: $1,700 to $7,800
Date First Installed: February 1982
Number Installed to Date: 100 - 500
(See Vendor Profile Page V-6)

COMMUNICATION DEVICES, INC.
01-08-0076
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Asynchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - 1,200 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Asynchronous: 8
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2),
Features: Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Port Contention, Flow Control
Diagnostic Features: No
Distribution Method: End user
Price: $2,000
Date First Installed: 1976
Number Installed to Date: Under 100
(See Vendor Profile Page V-6)

COMPLEX SYSTEMS, INC.
ARIUX 4/8
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 9
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 384 bps
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates:
Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols:
Complex X.25 (DERT X.25)
Features: Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Flow Control, Programmable, Menu-Driven Setup
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $1,350 to $1,950
Number Installed to Date: Under 100.
(See Vendor Profile Page V-6)

COMPRE COMMUNICATIONS, INC.
8LINK 2AA24
Multiplexer Class: Statistical
Input Interface: RS-232C
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 2,400 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 2,400 bps
Communications Protocols:
Proprietary
Features: Protocol Conversion, Automatic Repeat Request, Flow Control, Programmable, Network Monitor, Automatic Passthrough
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM, Third-party
Price: $675
Date First Installed: October 1982
Number Installed to Date: 500 - 1,000
(See Vendor Profile Page V-6)

COMPRE COMMUNICATIONS, INC.
8LINK 2AB192
Multiplexer Class: Statistical
Input Interface: RS-232C
Transmission Mode: Full-Duplex
Input Transmission Rates:
Synchronous - 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Line Transmission Rates:
Synchronous - 2,400 bps
Communications Protocols:
Proprietary
Features: Protocol Conversion, Automatic Repeat Request, Flow Control, Programmable, Network Monitor, Automatic Passthrough
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM, Third-party
Price: $675
Date First Installed: October 1982
Number Installed to Date: 500 - 1,000

COMPRE COMMUNICATIONS, INC.
DATA XCHANGE
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 32
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 110 bps, 9,600 bps
Aggregate Transmission Rate: 3,072 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous/Synchronous - 14,400 bps
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor, Field Expandable, Upgradable
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM, Third-party
Price: $2,550 to $9,800
Date First Installed: June 1981
Number Installed to Date: 500 - 1,000

COMPRE COMMUNICATIONS, INC.
ECONO SERIES 4
Multiplexer Class: Statistical
Input Interface: RS-232C
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 300 bps, 1,200 bps, 2,400 bps, 4,800 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 4,800 bps; Synchronous - 9,600 bps
Features: Automatic Repeat Request, Flow Control, Programmable
Diagnostic Features: Local
Distribution Method: End user, OEM, Third-party
Price: $1,095
Date First Installed: January 1981
Number Installed to Date: 100 - 500

COMPRE COMMUNICATIONS, INC.
ECONO SERIES 8
Multiplexer Class: Statistical
Input Interface: RS-232C
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 300 bps, 1,200 bps, 2,400 bps, 4,800 bps
Aggregate Transmission Rate: 384 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 9,600 bps
Features: Automatic Repeat Request, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Local
Distribution Method: End user, OEM, Third-party
Price: $1,695
Date First Installed: January 1981
Number Installed to Date: 100 - 500

COMPRE COMMUNICATIONS, INC.
Q-LINK 4AA24
Multiplexer Class: Statistical
Input Interface: RS-232C
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 2,400 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 9,600 bps
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor, Automatic Passthrough
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM, Third-party
Price: $1,195
Date First Installed: February 1983
Number Installed to Date: 100 - 500

COMPRE COMMUNICATIONS, INC.
Q-LINK 4AB192
Multiplexer Class: Statistical
Input Interface: RS-232C
Input Transmission Rates:
Synchronous - 4,800 bps; Synchronous - 9,600 bps
Aggregate Transmission Rate: 24 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 9,600 bps
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor, Automatic Passthrough
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM, Third-party
Price: $1,195
Date First Installed: February 1983
Number Installed to Date: 100 - 500

COMPUTER COMMUNICATIONS SPECIALISTS, INC.
CHANNEL COMMUNICATIONS CONCENTRATOR (CCC)
Multiplexer Class: TDM
Input Interface: Proprietary
Maximum Input Channels:
Synchronous: 64
Transmission Mode: Half-Duplex
Input Transmission Rates:
Asynchronous - 9,600 bps
Maximum Output Lines:
Synchronous: 3
Output Transmission Mode: Half-Duplex
Output Line Transmission Rates:
Asynchronous - 9,600 bps
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Port Contention, Switching, Flow Control, Network Monitor
Diagnostic Features: Local
Distribution Method: End user
Price: $3,695
Date First Installed: February 1982
Number Installed to Date: Under 100
(See Vendor Profile Page V-6)

COMPUTER SIGNTICS CORP.
RAMM-16
Multiplexer Class: Statistical
Input Interface: RS-232C, 20 MA Current Loop
Maximum Input Channels:
Synchronous: 16
Input Transmission Rates:
Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Half-Duplex
Output Line Transmission Rates:
Asynchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 56,000 bps
Communications Protocols: SDLC, BSC, Ascii
Features: Protocol Conversion, Polling, Port Contention
Diagnostic Features: Local
Distribution Method: Third-party
Price: $4,000
Date First Installed: June 1978
Number Installed to Date: Under 100
(See Vendor Profile Page V-7)

COMPUTER SIGNTICS CORP.
TAMM-16A
Multiplexer Class: Statistical
Input Interface: RS-232C, 20MA Current Loop

Multiplexers

Maximum Input Channels:
Synchronous: 16
Transmission Mode: Half-Duplex
Transmission Rate : Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Half-Duplex
Output Line Transmission Rates: Asynchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 56,000 bps
Communications Protocols: SDLC, BSC, Ascii
Features: Protocol Conversion, Polling, Port Contention
Diagnostic Features: Local
Distribution Method: Third-party
Price: $5,000
Date First Installed: February 1978
Number Installed to Date: Under 100

COMPUTER HORIZONS SYSTEMS, INC.
CHS 8MUX
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 48
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Communications Protocols: Ascii
Features: Protocol Conversion, (On-Line Reconfiguration), Flyback Buffering Delay, Polling, Port Contention, Flow Control
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $300
Date First Installed: 1980
Number Installed to Date: 100 - 500
(See Vendor Profile Page V-7)

COMPUTER PERIPHERAL SYSTEMS, INC.
MARS SYSTEM
MUX/CONCENTRATOR
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 8
Asynchronous: 8
Transmission Mode: Half-Duplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Synchronous: 8
Asynchronous: 4
Output Transmission Mode: Half-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Features: Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Polling, Port Contention, Switching, Flow Control, Programmable, Burroughs-Oriented
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,500 to $5,000
Date First Installed: July 1982
Number Installed to Date: Under 100
(See Vendor Profile Page V-7)

COMPUTER SYSTEMS CS/90
Multiplexer Class: Concentrator
Input Interface: RS-232C, RS-422, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 16
Asynchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 1,200 bps; Asynchronous/Synchronous - 2,400 bps; Synchronous - 4,800 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 1 bps
Maximum Output Lines:
Synchronous: 2
Asynchronous: 2
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 2,400 bps, 4,800 bps, 9,600 bps; Synchronous - 14,400 bps, 56,000 bps
Communications Protocols: SDLC, BSC, Ascii, Custom Protocols
Features: Automatic Speed Detection (Autobaud), Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Port Contention, Switching, Programmable
Diagnostic Features: Local
Distribution Method: End user, OEM
Price: $1,500 to $3,000
Date First Installed: 1983
(See Vendor Profile Page V-7)

COMPUTROL
MEGA PLEX
Multiplexer Class: Statistical
Input Interface: RS-232C, RS-422, Custom
Maximum Input Channels:
Synchronous: 64
Asynchronous: 64
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 2,400 bps, 9,600 bps
Aggregate Transmission Rate: 3,072 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 1M bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Port Contention, Flow Control, Programmable, Network Monitor
Diagnostic Features: Local
Distribution Method: End user, OEM
Price: $5,000 to $10,160
Date First Installed: June 1981
(See Vendor Profile Page V-7)

DATABIT, INC.
MODEL 926 TELEX & DATA TDM
Multiplexer Class: TDM
Input Interface: CCITT R.101
Maximum Input Channels:
Synchronous: 92
Asynchronous: 92
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps; Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps; Synchronous - 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 980 bps
Features: Programmable
Diagnostic Features: Local
Distribution Method: End user
(See Vendor Profile Page V-9)

DATAGRAM CORP.
DM 900
Multiplexer Class: Statistical
Input Interface: RS-232C, 20 mA Current Loop, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 9
Asynchronous: 1
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps; Asynchronous/Synchronous - 2,400 bps, 3600 bps, 4,800 bps, 7200 bps, 9,600 bps
Aggregate Transmission Rate: 864 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps, 14,400 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), Ascii
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Flow Control, Operational and Statistical Reports, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user, Third-party
Price: $1,550 to $2,750
Date First Installed: June 1982
Number Installed to Date: 500 - 1,000
(See Vendor Profile Page V-8)

DATAGRAM CORP.
DM 1600
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 16
Asynchronous: 4
Transmission Mode: Half-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 9,600 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Line Transmission Rates: Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), Ascii
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user, Third-party
Price: $2,200 to $4,600
Date First Installed: June 1979
Number Installed to Date: 500 - 1,000

DATAGRAM CORP.
DM 4800
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28, 20 mA Current Loop
Maximum Input Channels:
Synchronous: 52
Asynchronous: 4
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, Asynchronous/Synchronous - 2,400 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 9,600 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Line Transmission Rates: Synchronous/Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), Ascii
Features: Automatic Speed Detection (Autobaud), Data

Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Flow Control, Programmable, Network Monitor, Operational and Statistical Reports
Diagnostic Features: Remote, Local
Distribution Method: End user, Third-party
Price: $3,650 to $13,250
Date First Installed: June 1980
Number Installed to Date: 500 - 1,000

DATAPRODUCTS NEW ENGLAND, INC.
DP MUX-256
Multiplexer Class: Statistical
Input Interface: EIA
Maximum Input Channels:
Synchronous: 32
Asynchronous - 32
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 50 bps, 110 bps, 1,800 bps, 3,600 bps, Asynchronous/Synchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps, Synchronous 150 bps, 8,000 bps, 16,000 bps, 32,000 bps
Aggregate Transmission Rate: 2,560 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, CCITT X.25 (Level 3), BSC, Ascii
Features: Downline Loading (On-Line Reconfiguration), Operational and Statistical Reports, Programmable
Diagnostic Features: Local
Distribution Method: End user
Price: $4,842 to $9,550
Date First Installed: 1983
Number Installed to Date: Under 100
(See Vendor Profile Page V-9)

DATAPRODUCTS NEW ENGLAND, INC.
MC 3
Multiplexer Class: Statistical
Input Interface: EIA
Maximum Input Channels:
Synchronous: 32
Asynchronous: 32
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 75 bps, 110 bps; Asynchronous/Synchronous - 300 bps, 1,200 bps, 2,400 bps, 4,800 bps; Synchronous - 600 bps; 9,600 bps, 19,200 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 1,200 bps, 4,800 bps; Synchronous - 9,600 bps, 14,400 bps, 56,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, CCITT X.25 (Level 3), BSC, Ascii
Features: Downline Loading (On-Line Reconfiguration), Operational and Statistical Reports, Programmable
Diagnostic Features: No
Distribution Method: End user
Price: $6,715 to $10,800
Date First Installed: 1980

DATATEL, INC.
DCP 5000
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 4
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user, Third-party
Price: $1,300
Date First Installed: 1982
Number Installed to Date: Under 100
(See Vendor Profile Page V-10)

DATATEL, INC.
DCP 9100
Multiplexer Class: TDM
Input Interface: RS-232C, V.35
Maximum Input Channels:
Asynchronous: 96
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous/Synchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 15,400 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 1.5M bps
Communications Protocols: DY/FE
Features: Downline Loading (On-Line Reconfiguration), Operational and Statistical Reports, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Price: $3,850
Date First Installed: February 1983
Number Installed to Date: Under 100

DATEC, INC.
DATEC DATAMUX
Multiplexer Class: Statistical
Input Interface: RS-232C.
Maximum Input Channels:
Synchronous: 2
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - Up to 9,600
Communications Protocols: SDLC Subset
Features: Automatic Speed Detection (Autobaud), Data Compression, Automatic Repeat Request, Polling; Flow Control, Programmable, End to End Speed Conversion
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $835
Date First Installed: 1983
Number Installed to Date: Under 100
(See Vendor Profile Page V-10)

DCA/TAC
AYARWIN 208
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 128
Transmission Mode: Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 12 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: Ascii, DDCMP
Features: Automatic Speed Detection (Autobaud), Data Compression, Automatic Repeat Request, Flyback Buffering Delay, Polling, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $4,250 to $6,000
Date First Installed: 1979
Number Installed to Date: Under 100
(See Vendor Profile Page V-10)

DCA/TAC
SYSTEM 106
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: DDCMP
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM
Price: $1,295 to $2,650
Date First Installed: 1980
Number Installed to Date: Under 100

DCA/TAC
SYSTEM 116
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 576 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Communications Protocols: DDCMP
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local

Distribution Method: End user, OEM
Price: $1,495 to $2,850
Date First Installed: 1982
Number Installed to Date: Under 100

BCA/TAC
SYSTEM 128
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 32
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 576 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Communications Protocols: Ascii, DDCMP
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Flyback Buffering Delay, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user, Third-party
Price: $2,450 to $8,595
Date First Installed: 1982
Number Installed to Date: Under 100

BCA/TAC
SYSTEM 128
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 32
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 576 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Communications Protocols: Ascii, DDCMP
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Polling, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $3,250 to $9,395
Date First Installed: 1982
Number Installed to Date: Under 100

BCA/TAC
SYSTEM 325 NETSWITCH
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 1,472
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Maximum Output Lines:
Asynchronous: 11
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Communications Protocols: Ascii, DDCMP
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $12,560
Date First Installed: January 1982
Number Installed to Date: Under 100

BCA/TAC
SYSTEM 336
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 42
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Maximum Output Lines:
Asynchronous: 4
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Communications Protocols: CCITT X.25 (Level 3), BSC, Ascii, DDCMP
Features: Automatic Speed Detection (Autobaud), Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Polling, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM
Price: $6,795 to $7,195
Date First Installed: 1983
Number Installed to Date: Under 100

BCA/TAC
SYSTEM 365
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 1,400
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Maximum Output Lines:
Asynchronous: 44
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Communications Protocols: CCITT X.25 (Level 3), BSC, Ascii, DDCMP
Features: Automatic Speed Detection (Autobaud), Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Polling, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM
Price: $9,995 to $11,295
Date First Installed: 1980

BCA/TAC
T-1 SPEED TIME DIVISION MULTIPLEXOR
Multiplexer Class: TDM
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, RS-423, V.35, Bell 303
Maximum Input Channels:
Synchronous: 128
Asynchronous: 128
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 100 bps, 102 bps, 300 bps, 400 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 20,480 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps; Asynchronous - T-1; Asynchronous/Synchronous - 100 bps, 102 bps, 400 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, CCITT X.25 (Level 3), BSC, Ascii, Transparent
Features: Downline Loading (On-Line Reconfiguration), Operational, Statistical Reports, Programmable, Bandwidth Contention
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $3,800 to $4,950
Date First Installed: December 1983
Number Installed to Date: Under 100

BEVELCOM ELECTRONICS, INC.
DS1000
Multiplexer Class: Statistical
Input Interface: RS-232C, 20 mA Current Loop
Maximum Input Channels:
Synchronous: 16
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 14,400 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Port Contention, Programmable, Burst Aggregate - 76,800 bps
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $2,600 to $5,000
(See Vendor Profile Page V-10)

BEVELCOM ELECTRONICS, INC.
DS1000
Multiplexer Class: Statistical
Input Interface: RS-232C, 20 mA Current Loop
Maximum Input Channels:
Synchronous: 9
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 14,400 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Port Contention, Programmable, Burst Aggregate - 76,800 bps
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $1,560 to $2,750

DEVELCON ELECTRONICS, INC.
DS4000
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 52
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates:
Asynchronous - 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Synchronous - 14,400 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Port Contention, Programmable, Burst Aggregate - 76,800 bps
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $3,650 to $13,250

DIGITAL EQUIPMENT CORP.
DFM04
Multiplexer Class: Statistical
Input Interface: RS-232C, RS-423
Maximum Input Channels:
Synchronous: 4
Asynchronous: 4
Input Transmission Rates:
Synchronous - Up to 9,600 bps
Aggregate Transmission Rate: 1,536 bps
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration)
Diagnostic Features: Remote, Local
Price: $2,675
Date First Installed: 1983
(See Vendor Profile Page V-10)

DIGITAL EQUIPMENT CORP.
DFM08
Multiplexer Class: Statistical
Input Interface: RS-232C, RS-423
Maximum Input Channels:
Synchronous: 8
Asynchronous: 8
Input Transmission Rates:
Synchronous - Up to 9,600 bps
Aggregate Transmission Rate: 1,536 bps
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration)
Diagnostic Features: Remote, Local
Price: $3,350
Date First Installed: 1983

DIGITAL EQUIPMENT CORP.
DFM12
Multiplexer Class: Statistical
Input Interface: RS-232C, RS-423
Maximum Input Channels:
Synchronous: 12
Asynchronous: 12
Input Transmission Rates:
Synchronous - Up to 9,600 bps
Aggregate Transmission Rate: 1,536 bps
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration)
Diagnostic Features: Remote, Local
Price: $4,075
Date First Installed: 1983

DIGITAL EQUIPMENT CORP.
DFM16
Multiplexer Class: Statistical
Input Interface: RS-232C, RS-423
Maximum Input Channels:
Synchronous: 16
Asynchronous: 16
Input Transmission Rates:
Synchronous - Up to 9,600 bps
Aggregate Transmission Rate: 1,536 bps
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration)
Diagnostic Features: Remote, Local
Price: $4,800

DYNATECH PACKET TECHNOLOGY, INC.
DP 1000
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 760 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Communications Protocols: SDLC
Features: Automatic Speed Detection (Autobaud), Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Polling, Port Contention, Switching, Flow Control
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,000 to $2,000
Date First Installed: 1981
(See Vendor Profile Page V-11)

DYNATECH PACKET TECHNOLOGY, INC.
MULTIPAD 25
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 64
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps; Asynchronous/Synchronous - Up to 64,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), CCITT X.25 (Level 3)
Features: Automatic Speed Detection (Autobaud), Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $3,000 to $60,000
Date First Installed: 1981

DYNATECH PACKET TECHNOLOGY, INC.
MULTIPLEX 25
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 64
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps; Asynchronous/Synchronous - Up to 64,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), CCITT X.25 (Level 3)
Features: Automatic Speed Detection (Autobaud), Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Polling, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,500 to $50,000
Date First Installed: 1981

EMULEX CORP.
CS01-H
Multiplexer Class: Statistical
Input Interface: RS-232C, Current Loop
Maximum Input Channels:
Synchronous: 64
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps, External Clock
Maximum Output Lines:
Synchronous: 64
Output Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Output Line Transmission Rates:
Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, External Clock
Communications Protocols: Ascii
Distribution Method: End user, OEM, Third-party
(See Vendor Profile Page V-11)

EMULEX CORP.
CS11-F
Multiplexer Class: Statistical
Input Interface: RS-232C, Current Loop
Maximum Input Channels:
Synchronous: 48
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps, External Clock
Maximum Output Lines:
Synchronous: 48
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates:
Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, External Clock
Communications Protocols: Ascii
Diagnostic Features: Local
Distribution Method: End user, OEM, Third-party

EMULEX CORP.
CS11-H
Multiplexer Class: Statistical
Input Interface: RS-232C, Current Loop
Maximum Input Channels:
Synchronous: 64
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps, External Clock
Maximum Output Lines:
Synchronous: 64
Output Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Output Line Transmission Rates:
Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, External Clock
Communications Protocols: Ascii
Diagnostic Features: Local
Distribution Method: End user, OEM, Third-party

EMULEX CORP.
CS11-U
Multiplexer Class: Statistical
Input Interface: RS-232C, Current Loop
Maximum Input Channels:
Synchronous: 64
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps, External Clock
Maximum Output Lines:
Synchronous: 64

Multiplexers

Output Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Output Line Transmission Rates: Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, External Clock
Communications Protocols: Ascii
Diagnostic Features: Local
Distribution Method: End user, OEM, Third-party

EMULEX CORP.
CS11-V
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 32
Asynchronous: 32
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps; Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps; Synchronous - External Clock
Maximum Output Lines:
Synchronous: 32
Asynchronous: 32
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, Asynchronous - 1,800 bps, 14,400 bps, External Clock
Communications Protocols: BSC, Ascii
Diagnostic Features: Local
Distribution Method: End user, OEM, Third-party

EMULEX CORP.
CS21-F
Multiplexer Class: Statistical
Input Interface: RS-232C, Current Loop
Maximum Input Channels:
Synchronous: 16
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Synchronous: 16
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: Ascii
Diagnostic Features: Local
Distribution Method: End user, OEM, Third-party

EMULEX CORP.
CS21-H
Multiplexer Class: Statistical
Input Interface: RS-232C, Current Loop
Maximum Input Channels:
Synchronous: 16
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Synchronous: 16
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: Ascii
Diagnostic Features: Local
Distribution Method: End user, OEM, Third-party

EMULEX CORP.
CS21-U
Multiplexer Class: Statistical
Input Interface: RS-232C, Current Loop
Maximum Input Channels:
Synchronous: 16
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Synchronous: 16
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: Ascii
Diagnostic Features: Local
Distribution Method: End user, OEM, Third-party

EMULEX CORP.
CS21-Z
Multiplexer Class: Statistical
Input Interface: RS-232C, Current Loop
Maximum Input Channels:
Synchronous: 16
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Synchronous: 16
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: Ascii
Diagnostic Features: Local
Distribution Method: End user, OEM, Third-party

EMULEX CORP.
CSM11-MH
Multiplexer Class: Statistical
Input Interface: RS-232C, Current Loop
Maximum Input Channels:
Synchronous: 64
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Asynchronous: 16
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM, Third-party

EMULEX CORP.
CSM11-MU
Multiplexer Class: Statistical
Input Interface: RS-232C, Current Loop
Maximum Input Channels:
Synchronous: 64
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Asynchronous: 16
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM, Third-party

EMULEX CORP.
CSM21-MZ
Multiplexer Class: Statistical
Input Interface: RS-232C, Current Loop
Maximum Input Channels:
Synchronous: 32
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Asynchronous: 16
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM, Third-party

EMULEX CORP.
CSM21-NH
Multiplexer Class: Statistical
Input Interface: RS-232C, Current Loop
Maximum Input Channels:
Synchronous: 32
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Asynchronous: 16
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM, Third-party

EMULEX CORP.
CSM21-NU
Multiplexer Class: Statistical
Input Interface: RS-232C, Current Loop
Maximum Input Channels:
Synchronous: 32
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Asynchronous: 16
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM, Third-party

ERICSSON PROMATIC, INC.
1111
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 1
Transmission Mode: Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex, Echoplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed

Detection (Autobaud), Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request
Diagnostic Features: Local
Distribution Method: End user
Price: $990
Number Installed to Date: Under 100
(See Vendor Profile Page V-11)

ERICSSON PROGRAMTIC, INC. 1112
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 2
Transmission Mode: Full-Duplex, Echoplex
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex, Echoplex
Output Line Transmission Rates:
Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request
Diagnostic Features: Local
Distribution Method: End user
Price: $1,140
Number Installed to Date: Under 100

ERICSSON PROGRAMTIC, INC. 1114
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 4
Asynchronous: 1
Transmission Mode: Full-Duplex, Echoplex
Input Transmission Rates:
Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps;2,400 bps, 3,600 bps, 4,800 bps;
Asynchronous - 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex, Echoplex
Output Line Transmission Rates:
Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request
Diagnostic Features: Local
Distribution Method: End user
Price: $1,510
Number Installed to Date: Under 100

ERICSSON PROGRAMTIC, INC. 1116
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 8
Asynchronous: 1
Transmission Mode: Full-Duplex, Echoplex
Input Transmission Rates:
Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps;
Asynchronous - 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex, Echoplex
Output Line Transmission Rates:
Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request
Distribution Method: End user
Price: $2,150
Number Installed to Date: Under 100

FIBRONICS INTERNATIONAL, INC. FM 614
Multiplexer Class: Fiber-Optic
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 16
Asynchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 19,200 bps;
Asynchronous/Synchronous - Up to 64,000 bps
Output Transmission Mode: Full-Duplex
Communications Protocols: Transparent to User
Features: Automatic Speed Detection (Autobaud), Polling
Diagnostic Features: Remote, Local
Price: $2,000 to $2,800
Date First Installed: 1981
Number Installed to Date: Under 100
(See Vendor Profile Page V-12)

FIBRONICS INTERNATIONAL, INC. FM 618
Multiplexer Class: Fiber-Optic
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 16
Asynchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 19,200 bps;
Asynchronous/Synchronous - Up to 64,000 bps
Output Transmission Mode: Full-Duplex
Communications Protocols: Transparent to User
Features: Automatic Speed Detection (Autobaud), Polling
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $3,300 to $4,900
Date First Installed: 1981
Number Installed to Date: Under 100

FIBRONICS INTERNATIONAL, INC. FM 632
Multiplexer Class: Fiber-Optic
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, V.35,T-1,RS-449
Maximum Input Channels:
Synchronous: 128
Asynchronous: 32
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 19,200 bps;
Synchronous - Up to 64,000 bps
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - T-1
Communications Protocols: Transparent to User
Features: Polling
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $5,400 to $15,000
Date First Installed: 1983
Number Installed to Date: Under 100

FIBRONICS INTERNATIONAL, INC. FM 1608
Multiplexer Class: Fiber-Optic
Input Interface: IBM 3270, ITT
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 23,580 bps
Output Transmission Mode: Full-Duplex
Communications Protocols: IBM 3270, ITT, Raytheon
Features: Polling
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,300 to $2,200
Date First Installed: 1983
Number Installed to Date: Under 100

FIBRONICS INTERNATIONAL, INC. FM 1632
Multiplexer Class: Fiber-Optic
Maximum Input Channels:
Synchronous: 32
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 23,580 bps
Output Transmission Mode: Half-Duplex
Communications Protocols: IBM 3270, ITT, Raytheon
Features: Polling, Fiber Optic or Coaxial Link
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,825 to $4,900
Date First Installed: 1982
Number Installed to Date: 100 - 500

FRIEDMAN ASSOCIATES DATAGRAM DM600
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 9
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 110 bps, 300 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Asynchronous - 14,400 bps
Communications Protocols: HDLC (CCITT X.25 Level 2)
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Polling, Port Contention, Flow Control
Diagnostic Features: Local
Distribution Method: End user
Price: $1,550 to $2,750
Date First Installed: January 1982
(See Vendor Profile Page V-12)

FRIEDMAN ASSOCIATES DATAGRAM DM1600
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 16
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 540 bps
Maximum Output Lines:
Synchronous: 16
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Port Contention, Operational and Statistical Reports, Flow Control
Diagnostic Features: Local
Distribution Method: End user
Price: $2,900 to $5,000
Date First Installed: January 1981

FRIEDMAN ASSOCIATES DATAGRAM DM4800
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 52
Transmission Mode: Full-Duplex

Multiplexers

Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 540 bps
Maximum Output Lines:
Synchronous: 56
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 2,400 bps, 4,800 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Port Contention, Flow Control
Diagnostic Features: Local
Distribution Method: End user
Price: $3,600 to $13,200
Date First Installed: June 1981

FREEMAN ASSOCIATES
NEC STAT MUX
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Port Contention, Switching, Flow Control
Diagnostic Features: Local
Distribution Method: End user
Price: $35,000
Date First Installed: April 1982

FUJITSU AMERICA, INC.
F 1961A
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 16
Asynchronous: 16
Transmission Mode: Echoplex
Input Transmission Rates: Asynchronous/Synchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 1,530 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 19,200 bps
Communications Protocols: SDLC
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor, LCD Display; Prompting Protocol Configuration
Diagnostic Features: Remote, Local
Distribution Method: OEM
Date First Installed: October 1983
Number Installed to Date: 10
Number Installed to Date: Under 100
(See Vendor Profile Page V-12)

GANDALF DATA, INC.
PIN 9101 E
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 16
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 576 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), CCITT X.25 (Level 3), Ascii
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Supports HP ENQ/ACK Protocol
Diagnostic Features: Local
Distribution Method: End user
Price: $2,650 to $5,750
Date First Installed: 1981
Number Installed to Date: Under 100
(See Vendor Profile Page V-12)

GANDALF DATA, INC.
PIN 9103
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 32
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Operational and Statistical Reports, Flow Control, Programmable, Priority Channel Assign
Diagnostic Features: Local
Distribution Method: End user
Price: $1,650 to $7,150
Date First Installed: 1979
Number Installed to Date: 500 - 1,000

GANDALF DATA, INC.
PIN 9106
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 4
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps
Communications Protocols: SDLC
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flow Control, Built-in for Test Pattern Generation
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $825 to $1,095
Date First Installed: 1983
Number Installed to Date: Under 100

GANDALF DATA, INC.
GLM 504
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Asynchronous: 4
Transmission Mode: Half-Duplex, Full-Duplex
Aggregate Transmission Rate: bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 56,000 bps; Asynchronous/Synchronous - Up to 64K bps
Features: EIA Signal Throughput
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,550
Date First Installed: 1981
Number Installed to Date: Under 100

GANDALF DATA, INC.
LINE MISER-MUX4/MUX8
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 384 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Features: Port Contention, Switching
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $850 to $850
Date First Installed: January 1984
Number Installed to Date: Under 100

GANDALF DATA, INC.
LINE MISER-T1 MUX
Multiplexer Class: Wideband (T-1)
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 128
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 3,072 bps
Maximum Output Lines:
Asynchronous: T-1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - T-1
Communications Protocols: Bipolar RTZ
Features: Flow Control, Synchronous to PBX, Transparent
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $3,200
Number Installed to Date: Under 100

GANDALF DATA, INC.
LINE MISER-T1 MUX
Multiplexer Class: Wideband (T-1)
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 128
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps

Aggregate Transmission Rate: 3,072 bps
Maximum Output Lines:
Asynchronous: T-1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - T-1
Communications Protocols: Bipolar RTZ
Features: Flow Control, Synchronous to PABX, Transparent
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $3,200
Number Installed to Date: Under 100

GENCOMP, INC.
ASYNCHRONOUS MULTIPLEXER MODEL 2033
Multiplexer Class: TDM
Input Interface: RS-232C, Current Loop
Maximum Input Channels:
Synchronous: 128
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 1,536 bps
Output Line Transmission Rates: Asynchronous - Direct Connect to PDP-11
Communications Protocols: Ascii
Diagnostic Features: No
Distribution Method: OEM
Price: $1,000 to $3,000
Date First Installed: 1979
Number Installed to Date: 500 - 1,000
(See Vendor Profile Page V-13)

GENCOMP, INC.
ASYNCHRONOUS MULTIPLEXER MODEL 2035
Multiplexer Class: TDM
Input Interface: RS-232C, Current Loop
Maximum Input Channels:
Synchronous: 128
Transmission Mode: Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps, 134.5M bps, 150M bps
Aggregate Transmission Rate: 1,500 bps
Output Line Transmission Rates: Asynchronous - Direct Connect to PDP-11
Communications Protocols: Ascii
Diagnostic Features: Local
Distribution Method: End user
Price: $2,000 to $3,000
Number Installed to Date: Under 100

GENCOMP, INC.
ASYNCHRONOUS MULTIPLEXER MODEL 2133
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 128
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps, 134.5M bps, 150M bps
Aggregate Transmission Rate: 500 bps
Output Line Transmission Rates: Asynchronous - Direct Connect to LSI
Communications Protocols: Ascii
Diagnostic Features: Local
Distribution Method: OEM
Price: $900
Date First Installed: March 1983
Number Installed to Date: Under 100

GENCOMP, INC.
ASYNCHRONOUS MULTIPLEXER MODEL 2136
Multiplexer Class: TDM
Input Interface: RS-232C, Current Loop
Maximum Input Channels:
Synchronous: 128
Transmission Mode: Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps, 134.5M bps, 150M bps, 38.4K bps
Aggregate Transmission Rate: 1,500 bps
Output Line Transmission Rates: Asynchronous - Direct Connect to LSI-11
Communications Protocols: Ascii
Diagnostic Features: Local
Distribution Method: OEM
Price: $2,000 to $3,000
Number Installed to Date: Under 100

GENERAL DATACOMM INDUSTRIES, INC.
GENNET 1261
Multiplexer Class: Network Concentrator
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Half-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - Up to 19,200 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flow Control
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $1,400 to $2,200
Date First Installed: December 1983
Number Installed to Date: Under 100
(See Vendor Profile Page V-12)

GENERAL DATACOMM INDUSTRIES, INC.
GENNET 1262
Multiplexer Class: Network Concentrator
Input Interface: RS-232C, RS-422, RS-423, CCITT V.24/V.28, V.10, V.11
Maximum Input Channels:
Synchronous: 96
Asynchronous: 96
Transmission Mode: Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps to 19,200 bps
Aggregate Transmission Rate: 760 bps
Maximum Output Lines:
Asynchronous: 4
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 256,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor, Split Rates, Intelligent Front Panel
Diagnostic Features: Remote, Local
Distribution Method: End user
Date First Installed: June 1983
Number Installed to Date: Under 100

GENERAL DATACOMM INDUSTRIES, INC.
MEGAMUX (TDM 1287/1288)
Multiplexer Class: TDM
Input Interface: RS-232C, RS-422, RS-423, CCITT V.24/V.28, MIL 188C, CCITT V.703
Maximum Input Channels:
Synchronous: 54
Asynchronous: 54
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps; Asynchronous/Synchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps; Synchronous - 19,200 bps
Aggregate Transmission Rate: 20,400 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 256,000 bps
Features: Automatic Speed Detection (Autobaud), Network Monitor, Fiber-Optic Aggregate Interface
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $6,000 to $35,000
Date First Installed: June 1981
Number Installed to Date: 500 - 1,000

GENERAL DATACOMM INDUSTRIES, INC.
TDM 1200 SERIES
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 150 bps, 300 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 38 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: Ascii
Diagnostic Features: Local
Distribution Method: End user
Price: $995 to $1,295
Date First Installed: April 1981
Number Installed to Date: 1,000 - 5,000

GTE NETWORK SYSTEMS
9604 A/B
Multiplexer Class: Statistical Multiplexer
Maximum Input Channels:
Synchronous: 24
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - 4,800 bps, 56,000 bps
Aggregate Transmission Rate: 1.3K bps
Maximum Output Lines: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: 1.5K bps
Features: Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $15,000
Date First Installed: June 1983
Number Installed to Date: Under 500
(See Vendor Profile Page V-13)

HALCYON COMMUNICATIONS
4001
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 32
Transmission Mode: Echoplex
Input Transmission Rates: Synchronous - 50 bps, 9,600 bps
Aggregate Transmission Rate: 48 bps

Multiplexers

Maximum Output Lines:
Asynchronous: 1
Other: Split Link
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Operational and Statistical Reports, Programmable, Network Monitor, Remote Term Control
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,700 to $4,100
Date First Installed: 1982
Number Installed to Date: Under 100
(See Vendor Profile Page V-13)

MALGTON COMMUNICATIONS
4226
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 60
Asynchronous: 60
Transmission Mode: Echoplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 9,600 bps
Aggregate Transmission Rate: 48 bps
Maximum Output Lines:
Synchronous: 2
Asynchronous: 1
Other: Split Link
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Polling, Operational and Statistical Reports, Programmable, Network Monitor, Executive Port Option, Port Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $3,800 to $6,500
Date First Installed: 1982
Number Installed to Date: Under 100

MDI
3200
Multiplexer Class: Terminal Multiplexer
Maximum Input Channels:
Synchronous: 8
Maximum Output Lines:
Synchronous: 1
(See Vendor Profile Page V-14)

INFINET, INC.
MX400
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Asynchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - 1,200 bps, 2,400 bps, 4,800 bps
Aggregate Transmission Rate: 48 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 4,800 bps
Features: Programmable
Diagnostic Features: No
Distribution Method: End user
Price: $300
Number Installed to Date: 1,000 - 5,000
(See Vendor Profile Page V-15)

INFINET, INC.
MX496
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Asynchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - 2,400 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps
Features: Programmable, Tracks Fallback Rate of Modem
Diagnostic Features: No
Distribution Method: End user
Price: $800
Number Installed to Date: 100 - 500

INFINET, INC.
MX600
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Asynchronous: 6
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - 2,400 bps, 4,800 bps, 7,200 bps, 9,600 bps; Asynchronous/Synchronous - 14,400 bps, 120,000 bps
Aggregate Transmission Rate: 144 bps
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 19,200 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, BSC
Features: Programmable
Diagnostic Features: No
Distribution Method: End user
Price: $1,000
Number Installed to Date: Under 100

INFOTRON SYSTEMS CORP.
782 NETWORK CONCENTRATOR
Multiplexer Class: Network Concentrator
Input Interface: RS-232C, CCITT V.24/V.28
Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Asynchronous: 3
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - Up to 9,600 bps
Communications Protocols: SDLC, Ascii, Baudot
Features: Automatic Repeat Request, Port Contention, Switching, Flow Control
Price: $1,200

INFOTRON SYSTEMS CORP.
SM680 WITH 780NC OR 782NC
Multiplexer Class: Network Concentrator
Maximum Input Channels:
Asynchronous: 16
Input Transmission Rates: Asynchronous/Synchronous - 9,600 bps
Aggregate Transmission Rate: 384 bps
Features: Port Contention, Switching, Flow Control
Price: $1,200

INFOTRON SYSTEMS CORP.
SUPERMUX 780
Multiplexer Class: Network Concentrator
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 640
Asynchronous: 640
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps; Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 384 bps

Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 3,072 bps
Communications Protocols: BSC, Ascii
Features: Automatic Speed Detection (Autobaud), Switching, Flow Control
Diagnostic Features: Remote, Local
Price: $4,500 to $7,900
(See Vendor Profile Page V-16)

INFOTRON SYSTEMS CORP.
SM480 WITH 780NC OR 782NC
Multiplexer Class: Network Concentrator
Maximum Input Channels:
Asynchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 134.5M bps, 200M bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Asynchronous: 3
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - Up to 9,600 bps
Communications Protocols: SDLC, Ascii, Baudot
Features: Automatic Repeat Request, Port Contention, Switching, Flow Control
Price: $1,200

INFOTRON SYSTEMS CORP.
SM680 WITH 780NC OR 782NC
Multiplexer Class: Network Concentrator
Maximum Input Channels:
Asynchronous: 16
Input Transmission Rates: Asynchronous/Synchronous - 9,600 bps
Aggregate Transmission Rate: 384 bps
Features: Port Contention, Switching, Flow Control
Price: $1,200

INFOTRON SYSTEMS CORP.
SUPERMUX 780
Multiplexer Class: Network Concentrator
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 640
Asynchronous: 640
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps; Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 384 bps

Maximum Output Lines:
Asynchronous: 15
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 72,000 bps
Features: Downline Loading (On-Line Reconfiguration), Port Contention, Switching, Flow Control, Network Monitor, Optional ANM 800 Network Monitor
Diagnostic Features: Local
Price: $4,600 to $7,100

INFOTRON SYSTEMS CORP.
SUPERMUX 380 STAT MUX
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28, DB-25-P
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Synchronous - Up to 9,600 bps
Aggregate Transmission Rate: 768 bps
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: SDLC
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Flow Control, Programmable
Diagnostic Features: Remote, Local
Price: $1,375 to $1,750

INFOTRON SYSTEMS CORP.
SUPERMUX 480 STAT MUX
Multiplexer Class: Statistical
Input Interface: RS-232C, 20 mA or 60 mA Current Loop
Maximum Input Channels:
Synchronous: 8
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 768 bps
Output Line Transmission Rates: Synchronous - 2,400 bps, 4,800 bps; Asynchronous/Synchronous - Up to 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC
Features: Automatic Speed Detection, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flow Control
Diagnostic Features: Local
Price: $1,900 to $6,000

INFOTRON SYSTEMS CORP.
SUPERMUX 816
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 16
Asynchronous: 16
Input Transmission Rates: Asynchronous/Synchronous - 50

bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps; Synchronous - 50 bps to 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Port Contention, Switching
Diagnostic Features: Remote, Local
Price: $5,500
Date First Installed: 1982

INFOTRON SYSTEMS CORP. SUPERMUX 632
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 32
Asynchronous: 32
Input Transmission Rates:
Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 192 bps
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Port Contention, Switching
Diagnostic Features: Remote, Local
Price: $9,000
Date First Installed: 1982

INFOTRON SYSTEMS CORP. SUPERMUX 680 STAT MUX
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 32
Asynchronous: 32
Transmission Mode: Half-Duplex
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 134.5M bps, 150M bps; Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps
Aggregate Transmission Rate: 384 bps
Maximum Output Lines:
Asynchronous: 3
Output Transmission Mode: Half-Duplex
Output Line Transmission Rates:
Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps; Asynchronous/Synchronous - Up to 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flow Control
Diagnostic Features: Remote, Local
Price: $3,000 to $5,200

INFOTRON SYSTEMS CORP. SUPERMUX 780 STAT MUX
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28, DB-25-P
Maximum Input Channels:
Synchronous: 128
Asynchronous: 128
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 134.5M bps, 150M bps;
Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 384 bps
Output Line Transmission Rates:
Asynchronous/Synchronous - Up to 19,200 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC
Features: Automatic Speed Detection (Autobaud), Data Compression
Diagnostic Features: Remote, Local
Price: $1,700

INFOTRON SYSTEMS CORP. T1 MULTIPLEXER
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Asynchronous: 48
Input Transmission Rates:
Asynchronous/Synchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Output Line Transmission Rates:
Asynchronous - T-1
Communications Protocols: HDLC (CCITT X.205 Level 2)
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $4,800

INFOTRON SYSTEMS CORP. TIMELINE 180 MULTIPLEXER
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28, MIL 188C
Maximum Input Channels:
Synchronous: 16
Input Transmission Rates:
Synchronous - 37.5 bps to 9,600 bps
Aggregate Transmission Rate: 192 bps
Output Line Transmission Rates:
Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Features: Automatic Speed Detection (Autobaud)
Diagnostic Features: Remote, Local
Price: $1,700
Date First Installed: 1975

INFOTRON SYSTEMS CORP. TIMELINE 280 MULTIPLEXER
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Asynchronous: 24
Input Transmission Rates:
Asynchronous/Synchronous - Up to 19,200 bps
Aggregate Transmission Rate: 640 bps
Diagnostic Features: Local
Price: $1,800
Date First Installed: 1978

INFOTRON SYSTEMS CORP. TIMELINE 290 MULTIPLEXER
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Asynchronous: 4
Input Transmission Rates:
Asynchronous/Synchronous - Up to 7,200 bps
Aggregate Transmission Rate: 96 bps
Diagnostic Features: Local
Price: $1,950
Date First Installed: 1976

INTEGRATED DESIGN ENGINEERING, INC. IDE-250SA, -250CA
Multiplexer Class: Concentrator
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 16
Transmission Mode: Half-Duplex, Echoplex
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: Asci, IDE Protocol
Features: Data Compression, Protocol Conversion, Flyback Buffering Delay, Port Contention, Switching, Programmable
Diagnostic Features: Local
Distribution Method: End user
Price: $1,600 to $6,850
Date First Installed: 1979
Number Installed to Date: 100 - 500
(See Vendor Profile Page V-16)

INTERACTIVE SYSTEMS/3M MODEL 6330 STAT MUX
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 32

Meet The Cordless Wonder

New mLDS 122
ASYNC SHORT-HAUL

- Requires no desk space
- Requires no power cord or EIA cable
- Powered by EIA signals
- Range to four miles on LADS at 50 to 9600 bps
- Auto-equalized short-haul modem
- **ALL FOR ONLY $95!**

Phone 312-541-6060 today.

gandalf™

Gandalf Data, Inc. 1019 S. Noel Ave. Wheeling, IL 60090 TWX: 910-651-4951

Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps; Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps to 76,800 bps; Synchronous - 3,600 bps, 7,200 bps, 19,200 bps
Aggregate Transmission Rate: 3,072 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 76,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, Ascii
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Operational and Statistical Reports, Flow Control, Programmable
Diagnostic Features: Remote
Distribution Method: End user
Price: $3,640 to $8,150
Date First Installed: 1983
Number Installed to Date: Under 100
(See Vendor Profile Page V-16)

INTERACTIVE SYSTEMS/3M MODEL 6600
Multiplexer Class: TDM
Input Interface: IBM 3274 CRTS
Maximum Input Channels:
Asynchronous: 32
Transmission Mode: Half-Duplex
Input Transmission Rates: Asynchronous/Synchronous - 4.7K bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Half-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 4.7K bps
Communications Protocols: IBM, 3274 Type "A" CRT
Diagnostic Features: Local
Distribution Method: End user
Price: $1,600 to $3,090
Date First Installed: 1981
Number Installed to Date: 500 - 1,000

INTERBUSINESS CORP.
DUAL MUX A
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 2
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 192 bps
Output Transmission Mode: Full-Duplex
Features: Automatic Speed Detection (Autobaud), Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Flow Control, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM
Price: $695
Date First Installed: June 1983
Number Installed to Date: Under 100
(See Vendor Profile Page V-16)

INTERBUSINESS CORP.
DUAL MUX S
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Asynchronous: 2
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 192 bps
Output Transmission Mode: Full-Duplex
Features: Automatic Speed Detection (Autobaud), Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Flow Control, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM
Price: $695
Date First Installed: June 1983
Number Installed to Date: Under 100
(See Vendor Profile Page V-16)

INTERBUSINESS CORP.
QUAD MUX S
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Asynchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 384 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Features: Automatic Speed Detection (Autobaud), Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Flow Control, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM
Price: $1,150
Date First Installed: June 1983
Number Installed to Date: Under 100

INTERBUSINESS CORP.
QUAD MUX 4 CHANNEL STAT MUX
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 384 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Full-Duplex
Features: Automatic Speed Detection (Autobaud), Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Flow Control, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM
Price: $1,150
Date First Installed: June 1983
Number Installed to Date: Under 100

INTERFACE ELECTRONICS, INC.
SLAM
Multiplexer Class: Interface Board
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 16
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Maximum Output Lines:
Synchronous: 16
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: Ascii
Features: Loopback
Diagnostic Features: Local
Distribution Method: OEM
Price: $1,900
Date First Installed: 1979
Number Installed to Date: Under 100
(See Vendor Profile Page V-16)

INTERLAN, INC.
NTS-10 TERMINAL SAVER
Multiplexer Class: Statistical
Input Interface: RS-232C
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 384 bps
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates: Asynchronous - 10K bps
Communications Protocols: XNS
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Polling, Port Contention, Switching, Flow Control, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $400
Date First Installed: September 1983
Number Installed to Date: Under 100
(See Vendor Profile Page V-16)

INTER-LINK
LN-1000
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 80 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: HDLC Proprietary
Features: Automatic Speed Detection (Autobaud), Data Compression, Protocol Conversion, Automatic Repeat Request, Port Contention, Flow Control
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $995 to $1,535
Date First Installed: 1982
Number Installed to Date: Under 100
(See Vendor Profile Page V-16)

INTER-LINK
LN-2000
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 80 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: CCITT X.25 (Level 3)
Features: Automatic Speed Detection (Autobaud), Data Compression, Protocol Conversion, Automatic Repeat Request, Port Contention, Flow Control

Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $1,895 to $2,695
Date First Installed: September 1982
Number Installed to Date: Under 100

INTER-LINK
LN-4000
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 80 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: CCITT X.25 (Level 3)
Features: Automatic Speed Detection (Autobaud), Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Port Contention, Operational and Statistical Reports, Flow Control
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $2,995 to $3,995
Date First Installed: September 1982
Number Installed to Date: Under 100

INTERSIL SYSTEMS, INC.
5300
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 16
Transmission Mode: Full-Duplex
Aggregate Transmission Rate: 368 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps
Communications Protocols: Ascii
Features: Automatic Speed Detection (Autobaud), Data Compression, Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Operational and Statistical Reports, Flow Control, Programmable
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $1,500 to $2,250
Date First Installed: January 1982
Number Installed to Date: Under 100
(See Vendor Profile Page V-17)

ITT TELECOM PRODUCTS, INC.
D424
Multiplexer Class: TDM
Input Interface: RS-232C, RS-449
Maximum Input Channels:
Synchronous: 24
Asynchronous: 24
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous/Synchronous - 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps, 56K bps
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56K bps, T-1
Communications Protocols: HDLC (CCITT X.25 Level 2), SDLC, CCITT X.25 (Level 3), BSC, Ascii, Transparent
Diagnostic Features: No
Distribution Method: End user
Price: $5,000 - $50,000
Date First Installed: 1982
Number Installed to Date: 500 - 1,000
(See Vendor Profile Page V-17)

LEE SYSTEMS, INC.
407 SYSTEM
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 7
Asynchronous: 7
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 2,400 bps; Synchronous - 9,600 bps
Aggregate Transmission Rate: 672 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 76,800 bps
Communications Protocols: Transparent, Infra Red
Features: Switching, Network Monitor
Diagnostic Features: Local
Distribution Method: Third-party
Price: $13,550
Number Installed to Date: Under 100
(See Vendor Profile Page V-18)

M/A-COM LINKABIT, INC.
MX 24
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 24
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 19,200 bps
Aggregate Transmission Rate: 15,400 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - T-1
Communications Protocols: Asynchronous
Features: Automatic Speed Detection (Autobaud)
Distribution Method: End user
Price: $2,700 to $5,000
Date First Installed: May 1982
Number Installed to Date: 100 - 500
(See Vendor Profile Page V-18)

M/A-COM LINKABIT, INC.
MX 48
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 48
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 19,200 bps
Maximum Output Lines:
Synchronous: 2
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 2 T-1 Lines
Communications Protocols: Asynchronous
Features: Automatic Speed Detection (Autobaud)
Diagnostic Features: No
Distribution Method: End user
Price: $5,600
Date First Installed: May 1982

MANAGE, INC.
MUX-8
Multiplexer Class: Fiber-Optic
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - to 19,200 bps
Aggregate Transmission Rate: 1,536 bps
Maximum Output Lines:
Synchronous: 8
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 625,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, CCITT X.25 (Level 3), BSC, Ascii
Diagnostic Features: No
Distribution Method: End user
Date First Installed: November 1983
Number Installed to Date: Under 100
(See Vendor Profile Page V-18)

MEGADATA CORP.
SM5/X INTERFACE-A
Multiplexer Class: Network Concentrator
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 19,200 bps
Maximum Output Lines:
Synchronous: 4
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 14,400 bps
Communications Protocols: Ascii
Features: Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Polling, Port Contention, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,500
Date First Installed: September 1983
Number Installed to Date: Under 100
(See Vendor Profile Page V-18)

MEGADATA CORP.
SM5/X INTERFACE-S
Multiplexer Class: Network Concentrator
Input Interface: RS-232C
Maximum Input Channels:
Asynchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - 50 bps, 19,200 bps
Maximum Output Lines:
Asynchronous: 4
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 14,400 bps
Communications Protocols: BSC
Features: Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Polling, Port Contention, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,500
Date First Installed: 1982
Number Installed to Date: Under 100

MICOM SYSTEMS, INC.
INSTALINK400 MODEL M401
Multiplexer Class: FDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 1
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Other: Modulated Signal
Output Transmission Mode: Full-Duplex
Features: Automatic Speed Detection (Autobaud)
Diagnostic Features: Local
Distribution Method: Third-party
Price: $550 to $575
Date First Installed: March 1983
Number Installed to Date: 500 - 1,000
(See Vendor Profile Page V-18)

MICOM SYSTEMS, INC.
MICRO 200 PORT CONCENTRATOR
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28

Multiplexers

Maximum Input Channels:
Asynchronous: 1
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 576 bps
Maximum Output Lines:
Asynchronous: 8
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Network Monitor, Local Switching
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $2,550 to $3,250
Date First Installed: April 1983
Number Installed to Date: Under 100

MICOM SYSTEMS, INC.
MICRO 500 ERROR CONTROLLER
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 1
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 1,200/75 Asymmetrical
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates: Asynchronous - Up to 9,600 bps
Features: Data Compression, Protocol Conversion, Automatic Repeat Request, Flyback Buffering Delay, Flow Control, Asynchronous/Synchronous and Full- and Half Duplex Conversion
Diagnostic Features: Remote, Local
Price: $795
Date First Installed: April 1978
Number Installed to Date: 500 - 1,000

MICOM SYSTEMS, INC.
MICRO 900/2 DATA CONCENTRATOR
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 16
Asynchronous: 4
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,800 bps, 134.5M bps, 150M bps, 200M bps; Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 1,200 bps, 1,800 bps, 9,600 bps; Asynchronous/Synchronous - Up to 19,200 bps
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Operational and Statistical Reports, Flow Control, Command Port
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $1,050 to $4,600
Date First Installed: January 1978
Number Installed to Date: 10,000 - 50,000

MICOM SYSTEMS, INC.
MICRO 900/X25
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 24
Asynchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,800 bps; Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: CCITT X.25 (Level-3)
Features: Automatic Speed Detection (Autobaud), Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM, Third-party
Price: $2,050 to $4,600
Date First Installed: November 1982

MICOM SYSTEMS, INC.
MICRO 900/2 MULTIDROP CONCENTRATOR
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 134.5M bps, 150M bps, 200M bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - Up to 9,600 bps
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Polling, Operational and Statistical Reports, Flow Control, Network Monitor, Command Port, Battery Backup
Diagnostic Features: Remote, Local
Price: $900 to $4,600
Number Installed to Date: 500 - 1,000

MICOM SYSTEMS, INC.
MICRO 5000 INTELLIGENT MODEM
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates: Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps; Synchronous - 110 bps, 300 bps, 600 bps
Features: Data Compression, Protocol Conversion, Automatic Repeat Request, Flyback Buffering Delay, Flow Control, Asynchronous/Synchronous and Full- and Half-Duplex Conversion
Diagnostic Features: Remote, Local
Price: $1,500 to $3,400
Date First Installed: April 1978
Number Installed to Date: 500 - 1,000

MICOM SYSTEMS, INC.
MICRO 9000 CONCENTRATOR MODEM
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Transmission Mode: Half-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,800 bps, 134.5M bps, 150M bps, 200M bps; Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 1,200 bps, 1,800 bps, 9,600 bps; Asynchronous/Synchronous - Up to 19,200 bps
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering delay, Operational and Statistical Reports, Flow Control
Diagnostic Features: Local
Distribution Method: Third-party
Price: $1,650 to $7,200
Date First Installed: January 1978
Number Installed to Date: 10,000 - 50,000

MICOM SYSTEMS, INC.
INSTAMUX470 MDL M474 OR 478
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 1,536 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 820M bps
Communications Protocols: Bit Sampled
Features: Automatic Speed Detection (Autobaud)
Diagnostic Features: Local
Distribution Method: Third-party
Price: $695 to $1,050
Date First Installed: October 1982
Number Installed to Date: 500 - 1,000

MICOM SYSTEMS, INC.
INSTATRUNK480 MODEL M481
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 128
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 12,288 bps

Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - T-1
Communications Protocols: Bit Interleaved
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration)
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $3,200 to $12,600
Date First Installed: November 1983
Number Installed to Date: Under 100

MICOM SYSTEMS, INC.
M4096/4+
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Asynchronous: 4
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Synchronous - 2,400 bps, 4,800 bps, 7,200 bps, 9,600 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 4,800 bps, 9,600 bps
Communications Protocols: All Synchronous Protocols
Features: Downline Loading (On-Line Reconfiguration), Switched Carrier Simulation
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $3,695
Date First Installed: September 1983
Number Installed to Date: Under 100

MICOM SYSTEMS, INC.
MICRO100 LINE MULTIPLEXER
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.35
Maximum Input Channels:
Asynchronous: 1
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - 19,200 bps; Asynchronous/Synchronous - Up to 57,600 bps
Aggregate Transmission Rate: 640 bps
Maximum Output Lines:
Asynchronous: 4
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 4,800 bps, 9,600 bps
Communications Protocols: Bit Interleaved
Features: Automatic Downspeed or Line Delete
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $4,300 to $6,400
Date First Installed: September 1979
Number Installed to Date: 100 - 500

MICOM SYSTEMS, INC.
MICRO700 MODEL M700
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Asynchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - 1,200 bps, 2,400 bps, 4,800 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: Bit Interleaved
Features: Downline Loading (On-Line Reconfiguration)
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Date First Installed: 1979
Number Installed to Date: 500 - 1,000

MICOM SYSTEMS, INC.
MICRO750 MODEL 1 OR 2
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Asynchronous: 36
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - 1,200 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps; Asynchronous/Synchronous - Up to 259,600 bps
Output Line Transmission Rates: Synchronous - 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps; Asynchronous/Synchronous - Up to 300,000 bps
Communications Protocols: Bit Interleaved
Features: Downline Loading (On-Line Reconfiguration), Instantaneous Configuation Selection
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $2,500 to $10,000
Date First Installed: 1974
Number Installed to Date: 500 - 1,000

MICOM SYSTEMS, INC.
MICRO 800 CONCENTRATOR SWITCH
Multiplexer Class: Data Concentrator Switch
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Asynchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 1,200 bps, 1,800 bps, 9,600 bps; Asynchronous/Synchronous - Up to 19,200 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps; Synchronous - 14,400 bps
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Operational and Statistical Reports, Flow Control
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $1,400
Date First Installed: September 1979
Number Installed to Date: Under 100

MINNITRONICS CORP.
MZV-11/8 OCTOMUX
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - Up to 38.4K bps
Aggregate Transmission Rate: 3,072 bps
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - Up to 38.K bps
Features: Switching, Programmable
Diagnostic Features: Local
Distribution Method: End user, OEM, Third-party
Price: $1,300
Date First Installed: 1983
(See Vendor Profile Page V-20)

MITEL, INC.
MITEL DATA DEMULTIPLEXER
Multiplexer Class: Demultiplexer
Input Interface: RS-232C
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 300 bps, 1,200 bps
Maximum Output Lines:
Synchronous: 4
Output Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Output Line Transmission Rates: Asynchronous - 300 bps, 1,200 bps
Communications Protocols: Serial Data Link
Features: Switching, Programmable
Diagnostic Features: Local
Distribution Method: Third-party
Price: $850
Date First Installed: June 1982
Number Installed to Date: Under 100
(See Vendor Profile Page V-20)

MODULAR COMPUTER SYSTEMS, INC. (MODCOMP)
1807
Multiplexer Class: TDM
Input Interface: RS-232C, Current Loop V.35, WE301/303
Maximum Input Channels:
Synchronous: 256
Asynchronous: 256
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps to 250,000 bps
Aggregate Transmission Rate: 350 bps
Maximum Output Lines:
Synchronous: 256
Asynchronous: 256
Output Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Output Line Transmission Rates: Asynchronous/Synchronous - 50 bps to 250,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, CCITT X.25 (Level 3), BSC, Ascii, Mesnet
Features: Protocol Conversion, Downline Loading (On-Line Reconfiguration), Polling, Operational and Statistical Reports, Flow Control, Programmable, IBM 2/3780, IBM 3271
Diagnostic Features: Local
Distribution Method: End user
Price: $75,000
Date First Installed: April 1978
Number Installed to Date: 500 - 1,000
(See Vendor Profile Page V-20)

MULTI - TECH SYSTEMS, INC.
MULTI-MUX
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 8
Asynchronous: 1
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Flow Control, Programmable, Point to Point, Multipoint
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,295
Date First Installed: March 1983
(See Vendor Profile Page V-20)

MULTI TECHNOLOGY
RDS-1600
Multiplexer Class: Concentrator
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 16
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 300 bps, 600 bps,

1,200 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Synchronous: 19
Output Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Output Line Transmission Rates: Asynchronous - 300 bps, 600 bps, 1,200 bps, 4,800 bps, 9,600 bps
Communications Protocols: Variable Link CRC16
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Port Contention, Switching, Flow Control, Programmable
Diagnostic Features: Remote, Local
Distribution Method: OEM
Price: $5,000
Date First Installed: June 1978
Number Installed to Date: 100 - 500
(See Vendor Profile Page V-20)

MULTI TRONICS
SBR-700
Multiplexer Class: Concentrator
Input Interface: FSK Modem
Maximum Input Channels:
Synchronous: 1
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 1,200 bps
Aggregate Transmission Rate: 12 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Output Line Transmission Rates: Asynchronous - 1,200 bps
Communications Protocols: Variable Link CRC16
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Flow Control, Programmable
Distribution Method: End user
Price: $1,000
Date First Installed: June 1982
Number Installed to Date: 100 - 500

NETWORK PRODUCTS, INC.
BABY MUX
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 19,200
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps, 134.5M bps
Aggregate Transmission Rate: 384 bps
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: HDLC (CCITT X.205 Level-2)
Features: Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flow Control, Programmable
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $1,350 to $2,300
Date First Installed: April 1982
Number Installed to Date: 500 - 1,000
(See Vendor Profile Page V-21)

NETWORK PRODUCTS, INC.
BABY NET
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 384 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Port Contention, Switching, Operational, Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $1,450 to $2,400
Date First Installed: December 1982
Number Installed to Date: 100 - 500

NETWORK PRODUCTS, INC.
LOCAL MUX
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 8
Asynchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps, 38,400 bps
Aggregate Transmission Rate: 3,072 bps
Maximum Output Lines:
Other: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 937,500 bps
Features: Automatic Speed Detection (Autobaud), Transparent
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $850
Date First Installed: April 1983
Number Installed to Date: 500 - 1,000

NORTHERN TELECOM
COMM-MULTIPLEXER
Multiplexer Class: Concentrator
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 8
Asynchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps; Synchronous - 19,200 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps; Synchronous - 14,400 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, CCITT X.25 (Level 3), BSC
Features: Automatic Speed Detection (Autobaud), Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Programmable, Network Monitor, Auto Dialup
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $2,000
(See Vendor Profile Page V-22)

OPTELECOM, INC.
4481
Multiplexer Class: Fiber-Optic TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 4
Asynchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - Up to 153, 000 bps; Asynchronous - 100,000 bps
Aggregate Transmission Rate: 98,000 bps
Maximum Output Lines:
Other: 1 Aggregate Output Line
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 9.8K bps
Communications Protocols: Optical Intensity Modular Signal
Diagnostic Features: Remote
Distribution Method: End user, OEM
Price: $1,100
Date First Installed: March 1983
Number Installed to Date: 50
(See Vendor Profile Page V-22)

OPTELECOM, INC.
5100-8
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 4
Asynchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,800 bps, 3,600 bps, 7,200 bps; Asynchronous/Synchronous - 38.4K bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 1.2K bps
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Optical - 9,000 bps
Communications Protocols: All RS-232
Diagnostic Features: Remote
Distribution Method: End user, OEM
Price: $6,000
Date First Installed: February 1982
Number Installed to Date: 100

PARADYNE CORP.
DCX-615
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Asynchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Communications Protocols: HDLC (CCITT X.205 Level [illegible]
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration)
Diagnostic Features: Remote, Local
Price: $1,690 to $2,180
Date First Installed: 1982
Number Installed to Date: 500 - 1,000
(See Vendor Profile Page V-23)

PARADYNE CORP.
DCX-625
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28, CCITT V23 V28
Maximum Input Channels:
Synchronous: 32
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration)
Diagnostic Features: Remote, Local
Price: $3,200 to $7,200
Date First Installed: September 1982
Number Installed to Date: 1,000

PARADYNE CORP.
DCX-648
Multiplexer Class: Statistical
Input Interface: V.35

Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Output Line Transmission Rates:
Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps; Asynchronous/Synchronous - 72,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration)
Diagnostic Features: Remote, Local
Price: $10,000 to $85,000
Date First Installed: 1982
Number Installed to Date: Under 100

PARADYNE CORP.
DCX-850
Multiplexer Class: Statistical
Input Interface: CCITT V.24/V.28, V.35
Maximum Input Channels:
Synchronous: 240
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Output Line Transmission Rates:
Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps; Asynchronous/Synchronous - 72,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration)
Diagnostic Features: Remote, Local
Price: $15,000 to $100,000
Date First Installed: 1982
Number Installed to Date: Under 100

PARADYNE CORP.
DCX-851
Multiplexer Class: Statistical
Input Interface: CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Output Line Transmission Rates:
Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: HDLC
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration)
Diagnostic Features: Remote, Local
Price: $2,900 to $3,300
Date First Installed: 1982

PARADYNE CORP.
DCX-871
Multiplexer Class: Statistical
Input Interface: CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 32
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Output Line Transmission Rates:
Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level [illegible])
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration)
Diagnostic Features: Remote, Local
Price: $4,500 to $8,800
Number Installed to Date: 100 - 500

PARADYNE CORP.
MP-14.4 SM
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 16
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps; Asynchronous/Synchronous - 1,200 to 12,000 bps
Output Line Transmission Rates:
Synchronous - 19,200 bps
Features: Automatic Speed Detection (Autobaud)
Price: $14,975
Date First Installed: 1983

PARADYNE CORP.
DCX-T1
Multiplexer Class: TDM
Input Interface: CCITT V.35, 551A, 6-Wire
Maximum Input Channels:
Synchronous: 48
Input Transmission Rates:
Asynchronous - 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps, 44,800 bps
Output Line Transmission Rates:
Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps, T-1; Asynchronous/Synchronous - 1.5M bps
Features: Downline Loading (On-Line Reconfiguration)
Price: $8,000 to $27,000
Date First Installed: 1983

PARADYNE CORP.
DCX-725
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Asynchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates:
Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates:
Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, CCITT X.25 (Level 3)
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Flow Control
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $4,000
Date First Installed: 1982
Number Installed to Date: Under 100

PERIPHONICS CORP.
VOICEPACK
Multiplexer Class: Voice Multiplexer and Front End Processor
Input Interface: RS-232C, CCITT V.24/V.28, MIL 188C, Custom Protocols
Maximum Input Channels:
Synchronous: 100
Asynchronous: 100
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates:
Asynchronous - 300 bps, 1,200 bps
Maximum Output Lines:
Other: Configuration Dependent
Output Transmission Mode: Half-Duplex, Full-Duplex
Features: Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Polling, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Network Monitor, Voice/Data Front End Peripherals
Diagnostic Features: Remote
Distribution Method: End user, OEM
Price: $20,000
Date First Installed: January 1974
Number Installed to Date: Under 100
(See Vendor Profile Page V-23)

PERIPHONICS CORP.
T-COMM
Multiplexer Class: Voice Multiplexer
Input Interface: RS-232C, CCITT V.24/V.28, MIL 188C, Custom Protocols
Maximum Input Channels:
Synchronous: 416
Asynchronous: 416
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps; Asynchronous - 19,200 bps
Maximum Output Lines:
Other: Dependent
Output Transmission Mode: Half-Duplex, Full-Duplex
Communications Protocols: Vendor Dependent
Features: Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote
Distribution Method: End user, OEM
Price: $35,000
Date First Installed: January 1970
Number Installed to Date: 100 - 500

PERIPHONICS CORP.
VOICE STAR
Multiplexer Class: Voice Multiplexer and Front End Processor
Input Interface: RS-232C, CCITT V.24/V.28, MIL 188C, Custom Protocols
Maximum Input Channels:
Synchronous: 416
Asynchronous: 416
Transmission Mode: Full-Duplex
Input Transmission Rates:
Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 3,600 bps, 7,200 bps, 19,200 bps; Asynchronous/Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Maximum Output Lines:
Other: Dependent
Output Transmission Mode: Half-Duplex, Full-Duplex
Communications Protocols: Vendor Dependent
Features: Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote
Distribution Method: End user, OEM
Price: $35,000
Date First Installed: January 1970
Number Installed to Date: 100 - 500

PHALO CORP.
MD-3200
Multiplexer Class: TDM
Input Interface: IBM 3274 Control Terminal
Transmission Mode: Half-Duplex
Input Transmission Rates:
Asynchronous/Synchronous - 2.36M bps
Maximum Output Lines:
Synchronous: 1
Features: 3274 Terminal to Controller
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM
Price: $2,740 to $4,750
Date First Installed: April 1983
(See Vendor Profile Page V-23)

PHALO CORP.
MD-3208
Multiplexer Class: TDM
Input Interface: IBM 3274 Control Terminal
Transmission Mode: Half-Duplex
Input Transmission Rates:
Asynchronous/Synchronous - 2.36M bps
Maximum Output Lines:

Multiplexers

Other: 1 Optical or Coaxial
Output Transmission Mode: Half-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - Proprietary
Communications Protocols: IBM
Features: 3274 Terminal to Controller
Diagnostic Features: No
Distribution Method: End user, OEM
Price: $875
Date First Installed: September 1983

PHALO CORP.
OMX-1900
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 24
Asynchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 4,600 bps
Maximum Output Lines:
Other: Optical Link
Output Transmission Mode: Full-Duplex
Output Transmission Rate: 6.9M bps
Features: Speed and Protocol Transparent
Diagnostic Features: No
Distribution Method: End user
Price: $1,295
Date First Installed: July 1983

PHALO CORP.
OMX-1916
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 48
Asynchronous: 16
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 9,210 bps
Output Transmission Mode: Full-Duplex
Output Transmission Rate: 6.9M bps
Features: Speed and Protocol Transparent
Diagnostic Features: No
Distribution Method: End user
Price: $2,395
Date First Installed: July 1983

PHALO CORP.
OMX-5800
Multiplexer Class: TDM
Input Interface: RS-232C, MIL 188C, RS-449, V.35
Maximum Input Channels:
Synchronous: 64
Asynchronous: 64
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 9,210 bps
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 6M bps
Features: Protocol and Speed Transparent
Diagnostic Features: Local
Distribution Method: End user, OEM
Price: $6,000 to $18,800
Date First Installed: September 1982

PHALO CORP.
OMX-6600
Multiplexer Class: TDM
Input Interface: RS-232C, MIL 188C, RS-449, V.35
Maximum Input Channels:
Synchronous: 64
Asynchronous: 64
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 5,000 bps
Maximum Output Lines:
Other: 2 Optical
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 8M bps
Features: Protocol and Speed Transparent
Diagnostic Features: Remote, Local
Distribution Method: End user, OEM
Price: $3,300 to $16,000
Date First Installed: September 1982

PHILIPS ELECTRONIC INSTRUMENTS
FLEXPAC PAD
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Asynchronous: 15
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Communications Protocols: HDLC (CCITT X.25 Level 2), CCITT X.25 (Level 3)
Features: Automatic Speed Detection, Downline Loading (On-Line Reconfiguration), Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user, Third-party
Number Installed to Date: 500 - 1,000
(See Vendor Profile Page V-33)

PHOENIX DIGITAL CORP.
BABY KNET
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 1,152 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level-2)
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $1,450 to $2,400
Date First Installed: December 1982
Number Installed to Date: 100 - 500
(See Vendor Profile Page V-23)

PHOENIX DIGITAL CORP.
DPAC/PTX-1
Multiplexer Class: TDM
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, 20 mA and 60 mA Current Loop, HDLC
Maximum Input Channels:
Synchronous: 16
Asynchronous: 16
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Synchronous - 50 bps, 75 bps; Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 10,000 bps
Maximum Output Lines:
Synchronous: 16
Asynchronous: 16
Output Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, CCITT X.25 (Level 3), Ascii, Optonet
Features: Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Polling, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: OEM
Price: $5,000 to $9,000
Date First Installed: June 1980
Number Installed to Date: Under 100

PHOENIX DIGITAL CORP.
DPAC-30
Multiplexer Class: TDM
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, 20 mA and 60 mA Current Loop
Maximum Input Channels:
Synchronous: 16
Asynchronous: 16
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Synchronous - 50 bps, 75 bps; Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 10,000 bps
Maximum Output Lines:
Synchronous: 16
Asynchronous: 16
Output Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, CCITT X.25 (Level 3), Ascii, Optonet
Features: Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: OEM
Price: $7,000 to $12,000
Date First Installed: July 1982
Number Installed to Date: Under 100

PHOENIX DIGITAL CORP.
DPAC-30
Multiplexer Class: TDM
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, 20 mA and 60 mA Current Loop
Maximum Input Channels:
Synchronous: 16
Asynchronous: 16
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Synchronous - 50 bps, 75 bps; Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 10,000 bps
Maximum Output Lines:
Synchronous: 16
Asynchronous: 16
Output Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, CCITT X.25 (Level 3), Ascii, Optonet
Features: Data Compression, Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: OEM
Price: $7,000 to $12,000
Date First Installed: July 1982
Number Installed to Date: Under 100

PRENTICE CORP.
SNP 1101
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 1
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps,
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1

Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: HDLC Modified
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Flow Control
Diagnostic Features: Remote
Distribution Method: Third-party
Price: $695
Date First Installed: April 1981
Number Installed to Date: 100 - 500
(See Vendor Profile Page V-24)

PRENTICE CORP.
SNP 1102
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 2
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 1,200 bps to 9,600 bps
Communications Protocols: Modified HDLC
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Flow Control
Diagnostic Features: Remote
Distribution Method: Third-party
Price: $695
Date First Installed: April 1981
Number Installed to Date: 100 - 500

PRENTICE CORP.
SNP 1104
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 110 bps, 150 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 1,200 bps to 9,600 bps
Communications Protocols: Modified HDLC
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Flow Control
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $1,295
Date First Installed: October 1981
Number Installed to Date: 500 - 1,000

PRENTICE CORP.
SNP 1208
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 110 bps, 150 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 1,200 bps to 9,600 bps
Communications Protocols: Modified HDLC
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Polling, Flow Control
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $1,495 to $2,295
Date First Installed: August 1982
Number Installed to Date: 100 - 500

PRENTICE CORP.
SNP 1209
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Asynchronous: 1
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 110 bps, 150 bps, 300 bps; Asynchronous/Synchronous - 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps; Synchronous - 1,800 bps, 3,600 bps, 7,200 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps; Asynchronous/Synchronous - 1,200 to 9,600 bps
Communications Protocols: Modified HDLC
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flow Control
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $2,095 to $2,795
Date First Installed: November 1983
Number Installed to Date: Under 100

RACAL-MILGO, INC.
OMNIMUX 80
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Asynchronous: 4
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps to 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Output Line Transmission Rates: Asynchronous/Synchronous - Up to 19,200 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), Modified Synchronous Input Protocol
Features: Downline Loading (On-Line Reconfiguration), Programmable, Network Monitor, Speed Conversion
Diagnostic Features: Remote, Local
Distribution Method: End user
(See Vendor Profile Page V-24)

RACAL-MILGO, INC.
OMNIMUX 36
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Half-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Synchronous: 8
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 4,800 bps, 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), Modified Half-Duplex
Features: Downline Loading (On-Line Reconfiguration), Network Monitor, Aggregate and Channel Loopback
Distribution Method: End user
Price: $1,800 to $2,600

RACAL-MILGO, INC.
OMNIMUX 40
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 7,200 bps, 9,600 bps; 19,200 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Synchronous: 8
Output Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Output Line Transmission Rates: Asynchronous/Synchronous - Up to 9,600 bps
Communications Protocols: Modified HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Flyback Buffering Delay, Programmable, Network Monitor, Autobaud and Flow Control Optional
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,800 to $2,600

RACAL-MILGO, INC.
OMNIMUX 160
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Asynchronous: 16
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Synchronous - 50 bps to 9,600 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Output Line Transmission Rates: Asynchronous/Synchronous - Up to 19,200 bps
Communications Protocols: Modified HDLC (CCITT X.205 Level 2)
Features: Downline Loading (On-Line Reconfiguration), Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user

RACAL-MILGO, INC.
OMNIMUX 320
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 32
Asynchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Synchronous - 50 to 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 2
Output Line Transmission Rates: Asynchronous/Synchronous - Up to 19,200 bps
Communications Protocols: Modified HDLC (CCITT X.205 Level 2)
Features: Downline Loading (On-Line Reconfiguration), Flow Control, Programmable, Network Monitor

Diagnostic Features: Remote, Local

RACAL-VADIC
SCOTSMAN III
Multiplexer Class: Network Concentrator
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 4
Asynchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 75 bps, 110 bps, 300 bps, 600 bps, 9,600 bps; Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 7,200 bps; Synchronous - 19,200 bps
Aggregate Transmission Rate: 192 bps
Output Line Transmission Rates: Asynchronous - 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2), SDLC, CCITT X.25 (Level 3), BSC, Ascii
Features: Data Compression, Protocol Conversion, Automatic Repeat Request, Flyback Buffering Delay, Operational and Statistical Reports, Network Monitor
Diagnostic Features: Remote, Local
Date First Installed: December 1983
Number Installed to Date: Under 100
(See Vendor Profile Page V-25)

RACAL-VADIC
SCOTSMAN I
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Asynchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 150 bps, 300 bps, 600 bps; Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps; 4,800 bps, 9,600 bps; Synchronous - 3,600 bps, 7,200 bps
Aggregate Transmission Rate: 96 bps
Output Transmission Mode: Echoplex
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flow Control
Distribution Method: End user
Price: $1,850
Date First Installed: July 1983
Number Installed to Date: Under 100

RACAL-VADIC
SCOTSMAN II
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Asynchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 134 bps, 150 bps, 200 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Asynchronous: 1
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: Modified HDLC
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Switching, Operational and Statistical Reports, Flow Control, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $2,950 to $4,900
Number Installed to Date: Under 100

RAMSA ELECTRONICS
MODEL 1600
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 16
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 3,072 bps
Maximum Output Lines:
Synchronous: 16
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 14,400 bps
Communications Protocols: CCITT V.24
Features: Polling, Port Contention
Diagnostic Features: Local
Distribution Method: OEM
Price: $360 to $1,900
Date First Installed: January 1979
Number Installed to Date: Under 100
(See Vendor Profile Page V-25)

RAMSA ELECTRONICS
MODEL 2600
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 16
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 3,072 bps
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 14,400 bps
Communications Protocols: 20 mA Current Loop
Features: Polling, Port Contention, Parallel Print Port, Masterfly
Diagnostic Features: Local
Distribution Method: OEM
Price: $900 to $1,440
Date First Installed: January 1977
Number Installed to Date: 100 - 500

RIXON, INC.
DCX840 NETWORK MUX
Multiplexer Class: Network Concentrator
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 240
Input Transmission Rates: Asynchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 384 bps
Maximum Output Lines:
Asynchronous: 15
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps; Asynchronous/Synchronous - 72,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Downline Loading (On-Line Reconfiguration), Flyback Buffering Delay, Flow Control
Diagnostic Features: Local
(See Vendor Profile Page V-25)

RIXON, INC.
DCX850 SWITCHING MUX
Multiplexer Class: Network Concentrator
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 240
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 384 bps
Maximum Output Lines:
Asynchronous: 14
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps; Asynchronous/Synchronous - 72,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Data Compression, Downline Loading (On-Line Reconfiguration), Flyback Buffering Delay, Port Contention, Switching, Flow Control
Diagnostic Features: Local
Price: $80,000

RIXON, INC.
COMMUX STATISTICAL MULTIPLEXER PLUS
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 384 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 4,800 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Flyback Buffering Delay
Diagnostic Features: Local
Distribution Method: End user

RIXON, INC.
DCX815 STATISTICAL MULTIPLEXER
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 8
Transmission Mode: Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 384 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 14,400 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Data Compression, Flyback Buffering Delay, Buffer Overload Protection
Diagnostic Features: Local

RIXON, INC.
DCX825 STATISTICAL MULTIPLEXER
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 32
Asynchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,800 bps, 3,600 bps; Asynchronous/Synchronous - 1,200

bps, 2,400 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps; Asynchronous/Synchronous - 3,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Flyback Buffering Delay
Diagnostic Features: Local

NIXON, INC.
DCX726 SYNCHRONOUS MULTIPLEXER
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 4
Transmission Mode: Full-Duplex, Echoplex
Input Transmission Rates: Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps; Asynchronous/Synchronous - 7,200 bps
Communications Protocols: HDLC

NIXON, INC.
DCX824 STATISTICAL MULTIPLEXER
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 60
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 384 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps, 56,000 bps; Asynchronous/Synchronous - 72,000 bps
Communications Protocols: HDLC
Features: Automatic Speed Detection, Downline Loading (On-Line Reconfiguration), Flyback Buffering Delay, Flow Control
Diagnostic Features: Local

NIXON, INC.
DCX725 SYNCHRONOUS MULTIPLEXER
Multiplexer Class: TDM
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Asynchronous: 4
Transmission Mode: Full-Duplex, Echoplex
Input Transmission Rates: Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 4,800 bps, 9,600 bps, 14,400 bps, 19,200 bps; Asynchronous/Synchronous - 7,200 bps
Communications Protocols: HDLC
Features: Data Compression, Switching
Diagnostic Features: Local

ROCKWELL INTERNATIONAL
DXM-2003
Multiplexer Class: TDM
Input Interface: DS1
Maximum Input Channels:
Asynchronous: 28
Transmission Mode: Full-Duplex
Input Transmission Rates: T-1
Aggregate Transmission Rate: 44.7M bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: 44.7M bps
Communications Protocols: B3ZS
Features: Automatic Speed Detection (Autobaud), Programmable, 75 Watts of Power
Distribution Method: End user
Price: $18,000
Date First Installed: November 1983
Number Installed to Date: Under 500
(See Vendor Profile Page V-25)

SCITEC CORP.
CPX 25
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 32
Asynchronous: 32
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps; Asynchronous - 19,200 bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 2,400 bps, 56,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Flow Control, Programmable
Diagnostic Features: Local
Distribution Method: End user, OEM
Price: $1,850 to $10,000
(See Vendor Profile Page V-26)

SCITEC CORP.
ILX
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 32
Asynchronous: 32
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps; Asynchronous - 19,200 bps
Aggregate Transmission Rate: 384 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps, 9,600 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Flyback Buffering Delay, Flow Control, Programmable
Diagnostic Features: Local
Distribution Method: End user, Third-party
Price: $1,200
Date First Installed: January 1978
Number Installed to Date: 100 - 500

SCITEC CORP.
MPX
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 32
Asynchronous: 32
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7200 bps, 9,600 bps; Asynchronous - 19,200 bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 2,400 bps, 56,000 bps
Communications Protocols: HDLC (CCITT X.205 Level 2)
Features: Automatic Speed Detection (Autobaud), Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Flow Control, Programmable
Diagnostic Features: Local
Distribution Method: End user, OEM
Price: $4,500 to $10,000
Number Installed to Date: Under 100

SCITEC CORP.
ESPT1
Multiplexer Class: TDM
Input Interface: RS-232C, RS-449
Maximum Input Channels:
Asynchronous: 128
Transmission Mode: Full-Duplex
Input Transmission Rates: Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 14,400 bps, 19,200 bps; Asynchronous/Synchronous - 256K bps
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - T-1
Communications Protocols: T-1
Features: Downline Loading (On-Line Reconfiguration), Programmable, Voice
Diagnostic Features: Local
Distribution Method: End user, OEM
Price: $3,900 to $35,000
Date First Installed: March 1983
Number Installed to Date: Under 100

SIERRA RESEARCH CORP.
TC-2/32
Multiplexer Class: Cable
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 60
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 9,600 bps
Maximum Output Lines:
Synchronous: 1
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 9,600 bps
Communications Protocols: Custom
Features: Protocol Conversion, Downline Loading (On-Line Reconfiguration), Polling, Flow Control
Diagnostic Features: Local
Distribution Method: End user, OEM, Third-party
Price: $10,000

Date First Installed: January 1982
Number Installed to Date: Under 100
(See Vendor Profile Page V-26)

SPERRY CORP.
SIXTEEN CHANNEL TERMINAL MULTIPLEXER
Multiplexer Class: Scan for Channel Request
Input Interface: RS-232C, CCITT V.24/V.28
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Synchronous - 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 16
Output Transmission Mode: Half-Duplex, Full-Duplex
Output Line Transmission Rates: Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 14,400 bps
Communications Protocols: Transparent
Features: Polling
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $2,136
Date First Installed: April 1981
Number Installed to Date: 1,000 - 5,000
(See Vendor Profile Page V-26)

TANDY CORP.
COMMUNICATIONS MULTIPLEXER (71-3600)
Multiplexer Class: Concentrator
Input Interface: RS-232C
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 9,600 bps
Maximum Output Lines:
Synchronous: 16
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 300 bps
Communications Protocols: Ascii
Features: Downline Loading (On-Line Reconfiguration), Polling, Port Contention, Programmable, Network Monitor
Diagnostic Features: Local
Distribution Method: End user
Price: $6,000 to $8,000
Date First Installed: February 1980
Number Installed to Date: Under 100
(See Vendor Profile Page V-29)

TAU-TRON, INC.
INTRAPLEX T.D.M. 189
Multiplexer Class: TDM
Input Interface: RS-232C, RS-449
Maximum Input Channels:
Synchronous: 240
Asynchronous: 240
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous/Synchronous - 110 bps
Aggregate Transmission Rate: 1.3M bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Rate: 1.5M bps
Communications Protocols: Transparent to Protocol
Features: Polling, Switching, Programmable
Diagnostic Features: Local
Distribution Method: End user
Price: $3,500 to $8,000
Date First Installed: July 1983
(See Vendor Profile Page V-29)

TELEPROCESSING PRODUCTS, INC.
TP-212
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 2
Asynchronous: 2
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps
Communications Protocols: Ascii
Features: Automatic Repeat Request, Flyback Buffering Delay
Diagnostic Features: No
Distribution Method: End user, Third-party
Price: $850
Date First Installed: June 1981
Number Installed to Date: 100 - 500
(See Vendor Profile Page V-30)

TELEPROCESSING PRODUCTS, INC.
TP-214
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Asynchronous: 4
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps
Communications Protocols: Ascii
Features: Programmable, Automatic Repeat Request, Flyback Buffering Delay
Distribution Method: End user, Third-party
Price: $1,350
Date First Installed: January 1984
Number Installed to Date: Under 100

TELEPROCESSING PRODUCTS, INC.
TP-400 MULTI-DROP STAT MUX
Multiplexer Class: Statistical
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 32
Transmission Mode: Half-Duplex, Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 3,072 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps
Communications Protocols: Ascii
Features: Data Compression, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Polling, Port Contention, Operational and Statistical Reports, Flow Control, Network Monitor
Diagnostic Features: Local
Distribution Method: End user, Third-party
Price: $4,000 to $2,500
Date First Installed: June 1981
Number Installed to Date: 100 - 500

TELLABS, INC.
330A-F DATAPLEXERS
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 32
Asynchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 3,072 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps
Asynchronous/Synchronous - 76.8K bps
Communications Protocols: CCITT X.25 Level 2
Features: Automatic Speed Detection, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Price: $2,400 to $11,900
Date First Installed: 1982
Number Installed to Date: Under 100
(See Vendor Profile Page V-30)

TELLABS, INC.
331 XPLEXER
Multiplexer Class: Concentrator, Data Switching
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 32
Asynchronous: 8
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Aggregate Transmission Rate: 3,072 bps
Maximum Output Lines:
Asynchronous: 16
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 1,200 bps; Asynchronous/Synchronous - Up to 76.8K bps
Communications Protocols: Subset of CCITT X.25 Level 2
Features: Automatic Speed Detection (Autobaud), Automatic Repeat Request, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor, Flexible Network Topology
Diagnostic Features: Remote, Local
Distribution Method: End user, Third-party
Price: $2,900 to $12,900
Date First Installed: 1983

TELMAG, INC.
AMUX-1
Multiplexer Class: TDM
Input Interface: RS-232C
Maximum Input Channels:
Synchronous: 4
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 300 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps
Aggregate Transmission Rate: 192 bps
Maximum Output Lines:
Synchronous: 4
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 1,200 bps, 2,400 bps, 4,800 bps
Communications Protocols: Ascii
Diagnostic Features: Local
Distribution Method: End user
Price: $800
Date First Installed: January 1981
Number Installed to Date: Under 100
(See Vendor Profile Page V-30)

TELTONE CORP.
M-960
Multiplexer Class: Statistical
Input Interface: RS-232C, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 32
Transmission Mode: Full-Duplex, Echoplex
Input Transmission Rates: Asynchronous - 300 bps, 600 bps; Synchronous - 9,600 bps
Aggregate Transmission Rate: 3,072 bps

Maximum Output Lines:
Asynchronous: 2
Output Line Transmission Rates: Asynchronous/Synchronous - 76,800 bps
Communications Protocols: HDLC, SDLC, Subset of CCITT X.25 Level 2
Features: Automatic Speed Detection (Autobaud), Protocol Conversion, Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Polling, Operational and Statistical Reports, Programmable
Diagnostic Features: Remote, Local
Distribution Method: End user
Date First Installed: July 1983
Number Installed to Date: Under 100
(See Vendor Profile Page V-30)

TIMEPLEX, INC.
NETWORKING MICROPLEXER NM84
Multiplexer Class: Statistical
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, MIL 188C
Maximum Input Channels:
Synchronous: 96
Asynchronous: 96
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 9,216 bps
Maximum Output Lines:
Asynchronous: 6
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 14,400 bps
Communications Protocols: HDLC
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $17,000
Date First Installed: 1983
(See Vendor Profile Page V-31)

TIMEPLEX, INC.
NETWORKING MICROPLEXER NM144
Multiplexer Class: Statistical
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, MIL 188C
Maximum Input Channels:
Synchronous: 144
Asynchronous: 144
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - Up to 9,600 bps
Aggregate Transmission Rate: 13,900 bps
Maximum Output Lines:
Asynchronous: 6
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 14,400 bps
Communications Protocols: HDLC
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $17,000
Date First Installed: 1983

TIMEPLEX, INC.
QUAD SWITCHING MICROPLEXER QSM
Multiplexer Class: Statistical
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, MIL 188C
Maximum Input Channels:
Synchronous: 48
Asynchronous: 48
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 4,608 bps
Maximum Output Lines:
Asynchronous: 4
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 14,400 bps
Communications Protocols: HDLC
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $7,525
Date First Installed: 1983

TIMEPLEX, INC.
SERIES II MICROPLEXER M8
Multiplexer Class: Statistical
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, MIL 188C
Maximum Input Channels:
Synchronous: 8
Asynchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps, 75 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps, 14,400 bps, 19,200 bps
Communications Protocols: HDLC
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,625 to $2,650
Date First Installed: 1979

TIMEPLEX, INC.
SERIES II MICROPLEXER M24
Multiplexer Class: Statistical
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, MIL 188C
Maximum Input Channels:
Synchronous: 24
Asynchronous: 24
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous/Synchronous - 50 bps; Asynchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps; 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 2,304 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps, 14,400 bps, 19,200 bps; Asynchronous - 14,400 bps
Communications Protocols: HDLC
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $2,655 to $3,420
Date First Installed: 1980

TIMEPLEX, INC.
SERIES II MICROPLEXER M48
Multiplexer Class: Statistical
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, MIL 188C
Maximum Input Channels:
Synchronous: 48
Asynchronous: 48
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 4,608 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps, 14,400 bps, 19,200 bps
Communications Protocols: HDLC
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $4,690 to $5,150
Date First Installed: 1981

TIMEPLEX, INC.
SWITCHING MICROPLEXER SM8
Multiplexer Class: Statistical
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, MIL 188C
Maximum Input Channels:
Synchronous: 8
Asynchronous: 8
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 768 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps, 14,400 bps
Communications Protocols: HDLC
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,800 to $2,825
Date First Installed: 1981

TIMEPLEX, INC.
SWITCHING MICROPLEXER SM48
Multiplexer Class: Statistical
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, MIL 188C
Maximum Input Channels:
Synchronous: 24
Asynchronous: 24
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - Up to 9,600 bps
Aggregate Transmission Rate: 2,304 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps, 14,400 bps
Communications Protocols: HDLC
Features: Downline Loading, Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $2,830 to $3,855
Date First Installed: 1981

TIMEPLEX, INC.
SWITCHING MICROPLEXER SM48
Multiplexer Class: Statistical
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, MIL 188C
Maximum Input Channels:

Synchronous: 48
Asynchronous: 48
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - Up to 9,600 bps
Aggregate Transmission Rate: 4,608 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps, 14,400 bps
Communications Protocols: HDLC
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $4,125 to $5,150
Date First Installed: 1991

TIMEPLEX, INC.
WIDEBAND MICROPLEXER WB48
Multiplexer Class: Statistical
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, MIL 188C
Maximum Input Channels:
Synchronous: 48
Asynchronous: 48
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 4,608 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 72,000 bps
Communications Protocols: HDLC
Features: Downline Loading (On-Line Reconfiguration), Automatic Repeat Request, Flyback Buffering Delay, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $8,025
Date First Installed: 1992

TIMEPLEX, INC.
LINK1-T1 FACILITIES MANAGEMENT SYSTEM
Multiplexer Class: TDM
Input Interface: RS-232C, RS-422, MIL 188C
Maximum Input Channels:
Synchronous: 44
Asynchronous: 44
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous/Synchronous - Up to 51,000 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - T-1
Features: Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Date First Installed: 1983

TIMEPLEX, INC.
TIMEPLEXER TIG TDM
Multiplexer Class: TDM
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, MIL 188C
Maximum Input Channels:
Synchronous: 16
Asynchronous: 16
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 2,400 bps; Synchronous - 9,600 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 14,400 bps
Features: Operational and Statistical Reports, Flow Control, Programmable
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,725
Date First Installed: 1971

TIMEPLEX, INC.
TIMEPLEXER T-39 TDM
Multiplexer Class: TDM
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, MIL 188C
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 2,400 bps; Synchronous - 9,600 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 14,400 bps
Features: Operational and Statistical Reports, Flow Control, Programmable
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $2,050

TIMEPLEX, INC.
TIMEPLEXER T-96 TDM
Multiplexer Class: TDM
Input Interface: RS-232C, RS-422, CCITT V.24/V.28, MIL 188C
Maximum Input Channels:
Synchronous: 96
Asynchronous: 96
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - 19,200 bps; Asynchronous/Synchronous - 64,000 bps
Maximum Output Lines:
Asynchronous: 3
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - Up to 256,000 bps
Features: Operational and Statistical Reports, Flow Control, Programmable
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $3,270
Date First Installed: 1974

TIMEPLEX, INC.
MICROPLEXER X.25 PAD
Multiplexer Class: Statistical
Multiplexer Class: Packet Assembler/Disassembler
Input Interface: RS-232C, RS-422, CCITT V.24/V.28
Maximum Input Channels:
Synchronous: 48
Transmission Mode: Half-Duplex, Full-Duplex
Input Transmission Rates: Asynchronous - Up tp 9,600 bps Asynchronous/Synchronous - 600 bps, 3,600 bps
Aggregate Transmission Rate: 4,608 bps
Maximum Output Lines:
Asynchronous: 2
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Synchronous - 9,600 bps, 14,400 bps
Communications Protocols: HDLC
Features: Automatic Speed Detection (Autobaud), Protocol Conversion, Automatic Repeat Request, Operational and Statistical Reports, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $1,750
Date First Installed: 1988

USDATA, INC.
PEX-1 INTELLIGENT DATA MULTIPLEXER
Multiplexer Class: Network Concentrator
Input Interface: RS-232C, RS-422
Maximum Input Channels:
Synchronous: 14
Input Transmission Rates: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Communications Protocols: Ascii
Diagnostic Features: Remote, Local
Price: $3,500
(See Vendor Profile Page V-32)

WANG LABORATORIES, INC.
CMUX-2370 CABLE MULTIPLEXOR
Multiplexer Class: TDM
Input Interface: IBM Type "A" Coaxial
Maximum Input Channels:
Asynchronous: 32
Transmission Mode: Half-Duplex
Input Transmission Rates: Asynchronous/Synchronous - 23,500 bps
Aggregate Transmission Rate: 23,500 bps
Maximum Output Lines:
Asynchronous: 1
Output Transmission Mode: Half-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 23,500 bps
Communications Protocols: SDLC
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $3,375
Date First Installed: November 1993
Number Installed to Date: Under 100
(See Vendor Profile Page V-32)

WESTERN DATACOM
PRISM 1003
Multiplexer Class: Statistical
Input Interface: RS-232C, 20 mA Current Loop
Maximum Input Channels:
Synchronous: 3
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Aggregate Transmission Rate: 96 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 9,600 bps
Communications Protocols: High Protocol Streaming
Features: Data Compression, Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Flow Control, Automatic Speed Detection, Autodial Throughput
Diagnostic Features: Remote, Local
Distribution Method: Third-party
Price: $675
Date First Installed: August 1992
Number Installed to Date: 150
(See Vendor Profile Page V-33)

XYPLEX, INC.
XYPLEX SYSTEM
Multiplexer Class: Statistical
Input Interface: RS-232C
Transmission Mode: Full-Duplex
Input Transmission Rates: Asynchronous - 9,600 bps
Maximum Output Lines:
Synchronous: 1
Output Transmission Mode: Full-Duplex
Output Line Transmission Rates: Asynchronous/Synchronous - 1M bps
Features: Automatic Speed Detection, Downline Loading, Automatic Repeat Request, Flyback Buffering Delay, Port Contention, Switching, Flow Control, Programmable, Network Monitor
Diagnostic Features: Remote, Local
Distribution Method: End user
Price: $700
Date First Installed: October 1992
Number Installed to Date: Under 100
(See Vendor Profile Page V-33)

The CPT Solution that talks with mainframes in an important new way:

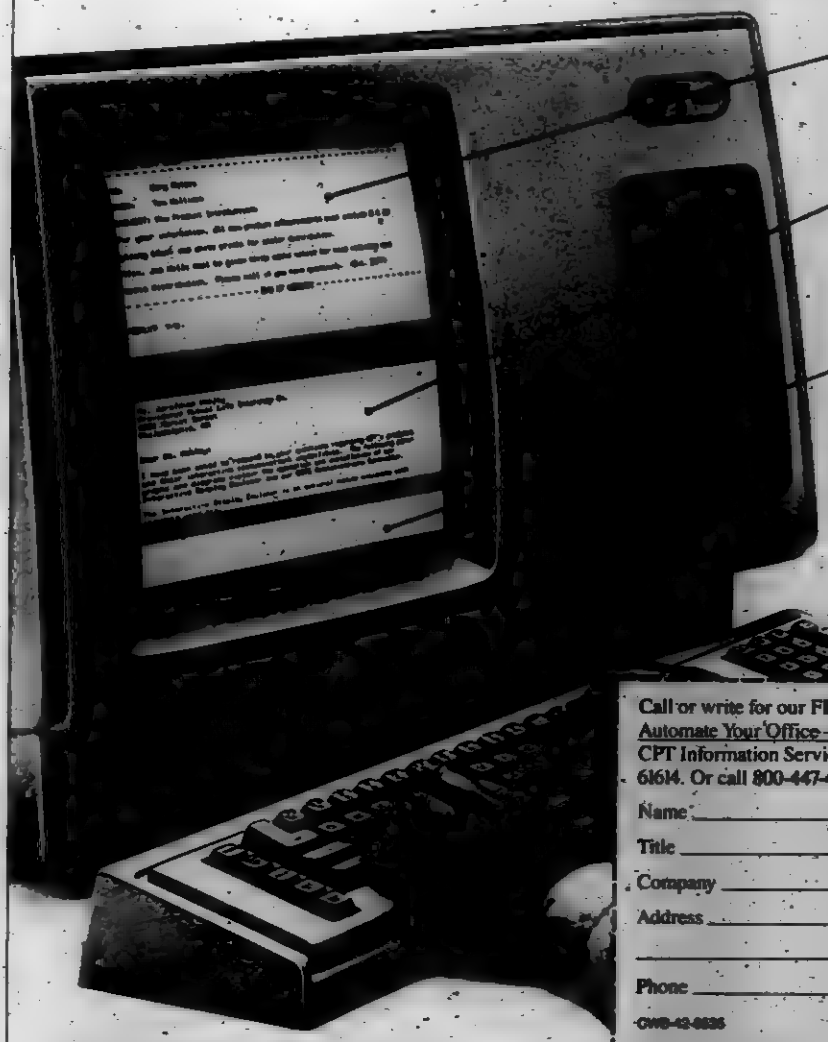
CPT solves the costly, cumbersome problem of separate data terminals and word processors at individual workstations.

An exclusive software breakthrough enables one CPT system to perform both functions. On the same screen. At the same time. We call it the CPT Interactive Display Emulator (IDE).

With this new CPT solution, an operator can transfer data processing information from a host computer (top window) directly to a word processing document-in-progress (middle window). Or vice versa. With just two keystrokes.

In addition, an optional CPT SNA communications controller can link up to 7 CPT systems together as part of an IBM 3270 network.

A few toll-free keystrokes on your telephone will bring you more information. And open some important new windows on the future.



Interactive Communications Window
A full 24-line by 80-column screen that displays information direct from a host computer.

Independent CPT Word Processing Window
A half-page display of the same CPT word processing that's earned a place on the Datapro Honor Roll for the last three years.

Word Processing Preview
Another standard CPT word processing feature. It lets you preview other pages in a document, or scan an entirely different document, without interrupting work in progress.

Specifications are subject to change at the discretion of CPT Corporation.

Call or write for our FREE 28-page booklet, How to Automate Your Office – One Step at a Time.™ Mail to CPT Information Service, P.O. Box 3900, Peoria, Illinois 61614. Or call 800-447-4700.

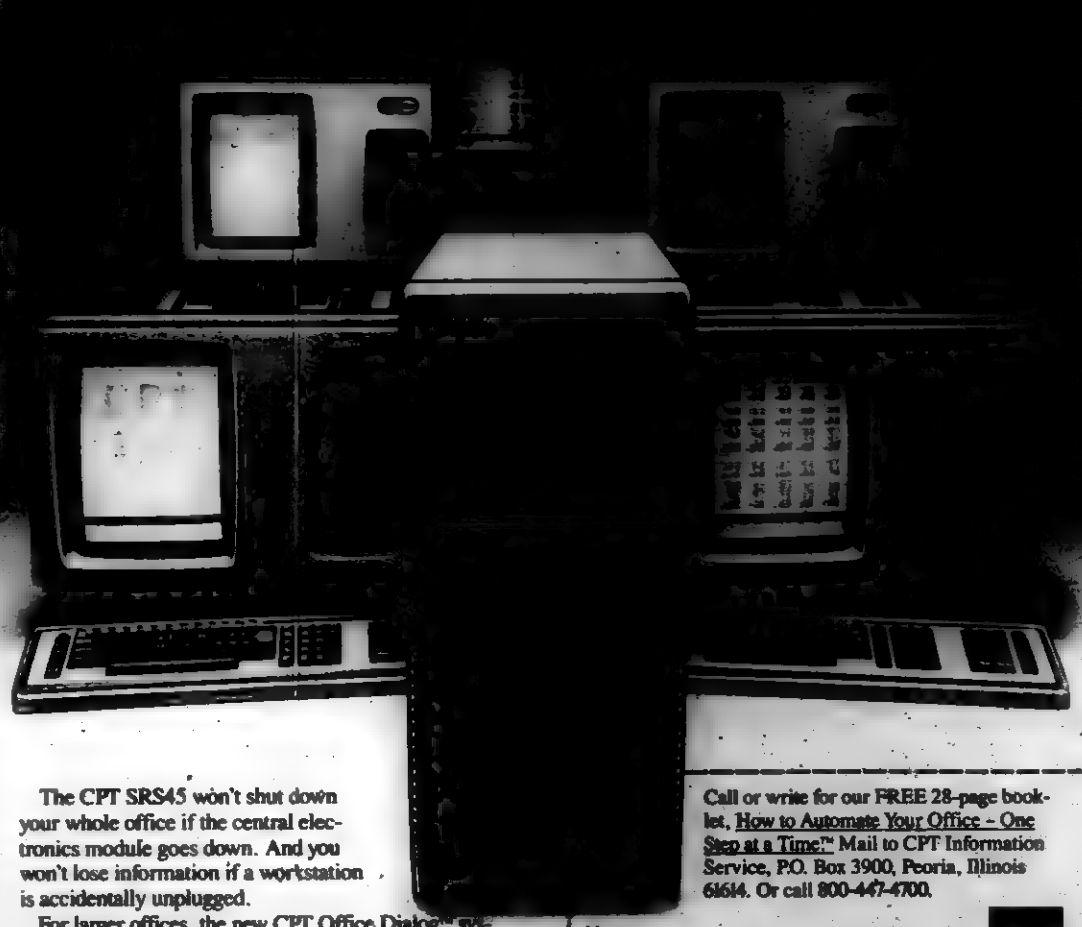
Office automation you can't outgrow

CPT.

New CPT Solutions that work together.



The CPT SRS45 won't shut down your whole office if the central electronics module goes down. And you won't lose information if a workstation is accidentally unplugged.

For larger offices, the new CPT Office Dialog™ system (not shown) supports from 8 to 128 workstations, depending on the application. It provides additional speed and capabilities, and can tie into existing IBM host computer systems with all their workstations.

Before you buy, find out why other multi-workstation systems can't promise many of these features. And why CPT can.

Specifications are subject to change at the discretion of CPT Corporation.

Call or write for our FREE 28-page booklet, How to Automate Your Office - One Step at a Time!™ Mail to CPT Information Service, P.O. Box 3900, Peoria, Illinois 61614. Or call 800-447-4700.

Index to Converters/Emulators

Converters are devices (or software) that convert the transmission characteristics of one data stream to different transmission characteristics. Included in this category are interface, protocol, speed and code conversion products.

Emulators permit one computer system to execute programming written for another computer system.

The index to converters/emulators is arranged alphabetically by vendor and contains the unit price as well as the page number on which the complete listing can be found.

Converters/Emulators

AGILE CORP.
MODEL 3661 TWINAX PROTOCOL CONVERTER
Conversion Function: Protocol Conversion
Number of Ports Supported: 2
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Protocol Conversion: IBM System/34, System/36 to RS-232C, IBM Series/1 to RS-232C
Features: Diagnostics, Polling
Price: $2,495
Distribution Method: End user
(See Vendor Profile Page V-1)

AGILE CORP.
MODEL 5367 PROTOCOL CONVERTER
Conversion Function: Protocol Conversion
Number of Ports Supported: 1
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Protocol Conversion: IBM 3270 BSC to Ascii RS-232C, 3270 SNA/SDLC to Ascii RS-232C, Local 3270 DCA to Ascii RS-232C
Features: Diagnostics, Polling
Price: $2,500
Distribution Method: End user
Number Installed to Date: 500 - 1,000
Date First Installed: September 1981

AGILE CORP.
MODEL 6367 PROTOCOL CONVERTER
Conversion Function: Protocol Conversion
Number of Ports Supported: 1
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 300 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Protocol Conversion: IBM 3270 BSC to Ascii RS-232C, 3270 SNA/SDLC to Ascii RS-232C, 3270 Local DCA to Ascii RS-232C
Features: Diagnostics, Polling
Price: $2,500
Distribution Method: End user

AGILE CORP.
PROGRAMMABLE COMMUNICATIONS INTERFACE LC-396
Conversion Function: Protocol Conversion
Number of Ports Supported: 3
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 50 bps, 75 bps, 110 bps, 1,800 bps, 3,600 bps, 7,200 bps, 9,600 bps; Asynchronous/Synchronous - 300 bps, 600 bps, 1,200 bps, 2,400 bps, 4,800 bps; Asynchronous - 19,200 bps
Protocol Conversion: HP MTS 3000 to RS-232C
Features: Polling
Price: $2,995
Distribution Method: End user
Number Installed to Date: 500 - 1,000
Date First Installed: March 1981

AGILE CORP.
PROGRAMMABLE COMMUNICATION INTERFACE MODEL LC-36
Conversion Function: Protocol Conversion
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 9,600 bps, 19,200 bps
Protocol Conversion: Burroughs Poll Select to Asynchronous Ascii
Features: Diagnostics, Polling
Price: $995
Distribution Method: End user
Number Installed to Date: 500 - 1,000
Date First Installed: November 1977

AIR LAND SYSTEMS CORP.
PRINTER INTERFACES MPC-SERIES
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ebcdic to Ascii, Baudot to Ascii, XS 3 to Ascii
Interface Conversion: Serial RS-232 to Parallel Centronics
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: IBM BSC 2780 to Ascii Unblocked, Honeywell VIP to Ascii Unblocked, Sperry U100 to Ascii Unblocked
Features: Data Compression, Diagnostics, Polling, Autoanswer
Price: $1,200 to $1,850
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 5,000 - 10,000
Date First Installed: 1972
(See Vendor Profile Page V-1)

AIR LAND SYSTEMS CORP.
PROTOCOL CONVERTERS PCU-SERIES
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 16
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps; Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ebcdic to Ascii, XS 3 to Ascii, Baudot to Ascii
Interface Conversion: Serial RS-232 to Serial RS-232
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: IBM PC 2780 to Ascii Asynchronous, Honeywell GRTS to Ascii Asynchronous, Sperry U100 to Ascii Asynchronous
Features: Concentration, Data Compression, Diagnostics, Polling, Autoanswer
Price: $1,400 to $5,000
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 5,000 - 10,000
Date First Installed: 1972

ALPHAMATRIX, INC.
BAE-800
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic, Baudot to Ascii, Ebcdic to Ascii
Interface Conversion: RS-232C to 20 mA Current Loop, RS-232C to 60 mA Current Loop
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: BSC to Ascii, AXDX to Ascii, BLC to Ascii
Features: Concentration, Data Compression, Diagnostics, Polling, Autoanswer
Price: $1,495
Monthly Maintenance Fee: $25
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: 1978
(See Vendor Profile Page V-1)

AMDAHL CORP.
4440 NETWORK CONCENTRATOR
Conversion Function: Protocol Conversion
Number of Ports Supported: 40
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps; Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Protocol Conversion: Asynchronous to X.25, X.25 to Asynchronous
Features: Concentration, Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $6,700 to $14,000
Monthly Maintenance Fee: $80
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: December 1982
(See Vendor Profile Page V-2)

AMDAHL CORP.
4460 NETWORK CONCENTRATOR
Conversion Function: Protocol Conversion
Number of Ports Supported: 8
Transmission Mode: Full-Duplex
Standard Transmission Rate: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Protocol Conversion: Bisynchronous 3270 to X.25, X.25 to Bisynchronous 3270
Features: Concentration, Diagnostics, Polling
Price: $10,700
Monthly Maintenance Fee: $70
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: January 1983

AMDAHL CORP.
4470 NETWORK CONCENTRATOR
Conversion Function: Protocol Conversion
Number of Ports Supported: 8
Transmission Mode: Full-Duplex
Standard Transmission Rate: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Protocol Conversion: SDLC/SNA 3270 to X.25, X.25 to SDLC/SNA 3270
Features: Concentration, Diagnostics, Polling
Price: $12,500
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: February 1984

ASAHAZI
KACHINA 2
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 5
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps, 56,000 bps
Code Conversion: Ascii to Ebcdic
Interface Conversion: RS-232C to CCITT V.27
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: BLC to HDLC
Features: Concentration, Data Compression, Diagnostics, Polling,

Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer, Integrated Modem
Price: $4,000 to $25,000
Distribution Method: End user
Number Installed to Date: 500 - 1,000
Date First Installed: 1981
(See Vendor Profile Page V-2)

APEX TECHNOLOGY
S-10
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 1
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Burroughs to RS-232C
Interface Conversion: Burroughs to RS-232C
Protocol Conversion: Burroughs to RS-232C
Features: Data Compression, Diagnostics
Price: $1,150
Distribution Method: Third-party
Number Installed to Date: Under 100
Date First Installed: 1982
(See Vendor Profile Page V-2)

APEX TECHNOLOGY
T-10
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 1
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Data Products Parallel to Synchronous RS-232C
Interface Conversion: Data Products Parallel to Synchronous RS-232C
Protocol Conversion: Data Products Parallel to Synchronous RS-232C
Features: Data Compression, Diagnostics
Price: $3,500
Distribution Method: Third-party
Number Installed to Date: Under 100
Date First Installed: September 1982

AST RESEARCH, INC.
AST-BSC
Conversion Function: Emulator
Transmission Mode: Half-Duplex
Price: $895
Distribution Method: OEM
Number Installed to Date: Under 100
Date First Installed: 1983
(See Vendor Profile Page V-2)

AST RESEARCH, INC.
AST-PCOX
Conversion Function: Emulator
Number of Ports Supported: 1
Standard Transmission Rate: 2.35M bps
Price: $1,195
Distribution Method: OEM
Number Installed to Date: Under 100
Date First Installed: 1983

AST RESEARCH, INC.
AST-SNA
Conversion Function: Emulator
Transmission Mode: Half-Duplex
Price: $895
Distribution Method: OEM
Number Installed to Date: Under 100
Date First Installed: 1983

AST RESEARCH, INC.
AST-3780
Conversion Function: Emulator
Transmission Mode: Half-Duplex
Standard Transmission Rate: Synchronous - 19,200 bps
Price: $945
Distribution Method: OEM
Number Installed to Date: Under 100
Date First Installed: 1983

AST RESEARCH, INC.
AST-6251
Conversion Function: Emulator
Transmission Mode: Half-Duplex
Standard Transmission Rate: Synchronous - 9,600 bps
Price: $895
Distribution Method: OEM
Number Installed to Date: Under 100
Date First Installed: 1983

ATLANTIC RESEARCH CORP.
IFA-SERIES
Conversion Function: Interface Conversion
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: All
Interface Conversion: RS-232 to V.35, RS-232 to RS-422, RS-232 to X.21, V.10, V.11
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Price: $220 to $1,150
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: February 1981
(See Vendor Profile Page V-3)

AVATAR TECHNOLOGIES, INC.
PA 1000
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator, PC to 3278, VT-100
Number of Ports Supported: 2
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 300 bps, 9,600 bps, 2.3M bps
Code Conversion: Asynchronous Ascii to IBM 3278/2
Interface Conversion: RS-232 to Coaxial
Mode Conversion: Full-Duplex to Half-Duplex
Protocol Conversion: Asynchronous Ascii to IBM Coaxial
Features: Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer, Protocol Conversion
Price: $995
Distribution Method: Third-party
Number Installed to Date: 500 - 1,000
Date First Installed: 1983
(See Vendor Profile Page V-3)

A. W. COMPUTER SYSTEMS, INC.
A.W. P.C. TYPE 1
Conversion Function: Protocol Conversion
Number of Ports Supported: 2
Standard Transmission Rate: Asynchronous - 600 bps, 1,200 bps; Synchronous - 4,800 bps
Code Conversion: IBM Ebcdic BSC to NCR Ascii BSC, NCR Ascii BSC to Ascii Asynchronous, IBM Ebcdic BSC to Ascii Synchronous
Features: Diagnostics, Polling
Price: $2,000 to $2,200
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: July 1983
(See Vendor Profile Page V-3)

A. W. COMPUTER SYSTEMS, INC.
A.W. P.C. TYPE 3
Conversion Function: Protocol Conversion
Number of Ports Supported: 2
Standard Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps; Synchronous - 3,600 bps, 9,600 bps
Code Conversion: IBM Ebcdic BSC to NCR Ascii BSC, NCR Ascii BSC to Ascii Asynchronous, IBM Ebcdic BSC to Ascii Synchronous
Features: Diagnostics, Polling
Price: $7,000 to $8,000
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: July 1983

BACKUS DATA SYSTEMS, INC.
DIGILINK II
Conversion Function: Code Conversion, Speed Conversion
Number of Ports Supported: 6
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Binary, Binary to Ascii
Distribution Method: End user
Number Installed to Date: Under 100
(See Vendor Profile Page V-3)

BETACOM CORP.
PROFESSIONAL COMMUNICATION MANAGER-3000
Conversion Function: Protocol Conversion, Emulator
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 110 bps; Asynchronous/Synchronous - 300 bps, 1,200 bps
Code Conversion: Ebcdic to Ascii, Baudot to Ascii
Interface Conversion: IBM PC to Televideo 910, Televideo 800/802 to TTY, IBM Compatible to TTY
Features: Diagnostics, Polling, Autoanswer, Autodial, Sign-on
Price: $1,300 to $2,500
Monthly Maintenance Fee: $13
Distribution Method: End user
Number Installed to Date: Under 100
(See Vendor Profile Page V-4)

BLACK BOX CATALOG/EXPANDER, INC.
AA/2S
Conversion Function: Protocol Conversion
Number of Ports Supported: 1
Transmission Mode: Half-Duplex On Bisynchronous
Standard Transmission Rate: Asynchronous/Synchronous - 9,600 bps
Code Conversion: Ebcdic to Ascii
Mode Conversion: Bisynchronous to Asynchronous
Protocol Conversion: 2780 to Ascii to 3741 to Ascii, 3780 to Ascii to Transparent Asynchronous, 2770 to Ascii
Features: Built-in Modem Emulator
Price: $1,695
Distribution Method: End user
Number Installed to Date: 500 - 1,000
Date First Installed: January 1982
(See Vendor Profile Page V-4)

CMI CORP.
IBM/SPERRY COMPATABILITY CARD
Conversion Function: Emulator
Number of Ports Supported: 1
Standard Transmission Rate: Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Features: Data Compression, Diagnostics, Polling, Automatic Parity Recognition
Price: $1,500
Distribution Method: Third-party
Number Installed to Date: Under 100
Date First Installed: March 1982
(See Vendor Profile Page V-5)

CMI CORP.
RAINBOW 100 SPERRY ADAPTER KIT
Conversion Function: Emulator
Number of Ports Supported: 1
Standard Transmission Rate: Synchronous - 110 bps, 300 bps,

Converters/Emulators

600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Features: Data Compression, Diagnostics, Polling, Automatic Parity Recognition, UTS Emulation
Price: $2,000
Distribution Method: Third-party
Number Installed to Date: Under 100
Date First Installed: March 1982

CODRITEX, INC.
TERMINAL CONCENTRATOR, MDS-8070
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 25
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Interface Conversion: RS-422A to RS-232C, 20 mA Current Loop to RS-232C, MIL 188C to RS-232C
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: 3270 SNA/SDLC to Ascii Asynchronous, IBM 3270 BSC to Ascii Asynchronous
Features: Concentration, Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer, Switching
Price: $4,000 to $20,000
Distribution Method: Third-party
Number Installed to Date: 500 - 1,000
Date First Installed: February 1981
(See Vendor Profile Page V-6)

COMPUTER COMMUNICATIONS SPECIALISTS, INC.
TASK 200
Number of Ports Supported: 2
Transmission Mode: Half-Duplex
Standard Transmission Rate: Asynchronous - 9,600 bps
Code Conversion: Component Driven
Interface Conversion: Component Driven
Protocol Conversion: Component Driven
Features: Diagnostics, Automatic Parity Recognition
Price: $450
Monthly Maintenance Fee: $6
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: April 1983
(See Vendor Profile Page V-6)

COMPUTER PERIPHERAL SYSTEMS, INC.
MARS
Conversion Function: Code Conversion, Speed Conversion
Number of Ports Supported: 7
Transmission Mode: Half-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Poll/Select to TTY
Interface Conversion: RS-232C to RS-232C, RS-232C to TDI, RS-232C to Parallel
Mode Conversion: Half-Duplex to Half-Duplex
Protocol Conversion: Poll/Select to TTY
Features: Concentration, Data Compression, Diagnostics, Polling
Price: $1,100 to $4,200
Monthly Maintenance Fee: $18
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: January 1982
(See Vendor Profile Page V-7)

COMPUTER SYSTEMS CS/86
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Data Buffer/Converter
Number of Ports Supported: 8
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 110 bps, 300 bps, 1,200 bps, 1,800 bps; Asynchronous/Synchronous - 2,400 bps, 4,800 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic, Binary to Ebcdic
Interface Conversion: RS-232 to RS-422, RS-232 to Current Loop, EIA to TTY Parallel
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: TTY Asynchronous to Bysynchronous, SDLC to TTY
Features: Concentration, Data Compression, Diagnostics, Automatic Data Rate Detection
Price: $1,500 to $3,900
Distribution Method: End User
Number Installed to Date: Under 100
Date First Installed: 1982
(See Vendor Profile Page V-7)

CORE/TECH SYSTEMS, INC.
A-302 RTS EMULATOR
Conversion Function: Asynchronous to Synchronous Conversion
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Mode Conversion: Full-Duplex to Half-Duplex, Asynchronous to Synchronous
Features: Automatic Data Rate Detection, Automatic Modem Handshaking
Price: $400
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: 1978
(See Vendor Profile Page V-8)

CONNECTICUT MICROCOMPUTER, INC.
BUSSTER GR
Conversion Function: Interface Conversion
Number of Ports Supported: 2
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Interface Conversion: IEEE-488 to RS-232
Features: Polling, Automatic Parity Recognition
Price: $495
Distribution Method: End user
(See Vendor Profile Page V-7)

CONNECTICUT MICROCOMPUTER, INC.
BUSSTER RG
Conversion Function: Interface Conversion
Number of Ports Supported: 2
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Interface Conversion: RS-232 to IEEE-488
Features: Polling, Automatic Parity Recognition
Price: $595

CONNECTICUT MICROCOMPUTER, INC.
SADI
Conversion Function: Code Conversion
Number of Ports Supported: 2
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: PET Ascii to True Ascii
Interface Conversion: RS-232 to IEEE
Features: Automatic Parity Recognition
Price: $295
Distribution Method: End user

CONTROL CONCEPTS
PROTOCOL CONVERTER/CC-3274
Conversion Function: Protocol Conversion
Number of Ports Supported: 32
Transmission Mode: Both Half- and Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Protocol Conversion: Asynchronous to Bisynchronous, Asynchronous to SNA/SDLC
Features: Concentration, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer, Graphics Passthrough
Price: $4,995 to $18,995
Monthly Maintenance Fee: $67
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: June 1982
(See Vendor Profile Page V-7)

DATA GENERAL CORP.
DG/RJE
Conversion Function: Emulator
Number of Ports Supported: 4
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Features: Data Compression, Polling, Autoanswer
Number Installed to Date: Under 100
(See Vendor Profile Page V-6)

DATA GENERAL CORP.
DG/3270
Conversion Function: Emulator, SNA/3270 Terminals and Ports
Number of Ports Supported: 4
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Features: Polling
Distribution Method: End user
Number Installed to Date: Under 100

DATA GENERAL CORP.
HASP
Conversion Function: Emulator
Number of Ports Supported: 16
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Distribution Method: End user
Number Installed to Date: Under 100

DATA GENERAL CORP.
RCX70
Conversion Function: Emulator
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps

If you're looking for an easy, flexible cost-effective way to make the personal computer to mainframe connection, look no further.

ICOT's Virtual Terminal System™ provides you with a convenient and flexible way to connect personal computers to your IBM or IBM-compatible mainframe. It does so by performing line concentration, cluster control and terminal emulation simultaneously. You'll be able to connect a multitude of personal computers into a single front-end port, conserving your mainframe resources. And you won't have to make any hardware modifications to either the personal computers themselves or to your network controllers.

Put ICOT's VTS protocol converter in your existing 3270 network and virtually any personal computer will be compatible with your BISYNC or SNA/SDLC applications software. ICOT's PC connection also gives you the flexibility of dial-up and leased line communications, plus access security.

ICOT Delivers a Turnkey Solution.
And ICOT won't leave you with a stack of black boxes and a screwdriver. We deliver a turnkey solution, installing every VTS ourselves. Then we back each installation with on-site training and a nationwide field service organization that delivers full engineering and maintenance support.

Whatever your current network configuration and protocols, ICOT's Virtual Terminal System can help you make the PC connection. Pure and simple.

For more information about the ICOT Virtual Terminal System call or write:

ICOT ...the data communications company

ICOT Corporation, 830 Maude Avenue, P.O. Box 7248, Mountain View, CA 94039; (415) 964-4635 TWX 910-379-6479

Converters/Emulators

Features: Polling
Distribution Method: End user
Number Installed to Date: Under 100

DATA GENERAL CORP.
MJ230
Conversion Function: Emulator
Number of Ports Supported: 16
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Features: Polling
Distribution Method: End user

DATAGRAM CORP.
DM 1000 B
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion
Number of Ports Supported: 16
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Burroughs Poll Select to Ascii, Ascii to Burroughs Poll Select
Interface Conversion: RS-232C to TDI, RS-232C to 20 mA, 20 mA to TDI
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: Asynchronous - to Burroughs Poll Select
Features: Concentration, Diagnostics, Polling, Automatic Data Rate Detection, Autoanswer
Price: $6,000 to $30,000
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: February 1979
(See Vendor Profile Page V-9)

DATA PLUS, INC.
PCT PLUS
Conversion Function: Code Conversion, Protocol Conversion, Speed Conversion
Number of Ports Supported: 5
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 9,600 bps
Code Conversion: Baudot to Ascii, Ascii to Baudot, Ebcdic to Ascii
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: SDLC to BDLC, HDLC to BLC, BLC to HDLC
Features: Concentration, Diagnostics, Polling, Automatic Parity Recognition, Autoanswer
Price: $3,100
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: January 1983
(See Vendor Profile Page V-9)

DATAPRISE, INC.
DR-10
Conversion Function: Protocol Conversion, Speed Conversion
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Baudot, Ebcdic to Ascii, Ebcdic to Baudot
Interface Conversion: Current Loop to EIA, Current Loop to RS-422, Current Loop to RS-423
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Features: Concentration, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Made to Specific Needs
Price: $750
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: 1982
(See Vendor Profile Page V-9)

DATASTREAM COMMUNICATION, INC.
774
Conversion Function: Code Conversion
Number of Ports Supported: 24
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Interface Conversion: RS-232 to RG-59
Features: Data Compression, Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition
Price: $4,000 to $10,000
Monthly Maintenance Fee: $40
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: 1980
(See Vendor Profile Page V-9)

DATASTREAM COMMUNICATION, INC.
776
Conversion Function: Code Conversion
Number of Ports Supported: 8
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Interface Conversion: RS-232 to RG-59
Features: Data Compression, Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition
Price: $6,000 to $9,008
Monthly Maintenance Fee: $40
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: 1980

DATASTREAM COMMUNICATION, INC.
874
Conversion Function: Code Conversion
Number of Ports Supported: 16
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ebcdic to Ascii, Ascii to Ebcdic
Interface Conversion: RS-232 to RG-59
Features: Data Compression, Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition
Price: $16,000
Monthly Maintenance Fee: $55
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: 1981

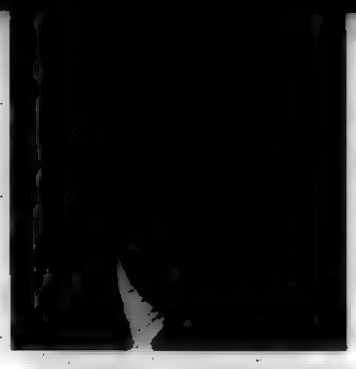
DATASTREAM COMMUNICATION, INC.
MPC
Conversion Function: Code Conversion
Number of Ports Supported: 24
Standard Transmission Rate: Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Interface Conversion: RS-232
Features: Data Compression, Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition
Price: $6,000 to $12,000
Monthly Maintenance Fee: $150
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: January 1984

DATA TECHNOLOGY INDUSTRIES
MIDDLEMAN
Conversion Function: Code Conversion, Emulator
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 150 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 9,600 bps
Code Conversion: Ascii to 12-13 Bit Parallel
Features: Memory Test Initialization
Price: $550
Distribution Method: Third-party
Number Installed to Date: 100 - 500
Date First Installed: 1980
(See Vendor Profile Page V-9)

DCA/ITAC
INA/ATC
Conversion Function: Code Conversion, Protocol Conversion
Number of Ports Supported: 24
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps:
Asynchronous/Synchronous - 2,400 bps, 4,800 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic
Protocol Conversion: Ascii to 3270/BSC, Ascii to SDLC/SNA
Features: Concentration, Automatic Data Rate Detection, Dial-up Modem Support
Price: $8,950 to $14,950
Distribution Method: End user, Third-party
Number Installed to Date: Under 100
(See Vendor Profile Page V-10)

DIGITAL ASSOCIATES CORP.
COMMUNICATION PRINTER INTERFACE 7141
Conversion Function: Interface Conversion
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ebcdic to Ascii
Interface Conversion: IBM 2780, 3780 to Parallel
Features: Data Compression, Diagnostics, Polling, Automatic Parity Recognition, Autoanswer
Price: $1,650
Monthly Maintenance Fee: $40
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: 1979
(See Vendor Profile Page V-10)

DIGITAL ASSOCIATES CORP.
RLPS 901080
Conversion Function: Interface Conversion
Number of Ports Supported: 2
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Any Code to Standard
Interface Conversion: Parallel to RS-232C
Protocol Conversion: Parallel to Synchronous X.25
Features: Data Compression, Diagnostics, Polling, Automatic Parity Recognition, Autoanswer, Autodial
Price: $6,790



"GET IBM 3270, 3780 AND HASP COMMUNICATIONS—ADDING A ONE-BOARD PROCESSOR TO MY PC?"

"YOU CAN WITH PERSYST."

The Persyst DCP/88. The only compatible front end communications processor that can support a range of IBM communications.

It's a Persyst exclusive.

The DCP/88 distributed communications processor. A one-board computer that can be configured by software to handle communications between a PC and another computer system.

In fact, the DCP/88 enables the IBM or TI PC to support a range of sophisticated IBM communications—all with just one processor.

So it gives corporate users unprecedented, low-cost flexibility to incorporate the PC into virtually any environment.

Convert any PC into an IBM 3270 terminal. An IBM 2780/3780 RJE workstation. Or a HASP/RJE workstation—instantly.

Just combine the DCP/88 with Persyst software—and you can connect your PC to any compatible host mainframe or minicomputer.

PC/3270 enables your PC to emulate an IBM 3274 Cluster control unit and 3278 terminal, supporting up to four additional devices. Including a printer and three other PCs functioning as 3278 terminals.

PC/3780 converts your PC into a 2780/3780 remote job entry terminal that can send and receive batch files to and from the host.

And with PC/HASP, your PC instantly becomes a full-function HASP/RJE workstation that can support up to seven input and seven output multi-leaved job streams concurrently.

Capability to support your communications needs now. And in the future.

Because the DCP/88 supports bisync, SDLC, HDLC and async protocols, it is the only communications processor you'll ever have to buy.

Use it to connect your PC to an expanding network of IBM communications. Configure your system to meet virtually any communications need—without adding another piece of hardware. Or expense.

All of which makes the DCP/88 as practical as it is powerful.

The Persyst Coax/3278. Still another way to expand your IBM communications.

Here's another fast way to incorporate the PC into existing SNA or bisync data processing installations.

The Coax/3278. A single-slot expansion board that converts your PC into an IBM 3278 display terminal. And with its high-speed coaxial port, you can connect the PC directly to IBM 3274 or 3276 cluster controllers.

Sophisticated communications products for the corporate user. Insist on Persyst.

Persyst communications products are designed to make corporate information systems more powerful. And more efficient.

Write or call Persyst today for complete information.

THE DCP/88™ BY PERSYST.

Converters/Emulators

Monthly Maintenance Fee: $40
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: 1981

SIVERSPEED DATA RESOURCES, INC.
HYDRA II
Conversion Function: Code Conversion
Number of Ports Supported: 16
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Features: Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition, Redundant Data Suppression
Price: $6,900 to $9,900
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: January 1983
(See Vendor Profile Page V-10)

SYNATECH DATA SYSTEMS
DYNA-TEST 1000
Conversion Function: Interface Conversion, Code Conversion
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps, 56,000 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Interface Conversion: RS-449 to RS-232, V.35 to RS-232, Bell 303 to RS-232
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Features: Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer, High-Speed Integral Tape
Price: $8,000
Monthly Maintenance Fee: $35
Distribution Method: End user, Third-party
Number Installed to Date: 500 - 1,000
Date First Installed: 1980
(See Vendor Profile Page V-11)

SYNATECH DATA SYSTEMS
DYNA-TEST 2000 C
Conversion Function: Interface Conversion, Code Conversion
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Interface Conversion: RS-449 to RS-232, V.35 to RS-232, Bell 303 to RS-232
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: SDLC/SNA to Synchronous
Features: Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Switch Selectable Emulator
Price: $13,000
Monthly Maintenance Fee: $45
Distribution Method: End user, Third-party
Number Installed to Date: 500 - 1,000

SYNATECH PACKET TECHNOLOGY, INC.
MULTI-PAD X.25
Conversion Function: Code Conversion, Protocol Conversion, Speed Conversion
Number of Ports Supported: 16
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Asynchronous X.25, Baudot to Synchronous X.25
Interface Conversion: RS-232 to RS-232
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: Asynchronous Ascii to X.25, Asynchronous Baudot to X.25
Features: Concentration, Data Compression, Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer, Autospeed, Autoparity
Price: $2,695 to $3,400
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: December 1982
(See Vendor Profile Page V-11)

SYNATECH PACKET TECHNOLOGY, INC.
MULTI-PLEX X.25
Conversion Function: Code Conversion, Protocol Conversion, Speed Conversion
Number of Ports Supported: 8
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to X.25
Interface Conversion: RS-232 to RS-232
Mode Conversion: Half-Duplex to Full-Duplex
Protocol Conversion: Asynchronous Ascii to X.25
Features: Concentration, Data Compression, Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer, Autospeed, Autoparity
Price: $1,695 to $2,695
Distribution Method: End user
Number Installed to Date: 500 - 1,000
Date First Installed: December 1980

SYSTECH TECHNOLOGY MESSAGE HANDLER
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion
Number of Ports Supported: 3
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 9,600 bps
Code Conversion: Baudot to Ascii, Ascii to Baudot
Interface Conversion: RS-232C to CCITT V.27
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Features: Diagnostics, Polling, Automatic Data Rate Detection, Autoanswer
Price: $495 to $1,995
Distribution Method: OEM
Number Installed to Date: 500 - 1,000
Date First Installed: 1978
(See Vendor Profile Page V-11)

TORRICAN, INC.
FS-100 CODEM
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Full Document Conversion
Number of Ports Supported: 2
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 2,400 bps, Asynchronous - 9,600 bps
Code Conversion: Ascii to Configured, Ebcdic to Configured, Typesetting to Configured
Interface Conversion: Asynchronous to BSC, BSC to BSC, Asynchronous to Asynchronous
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: Teletype to Configured, 2770 to Configured, 3780 to Configured
Features: Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $13,000
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: September 1982
(See Vendor Profile Page V-12)

TRANDALF DATA, INC.
IFC 200 SERIES
Conversion Function: Interface Conversion
Number of Ports Supported: 1
Code Conversion: RS-232C to RS-422 or RS-423, CCITT V.35 to RS-232C, Bell 301 or RS-422, RS-423 to RS-232C
Price: $400 to $650
Distribution Method: End user
Number Installed to Date: 1,000 - 5,000
(See Vendor Profile Page V-12)

TRANDALF DATA, INC.
PIN 3270E-7
Conversion Function: 3270-Type Controller
Number of Ports Supported: 16
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Protocol Conversion: TTY II to 3270 BSC
Features: Diagnostics, User Programmable
Price: $7,900 to $13,000
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: 1983

GATEWAY COMMUNICATIONS, INC.
GATEWAY PROCESSOR
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 16
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 9,600 bps; Asynchronous/Synchronous - 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Interface Conversion: SNA to Ascii, SNA to BSC, BSC to SNA
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: 3270 SNA to Ascii, BSC 3270 to Ascii
Features: Concentration, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $1,560
Distribution Method: Third-party
(See Vendor Profile Page V-12)

GATEWAY COMMUNICATIONS, INC.
GATEWAY PROCESSOR
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 16
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps; Asynchronous/Synchronous - 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 19,200 bps

Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Interface Conversion: SNA to Ascii, SNA to BSC, BSC to SNA
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: 3270 SNA to Ascii, BSC 3270 to Ascii
Features: Concentration, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $1,560
Distribution Method: Third-party

HERMSDEN DATA SYSTEMS
COMMCENTER 2
Conversion Function: Interface Conversion, Code Conversion, Speed Conversion
Number of Ports Supported: 2
Transmission Mode: Half-Duplex, Full-Duplex
Code Conversion: Ascii to Ebcdic, Ascii to Baudot
Interface Conversion: RS-232 to RG-11
Features: Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $995
Distribution Method: Third-party
Number Installed to Date: 5,000 - 10,000
Date First Installed: April 1980
(See Vendor Profile Page V-14)

IBM CORP.
7426
Conversion Function: Protocol Conversion
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Protocol Conversion: Ascii to SDLC
Features: Diagnostics, Autoanswer
(See Vendor Profile Page V-14)

ICOT CORP.
VTS 252
Conversion Function: Code Conversion, Protocol Conversion, Speed Conversion
Number of Ports Supported: 16
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to 3270 Ebcdic
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: Ascii to Bisynchronous, Ascii to SDLC
Features: Concentration, Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer, Multiple Host, Automatic Log-on
Price: $5,800 to $8,200
Distribution Method: Third-party
Number Installed to Date: Under 100
Date First Installed: 1982
(See Vendor Profile Page V-15)

IDE ASSOCIATES, INC.
IDECOMM 3278/NPR-001 SPR-01
Conversion Function: Emulator
Number of Ports Supported: 1
Transmission Mode: Half-Duplex
Standard Transmission Rate: 25000 bps
Code Conversion: IBM PC to IBM 3278/3274
Interface Conversion: IBM PC to IBM 3278/3274
Protocol Conversion: IBM PC to IBM 3278/3274
Features: Diagnostics, 3278/3274 to IBM PC Conversion
Price: $1,195
Distribution Method: Third-party
Number Installed to Date: Under 100
Date First Installed: December 1983
(See Vendor Profile Page V-15)

INNOVATIVE MICROSYSTEMS, INC.
IMI SERIES 570
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion
Number of Ports Supported: 5
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii, Serial to Parallel
Interface Conversion: Ascii to Ebcdic, Ebcdic to Ascii, Serial to Parallel
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: Asynchronous to Printer
Features: Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $600 to $2,000
Distribution Method: OEM
Number Installed to Date: Under 100
Date First Installed: 1981
(See Vendor Profile Page V-16)

INNOVATIVE ELECTRONICS, INC.
MC-80/188
Conversion Function: Protocol Conversion, Emulator
Number of Ports Supported: 2
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 9,600 bps; Synchronous - 19,200 bps
Protocol Conversion: 2780/3780 BSC to Asynchronous Ascii
Features: Diagnostics, Polling, Autoanswer
Price: $1,445 to $1,845
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: January 1980
(See Vendor Profile Page V-16)

INNOVATIVE ELECTRONICS, INC.
MC-80/288
Conversion Function: Protocol Conversion
Number of Ports Supported: 2
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 9,600 bps; Synchronous - 19,200 bps
Protocol Conversion: Burroughs Poll/Select to Asynchronous Ascii
Features: Diagnostics, Polling, Autoanswer
Price: $1,445 to $1,845
Distribution Method: End user
Number Installed to Date: 500 - 1,000
Date First Installed: January 1980

INNOVATIVE ELECTRONICS, INC.
MC-80/388
Conversion Function: Protocol Conversion
Number of Ports Supported: 2
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 9,600 bps; Asynchronous - 19,200 bps
Protocol Conversion: IBM 3270 BSC to Burroughs Poll/Select
Features: Diagnostics, Polling, Autoanswer
Price: $2,095 to $2,245
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: January 1980

INNOVATIVE ELECTRONICS, INC.
MC-80/488
Conversion Function: Protocol Conversion
Number of Ports Supported: 2
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 9,600 bps, Synchronous - 19,200 bps
Protocol Conversion: IBM 3270 BSC to NCR Poll/Select
Features: Diagnostics, Polling, Autoanswer
Price: $2,095 to $2,245
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: January 1980

INNOVATIVE ELECTRONICS, INC.
MC-80/588
Conversion Function: Protocol Conversion, Emulator
Number of Ports Supported: 2
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 9,600 bps; Synchronous - 19,200 bps
Code Conversion: Ebcdic to Ascii
Mode Conversion: Synchronous to Asynchronous
Protocol Conversion: 3270 BSC to Asynchronous Ascii
Features: Diagnostics, Polling, Autoanswer
Price: $1,495 to $1,695
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: October 1980

INNOVATIVE ELECTRONICS, INC.
MC-80/682
Conversion Function: Protocol Conversion
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 9,600 bps; Synchronous - 19,200 bps
Protocol Conversion: 3270 BSC to Asynchronous Ascii
Features: Diagnostics, Polling, Autoanswer
Price: $1,650
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: December 1982

INTECOM, INC.
3270 IPC
Conversion Function: Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 16
Transmission Mode: Half-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to IBM 3270 Bisynchronous
Protocol Conversion: Ascii to 3270 Bisynchronous
Features: Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer, Multiplexing
Price: $15,000
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: 1983
(See Vendor Profile Page V-16)

INTECOM, INC.
X.25 IPC
Conversion Function: Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 16
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 19,200 bps; Asynchronous/Synchronous - 9,600 bps
Code Conversion: Ascii to X.25 Packet

Converters/Emulators

Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: Ascii to X.25
Features: Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer, Multiplexer
Price: $15,000
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: 1983

INTEGRATED DESIGN ENGINEERING, INC.
IDE-3011
Conversion Function: Protocol Conversion, Speed Conversion
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: NCR 301 to Serial TTY
Features: Diagnostics, Polling, Automatic Parity Recognition
Price: $500
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: 1982
(See Vendor Profile Page V-16)

INTEGRATED DESIGN ENGINEERING, INC.
IDE-3013
Conversion Function: Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: NCR 301 to Serial TTY
Features: Diagnostics, Polling, Automatic Parity Recognition
Price: $500
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: September 1982

INTEGRATED DESIGN ENGINEERING, INC.
IDE-3014
Conversion Function: Protocol Conversion, Speed Conversion
Number of Ports Supported: 4
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: NCR 301 to Serial TTY
Features: Diagnostics, Polling, Automatic Parity Recognition
Price: $500
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: 1982

INTEGRATED DESIGN ENGINEERING, INC.
IDE-3015
Conversion Function: Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Interface Conversion: NCR PC BUS to RS-232
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: NCR 301 to Serial TTY
Features: Diagnostics, Polling, Automatic Parity Recognition
Price: $450
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: 1983

INTEGRATED DESIGN ENGINEERING, INC.
IDE-3016
Conversion Function: Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 4
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: NCR 301 to Serial TTY
Features: Concentration, Diagnostics, Polling, Automatic Parity Recognition
Price: $1,850
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: September 1982

INTEGRATED DESIGN ENGINEERING, INC.
IDE-3018
Conversion Function: Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 4
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: NCR 301 to Serial TTY
Features: Concentration, Diagnostics, Polling, Automatic Parity Recognition
Price: $1,850
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: 1982

INTELLIGENT BUSINESS SYSTEMS, INC.
CSX 1024
Conversion Function: Code Conversion, Protocol Conversion
Number of Ports Supported: 2,048
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 9,600; Asynchronous/Synchronous - 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps
Code Conversion: Baudot to Ascii, CCITT X.62 to Telex
Protocol Conversion: PSTN DDD to Telex, Teletex to Telex, X.71 to X.75
Features: Concentration, Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $60,000
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: January 1984
(See Vendor Profile Page V-16)

INTELLIGENT BUSINESS SYSTEMS, INC.
CSX-1024
Conversion Function: Code Conversion, Speed Conversion
Number of Ports Supported: 2,048
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps; Synchronous - 19,200 bps, 64,000 bps
Code Conversion: Ascii to Baudot, X.61 to Telex
Protocol Conversion: X.71 to X.75, Telex to Teletex, PSTN (DDD) to Telex
Features: Concentration, Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer, Full Redundancy
Price: $60,000
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: February 1982

INTER-LINK
2101/2501
Conversion Function: Code Conversion, Protocol Conversion
Number of Ports Supported: 5
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 9,600 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Protocol Conversion: IBM BSC to Asynchronous Ascii, IBM SDLC/SNA to Asynchronous Ascii
Features: Concentration, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $995 to $1,900
Monthly Maintenance Fee: $20
Distribution Method: Third-party
Number Installed to Date: Under 100
Date First Installed: September 1982
(See Vendor Profile Page V-16)

INTERGE. SYSTEMS, INC.
3276-1
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 8
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to BSC
Interface Conversion: Ascii to BSC
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: Ascii to BSC
Features: Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $3,500
Monthly Maintenance Fee: $35
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: February 1981
(See Vendor Profile Page V-17)

INTERGE. SYSTEMS, INC.
3276-12
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 8
Transmission Mode: Full-Duplex
Standard Transmission Rate:

Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to SDLC
Interface Conversion: Ascii to SNA
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: Ascii to BSC
Features: Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition
Price: $3,500
Monthly Maintenance Fee: $35
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: February 1981

TYMS CORPORATION SYSTEMS
MULTIDISK READER
Conversion Function: Floppy Disk Conversion
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Ascii
Features: Reads Floppy Disk, WP, PC
Price: $12,900 to $15,900
Distribution Method: OEM
Number Installed to Date: 100 - 200
Date First Installed: 1982
(See Vendor Profile Page V-17)

J B M ELECTRONICS
ASYNCHRONOUS PROTOCOL CONVERTERS
Conversion Function: Code Conversion, Protocol Conversion, Speed Conversion
Number of Ports Supported: 16
Transmission Mode: Full-Duplex
Standard Transmission Rate: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: 3275 Synchronous to Asynchronous, 3270 SNA to Asynchronous
Features: Concentration, Diagnostics, Polling, Automatic Data Rate Detection, Autoanswer
Price: $995
Distribution Method: Third-party
Number Installed to Date: 500 - 1,000
Date First Installed: September 1979
(See Vendor Profile Page V-17)

KAMPMAN RESEARCH MANUFACTURING, INC.
MODEL 870
Conversion Function: Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 8
Transmission Mode: Full-Duplex, Block Mode Operation
Standard Transmission Rate: Asynchronous - 75 bps, 110 bps, 300 bps, 600 bps, 9,600 bps; Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic
Protocol Conversion: Ascii to IBM 3270 BSC
Features: Concentration, Polling, Automatic Data Rate Detection, Autoanswer
Price: $3,395 to $8,295
Monthly Maintenance Fee: $65
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 100 - 500
Date First Installed: January 1980
(See Vendor Profile Page V-17)

KAMPMAN RESEARCH MANUFACTURING, INC.
MODEL 871
Conversion Function: Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 8
Transmission Mode: Full-Duplex, Block Mode Operation
Standard Transmission Rate: Asynchronous - 75 bps, 110 bps, 300 bps, 600 bps, 9,600 bps; Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic
Protocol Conversion: Ascii to Sperry Univac
Features: Concentration, Polling, Automatic Data Rate Detection, Autoanswer
Price: $3,395 to $8,295
Monthly Maintenance Fee: $65
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 100 - 500
Date First Installed: January 1980

KAMPMAN RESEARCH MANUFACTURING, INC.
MODEL 872
Conversion Function: Code Conversion, Protocol Conversion, Speed Conversion, Emulator

Here are a few good reasons why you should make Local Data your protocol converter company.

Local Data's comprehensive line of local and remote protocol converters have been used around the world to make async-to-IBM communications simple and economical.

DATALYNX™/3274.
DataLynx™/3274 remote async ASCII protocol converter supports SNA/SDLC or BSC protocols. 80 types of ASCII async terminals can emulate IBM 3278 display stations. RS-232C ASCII async printers can emulate IBM 328X printers.

DATALYNX™/3780.
DataLynx™/3780 async ASCII-to-IBM 3780, 2780, 2770 and 3741 protocol converter supports EBCDIC BSC protocol on one channel and async ASCII devices on the other two channels. Features include transparency, mini/micro support and free file transfer program.

INTERLYNX™/3278.
InterLynx™/3278 allows the attachment of low-cost ASCII CRT terminals or p.c.'s to 3274/3276/4701 and 43XX integrated adaptor Type "A" coax ports. InterLynx/3278 enables the user to use async CRT's on IBM systems and switch to async applications under terminal control.

FILELYNX™/3278.
For micro-mainframe file transfers.

INTERLYNX™/3287.
InterLynx™/3287 allows attachment of ASCII printers to IBM Type "A" coax ports or 3274/3276/4701 controller and 4321/4331 CPU's.

SNA LU1 SCS and LU3 capability are standard with the InterLynx/3287. Features include parallel and serial ports and front panel set-up.

"Your Lynx to IBM."

Converters/Emulators

Number of Ports Supported: 8
Transmission Mode: Full-Duplex, Block Mode Operation
Standard Transmission Rate: Asynchronous - 75 bps, 110 bps, 300 bps, 600 bps, 9,600 bps; Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic
Protocol Conversion: Ascii to 3270 SNA/SDLC
Features: Concentration, Polling, Automatic Data Rate Detection, Autoanswer
Price: $3,395 to $8,295
Monthly Maintenance Fee: $85
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 100 - 500
Date First Installed: January 1980

KMW SYSTEMS CORP.
2780/3780
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 3
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 110 bps, 300 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ebcdic to Ascii, Ebcdic to Binary, Ebcdic to Card Punch
Interface Conversion: RS-232 Synchronous to Async, RS-232 Synchronous to Printer, RS-232 Synchronous to Card Reader
Mode Conversion: From Full-Duplex to Half-Duplex, Full to Full
Protocol Conversion: BSC to Asynchronous Ascii
Features: Concentration, Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $1,995
Monthly Maintenance Fee: $1
Distribution Method: Third-party
Number Installed to Date: 100 - 500
Date First Installed: 1978
(See Vendor Profile Page V-17)

KMW SYSTEMS CORP.
3770
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 8
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ebcdic SNA/SDLC to Asynchronous Ascii, Ebcdic to Binary, Ebcdic to 2780/3780
Interface Conversion: RS-232 Synchronous to RS-232 Asynchronous, RS-232 Synchronous to Binary, RS-232 Synchronous to 2780/3780
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: Ebcdic SNA/SDLC to Asynchronous RS-232, Ebcdic SNA/SDLC to Synchronous Parallel, Synchronous RS-232 to Synchronous RS-232
Features: Concentration, Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $4,550
Distribution Method: Third-party
Number Installed to Date: Under 100
Date First Installed: 1981

KMW SYSTEMS CORP.
3777 SERIES II
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 8
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 110 bps, 300 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ebcdic to Ascii, Ascii to Ebcdic
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: SNA/SDLC Ebcdic to Asynchronous Ascii
Features: Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $4,550
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: 1979

KMW SYSTEMS CORP.
HASP
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 8
Standard Transmission Rate: Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ebcdic to Ascii, Ebcdic to Binary
Interface Conversion: RS-232 to Synchronous, RS-232 to Ascii, RS-232 Synchronous to Parallel Async
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: Synchronous Ebcdic to Asynchronous Ascii, Synchronous Ebcdic to Asynchronous Printer, Synchronous Ebcdic to Binary
Features: Concentration, Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $4,550
Monthly Maintenance Fee: $1
Distribution Method: Third-party
Number Installed to Date: 100 - 500
Date First Installed: 1977

LOCAL DATA, INC.
DATALYNX 3274
Conversion Function: Protocol Conversion
Number of Ports Supported: 10
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Protocol Conversion: BSC to Asynchronous, SNA/SDLC to Asynchronous
Features: Concentration, Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Autoanswer, Auxiliary Printer
Price: $6,000
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: 1900
(See Vendor Profile Page V-16)

LOCAL DATA, INC.
DATALYNX 3780
Conversion Function: Protocol Conversion
Number of Ports Supported: 3
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: Asynchronous to BSC
Features: Diagnostics, Polling, Autoanswer, Transparency, Prompt Mode
Price: $1,750
Distribution Method: End user
Number Installed to Date: 500 - 1,000
Date First Installed: September 1980

LOCAL DATA, INC.
INTERLYNX 3278
Conversion Function: Protocol Conversion
Number of Ports Supported: 3
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic
Interface Conversion: RS-232C to IBM Type-A Coax
Mode Conversion: Half-Duplex to Full-Duplex
Protocol Conversion: IBM Type-A to Asynchronous
Features: Diagnostics, Automatic Data Rate Detection, Autoanswer, 50 Terminal Types
Price: $1,395
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: April 1983

LOCAL DATA, INC.
INTERLYNX 3287
Conversion Function: Interface Conversion, Protocol Conversion
Number of Ports Supported: 3
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic
Interface Conversion: Asynchronous to IBM Type-A
Mode Conversion: From Half-Duplex to Full-Duplex
Protocol Conversion: BSC/SNA to Asynchronous
Features: Diagnostics, Supports RS-232C Centronics
Price: $1,750
Distribution Method: End user
Number Installed to Date: Under 100

MICOM SYSTEMS, INC.
MICRO600/X.25 CONCENTRATOR PAD
Conversion Function: Code Conversion, Protocol Conversion, Speed Conversion
Number of Ports Supported: 24
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps; Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 4,800 bps, 19,200 bps; 9,600 bps
Code Conversion: 5-, 6-, 7-, 8-Bit to X.25 8-Bit Character
Mode Conversion: Full-Duplex to Full-Duplex
Protocol Conversion: Asynchronous to X.25, HDLC to X.25
Features: Concentration, Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer, Full Support of DCITT X.3, X.28, X.29 Interfaces
Price: $2,050 to $4,600
Distribution Method: Third-party
Number Installed to Date: 500 - 1,000
Date First Installed: September 1982
(See Vendor Profile Page V-15)

MICOM SYSTEMS, INC.
MICRO7400 PROTOCOL CONVERTER
Number of Ports Supported: 12
Transmission Mode: Half-Duplex, Full-Duplex

Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic
Protocol Conversion: Ascii to 3270 BSC, Ascii to 3270 SNA
Features: Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Autoanswer, 3270 Terminal Simulation
Price: $1,650 to $4,750
Distribution Method: Third-party
Number Installed to Date: Under 100
Date First Installed: January 1984

MICROLOGIC, INC.
BABYTALK
Conversion Function: Code Conversion, Emulator
Number of Ports Supported: 2
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Interface Conversion: RS-232 to CCITT V.21, RS-232 to CCITT V.23
Features: Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $595
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 500 - 1,000
(See Vendor Profile Page V-19)

MIDWEST DATA SOURCE
APPLE II
Conversion Function: Interface Conversion, Protocol Conversion, Emulator
Number of Ports Supported: 3
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 75 bps, 3,600 bps
Code Conversion: Burroughs to Teletype
Protocol Conversion: Burroughs to Teletype
Features: Diagnostics, Polling, Automatic Parity Recognition
Price: $695 to $1,500
(See Vendor Profile Page V-20)

MIDWEST DATA SOURCE
APPLE III
Conversion Function: Interface Conversion, Protocol Conversion, Emulator
Number of Ports Supported: 3
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 75 bps, 3,600 bps
Interface Conversion: Burroughs to Teletype
Protocol Conversion: Burroughs to Teletype
Features: Diagnostics, Polling, Automatic Parity Recognition
Price: $695 to $1,595

MIDWEST DATA SOURCE
IBM
Conversion Function: Interface Conversion, Protocol Conversion, Emulator
Number of Ports Supported: 3
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 75 bps, 3,600 bps
Interface Conversion: Burroughs to Teletype
Protocol Conversion: Burroughs to Teletype
Features: Diagnostics, Polling, Automatic Parity Recognition
Price: $140 to $1,200
Distribution Method: End user

MODEMS PLUS, INC.
SMITE ONE
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 3
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Interface Conversion: RS-232C to Parallel, RS-232C to RS-232C
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: Burroughs to Ascii
Features: Data Compression, Diagnostics, Polling, Autoanswer
Price: $1,260
Monthly Maintenance Fee: $10
Distribution Method: Third-party
Number Installed to Date: 500 - 1,000
Date First Installed: June 1981
(See Vendor Profile Page V-20)

MODEMS PLUS, INC.
SMITE ONE
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 5
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to BSC, Ascii to SDLC, BSC to SDLC
Interface Conversion: RS-232C to NRZI, RS-232C to Parallel
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: IBM BSC to IBM SDLC, Ascii to SDLC
Features: Concentration, Data Compression, Diagnostics, Polling, Autoanswer
Price: $3,900
Monthly Maintenance Fee: $25
Distribution Method: Third-party
Number Installed to Date: Under 100
Date First Installed: June 1983

NATIONAL COMPUTER SYSTEMS, INC.
PROTOCOL CONVERTER
Conversion Function: Interface Conversion, Code Conversion, Speed Conversion, Emulator
Number of Ports Supported: 4
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Asynchronous to Poll/Select
Interface Conversion: Asynchronous to Poll/Select
Mode Conversion: Half-Duplex to Full-Duplex, Duplex to Half-Duplex
Protocol Conversion: Asynchronous to Poll/Select
Features: Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition
Price: $1,500
Distribution Method: End user
Date First Installed: June 1984
(See Vendor Profile Page V-21)

NESTAR SYSTEMS, INC.
3270 BSC
Conversion Function: Emulator
Number of Ports Supported: 16
Transmission Mode: Half-Duplex
Standard Transmission Rate: Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ebcdic to Ascii
Features: Concentration, Data Compression, Diagnostics, Polling
Price: $3,000
Distribution Method: End user
Date First Installed: August 1985
(See Vendor Profile Page V-21)

NESTAR SYSTEMS, INC.
3270 SNA
Conversion Function: Emulator
Number of Ports Supported: 32
Transmission Mode: Full-Duplex
Standard Transmission Rate: Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ebcdic to Ascii
Features: Concentration, Data Compression, Diagnostics, Polling
Price: $4,000
Distribution Method: End user

NORTHERN TELECOM, INC.
PC
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion
Number of Ports Supported: 2
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps; Synchronous - 19,200 bps
Code Conversion: Ebcdic to Ascii, Ascii to Ebcdic
Protocol Conversion: HDLC/X.25/BSC to HDLC/X.25/BSC
Features: Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition
Price: $4,200
Distribution Method: End user, OEM
Number Installed to Date: Under 100
Date First Installed: November 1983
(See Vendor Profile Page V-22)

NORTHERN TELECOM, INC.
SL-1
Number of Ports Supported: 64
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps; Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps, 56,000
Interface Conversion: IBM PC; IBM PC-XT to NT SL-1
Protocol Conversion: Ascii to IBM 3270
Date First Installed: 1980

OSI DATA CORP.
720 PROTOCOL CONVERTER
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 4
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Baudot to Ascii, Ascii to Baudot
Interface Conversion: Baudot to ASCII, Ascii to Baudot
Features: Diagnostics
Price: $2,000
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: 1983
(See Vendor Profile Page V-22)

PERIPHERAL TECHNOLOGY, INC.
SCAT
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 25
Transmission Mode: Half-Duplex, Full-Duplex

Converters/Emulators

Standard Transmission Rate: Asynchronous/Synchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic
Interface Conversion: RS-232C to RS-422
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: Ascii to BSC, Ascii to SNA
Features: Concentration, Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer, Password Protection
Price: $995
Distribution Method: OEM
Number Installed to Date: 100 - 500
Date First Installed: 1982
(See Vendor Profile Page V-22)

PERIPHERAL TECHNOLOGY, INC.
SCAT 1
Conversion Function: Protocol Conversion
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Protocol Conversion: Ascii to Bisynchronous, Ascii to SNA
Features: Data Compression, Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition
Price: $795
Distribution Method: Third-party
Number Installed to Date: Under 100
Date First Installed: September 1981

PERIPHERAL TECHNOLOGY, INC.
SCAT 2 2101
Conversion Function: Protocol Conversion
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Protocol Conversion: Ascii to Bisynchronous, Ascii to SNA
Features: Data Compression, Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition
Price: $995
Distribution Method: Third-party
Number Installed to Date: Under 100
Date First Installed: January 1982

PERIPHERAL TECHNOLOGY, INC.
SCAT 2 2201
Conversion Function: Protocol Conversion
Number of Ports Supported: 5
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Protocol Conversion: Ascii to Bisynchronous, Ascii to SNA
Features: Concentration, Data Compression, Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition
Price: $2,995
Distribution Method: Third-party
Number Installed to Date: 100 - 500
Date First Installed: January 1982

PERIPHERALS CORP.
T-COMM
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 416
Transmission Mode: Half-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ebcdic to Ascii, Ascii to Ebcdic
Interface Conversion: User Selectble
Mode Conversion: From Half-Duplex to Full-Duplex
Protocol Conversion: User Selectable
Features: Concentration, Data Compression, Diagnostics, Polling, Automatic Parity Recognition, Autoanswer, Autodial
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: January 1974
(See Vendor Profile Page V-23)

PERSONAL MICROCOMPUTERS
MICRO-MET
Conversion Function: CP/M Conversion
Number of Ports Supported: 2
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Price: $995
Distribution Method: End user, OEM
Number Installed to Date: 500 - 1,000
Date First Installed: April 1983
(See Vendor Profile Page V-23)

PHOENIX DIGITAL CORP.
DPAC-30
Conversion Function: Interface Conversion, Protocol Conversion, Speed Conversion, Emulator, Protocol to Protocol
Number of Ports Supported: 16
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Asynchronous/Bisynchronous to Modicon, GE to Modicon, GE to Asynchronous/Bisynchronous
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Features: Concentration, Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $8,000
Monthly Maintenance Fee: $35
Distribution Method: OEM
Number Installed to Date: Under 100
Date First Installed: February 1980
(See Vendor Profile Page V-23)

PHOENIX 1, INC.
CLEO 3270
Conversion Function: Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 9
Transmission Mode: Half-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ebcdic to Ascii
Interface Conversion: RS-232C to RS-232C
Mode Conversion: Half-Duplex to Full-Duplex
Protocol Conversion: 3276/2 to Full-Duplex Ascii
Features: Diagnostics, Autoanswer
Price: $3,995
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: 1981
(See Vendor Profile Page V-24)

PHOENIX 1, INC.
CLEO 3270 H
Conversion Function: Protocol Conversion
Number of Ports Supported: 8
Transmission Mode: Half-Duplex
Standard Transmission Rate: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ebcdic to Ascii
Interface Conversion: RS-232 to RS-232
Mode Conversion: Straight Half-Duplex
Protocol Conversion: 3270/2 to Ascii
Price: $3,995
Distribution Method: End user, OEM
Number Installed to Date: Under 100
Date First Installed: December 1981

PHOENIX 1, INC.
CLEO 3276 HF
Conversion Function: Protocol Conversion
Number of Ports Supported: 8
Transmission Mode: Half-Duplex
Standard Transmission Rate: Synchronous - 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ebcdic to Ascii
Interface Conversion: RS-232 to RS-232
Mode Conversion: Straight Half-Duplex
Protocol Conversion: 3271/12 to Ascii
Price: $3,995
Distribution Method: End user, OEM
Number Installed to Date: Under 100
Date First Installed: January 1983

PROGRESSIVE SYSTEMS, INC.
CLC MODELS 2/4
Conversion Function: Protocol Conversion
Number of Ports Supported: 14
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Baudot to Ascii, Ascii to Baudot, Ebcdic to Ascii
Protocol Conversion: Telex to Ascii, TWX to Ascii, DDP to Ascii
Features: Data Compression, Diagnostics, Automatic Parity Recognition, Autoanswer, for Tandem and IBM Computer

Price: $3,500 to $15,000
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: January 1978
(See Vendor Profile Page V-24)

PROGRESSIVE SYSTEMS, INC.
CLC MODEL 5
Conversion Function: Protocol Conversion
Number of Ports Supported: 20
Transmission Mode: Half-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Baudot to Ascii, Ascii to Baudot, Ebcdic to Ascii
Protocol Conversion: Telex to Ascii, TWX to Ascii, DDP to Ascii
Features: Concentration, Data Compression, Diagnostics, Automatic Parity Recognition, Autoanswer for Tandem Computers
Price: $4,000 to $18,000
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: January 1984

PROTOCOL COMPUTERS, INC.
7188/SNA
Conversion Function: Protocol Conversion
Number of Ports Supported: 8
Transmission Mode: Full-Duplex
Standard Transmission Rate: Synchronous - 300 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Protocol Conversion: BSC 3271 to SNA/SDLC 3274
Features: Polling
Price: $3,100 to $7,000
Monthly Maintenance Fee: $35
Distribution Method: End user, OEM, Third-party
Number Installed to Date: Under 100
Date First Installed: January 1983
(See Vendor Profile Page V-24)

PROTOCOL COMPUTERS, INC.
736X
Conversion Function: Protocol Conversion
Number of Ports Supported: 3
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 300 bps; Asynchronous/Synchronous - 1,200 bps; 2,400 bps, 4,800 bps, 9,600 bps
Protocol Conversion: X.25 to SDLC
Features: Diagnostics, Polling
Monthly Maintenance Fee: $55
Distribution Method: End user, OEM, Third-party
Number Installed to Date: Under 100
Date First Installed: April 1983

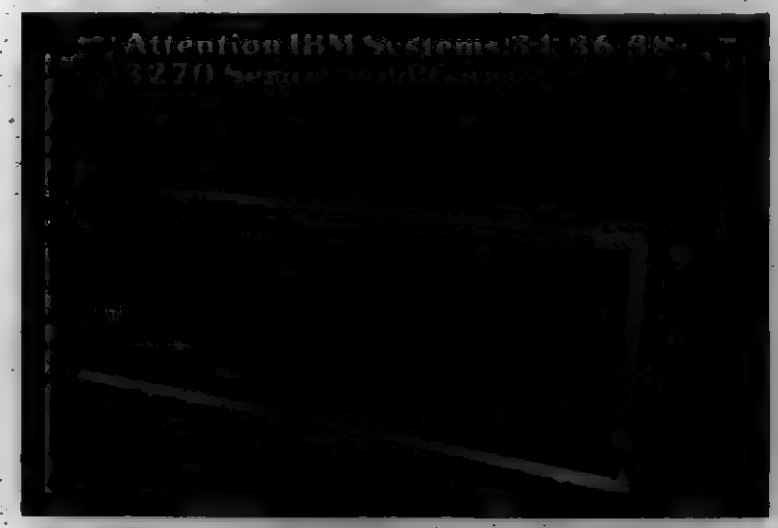
PROTOCOL COMPUTERS, INC.
740
Conversion Function: Protocol Conversion
Number of Ports Supported: 8
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 300 bps; Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Code Conversion: Ebcdic to Ascii
Protocol Conversion: SNA/SDLC to Ascii
Features: Polling, Autoanswer
Price: $5,200
Monthly Maintenance Fee: $35
Distribution Method: End user, OEM, Third-party

Number Installed to Date: Under 100
Date First Installed: October 1983

PROTOCOL COMPUTERS, INC.
7SS/SNA
Conversion Function: Protocol Conversion
Number of Ports Supported: 8
Transmission Mode: Full-Duplex
Standard Transmission Rate: Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Protocol Conversion: 3270 BSC to 3276 SNA/SDLC

Features: Polling
Price: $3,100 to $7,000
Monthly Maintenance Fee: $35
Distribution Method: End user, OEM, Third-party
Number Installed to Date: Under 100
Date First Installed: December 1983

PROTOCOL COMPUTERS, INC.
1951 CONVERTER
Conversion Function: Protocol Conversion
Number of Ports Supported: 7
Transmission Mode: Full-Duplex



Let MTI connect you to the low-cost ASCII world with protocol converters from PCI (and let your PC talk with your mainframe, too).

PCI protocol converters allow IBM users to expand their networks using ASCII terminals and printers with complete compatibility, high performance and at lower cost than with expensive SNA/SDLC equipment. The PCI 1076 lets any PC talk to an IBM mainframe.

MTI is an authorized distributor of PCI protocol converters as well as the most desirable ASCII terminals and printers. And MTI field sales engineers provide on-site consultation to show you how to design the most cost-effective terminal system.

Whether you buy, rent or lease, you'll find MTI is the one source for all the terminals, peripherals, systems, applications expertise and service you'll ever need. At good prices. Call MTI today and save.

Converters/Emulators

Standard Transmission Rate: Asynchronous - 300 bps; Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Protocol Conversion: SNA/SDLC to Ascii
Features: Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition
Price: $3,100 to $7,000
Monthly Maintenance Fee: $30
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 100 - 500
Date First Installed: November 1982

PROTOCOL COMPUTERS, INC.
1667 CONVERTER
Conversion Function: Protocol Conversion
Number of Ports Supported: 7
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 300 bps; Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Protocol Conversion: Ascii to SNA/SDLC (FU1)
Features: Polling, Automatic Data Rate Detection
Price: $3,100 to $7,000
Monthly Maintenance Fee: $30
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 100 - 500
Date First Installed: September 1979

PROTOCOL COMPUTERS, INC.
1671 CONVERTER
Conversion Function: Protocol Conversion
Number of Ports Supported: 7
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 300 bps; Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Protocol Conversion: Ascii to 3270 BSC
Features: Polling, Automatic Data Rate Detection
Price: $3,100 to $7,000
Monthly Maintenance Fee: $30
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 100 - 500
Date First Installed: August 1982

PROTOCOL COMPUTERS, INC.
1676 CONVERTER
Conversion Function: Protocol Conversion, Emulator
Number of Ports Supported: 8
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 300 bps; Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Code Conversion: Ebcdic to Ascii
Protocol Conversion: Ascii to SNA/SDLC 3274-6
Features: Diagnostics, Polling, Automatic Data Rate Detection, Autoanswer
Price: $3,100 to $7,000
Monthly Maintenance Fee: $30
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 500 - 1,000
Date First Installed: September 1980

PROTOCOL COMPUTERS, INC.
1676X CONVERTER
Conversion Function: Protocol Conversion, Emulator
Number of Ports Supported: 7
Standard Transmission Rate: Asynchronous - 300 bps; Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Protocol Conversion: Ascii to 3270 SNA/SDLC
Features: Diagnostics, Polling, Automatic Data Rate Detection
Price: $4,600 to $8,500
Monthly Maintenance Fee: $30
Distribution Method: End user, OEM, Third-party
Number Installed to Date: Under 100
Date First Installed: April 1982

PROTOCOL COMPUTERS, INC.
3780/SNA
Conversion Function: Protocol Conversion
Number of Ports Supported: 1
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 300 bps; Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Protocol Conversion: 3780 BSC to 3776/2 SNA/SDLC
Features: Polling
Price: $3,100 to $7,000
Monthly Maintenance Fee: $50
Distribution Method: End user, OEM, Third-party
Number Installed to Date: Under 100
Date First Installed: September 1983

PROTOCOL COMPUTERS, INC.
PCI SERIES
Conversion Function: Code Conversion, Protocol Conversion, Emulator
Number of Ports Supported: 8
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 300 bps; Asynchronous/Synchronous - 1,200 bps; 2,400 bps, 4,800 bps, 9,600 bps
Code Conversion: Ascii/BSC 3270 to Ascii/SNA 3767, Ascii/SNA 3270 to 3780/SNA 3770, Ascii/SNA 5251 to 3270 BSC/SNA
Protocol Conversion: Ascii/BNS 3270 to Ascii/SNA 3767, Ascii/SNA 3270 to 3780, Ascii/SNA 5251 to 3270 BSC/SNA
Features: Concentration, Diagnostics, Polling, Automatic Data Rate Detection, Autorenewer, Dynamic Printer Assignment
Price: $1,850 to $8,500
Monthly Maintenance Fee: $40
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 500 - 1,000
Date First Installed: August 1980

PROTOCOL COMPUTERS, INC.
R738X CONVERTER
Conversion Function: Protocol Conversion
Number of Ports Supported: 8
Standard Transmission Rate: Asynchronous - 300 bps; Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Protocol Conversion: SDLC to X.25
Features: Diagnostics, Polling
Price: $5,500
Monthly Maintenance Fee: $55
Distribution Method: End user, OEM, Third-party
Number Installed to Date: Under 100
Date First Installed: December 1983

PROTOCOL COMPUTERS, INC.
VIDROTEX 67
Conversion Function: Protocol Conversion
Number of Ports Supported: 7
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 75 bps, 300 bps, Asynchronous/Synchronous - 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Protocol Conversion: Ascii to SNA/SDLC
Features: Polling
Price: $3,100 to $7,000
Monthly Maintenance Fee: $35
Distribution Method: End user, OEM, Third-party
Number Installed to Date: Under 100

QUADTECHNICS, INC.
SQ1
Conversion Function: Protocol Conversion
Number of Ports Supported: 1
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Digital Command
Protocol Conversion: Serial to Qume
Features: Diagnostics, Automatic Parity Recognition, Autorenewer
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: January 1984
(See Vendor Profile Page V-24)

QUADTECHNICS, INC.
ST1
Conversion Function: Protocol Conversion
Number of Ports Supported: 1
Standard Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Digital Command
Protocol Conversion: Serial to Parallel
Features: Diagnostics, Automatic Parity Recognition, Autoanswer
Price: $300 to $400
Distribution Method: End user
Number Installed to Date: 500 - 1,000
Date First Installed: June 1981

RACAL-TELESYSTEMS, INC.
292 NETWORKING TRANSLATOR
Conversion Function: Protocol Conversion
Number of Ports Supported: 2
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps
Protocol Conversion: Word Processor to Word Processor
Features: Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition
Price: $2,695
Monthly Maintenance Fee: $59
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: February 1983
(See Vendor Profile Page V-25)

RACAL-TELESYSTEMS, INC.
404 CENTRAL SITE TRANSLATOR
Conversion Function: Protocol Conversion
Number of Ports Supported: 2
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps
Protocol Conversion: Word Processor to Word Processor
Features: Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition
Price: $3,995
Monthly Maintenance Fee: $33
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: February 1983

RAIMAN CORP.
RP-III
Conversion Function: Protocol Conversion
Transmission Mode: Half-Duplex, Full-Duplex
Features: Remote Batch
Price: $4,100 to $20,000
Monthly Maintenance Fee: $200
Distribution Method: End user
Number Installed to Date: Under 100
(See Vendor Profile Page V-26)

RENEX CORP.
TRANSLATOR-3270
Conversion Function: Protocol Conversion

Number of Ports Supported: 32
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 600 bps, 1,800 bps, 3,600 bps, 7,200 bps; Asynchronous/Synchronous - 300 bps, 1,200 bps, 2,400 bps, 4,800 bps, 9,600 bps
Protocol Conversion: Ascii to 3270 SNA/SDLC, Ascii to 3270 BSC, Ascii to System/34, System/36, System/38
Features: Diagnostics, Automatic Data Rate Detection
Price: $3,600 to $15,000
Monthly Maintenance Fee: $67
Distribution Method: Third-party
Number Installed to Date: 500 - 1,000
Date First Installed: September 1980
(See Vendor Profile Page V-26)

SNAPPSTALL CORP.
MEDIACOM
Conversion Function: Protocol Conversion
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic
Protocol Conversion: Asynchronous to Bisynchronous, Bisynchronous to Asynchronous
Features: Diagnostics, Autoanswer
Price: $5,500
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: June 1980
(See Vendor Profile Page V-26)

SHERWOOD DIGITAL ELECTRONICS
A/S-2, A/S-3
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 2,400 bps, 9,600 bps
Code Conversion: Ebcdic to Ascii, Ebcdic to Baudot, Ascii to Baudot
Interface Conversion: RS-232 to RS-232
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: Bisynchronous Ebcdic to Ascii Asynchronous, Ebcdic Bisynchronous to Baudot-Telex
Features: Data Compression, Diagnostics, Polling, Autoanswer
Price: $1,495 to $2,495
Distribution Method: Third-party
Number Installed to Date: 1,000 - 5,000
Date First Installed: March 1978
(See Vendor Profile Page V-26)

SHERWOOD DIGITAL ELECTRONICS
PQ4, PQ5
Conversion Function: Protocol Conversion
Number of Ports Supported: 2
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,800 bps; Asynchronous/Synchronous - 1,200 bps; 2,400 bps, 4,800 bps, 9,600 bps
Code Conversion: Ebcdic to Baudot, Ascii to Ebcdic, Ascii to Baudot
Interface Conversion: IBM TWX-AX to RS-232
Protocol Conversion: SNA/SDLC TWX to Ascii-Asynchronous
Features: Diagnostics, Polling, Autoanswer
Price: $1,495 to $2,495
Distribution Method: Third-party
Number Installed to Date: 500 - 1,000
Date First Installed: March 1978

STARNET DATA SYSTEMS
STARNET II
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Dissimilar Protocols
Number of Ports Supported: 16
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 19,200 bps
Code Conversion: Ascii to Binary, Ascii to Hex, Ascii to Ascii II
Interface Conversion: RS-232 to V.35
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: INQ AK to DCI DC2, CTS RTS to DCII DC3, XON XOF to ENQ ANK
Features: Diagnostics, Autoanswer, Modem Facility, Autodial, Autoanswer
Price: $14,710
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: 1981
(See Vendor Profile Page V-26)

STRATUS COMPUTER, INC.
STRATUS/32 CONTINUOUS PROCESSING SYSTEM
Conversion Function: Protocol Conversion, Speed Conversion
Number of Ports Supported: 32
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ebcdic to Ascii, Ascii to Ebcdic
Interface Conversion: RS-232 to RS-422, RS-422 to RS-232
Features: Concentration, Data Compression, Diagnostics, Polling, Automatic Parity Recognition, Autoanswer
Price: $140,000
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: February 1982
(See Vendor Profile Page V-26)

SYNALTA SYSTEMS
DCIC 2
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 3
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Interface Conversion: Serial to Parallel, Parallel to Serial
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: SLC to HDLC, SDLC to BDLC
Features: Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $495
Monthly Maintenance Fee: $25
Distribution Method: End user, OEM
Number Installed to Date: 100 - 500
Date First Installed: January 1983
(See Vendor Profile Page V-26)

SYNALTA SYSTEMS
STD SER 2
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 3
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Interface Conversion: Serial to Parallel, Parallel to Serial
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: SLC to HDLC, SDLC to BDLC
Features: Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $495
Monthly Maintenance Fee: $25
Distribution Method: End user, OEM
Number Installed to Date: 100 - 500
Date First Installed: January 1983

TANDY CORP.
T 76
Conversion Function: Protocol Conversion
Number of Ports Supported: 7
Standard Transmission Rate: Synchronous - 9,600 bps
Code Conversion: Ebcdic to Ascii
Interface Conversion: RS-232C to RS-232C
Protocol Conversion: SNA/SDLC to Ascii 2
Features: Diagnostics, Automatic Data Rate Detection, Automatic Parity Recognition
Price: $7,000
Distribution Method: End user
Date First Installed: December 1981
(See Vendor Profile Page V-26)

TECHLAND SYSTEMS, INC.
BLUE LINX 3275/6 BISYNCH
Conversion Function: Emulator
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps; Synchronous - 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Features: Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $690
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 100 - 500
(See Vendor Profile Page V-26)

TECHLAND SYSTEMS, INC.
BLUE LINX 3276/SDLC
Conversion Function: Emulator
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps; 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Features: Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $690
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 500 - 1,000
Date First Installed: November 1982

TECHLAND SYSTEMS, INC.
BLUE LINX 5251/12
Conversion Function: Emulator
Number of Ports Supported: 1
Standard Transmission Rate: Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps; Synchronous - 3,600 bps, 4,800 bps,

Converters/Emulators

7,200 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Features: Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $690
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 500 - 1,000
Date First Installed: November 1982

TECHLARD SYSTEMS, INC.
VTERM
Conversion Function: Emulator
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 1,200 bps, 1,800 bps, 2,400 bps; Synchronous - 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Features: Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $160
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 1,000 - 5,000
Date First Installed: October 1981

TEKTRONIX, INC.
834
Conversion Function: Emulator
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Mode Conversion: Half-Duplex to Full-Duplex, Full-Duplex to Half-Duplex
Protocol Conversion: BSC to X.25, SDLC, SNA
Features: Diagnostics, Polling, Protocol Simulation
Price: $175 to $3,990
Distribution Method: End user
Number Installed to Date: 500 - 1,000
Date First Installed: 1981
(See Vendor Profile Page V-30)

TELEBYTE TECHNOLOGIES, INC.
60
Conversion Function: Interface Conversion
Number of Ports Supported: 1
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps, 20,000 bps
Interface Conversion: RS-232C to

RS-449, RS-449 to RS-232C
Features: Automatic Data Rate Detection
Price: $115
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: September 1981
(See Vendor Profile Page V-30)

TELEBYTE TECHNOLOGIES, INC.
64
Conversion Function: Interface Conversion
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Interface Conversion: RS-232C to Current Loop, Current Loop to RS-232C
Features: Automatic Data Rate Detection
Price: $80
Distribution Method: End user
Number Installed to Date: 100 - 500
Date First Installed: September 1982

TELEBYTE TECHNOLOGIES, INC.
66
Conversion Function: Interface Conversion
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Interface Conversion: RS-232C to Current Loop, Current Loop to RS-232C
Features: Automatic Data Rate Detection
Price: $100
Distribution Method: End user
Number Installed to Date: 500 - 1,000
Date First Installed: June 1983

TELEBYTE TECHNOLOGIES, INC.
78
Conversion Function: Interface Conversion
Number of Ports Supported: 2
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Interface Conversion: RS-232C to Current Loop, Current Loop to RS-232C
Features: Diagnostics
Price: $195
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: June 1983

TELEBYTE TECHNOLOGIES, INC.
SERIES 83
Conversion Function: Interface Conversion
Number of Ports Supported: 1
Transmission Mode: Full-Duplex, Control Signals
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps, 100,000 bps
Interface Conversion: RS-232C to RS422, RS422 to RS-232C
Features: Automatic Data Rate Detection
Price: $99 to $126
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: March 1983

TELERACE CORP.
TELEX PLUG
Conversion Function: Code Conversion, Protocol Conversion, Speed Conversion
Number of Ports Supported: 2
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to Baudot, Baudot to Ascii
Features: Diagnostics, Autoanswer, Fail Back
Price: $1,395 to $1,670
Monthly Maintenance Fee: $24
Distribution Method: End user, OEM, Third-party
Number Installed to Date: Under 100
Date First Installed: September 1980
(See Vendor Profile Page V-30)

TELEPROCESSING PRODUCTS, INC.
TP-200/201
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Simplex
Standard Transmission Rate: Asynchronous/Synchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Protocol Conversion: Asynchronous to Synchronous, Synchronous to Asynchronous
Features: Diagnostics
Price: $295 to $395
Distribution Method: End user, Third-party
Number Installed to Date: 1,000 - 5,000
Date First Installed: January 1979
(See Vendor Profile Page V-30)

TELEPROCESSING PRODUCTS, INC.
TP-300
Conversion Function: Interface Conversion
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Protocol Conversion: Asynchronous to Synchronous, Synchronous to Asynchronous
Features: Diagnostics, Automatic Parity Recognition, Autoanswer, Error Control
Price: $735
Distribution Method: End user, Third-party
Number Installed to Date: 100 - 500
Date First Installed: May 1981

TELEPROCESSING PRODUCTS, INC.
TP-300I
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Simplex
Standard Transmission Rate: Asynchronous/Synchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Protocol Conversion: Asynchronous to Synchronous, Synchronous to Asynchronous
Features: Diagnostics, Automatic Parity Recognition, Autoanswer, Error Control
Price: $735
Distribution Method: End user, Third-party
Number Installed to Date: 100 - 500
Date First Installed: May 1981

TELEPROCESSING PRODUCTS, INC.
TP-350
Conversion Function: Interface Conversion
Number of Ports Supported: 1
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps, 56,000 bps
Interface Conversion: RS-232 to V.35, V.35 to RS-232
Price: $450
Distribution Method: End user, Third-party
Number Installed to Date: 500 - 1,000

TELTONE CORP.
M-871 ACCESS CONTROLLER
Conversion Function: Protocol Conversion
Number of Ports Supported: 25
Transmission Mode: Half-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 300

bps, 1,200 bps, 2,400 bps; Synchronous - 600 bps, 4,800 bps, 9,600 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Interface Conversion: RS-232C
Protocol Conversion: Ascii to SNA/SDLC, Ascii to BSC
Features: Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: October 1983
(See Vendor Profile Page V-30)

TYMNAS [illegible]
8220
Conversion Function: Protocol Conversion
Number of Ports Supported: 32
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Protocol Conversion: Ascii to BSC, Ascii to SDLC, Ascii to VIP
Features: Concentration, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition
Price: $5,000 to $12,000
Distribution Method: End user
Number Installed to Date: Under 100
Date First Installed: December 1981
(See Vendor Profile Page V-30)

TRW COMP.
TRW 232D
Conversion Function: Interface Conversion, Code Conversion
Number of Ports Supported: 2
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Commodore Ascii to Ascii
Interface Conversion: IEEE/488 to RS-232, RS-232 to IEEE/488
Price: $369
Distribution Method: Third-party
Number Installed to Date: 100 - 500
Date First Installed: 1979
(See Vendor Profile Page V-31)

TRW COMP.
TRW 1000
Conversion Function: Interface Conversion, Code Conversion
Number of Ports Supported: 1
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Commodore Ascii to Ascii
Interface Conversion: IEEE/488 to RS-232
Price: $129
Distribution Method: Third-party
Number Installed to Date: 500 - 1,000
Date First Installed: 1980

TRW COMP.
TRW 2000
Conversion Function: Interface Conversion, Code Conversion
Number of Ports Supported: 1
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Commodore Ascii to Ascii
Interface Conversion: IEEE/488 to RS-232, RS-232 to IEEE/488
Price: $229
Distribution Method: Third-party
Number Installed to Date: 500 - 1,000
Date First Installed: 1981

TRENDATA STANDARD MEMORIES CORP.
TCA/2
Conversion Function: Protocol Conversion
Number of Ports Supported: 8
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps
Code Conversion: Ascii to BSE
Protocol Conversion: RS-232 to IBM
Price: $5,000
Distribution Method: End user
Number Installed to Date: 500 - 1,000
(See Vendor Profile Page V-31)

TRI-DATA
NETWAY COMMUNICATIONS PROCESSOR
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 32
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Asynchronous/Synchronous - 50 bps, 75 bps, 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps, 56,000 bps
Protocol Conversion: 3270 SNA to Asynchronous Ascii, SDLC to Asynchronous Ascii, 3270 Bisynchronous to Asynchronous Ascii
Features: Concentration, Data Compression, Diagnostics, Polling, Automatic Data Rate Detection, Automatic Parity Recognition, Autoanswer
Price: $11,000
Distribution Method: End user, OEM, Third-party
Number Installed to Date: Under 100
Date First Installed: March 1983
(See Vendor Profile Page V-31)

VIA WEST, INC.
CST 100
Conversion Function: Interface Conversion
Number of Ports Supported: 1
Standard Transmission Rate: Asynchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Interface Conversion: RS-232 to Centronics Parallel
Price: $150
Distribution Method: OEM
Number Installed to Date: 500 - 1,000
(See Vendor Profile Page V-32)

VIA WEST, INC.
PSI 100
Conversion Function: Interface Conversion
Number of Ports Supported: 1
Standard Transmission Rate: Asynchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Interface Conversion: Centronics Parallel to RS-232
Price: $200
Distribution Method: OEM
Number Installed to Date: Under 100

VIA WEST, INC.
VST 2000
Conversion Function: Interface Conversion
Number of Ports Supported: 1
Standard Transmission Rate: Asynchronous - 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Interface Conversion: RS-232 to Centronics Parallel
Features: Diagnostics
Price: $195
Distribution Method: OEM
Number Installed to Date: 5,000 - 10,000

WESTERN DATACOM
DATACOM 1660
Conversion Function: Interface Conversion, Code Conversion, Protocol Conversion, Speed Conversion, Emulator
Number of Ports Supported: 4
Transmission Mode: Full-Duplex
Standard Transmission Rate: Asynchronous - 110 bps, 300 bps, 600 bps, 1,200 bps, 1,800 bps, 2,400 bps, 3,600 bps, 4,800 bps, 7,200 bps, 9,600 bps, 19,200 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Interface Conversion: Software Flow Center to Hardware Flow Center
Protocol Conversion: Any Asynchronous to Other Asynchronous
Features: Diagnostics, Autoanswer, Dual-Speed Modems
Price: $2,000
Monthly Maintenance Fee: $10
Distribution Method: Third-party
Number Installed to Date: Under 100
Date First Installed: November 1982
(See Vendor Profile Page V-33)

XYGMAR, INC.
X-100
Conversion Function: Protocol Conversion
Number of Ports Supported: 5
Transmission Mode: Half-Duplex, Full-Duplex
Standard Transmission Rate: Synchronous - 2,400 bps
Code Conversion: Ascii to Ebcdic, Ebcdic to Ascii
Mode Conversion: Usually Half-Duplex, No Conversion
Protocol Conversion: Ascii to SNA/SDLC
Features: Diagnostics, Automatic Parity Recognition
Price: $1,150
Monthly Maintenance Fee: $13
Distribution Method: End user
Number Installed to Date: Under 100
(See Vendor Profile Page V-33)

COMMUNICATIONS PROCESSORS

Index to Communications Processors

Often referred to as front-end processors, these systems perform the communications management function between peripheral devices and the host computer. These tasks include line control of the communications circuits, interface control, message formatting and error checking, as well as other functions. The index has been arranged alphabetically by vendor and contains the unit price as well as the page number on which the complete listing can be found.

VENDOR	MODEL	PRICE	PAGE
AGS	IF-11/3780	$8,000	B-25
	IF-11/HDLC	$7,500 to $10,000	B-25
	IF-11Q/X.25	$9,500	B-25
	IF-11/X.25	$10,000	B-25
	IF-11/X.25 PLUS	$9,000 to $24,000	B-25
	UMC PROCESSOR BOARD	$3,600 to $12,000	B-25
Ascom Telecommunications	ACCESS 34-I	$6,000 to $25,000	B-25
	ACCESS 36-II	$6,000 to $25,000	B-25
	ACCESS 38	$6,000 to $25,000	B-25
Ascotel Corp.	4705	$60,000	B-25
	4705 E	$120,000	B-25
Asmet, Inc.	NUCLEUS 6000-PACKET SWITCH	$100,000	B-26
Asnaam, Inc.	MODEL 8911A CHANNEL INTERFACE	$20,000	B-26
A. W. Computer Systems, Inc.	A.W. BRIDGE TECH	N/A	B-26
Behavior Corp.	PROFESSIONAL COMM MANAGER-3000	$1,300 to $2,500	B-26
Broadband Systems, Inc.	PS-1100	$3,300	B-26
Burroughs Corp.	B874	N/A	B-26
	CP3880	$94,050 to $124,950	B-26
	CP9582	$27,000 to $44,000	B-27
	NSP/LSP	N/A	B-27
Century Analysis, Inc.	OSI	$11,000	B-27
Chi Corp.	CCP/3205	$32,000 to $250,000	B-27
Codex Corp.	CODEX 6520 FEP	$45,000	B-27
Comsaar, Ltd.	CMC-4	$13,005 to $190,050	B-27
	CMC-32	$35,000 to $65,000	B-27
	DNP-4I	$30,000 to $80,000	B-27
	DNP-8I	$50,000 to $107,000	B-28
	DNP-16I	$75,000 to $250,000	B-28
Connetics, Inc.	TERMINAL-CONCENTRATOR: MDS-8070	$4,000 to $20,000	B-28
Computer Communications, Inc.	CC-6	$28,000 to $50,000	B-28
	CC-8	$50,000 to $100,000	B-28
	CC-80	$200,000 to $500,000	B-28
	CC-85	$200,000 to $500,000	B-28
Computer Ideation Corp.	LDP-5	$30,000	B-28
Computer Systems	CP/86	$2,500 to $10,000	B-29
Control Data Corp.	2551-3	$38,170	B-29
	2551-4	$47,883	B-29
Datagram Corp.	DM 1600B	$6,000 to $30,000	B-29
Datapraba, Inc.	DR-10	$750	B-29
Datastream Communications, Inc.	774	$4,000 to $10,000	B-29
	778	$4,000 to $6,000	B-30
	874	$18,000	B-30
	MPC	$6,000 to $12,000	B-30
Daycom Corp.	DAYCOM	N/A	B-30
DGA/TAC	SYSTEM 335	N/A	B-30
	SYSTEM 355	N/A	B-30
Digital Equipment Corp.	ETHERNET COMMUNICATIONS SERVERS	N/A	B-30
Engineered Systems, Inc.	TCS/500	$15,000	B-30
Envox Systems, Inc.	ENVAX 600	$1,000 to $3,000	B-30
	TRANSACTION PROCESSOR	$4,000 to $20,000	B-31
Excelan	EXOS 101	$1,700	B-31
Gandalf Data, Inc.	PACX IV	N/A	B-31
Gateway Communications, Inc.	GATEWAY PROCESSOR	$1,595 to $4,500	B-31
GTE Telenet Communications Corp.	TP-3005 NETWORK INTERFACE PROCESSOR	$2,350	B-31
	TP3010-II NETWORK INTERFACE PROCESSOR	$7,500	B-31
Harris Corp.	HARRIS 1600	N/A	B-31
	HARRIS 8470	$3,500	B-31
	HARRIS 9240	N/A	B-31
Hewlett-Packard Data Systems	Z-80	$1,000	B-32
Hewlett Corp.	HK-68A	$3,285	B-32

Communications Processor Index

VENDOR	MODEL	PRICE	PAGE
Honeywell, Inc.	DATANET 8	$38,085	B-32
	DATANET 6661	$36,805	B-32
IBM Corp.	3704	$36,150	B-32

	3670 MBS	N/A	B-36
	3690	N/A	B-36
Nestar Data Communications, Inc.	TRANSACTION CONCENTRATOR	$4,500	B-36
Northern Telecom, Inc.	BMC	$17,000 to $125,000	B-36
	29X SERIES	N/A	B-36
	503	$10,000 to $30,000	B-37
	585	$15,000 to $30,000	B-37
	585	$50,000 to $200,000	B-37
Nu Data Corp.	720 COMMUNICATIONS PROCESSOR	$1,700	B-37
Paradyne Corp.	PIXNET	$25,000	B-37
	SYSTEM 8400	$30,000	B-37
Peripheral Corp.	T-COMM	$60,000 to $120,000	B-37
Perkyst, Inc.	DCP/88	$2,000	B-38
	PC/3270	$995	B-38
Philips Electronics Instruments, Inc.	FLEXPAC PAD	N/A	B-38
Phoenix Digital Corp.	DPAC-80/PC	$8,000 to $15,000	B-38
Processing Innovations, Inc.	SAM (SPEECH AIDED MODEM)	$1,595 to $10,000	B-38
Radian Corp.	UT-1 & UT-4	$39,500 to $100,000	B-38
	UT-2 & UT-3	$24,000 to $50,000	B-38
Raycom Corp.	ATTACHED PROCESSOR AP61	$9,500 to $28,000	B-38
Raytheon Co.	RAYNET I, II, III	$200,000 to $600,000	B-38
S&S Semiconductors Corp.	SAMSON	$24,900	B-38
Sidereal Corp.	MICRONET 6	$18,000 to $23,000	B-39
	MICRONET 8	$21,000 to $26,000	B-39
	MICRONET 12	$2,500	B-39
	MICRONET 20	$4,200	B-39
	MICRONET 25	$5,600	B-39
	MICRONET 404	$8,750 to $12,100	B-39
	THE MICRONET SWITCH (STORE/FORWARD MSG)	$65,000 to $95,000	B-39
Software Results Corp.	COMBOARD/HASP	$13,900 to $26,900	B-40
	COMBOARD/SNA	$18,000 to $32,800	B-40
	COMBOARD/3780	$9,800 to $21,900	B-40
Sperry Corp.	DISTRIBUTED COMMUNICATIONS PROCESSOR/10	$28,000 to $50,000	B-40
	DISTRIBUTED COMMUNICATIONS PROCESSOR/20	$47,000 to $100,000	B-40
	DISTRIBUTED COMM PROCESSOR/40	$103,000 to $999,999	B-40
Summa Four	MCX & PCX SERIES	N/A	B-40
Syscom, Inc.	STORE & FORWARD MESSAGE SWITCH	$50,000	B-40
Tandem Computers, Inc.	6100 COMMUNICATION SUBSYSTEM	$24,000 to $300,000	B-40
	INFOSAT	$53,000	B-41
Thames Engineering	MZ-80	$6,000 to $12,000	B-41
TTTI	68K30	$3,750	B-41
Tusk Electronics, Inc.	PEOPLE TO COMPUTER INTERFACE	N/A	B-41
Wintechnifier, Inc.	DATATALKER	$995	B-41
	DATATALKER 2	$995 to $995	B-41
Xyplex, Inc.	XP-UN64	$8,500	B-41
	XYPLEX SYSTEM	N/A	B-41

ADC
IF-11/3780
Processor Function: Front-End Processor
Compatibility Classification: 2780/3780
Word Length: 8 bit
Host Compatibility: DEC PDP-11
Maximum Number Input Lines: 2
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 19,200 bps
Input Port Code Supported: Ebcdic
Protocols Supported: BSC
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Features: Protocol and Code Conversion
Price: $8,000
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: March 1981
(See Vendor Profile Page V-1)

ADC
IF-11/HDLC
Processor Function: Front-End Processor
Word Length: 8 bit
Host Compatibility: DEC VAX, DEC PDP-11, DEC LSI-11
Maximum Number Input Lines: 1
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 2,400 bps to 500,000 bps
Input Port Code Supported: Ascii
Protocols Supported: HDLC
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Features: Protocol and Code Conversion, Error Control, User Programmable
Price: $7,500 to $10,000
Distribution Method: OEM

ADC
IF-11Q/X.25
Processor Function: Front-End Processor
Compatibility Classification: X.25
Word Length: 8 bit
Host Compatibility: DEC LSI-11
Maximum Number Input Lines: 32
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 56,000 bps
Input Port Code Supported: X.25
Protocols Supported: X.25
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Features: Protocol and Code Conversion, Error Control, Automatic Disconnect, Multiplexer/Demultiplexer
Price: $9,500
Distribution Method: End user

ADC
IF-11/X.25
Processor Function: Front-End Processor
Compatibility Classification: X.25
Word Length: 8 bit
Host Compatibility: DEC PDP-11, DEC VAX-11
Maximum Number Input Lines: 32
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 56,000 bps
Input Port Code Supported: X.25
Protocols Supported: X.25
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Features: Protocol and Code Conversion, Error Control, Automatic Disconnect, Multiplexer/Demultiplexer
Price: $10,000
Distribution Method: End user
Number Installed to Date: 50 to 100

ADC
IF-11/X.25 PLUS
Processor Function: Front-End Processor
Compatibility Classification: X.25 PAD
Word Length: 8 bit
Host Compatibility: DEC PDP-11, DEC VAX-11
Maximum Number Input Lines: 32
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 56,000 bps
Input Port Code Supported: X.25
Protocols Supported: X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Features: Protocol and Code Conversion, Error Control, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), User Programmable
Price: $9,000 to $24,000
Distribution Method: End user
Number Installed to Date: 1 to 10

ADC
UMC PROCESSOR BOARD
Processor Function: Front-End Processor
Compatibility Classification: Processor Board
Word Length: 8 bit
Host Compatibility: DEC VAX, DEC PDP
Maximum Number Input Lines: 64
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 300 bps to 700 bps
Input Port Code Supported: Ebcdic, Ascii, X.25
Protocols Supported: BSC, ADCCP, HDLC, UDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Features: User Programmable
Price: $3,600 to $12,000
Distribution Method: End user
Number Installed to Date: 1,000 to 10,000
Date First Installed: September 1978

ACCESS TELECOMMUNICATIONS
ACCESS 34-I
Processor Function: Front-End Processor
Compatibility Classification: Non-IBM (Specialty)
Word Length: 8 bit
Host Compatibility: IBM System/34
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test
Maximum Number Input Lines: 8
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Asynchronous: 55 bps to 19,200 bps
Input Port Code Supported: Ascii
Protocols Supported: X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 8
Aggregate Transmission Rate: 8
Aggregate Transmission Rate: 192 bps
Features: Protocol and Code Conversion, Error Control, Terminal-Initiated Applications Switching, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $6,000 to $25,000
Monthly Maintenance Fee: $115
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: January 1981
(See Vendor Profile Page V-1)

ACCESS TELECOMMUNICATIONS
ACCESS 36-II
Processor Function: Front-End Processor
Compatibility Classification: Non-IBM (Specialty)
Word Length: 8 bit
Host Compatibility: IBM System/36
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test
Maximum Number Input Lines: 8
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Asynchronous: 55 bps to 19,200 bps
Input Port Code Supported: Ascii
Protocols Supported: X.25, Asynchronous (Start/Stop)
Aggregate Transmission Rate: 8
Aggregate Transmission Rate: 192 bps
Features: Protocol and Code Conversion, Error Control, Terminal-Initiated Applications Switching, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $6,000 to $25,000
Monthly Maintenance Fee: $115
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: January 1981

ACCESS TELECOMMUNICATIONS
ACCESS 38
Processor Function: Front-End Processor
Compatibility Classification: Non-IBM (Specialty)
Word Length: 8 bit
Host Compatibility: IBM System/38
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test
Maximum Number Input Lines: 8
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Asynchronous: 55 bps to 19,200 bps
Input Port Code Supported: Ascii
Protocols Supported: X.25, Asynchronous (Start/Stop)
Aggregate Transmission Rate: 8
Aggregate Transmission Rate: 192 bps
Features: Protocol and Code Conversion, Error Control, Terminal-Initiated Applications Switching, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $6,000 to $25,000
Monthly Maintenance Fee: $115
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: January 1981

ARRAKIS, CORP.
4785
Processor Function: Front-End Processor
Compatibility Classification: IBM 37XX
Word Length: 16 bit
Host Compatibility: Amdahl 470, Amdahl 580, IBM 370
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 64,000 bps
Asynchronous: 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Baudot
Protocols Supported: BSC, SDLC, HDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 4
Aggregate Transmission Rate: 4
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities,

Downline Loading of Remote Node
Price: $60,000
Monthly Maintenance Fee: $320
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: September 1980
(See Vendor Profile Page V-2)

AMDAHL CORP.
4705 E
Processor Function: Front-End Processor
Compatibility Classification: IBM 37XX
Word Length: 16 bit
Host Compatibility: Amdahl 470, Amdahl 580, IBM 370
Maximum Number Input Lines: 352
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 64,000 bps
Asynchronous: 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Baudot
Protocols Supported: BSC, SDLC, HDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 4
Aggregate Transmission Rate: 4
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $120,000
Monthly Maintenance Fee: $320
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: September 1980

ARNET, INC.
NUCLEUS 8000-PACKET SWITCH
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: X.25
Word Length: 16 bit
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive
Maximum Number Input Lines: 1,024
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 150 bps to 64,000 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Baudot
Protocols Supported: X.25
Maximum Output Lines: 1,024
Aggregate Transmission Rate: 1,024
Aggregate Transmission Rate: 10,000 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $100,000
Distribution Method: OEM
Date First Installed: 1980
(See Vendor Profile Page V-2)

ASSOCOM, INC.
MODEL 9811A CHANNEL INTERFACE
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Distributed Processing Nodes
Compatibility Classification: IBM, Mainframes, PCM
Word Length: 16 bit
Host Compatibility: IBM Mainframes
Peripherals Supported: CRT, Printer, Disk Drive, Diagnostic/Test, Graphics
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 2,400 bps to 1,000,000 bps
Asynchronous: 50 bps to 38,400 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data, Baudot
Protocols Supported: BSC, SDLC, HDLC, BDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal Controller, Automatic Polling, User Programmable
Price: $20,000
Distribution Method: End user, OEM
Number Installed to Date: 100 to 1,000
Date First Installed: November 1980
(See Vendor Profile Page V-3)

A. W. COMPUTER SYSTEMS, INC.
A.W. BRIDGE TECH
Processor Function: Message Switch, Distributed Processing Nodes
Compatibility Classification: IBM Series/1
Word Length: 16 bit
Host Compatibility: IBM Series/1, DEC PDP-11
Peripherals Supported: CRT, Printer, Disk Drive, Diagnostic/Test
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data
Protocols Supported: BSC, SDLC, HDLC, X.25, Asynchronous (Start/Stop)
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Distribution Method: End user
Number Installed to Date: 10 to 50
Date First Installed: 1973
(See Vendor Profile Page V-3)

BETACOM CORP.
PROFESSIONAL COMM MANAGER-2000
Processor Function: Front-End Processor
Compatibility Classification: Micro Processor
Word Length: 16 bit
Host Compatibility: IBM PC-XT, Televideo 910, 802, 800
Peripherals Supported: CRT, Printer
Maximum Number Input Lines: 2
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 300 bps to 1,200 bps
Asynchronous: 1,200 bps
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: BSC, SDLC, Asynchronous (Start/Stop), TWX
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Automatic Polling, User Programmable, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $1,300 to $2,500
Monthly Maintenance Fee: $13
Distribution Method: End user
Number Installed to Date: 100 to 1,000
(See Vendor Profile Page V-4)

BROADBAND SYSTEMS, INC.
PS-1100
Processor Function: Remote-Line Concentrator
Compatibility Classification: IBM 3250
Word Length: 32 bit
Host Compatibility: IBM 308X, IBM 430X
Peripherals Supported: Graphics Terminals
Maximum Number Input Lines: 1
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Synchronous: 2,400 bps to 2,000,000 bps
Input Port Code Supported: Ascii
Protocols Supported: SDLC
Aggregate Transmission Rate: 20,000 bps
Features: Error Control, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Automatic Polling, User Programmable
Price: $3,300
Distribution Method: End user
Date First Installed: August 1981
(See Vendor Profile Page V-4)

BURROUGHS CORP.
B674
Processor Function: Front-End Processor
Compatibility Classification: Non-IBM (General Purpose)
Host Compatibility: Burroughs B2/3/4000
Maximum Number Input Lines: 32
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Synchronous: 9,600 bps
Asynchronous: 19,200 bps
Input Port Code Supported: Ebcdic, Ascii
Aggregate Transmission Rate: 1
Features: Protocol and Code Conversion, Error Control, Terminal-Initiated Applications Switching, Automatic Disconnect, Terminal Controller, Automatic Polling, Statistics Collection, Autodial/Autoanswer Capabilities
Distribution Method: End user
Date First Installed: 1974
(See Vendor Profile Page V-4)

BURROUGHS CORP.
CP3680
Processor Function: Front-End Processor
Compatibility Classification: Non-IBM (General Purpose)
Host Compatibility: Burroughs B2/3/4000
Peripherals Supported: CRT, Disk Drive
Maximum Number Input Lines: 256
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 9,600 bps
Asynchronous: 19,200 bps
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: BSC, SDLC, Asynchronous (Start/Stop)
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $84,050 to $124,950
Monthly Maintenance Fee: $535
Distribution Method: End user
Date First Installed: September 1981

BURROUGHS CORP.
CP9552
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Host Compatibility: Burroughs
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test, Card Reader
Maximum Number Input Lines: 96
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 9,600 bps
Asynchronous: 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25
Protocols Supported: BSC, SDLC, SDLC, X.25, Asynchronous (Start/Stop)
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $27,000 to $44,000
Distribution Method: End user
Date First Installed: June 1982

BURROUGHS CORP.
NSP/LSP
Processor Function: Front-End Processor
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 48 bit
Host Compatibility: Burroughs B7900, B6900, B5900
Maximum Number Input Lines: 128
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 2,000 bps to 56,000 bps
Asynchronous: 50 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Baudot
Protocols Supported: BSC, SDLC, HDLC, BDLC, X.25, Asynchronous (Start/Stop)
Aggregate Transmission Rate: 1
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, Statistics Collection, Autodial/Autoanswer Capabilities
Monthly Maintenance Fee: $300
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: January 1980

CENTURY ANALYSIS, INC.
CAI
Processor Function: Line Multiplexing
Compatibility Classification: NCR Criterion Series
Word Length: 16 bit
Host Compatibility: NCR Criterion
Peripherals Supported: CRT, Printer
Maximum Number Input Lines: 21
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Asynchronous: 300 bps to 19,200 bps
Input Port Code Supported: Ascii
Protocols Supported: Asynchronous (Start/Stop)
Maximum Output Lines: 21
Aggregate Transmission Rate: 96 bps
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Terminal Controller, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $11,000
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: June 1982
(See Vendor Profile Page V-5)

CMI CORP.
CCP/3305
Processor Function: Front-End Processor, Remote-Line Concentrator, Host Independent
Compatibility Classification: Sperry
Word Length: 32 bit
Host Compatibility: Sperry 1100
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test
Maximum Number Input Lines: 400
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 50,000 bps
Asynchronous: 75 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data
Protocols Supported: BSC, SDLC, ADCCP, HDLC, UDLC, X.25, Asynchronous (Start/Stop), Uniscope
Maximum Output Lines: 400
Aggregate Transmission Rate: 2,000 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $32,000 to $250,000
Distribution Method: Third-party
Number Installed to Date: 100 to 1,000
(See Vendor Profile Page V-6)

CODEX CORP.
CODEX 6020 FEP
Processor Function: Front-End Processor
Compatibility Classification: IBM 270X
Word Length: 16 bit
Host Compatibility: IBM Mainframes
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive
Maximum Number Input Lines: 240
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 230,400 bps
Asynchronous: 50 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, Baudot
Protocols Supported: BSC, Asynchronous (Start/Stop)
Maximum Output Lines: 4
Aggregate Transmission Rate: 16,000 bps
Features: Protocol and Code Conversion, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, Statistics Collection, Autodial/Autoanswer Capabilities, Multipoint Dynamic
Price: $45,000
Monthly Maintenance Fee: $450
Distribution Method: End user
Date First Installed: 1980
(See Vendor Profile Page V-5)

COMMEX, LTD.
CMC-4
Processor Function: Front-End Processor
Compatibility Classification: IBM 37XX
Word Length: 8 bit
Host Compatibility: IBM
Peripherals Supported: CRT, Printer
Maximum Number Input Lines: 4
Input Transmission Mode: Full-Duplex, Half-Duplex, Isochrono
Input Transmission Speeds:
Synchronous: 1,200 bps to 57,600 bps
Asynchronous: 75 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, Baudot, PTTC
Protocols Supported: BSC, Asynchronous (Start/Stop), SDA2, TTY2, IBM Series/1
Maximum Output Lines: 1
Aggregate Transmission Rate: 576 bps
Features: Error Control, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Autodial/Autoanswer Capabilities, Hardware Configurable
Price: $13,005 to $190,080
Monthly Maintenance Fee: $80
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: 1976
(See Vendor Profile Page V-6)

COMMEX, LTD.
CMC-32
Processor Function: Front-End Processor
Compatibility Classification: IBM 37XX
Word Length: 8 bit
Host Compatibility: IBM
Peripherals Supported: CRT, Printer
Maximum Number Input Lines: 32
Input Transmission Mode: Full-Duplex, Half-Duplex, Isochronou
Input Transmission Speeds:
Synchronous: 1,200 bps to 57,600 bps
Asynchronous: 75 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, Baudot, PTTC
Protocols Supported: BSC, Asynchronous (Start/Stop), SDA2, TTY2, IBM Series/1
Maximum Output Lines: 1
Aggregate Transmission Rate: 576 bps
Features: Error Control, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Autodial/Autoanswer Capabilities, Hardware Configurable
Price: $35,000 to $65,000
Monthly Maintenance Fee: $120
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: September 1976

COMMEX, LTD.
DNP-4I
Processor Function: Front-End Processor, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: IBM 37XX
Word Length: 8 bit
Host Compatibility: IBM, DEC
Peripherals Supported: CRT, Printer
Maximum Number Input Lines: 18
Input Transmission Mode: Full-Duplex, Half-Duplex, Isochronous
Input Transmission Speeds:
Synchronous: 600 bps to 56,000 bps
Input Transmission Speeds:
Asynchronous: 75 bps to 19,200 bps
Input Port Code Supported: Ebcdic,

Communications Processors

Ascii, Baudot, PTTC
Protocols Supported: BSC, ADCCP, X.25, Asynchronous (Start/Stop), SDA2, TTY2, IBM Series/1
Maximum Output Lines: 1
Aggregate Transmission Rate: 1 - 750 bps
Features: Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node, User Configurable
Price: $30,000 to $80,000
Monthly Maintenance Fee: $140
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: 1982

COMMTEX, LTD.
DNP-4I
Processor Function: Front-End Processor, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: IBM 37XX
Word Length: 8 bit
Host Compatibility: IBM, DEC
Peripherals Supported: CRT, Printer
Maximum Number Input Lines: 23
Input Transmission Mode: Full-Duplex, Half-Duplex, Isochronous
Input Transmission Speeds:
Synchronous: 600 bps to 56,000 bps
Asynchronous: 75 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, Baudot, PTTC
Protocols Supported: BSC, ADCCP, X.25, Asynchronous (Start/Stop), SDA2, TTY2, IBM Series/1
Maximum Output Lines: 1
Aggregate Transmission Rate: 750 bps
Features: Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node, User Configurable
Price: $50,000 to $107,000
Monthly Maintenance Fee: $165
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: 1982

COMMTEX, LTD.
DNP-16I
Processor Function: Front-End Processor, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: IBM 37XX
Word Length: 8 bit
Host Compatibility: IBM, DEC
Peripherals Supported: CRT, Printer
Maximum Number Input Lines: 83
Input Transmission Mode: Full-Duplex, Half-Duplex, Isochronous
Input Transmission Speeds:
Synchronous: 600 bps to 56,000 bps
Asynchronous: 75 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, Baudot, PTTC
Protocols Supported: BSC, ADCCP, X.25, Asynchronous (Start/Stop), SDA2, TTY2, IBM Series/1
Maximum Output Lines: 4
Aggregate Transmission Rate: 750 bps
Features: Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node, User Configurable
Price: $75,000 to $250,000
Monthly Maintenance Fee: $195
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: 1982

COMMTEX, INC.
TERMINAL CONCENTRATOR; MDS-3070
Processor Function: Message Switch, Remote-Line Concentrator, Distributed Processing Nodes
Compatibility Classification: IBM 3274/6 Compatible
Word Length: 8 bit, 16 bit
Host Compatibility: IBM 360/370, IBM 30XX, 43XX, TTY
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive
Maximum Number Input Lines: 128
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 19,200 bps
Asynchronous: 110 bps to 19,200 bps
Input Port Code Supported: Ascii
Protocols Supported: BSC, SDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 4
Aggregate Transmission Rate: 4
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node, Switching
Price: $4,000 to $80,000
Distribution Method: Third-party
Number Installed to Date: 1,000 to 10,000
Date First Installed: February 1981

COMPUTER COMMUNICATIONS, INC.
CC-8
Processor Function: Front-End Processor
Compatibility Classification: IBM 37XX
Word Length: 16 bit
Host Compatibility: IBM 370, IBM 30XX, IBM 43XX
Peripherals Supported: CRT, Printer, Disk Drive
Maximum Number Input Lines: 32
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 2,000 bps to 56,000 bps
Input Transmission Speeds:
Asynchronous: 75 bps to 9,600 bps
Input Port Code Supported: Ascii
Protocols Supported: BSC, Asynchronous (Start/Stop)
Maximum Output Lines: 2
Aggregate Transmission Rate: 8,000 bps
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, Autodial/Autoanswer Capabilities
Price: $28,000 to $60,000
Distribution Method: End user
Date First Installed: 1981
(See Vendor Profile Page V-6)

COMPUTER COMMUNICATIONS, INC.
CC-6
Processor Function: Front-End Processor
Compatibility Classification: IBM 37XX
Word Length: 16 bit
Host Compatibility: IBM 370, IBM 30XX, IBM 43XX
Peripherals Supported: CRT, Printer, Disk Drive
Maximum Number Input Lines: 240
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 2,000 bps to 230,400 bps
Input Transmission Speeds:
Asynchronous: 75 bps to 9,600 bps
Input Port Code Supported: Ascii
Protocols Supported: BSC, Asynchronous (Start/Stop), TTY
Maximum Output Lines: 4
Aggregate Transmission Rate: 16,000 bps
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, Statistics Collection, Autodial/Autoanswer Capabilities, X.25 Support
Price: $50,000 to $100,000
Distribution Method: End user
Number Installed to Date: 300
Date First Installed: 1978

COMPUTER COMMUNICATIONS, INC.
CC-80
Processor Function: Message Switch, Electronic Mail
Compatibility Classification: Custom Design Communications Processor
Word Length: 16 bit
Host Compatibility: IBM 370, IBM 30XX, IBM 43XX
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive
Maximum Number Input Lines: 1,000
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 2,000 bps to 230,400 bps
Asynchronous: 75 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25
Protocols Supported: BSC, HDLC, Asynchronous (Start/Stop), Sabre X.25
Maximum Output Lines: 7
Aggregate Transmission Rate: 12,000 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities
Price: $200,000 to $500,000
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: 1978

COMPUTER COMMUNICATIONS, INC.
CC-85
Processor Function: Message Switch, Electronic Mail
Compatibility Classification: Custom Design Communications Processor
Word Length: 16 bit
Host Compatibility: IBM 370, IBM 30XX, IBM 43XX
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive
Maximum Number Input Lines: 1,000
Input Transmission Mode: Full-Duplex, Half-Duplex

Input Transmission Speeds:
Synchronous: 2,000 bps to 230,400 bps
Input Transmission Speeds:
Asynchronous: 75 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25
Protocols Supported: BSC, HDLC, Asynchronous (Start/Stop), Sabre X.25
Maximum Output Lines: 7
Aggregate Transmission Rate: 24,000 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities
Price: $200,000 to $500,000
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: 1979

COMPUTER MEDICS CORP.
LDP-5
Processor Function: Front-End Processor
Compatibility Classification: IBM 37XX
Word Length: 8 bit
Peripherals Supported: CRT, Printer, Bar Code Scanner
Maximum Number Input Lines: 32
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Asynchronous: 110 bps to 9,600 bps
Input Port Code Supported: Ascii
Protocols Supported: Asynchronous (Start/Stop)
Maximum Output Lines: 5
Aggregate Transmission Rate: 96 bps
Features: Protocol and Code Conversion, Terminal Emulation, Multiplexer/Demultiplexer, Local Console (System Control Functions), Automatic Polling, Statistics Collection, Downline Loading of Remote Node
Price: $30,000
Distribution Method: Third-party
Number Installed to Date: 50 to 100
Date First Installed: 1979
(See Vendor Profile Page V-7)

COMPUTER SYSTEMS CP/86
Processor Function: Front-End Processor, Remote-Line Concentrator
Compatibility Classification: IBM 270X
Word Length: 16 bit
Host Compatibility: IBM-PC-XT,4300, DEC PDP-11, DEC VAX-780
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test
Maximum Number Input Lines: 32
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 2,400 bps to 8,000 bps
Asynchronous: 300 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, Parallel Binary Data
Protocols Supported: BSC, SDLC, Asynchronous (Start/Stop)
Maximum Output Lines: 2
Aggregate Transmission Rate: 1,000 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Multiplexer/Demultiplexer, Terminal Controller, User Programmable, Autodial/Autoanswer Capabilities
Price: $2,900 to $10,000
Distribution Method: End user
Date First Installed: 1982
(See Vendor Profile Page V-7)

CONTROL DATA CORP.
2551-3
Processor Function: Front-End Processor
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 16 bit
Host Compatibility: CDC Cyber 700, CDC Cyber 800
Peripherals Supported: Tape Drive
Maximum Number Input Lines: 256
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 56,000 bps
Asynchronous: 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25
Protocols Supported: BSC, SDLC, HDLC, X.25, HASP, CDCCP
Maximum Output Lines: 256
Aggregate Transmission Rate: 256
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $36,170
Monthly Maintenance Fee: $425
Distribution Method: End user
Date First Installed: 1974
(See Vendor Profile Page V-8)

CONTROL DATA CORP.
2561-4
Processor Function: Front-End Processor
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 16 bit
Host Compatibility: CDC Cyber 700, CDC Cyber 800
Maximum Number Input Lines: 256
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 56,000 bps
Input Transmission Speeds:
Asynchronous: 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25
Protocols Supported: BSC, SDLC, HDLC, X.25, HASP, CDCCP
Maximum Output Lines: 256
Aggregate Transmission Rate: 256
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $47,863
Monthly Maintenance Fee: $475
Distribution Method: End user
Date First Installed: 1974

DATAGRAM CORP.
DM 19000
Processor Function: Front-End Processor
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Host Compatibility: Burroughs Mainframes
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 40
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 110 bps to 9,600 bps
Asynchronous: 110 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, Baudot
Protocols Supported: Asynchronous (Start/Stop), Burroughs Poll Select
Maximum Output Lines: 2
Aggregate Transmission Rate: 192 bps
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $6,000 to $30,000
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: January 1979
(See Vendor Profile Page V-9)

DATAPOINT, INC.
DR-10
Processor Function: Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Peripherals Supported: CRT, Printer, Disk Drive, Diagnostic/Test
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 50 bps to 19,200 bps
Asynchronous: 50 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data
Protocols Supported: BSC, SDLC, HDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 2
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, Statistics Collection
Price: $750
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: September 1982
(See Vendor Profile Page V-9)

DATASTREAM COMMUNICATIONS, INC.
774
Processor Function: Remote-Line Concentrator
Compatibility Classification: IBM 3270
Host Compatibility: IBM
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 16
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Synchronous: 110 bps to 9,600 bps
Asynchronous: 110 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, Asynchronous Serial
Protocols Supported: BSC
Maximum Output Lines: 2
Aggregate Transmission Rate: 2
Features: Protocol and Code Conversion, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Terminal Controller, Local Console (System Control Functions), User Programmable
Price: $4,000 to $10,000
Monthly Maintenance Fee: $125
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: September 1980
(See Vendor Profile Page V-9)

Communications Processors

DATASTREAM COMMUNICATION, INC.
778
Processor Function: Remote-Line Concentrator
Compatibility Classification: IBM 3270
Host Compatibility: IBM
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 15
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Synchronous: 110 bps to 9,600 bps
Asynchronous: 110 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, Asynchronous Serial
Protocols Supported: BSC
Maximum Output Lines: 2
Aggregate Transmission Rate: 2
Features: Protocol and Code Conversion, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Terminal Controller, Local Console (System Control Functions), User Programmable
Price: $4,000 to $6,000
Monthly Maintenance Fee: $100
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: September 1980

DATASTREAM COMMUNICATION, INC.
674
Processor Function: Remote-Line Concentrator
Compatibility Classification: IBM 3270
Host Compatibility: IBM
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 15
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Synchronous: 110 bps to 9,600 bps
Asynchronous: 110 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, Asynchronous Serial
Protocols Supported: BSC
Maximum Output Lines: 2
Aggregate Transmission Rate: 2
Features: Protocol and Code Conversion, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Terminal Controller, Local Console (System Control Functions), User Programmable
Price: $16,000
Monthly Maintenance Fee: $115
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: September 1981

DATASTREAM COMMUNICATION, INC.
MPC
Processor Function: Remote-Line Concentrator
Compatibility Classification: IBM 3270
Host Compatibility: IBM
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 15
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Synchronous: 110 bps to 9,600 bps
Asynchronous: 110 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, Asynchronous Serial
Maximum Output Lines: 2
Aggregate Transmission Rate: 2
Features: Protocol and Code Conversion, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Terminal Controller, Local Console (System Control Functions), User Programmable
Price: $6,000 to $12,000
Monthly Maintenance Fee: $150
Distribution Method: End user
Number Installed to Date: 1 to 10
Date First Installed: January 1984

DAYCOM CORP.
DAYCOM
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 16 bit, 32 bit
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: BSC, SDLC, HDLC, BDLC
Features: Error Control, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection
Number Installed to Date: 100 to 1,000
(See Vendor Profile Page V-10)

DCA/TAC
SYSTEM 326
Processor Function: Host Independent
Compatibility Classification: Network Processor
Word Length: 8 bit
Host Compatibility: DEC, DG, IBM
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive
Maximum Number Input Lines: 42
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 2,400 bps to 9,600 bps
Asynchronous: 50 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Baudot
Protocols Supported: BSC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 42
Aggregate Transmission Rate: 4,000 bps
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance
Distribution Method: End user, OEM, Third-party
Date First Installed: 1984
(See Vendor Profile Page V-10)

DCA/TAC
SYSTEM 365
Processor Function: Host Independent
Compatibility Classification: Network Processor
Word Length: 8 bit
Host Compatibility: DEC, DG, IBM
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive
Maximum Number Input Lines: 126
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 2,400 bps to 9,600 bps
Asynchronous: 50 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Baudot
Protocols Supported: BSC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 126
Aggregate Transmission Rate: 4,000 bps
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 100 to 1,000
Date First Installed: 1980

DIGITAL EQUIPMENT CORP.
ETHERNET COMMUNICATIONS SERVERS
Processor Function: Front-End Processor, Remote-Line Concentrator, Host Independent
Compatibility Classification: DEC Communication Service for Ethernet
Word Length: 16 bit
Host Compatibility: DEC
Maximum Number Input Lines: 32
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Asynchronous: 19,200 bps
Input Port Code Supported: Ascii
Protocols Supported: Asynchronous (Start/Stop)
Maximum Output Lines: 32
Aggregate Transmission Rate: 32
Distribution Method: End user, OEM, Third-party
Date First Installed: March 1984
(See Vendor Profile Page V-10)

[illegible] SYSTEMS, INC.
TCS/500
Processor Function: Front-End Processor
Compatibility Classification: IBM 3270
Word Length: 16 bit
Host Compatibility: IBM 3270
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test
Maximum Number Input Lines: 144
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Asynchronous: 600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data, Baudot
Protocols Supported: BSC, SDLC, HDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 144
Aggregate Transmission Rate: 192 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial and Autoanswer Capabilities, Downline Loading of Remote Node
Price: $15,000
Distribution Method: End user
Number Installed to Date: 1 to 10
Date First Installed: October 1981
(See Vendor Profile Page V-11)

ENVAX SYSTEMS, INC.
ENVAX 600
Processor Function: Front-End Processor, Host Independent
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 8
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Asynchronous: 2,400 bps

Input Port Code Supported: Ebcdic, Ascii, Baudot
Protocols Supported: Asynchronous (Start/Stop)
Maximum Output Lines: 1
Aggregate Transmission Rate: 96 bps
Features: Protocol and Code Conversion, Automatic Disconnect, On-Line Maintenance, Autodial/Autoanswer Capabilities
Price: $1,000 to $3,000
Distribution Method: Third-party
Number Installed to Date: 1,000 to 10,000
Date First Installed: October 1978
(See Vendor Profile Page V-11)

RAYMAX SYSTEMS, INC.
TRANSACTION PROCESSOR
Processor Function: Front-End Processor
Compatibility Classification: IBM 37XX
Word Length: 8 bit
Host Compatibility: IBM 370, 360, DG, Datapoint ARC
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test
Maximum Number Input Lines: 32
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Asynchronous: 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data, Baudot
Protocols Supported: BSC, SDLC, HDLC, BDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 4
Aggregate Transmission Rate: 2 Mb bps
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), On-Line Maintenance, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $4,000 to $20,000
Distribution Method: Third-party
Number Installed to Date: 50 to 100
Date First Installed: February 1981

EXCELAN
EXOS 101
Processor Function: Front-End Processor
Compatibility Classification: IBM 270X
Word Length: 16 bit
Maximum Memory Supported: 16.0M bytes
Peripherals Supported: Ethernet LAN
Input Transmission Mode: Half-Duplex
Protocols Supported: Ethernet CCP IP
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Multiplexer/Demultiplexer, User Programmable, Statistics Collection, Downline Loading of Remote Node
Price: $1,700
Distribution Method: OEM
Number Installed to Date: 1 to 10
Date First Installed: January 1983
(See Vendor Profile Page V-12)

GANDALF DATA, INC.
PACX IV
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit, 16 bit
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 1,024
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 2,400 bps to 19,200 bps
Asynchronous: 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Baudot
Protocols Supported: BSC, SDLC, HDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 128
Aggregate Transmission Rate: 190,000 bps
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Distribution Method: End user
Number Installed to Date: 1,000 to 10,000
(See Vendor Profile Page V-12)

GATEWAY COMMUNICATIONS, INC.
GATEWAY PROCESSOR
Processor Function: Message Switch, Remote-Line Concentrator, Host Independent
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Host Compatibility: IBM
Peripherals Supported: CRT, Printer, Disk Drive, Diagnostic/Test
Maximum Number Input Lines: 16
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 2,400 bps to 56,000 bps
Asynchronous: 110 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data, Baudot
Protocols Supported: BSC, SDLC, ADCCP, HDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 16
Aggregate Transmission Rate: 5,000 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $1,500 to $4,500
Distribution Method: Third-party
Number Installed to Date: 1 to 10
Date First Installed: January 1983
(See Vendor Profile Page V-12)

GTE TELENET COMMUNICATIONS CORP.
TP-3005 NETWORK INTERFACE PROCESSOR
Processor Function: Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Maximum Number Input Lines: 8
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Asynchronous: 110 bps to 9,600 bps
Input Port Code Supported: Ascii
Protocols Supported: X.25, Asynchronous (Start/Stop), X.28, X.29, X.3
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Local Console (System Control Functions), On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $2,350
Monthly Maintenance Fee: $30
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: January 1983
(See Vendor Profile Page V-13)

GTE TELENET COMMUNICATIONS CORP.
TP3010-II NETWORK INTERFACE PROCESSOR
Processor Function: Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: Network Interface Process
Word Length: 8 bit
Peripherals Supported: Tape Drive
Maximum Number Input Lines: 28
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 9,600 bps
Asynchronous: 50 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, Baudot
Protocols Supported: BSC, SDLC, X.25, Asynchronous (Start/Stop), 3270 DSP BPAD
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $7,500
Monthly Maintenance Fee: $65
Distribution Method: End user
Number Installed to Date: 1,000 to 10,000
Date First Installed: December 1978

HARRIS CORP.
HARRIS 1000
Processor Function: Distributed Processing Nodes
Compatibility Classification: IBM 37XX
Word Length: 16 bit
Host Compatibility: IBM Mainframes, Sperry 1004, CDC 200 UT
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test, Card Reader
Maximum Number Input Lines: 4
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 56,000 bps
Asynchronous: 110 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: BSC, SDLC, HDLC, Asynchronous (Start/Stop)
Maximum Output Lines: 4
Aggregate Transmission Rate: 4
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, Statistics Collection, Autodial/Autoanswer Capabilities
Distribution Method: End user
Number Installed to Date: 1,000 to 10,000
Date First Installed: September 1974
(See Vendor Profile Page V-14)

HARRIS CORP.
HARRIS 8470
Processor Function: Front-End Processor

Communications Processors

Compatibility Classification: Non-IBM (General Purpose)
Word Length: 48 BIT
Host Compatibility: Harris 800, 700, 500, 1000
Peripherals Supported: CRT, Printer, Tape Drive, IEEE 488 Device
Maximum Number Input Lines: 16
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 56,000 bps
Asynchronous: 50 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data
Protocols Supported: BSC, X.25, Asynchronous (Start/Stop), Isochronous
Maximum Output Lines: 1
Aggregate Transmission Rate: 15,000 bps
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Downline Loading of Remote Node
Price: $3,500
Monthly Maintenance Fee: $20
Distribution Method: End user
Date First Installed: September 1982

HARRIS CORP.
HARRIS 8240
Processor Function: Distributed Processing Nodes
Compatibility Classification: IBM 37XX
Word Length: 16 bit
Host Compatibility: IBM Mainframes, Sperry 1004, CDC 200 UT
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test, Card Reader
Maximum Number Input Lines: 4
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 56,000 bps
Asynchronous: 110 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: BSC, SDLC, HDLC, Asynchronous (Start/Stop)
Maximum Output Lines: 4
Aggregate Transmission Rate: 4
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, Statistics Collection, Autodial/Autoanswer Capabilities
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: March 1982

HEINEKEN DATA SYSTEMS
Z-80
Processor Function: Front-End Processor, Host Independent, Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Host Compatibility: IBM 370, IBM 4300
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 1
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Asynchronous: 9,600 bps
Input Port Code Supported: Ascii
Protocols Supported: Asynchronous (Start/Stop)
Maximum Output Lines: 3
Aggregate Transmission Rate: 96 bps
Features: Protocol and Code Conversion, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Terminal Controller, Automatic Polling, User Programmable, On-Line Maintenance, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $1,000
Monthly Maintenance Fee: $30
Distribution Method: Third-party
Number Installed to Date: 10,000 to 50,000
Date First Installed: April 1980
(See Vendor Profile Page V-14)

HERMES CORP.
HK-68A
Processor Function: Front-End Processor
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 16 bit
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test
Maximum Number Input Lines: 48
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 50 bps to 1,000,000 bps
Asynchronous: 50 bps to 38,400 bps
Input Port Code Supported: Ascii, X.25
Protocols Supported: BSC, SDLC, ADCCP, HDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 16
Aggregate Transmission Rate: 16
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $3,265
Distribution Method: End user, OEM
Number Installed to Date: 100 to 1,000
Date First Installed: October 1983
(See Vendor Profile Page V-14)

HONEYWELL, INC.
DATANET 8
Processor Function: Front-End Processor, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: Network Processor
Word Length: 16 bit
Host Compatibility: Honeywell DPS 8, DPS 66, DPS 64
Peripherals Supported: Disk Drive
Maximum Number Input Lines: 128
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 56,000 bps
Asynchronous: 75 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25
Protocols Supported: BSC, ADCCP, HDLC
Maximum Output Lines: 4
Aggregate Transmission Rate: 4
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Statistics Collection, Downline Loading of Remote Node, Autoanswer Capabilities
Price: $39,065
Monthly Maintenance Fee: $240
Distribution Method: End user
Date First Installed: September 1980
(See Vendor Profile Page V-14)

HONEYWELL, INC.
DATANET 6661
Processor Function: Front-End Processor
Compatibility Classification: Network Processor
Word Length: 16 bit
Host Compatibility: Honeywell Series 60
Peripherals Supported: CRT
Maximum Number Input Lines: 96
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 56,000 bps
Asynchronous: 75 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: BSC, ADCCP, HDLC
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $36,605
Monthly Maintenance Fee: $362
Distribution Method: End user
Date First Installed: 1980

IBM CORP.
3704
Processor Function: Front-End Processor
Compatibility Classification: IBM 37XX
Host Compatibility: IBM S/370, IBM 4300, IBM 303X, 308X
Maximum Number Input Lines: 32
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps
Asynchronous: 110 bps to 1,200 bps
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: BSC, SDLC, Asynchronous (Start/Stop)
Maximum Output Lines: 2
Aggregate Transmission Rate: 1
Features: Error Control, Terminal-Initiated Applications Switching, Automatic Polling, User Programmable, Autodial/Autoanswer Capabilities
Price: $38,150
Distribution Method: End user
Date First Installed: February 1973
(See Vendor Profile Page V-14)

IBM CORP.
3705-80 0851-0854
Processor Function: Front-End Processor, Remote-Line Concentrator
Compatibility Classification: IBM 37XX
Host Compatibility: IBM S/370, IBM 303X, 308X, IBM 43XX
Maximum Number Input Lines: 16
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Port Code Supported: Ebcdic, Ascii, X.25
Protocols Supported: BSC, SDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 2
Aggregate Transmission Rate: 2
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Multiplexer/Demultiplexer, Automatic Polling, User Programmable, Statistics Collection, Downline Loading of Remote Node
Price: $39,300 to $55,940
Distribution Method: End user
Date First Installed: June 1981

IBM CORP.
3705-II E1-L4
Processor Function: Front-End Processor, Remote-Line Concentrator
Compatibility Classification: IBM 37XX
Host Compatibility: IBM 370, IBM 303X, 308X, IBM 43XX
Maximum Number Input Lines: 352
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 230,400 bps
Asynchronous: 455 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Baudot
Protocols Supported: BSC, SDLC, X.25, Asynchronous (Start/Stop), Line Control
Maximum Output Lines: 4
Aggregate Transmission Rate: 4
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Polling, User Programmable, Downline Loading of Remote Node
Price: $49,270 to $300,610
Distribution Method: End user
Date First Installed: August 1976

IBM CORP.
3725-1
Processor Function: Front-End Processor, Remote-Line Concentrator
Compatibility Classification: IBM 37XX
Host Compatibility: IBM 3/370, IBM 303X, 308X, IBM 43XX
Peripherals Supported: CRT
Maximum Number Input Lines: 256
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 256,000 bps
Asynchronous: 50 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25
Protocols Supported: BSC, SDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 8
Aggregate Transmission Rate: 6
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, User Programmable, Statistics Collection, Downline Loading of Remote Node
Price: $132,480 to $299,940
Distribution Method: End user
Date First Installed: April 1983

IBM CORP.
3725-2
Processor Function: Front-End Processor, Remote-Line Concentrator
Compatibility Classification: IBM 37XX
Host Compatibility: IBM 3/370, IBM 303X, 308X, IBM 43XX
Peripherals Supported: CRT
Maximum Number Input Lines: 24
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 256,000 bps
Asynchronous: 50 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25
Protocols Supported: BSC, SDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 2
Aggregate Transmission Rate: 2
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, User Programmable, Statistics Collection, Downline Loading of Remote Node
Price: $72,240 to $85,240
Monthly Maintenance Fee: $227
Distribution Method: End user, Third-party
Date First Installed: January 1984

IDET CORP.
3X SERIES
Processor Function: Remote-Line Concentrator
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 16 bit
Host Compatibility: IBM 370X, IBM 3725, NCR 8325 6655
Peripherals Supported: CRT, Printer
Maximum Number Input Lines: 32
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 19,200 bps
Asynchronous: 300 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25
Protocols Supported: BSC, SDLC, HDLC, X.25, Asynchronous (Start/Stop), Para, NCR
Maximum Output Lines: 25
Aggregate Transmission Rate: 192 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Automatic Polling, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $3,000 to $25,000
Number Installed to Date: 100 to 1,000
Date First Installed: 1979
(See Vendor Profile Page V-16)

ILEX SYSTEMS DATA SYSTEMS, INC.
COMMUNICATIONS PROCESSOR 1
Processor Function: Front-End Processor
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Host Compatibility: Sigma 9000
Peripherals Supported: CRT, Diagnostic/Test
Maximum Number Input Lines: 256
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,000,000 bps
Asynchronous: 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data, Baudot
Protocols Supported: SDLC, Synchronous
Maximum Output Lines: 256
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $3,000
Distribution Method: End-user
(See Vendor Profile Page V-15)

INFORMATION SERVICES CORP.
SMART SYNC MODEM
Processor Function: Remote-Line Concentrator
Compatibility Classification: IBM 37XX
Word Length: 8 bit
Host Compatibility: IBM, DEC VAX, Sperry
Peripherals Supported: CRT, Printer
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Asynchronous: 9,600 bps
Input Port Code Supported: Ascii
Protocols Supported: BSC
Features: Automatic Transmission Speed (Baud Rate) Detection, Automatic Polling, User Programmable, Autodial/Autoanswer Capabilities
Price: $6,500
Distribution Method: End user
Number Installed to Date: 1 to 10
(See Vendor Profile Page V-15)

INTEGRATED SERVER ENGINEERING, INC.
PORT-SAVER
Processor Function: Remote-Line Concentrator
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Host Compatibility: NCR
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 16
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Asynchronous: 50 bps to 19,200 bps
Input Port Code Supported: Ascii
Protocols Supported: IDE Proprietary
Maximum Output Lines: 4
Aggregate Transmission Rate: 192 bps
Features: Terminal Emulation, Terminal-Initiated Applications Switching, Multiplexer/Demultiplexer, Terminal Controller, Automatic Polling, User Programmable, Downline Loading of Remote Node
Price: $1,600
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: 1979
(See Vendor Profile Page V-16)

INTELLIGENT SOFTWARE SYSTEMS, INC.
CSX 1024
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, PC
Maximum Number Input Lines: 2,048
Input Transmission Mode: Full-Duplex
Input Port Code Supported: Ebcdic, Ascii, X.25, Baudot, Telex
Protocols Supported: BSC, SDLC, HDLC, X.25, Telex
Aggregate Transmission Rate: 9,600 bps
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Statistics Collection, Autodial and Autoanswer Capabilities, Downline Loading of Remote Node
Price: $60,000
Distribution Method: End user
Number Installed to Date: 1 to 10
Date First Installed: January 1984
(See Vendor Profile Page V-16)

INTERCON RESEARCH CORP.
INTERCON 100A
Processor Function: Front-End Processor
Compatibility Classification: IBM 3270
Word Length: 8 bit
Host Compatibility: DEC VAX, IBM
Peripherals Supported: Printer, Disk Drive, Diagnostic/Test
Maximum Number Input Lines: 1

Communications Processors

Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 56,000 bps
Asynchronous: 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, BCD
Protocols Supported: BSC, SDLC, X.25, Hasp, Seops 200
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Aggregate Transmission Rate: 980 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Disconnect, Local Console (System Control Functions), Automatic Polling, Downline Loading of Remote Node
Price: $1,250 to $4,995
Distribution Method: OEM
Number Installed to Date: 10 to 50
Date First Installed: 1983
(See Vendor Profile Page V-16)

SYTEK,INC.
IN1610 UNIBUS ETHERNET CTLR
Processor Function: Front-End Processor, Message Switch, Distributed Processing Nodes
Compatibility Classification: Ethernet
Word Length: 16 bit
Host Compatibility: DEC VAX, DEC PDP-11
Peripherals Supported: Diagnostic/Test
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: Up to 2,560,000 bps
Asynchronous: UP to 2,560,000 bps
Input Port Code Supported: Ascii
Protocols Supported: CSMA/CD
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Aggregate Transmission Rate: 25,000 bps
Features: Protocol and Code Conversion, Error Control, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Local Console (System Control Functions), On-Line Maintenance, Statistics Collection, Downline Loading of Remote Node
Price: $3,000
Distribution Method: OEM
Number Installed to Date: 1,000 to 10,000
Date First Installed: January 1982
(See Vendor Profile Page V-16)

TYMNET CORPORATION SYSTEMS
QUADRITEX SERIES IDC
Processor Function: Front-End Processor
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Peripherals Supported: Printer.
Maximum Number Input Lines: 1
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Asynchronous: 50 bps to 9,600 bps
Input Port Code Supported: Ascii
Protocols Supported: Asynchronous (Start/Stop)
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Features: Protocol and Code Conversion, Terminal Controller, User Programmable, Operation Control String Translation
Price: $695 to $2,495
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: 1979
(See Vendor Profile Page V-17)

ITT TELECOM PRODUCTS, INC.
N940
Processor Function: Host Independent
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 64,000 bps
Input Port Code Supported: Ascii, X.25, Parallel Binary Data
Protocols Supported: BSC, UDLC
Aggregate Transmission Rate: 15,000 bps
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Statistics Collection
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: 1976
(See Vendor Profile Page V-17)

JC SYSTEMS
LINK 81
Processor Function: Front-End Processor, Remote-Line Concentrator
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Host Compatibility: JC Systems
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 4
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 110,000 bps
Asynchronous: 50 bps to 110,000 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data
Protocols Supported: BSC, SDLC, ADCCP, HDLC, BDLC, X.25, X.27, Asynchronous (Start/Stop)
Maximum Output Lines: 1
Aggregate Transmission Rate: 20,000 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Monthly Maintenance Fee: $20
Distribution Method: Third-party
Date First Installed: January 1984
(See Vendor Profile Page V-17)

LEXICON SYSTEMS, INC.
CMC-4/8/32
Processor Function: Front-End Processor
Compatibility Classification: IBM 270X
Word Length: 8 bit
Host Compatibility: IBM 360, IBM 370, IBM 303X
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 32
Input Transmission Mode: Half-Duplex
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: BSC, Asynchronous (Start/Stop)
Maximum Output Lines: 1
Aggregate Transmission Rate: 4,000 bps
Features: Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Automatic Polling, On-Line Maintenance, Autodial/Autoanswer Capabilities
Price: $14,000 to $60,000
Distribution Method: End user
Number Installed to Date: 100 to 1,000
(See Vendor Profile Page V-16)

LEXICON SYSTEMS, INC.
DSP
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: IBM 370X
Word Length: 8 bit, 16 bit
Host Compatibility: IBM
Peripherals Supported: CRT
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 56,000 bps
Input Port Code Supported: Ebcdic, Ascii, X.25
Protocols Supported: BSC, SDLC, ADCCP, HDLC, BDLC, UDLC, X.25
Maximum Output Lines: 32
Aggregate Transmission Rate: 240,000 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $30,000 to $300,000
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: 1981

M/A-COM DCC, INC.
CP6000 SERIES II
Processor Function: Distributed Processing Nodes
Compatibility Classification: Packet Switching
Word Length: 16 bit
Peripherals Supported: CRT, Disk Drive, Diagnostic/Test
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 64,000 bps
Asynchronous: 384,000 bps
Input Port Code Supported: Ebcdic, Ascii, X.25
Protocols Supported: X.25, X.75
Maximum Output Lines: 2,000
Aggregate Transmission Rate: 2,000
Features: Protocol and Code Conversion, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $20,000 to $200,000
(See Vendor Profile Page V-16)

MICOM-INTERLAN CORP.
1270 TCU
Processor Function: Front-End Processor
Compatibility Classification: IBM 270X
Word Length: 8 bit
Host Compatibility: IBM 370, IBM 303X, IBM 36
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 2
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 56,000 bps
Asynchronous: 56,000 bps
Input Port Code Supported: Ebcdic, Ascii, Baudot, PTTC, TWX, BCD
Protocols Supported: BSC, Asynchronous (Start/Stop)
Maximum Output Lines: 96
Aggregate Transmission Rate: 96
Aggregate Transmission Rate: 1,800 bps
Features: Protocol and Code Conversion, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Automatic Polling, On-

Line Maintenance,
Autodial/Autoanswer Capabilities
Distribution Method: End user
Date First Installed: 1970
(See Vendor Profile Page V-18)

BROOM SYSTEMS, INC.
MICRO 800/X.25 CONCENTRATOR PAD
Processor Function: Remote-Line Concentrator, Host Independent
Compatibility Classification: X.25 PAD
Word Length: 8 bit
Host Compatibility: IBM, Prime Primenet, CDC 2501-NOS
Peripherals Supported: CRT, Printer
Maximum Number Input Lines: 24
Input Transmission Mode: Half-Duplex, Echoplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 9,600 bps
Asynchronous: 50 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Baudot
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Aggregate Transmission Rate: 768 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Local Console (System Control Functions), Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $2,050 to $4,800
Distribution Method: Third-party
Number Installed to Date: 1,000 to 10,000
Date First Installed: November 1982
(See Vendor Profile Page V-18)

HONEYWELL, INC.
MCS-30
Processor Function: Front-End Processor
Compatibility Classification: Honeywell Datanet
Word Length: 8 bit
Host Compatibility: Honeywell DIA, DTS8
Peripherals Supported: Ascii
Maximum Number Input Lines: 32
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Asynchronous: 1,200 bps to 38,400 bps
Input Port Code Supported: Ascii
Protocols Supported: Ascii
Maximum Output Lines: 32
Aggregate Transmission Rate: 384 bps
Features: Error Control, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Multiplexer/Demultiplexer, On-Line Maintenance; Downline Loading of Remote Node
Price: $25,000
Monthly Maintenance Fee: $200
Distribution Method: End user
Number Installed to Date: 10 to 50
Date First Installed: November 1977
(See Vendor Profile Page V-18)

INFORMATA CORP.
5780
Processor Function: Front-End Processor
Compatibility Classification: IBM 37XX
Word Length: 8 bit
Host Compatibility: IBM 3780, IBM 3780
Peripherals Supported: CRT, Printer
Maximum Number Input Lines: 1
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Asynchronous: 19,200 bps
Protocols Supported: BSC
Maximum Output Lines: 1
Aggregate Transmission Rate: 192 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Disconnect, Local Console (System Control Functions), On-Line Maintenance, Autodial/Autoanswer Capabilities
Price: $5,100
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: June 1981
(See Vendor Profile Page V-18)

INFORMATA CORP.
NETWORK SYSTEM
Processor Function: Host Independent
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 16 bit
Host Compatibility: Microdata, IBM.
Peripherals Supported: CRT, Printer
Maximum Number Input Lines: 1,000
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Asynchronous: 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data, Baudot, Transparent
Protocols Supported: BSC, SDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 44
Aggregate Transmission Rate: 44
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Local Console (System Control Functions), User Programmable, Statistics Collection, Downline Loading of Remote Node
Price: $15,000 to $80,000

MODCOMP PLUS, INC.
WRITE ONE
Processor Function: Distributed Processing Nodes
Compatibility Classification: Burroughs
Word Length: 8 bit
Host Compatibility: Burroughs 6900
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 1
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 19,200 bps
Asynchronous: 19,200 bps
Input Port Code Supported: Ascii
Protocols Supported: Asynchronous (Start/Stop), Synchronous Poll Sheet
Maximum Output Lines: 2
Aggregate Transmission Rate: 192 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Terminal Controller, Automatic Polling, Autodial/Autoanswer Capabilities
Price: $1,280
Monthly Maintenance Fee: $10
Distribution Method: Third-party
Number Installed to Date: 1,000 to 10,000
Date First Installed: June 1981
(See Vendor Profile Page V-20)

MODCOMP PLUS, INC.
WRITE ONE
Processor Function: Distributed Processing Nodes
Compatibility Classification: IBM 270X
Word Length: 8 bit
Host Compatibility: IBM 9100, IBM 4300, IBM 3300
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 2
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 19,200 bps
Asynchronous: 192,000 bps
Input Port Code Supported: Ebcdic, Ascii, Parallel Binary Data
Protocols Supported: BSC, SDLC, HDLC, Asynchronous (Start/Stop)
Maximum Output Lines: 3
Aggregate Transmission Rate: 3
Aggregate Transmission Rate: 192 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Automatic Disconnect, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $3,900
Monthly Maintenance Fee: $25
Distribution Method: Third-party
Number Installed to Date: 10 to 50
Date First Installed: June 1983

MODULAR COMPUTER SYSTEMS, INC. (MODCOMP)
CL II/45
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 16 bit
Host Compatibility: IBM 360, 370, CDC Cyber, IBM 3033X
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test, IBM Select
Maximum Number Input Lines: 255
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 250,000 bps
Asynchronous: 50 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Baudot, Marnet
Protocols Supported: BSC, SDLC, ADCCP, HDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 256
Aggregate Transmission Rate: 14,500 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $60,000
Monthly Maintenance Fee: $600
Distribution Method: OEM
Number Installed to Date: 100 to 1,000
Date First Installed: 1982
(See Vendor Profile Page V-20)

MODULAR COMPUTER SYSTEMS, INC. (MODCOMP)
CL II/75
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 16 bit
Host Compatibility: IBM 360,370, CDC Cyber, IBM 3033X
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test, IBM Select
Maximum Number Input Lines: 256
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 35,000 bps
Asynchronous: 50 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Baudot, Marnet
Protocols Supported: BSC, SDLC, ADCCP, HDLC, X.25, Asynchronous (Start/Stop)

Communications Processors

Maximum Output Lines: 256
Aggregate Transmission Rate: 19,000 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $150,000
Monthly Maintenance Fee: $700
Distribution Method: OEM
Number Installed to Date: 100 to 1,000
Date First Installed: 1982

BBN COMMUNICATIONS, INC.
BBN 1000
Processor Function: Message Switch, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Host Compatibility: IBM PC-XT, Apple, DEC PDP-11
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps
Asynchronous: 4,800 bps
Input Port Code Supported: Ascii, X.25
Protocols Supported: BSC, SDLC, ADCCP, HDLC, BDLC, LDLC, X.25, Bold, X.27, Asynchronous (Start/Stop), ICP
Maximum Output Lines: 128
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $1,500
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: 1980
(See Vendor Profile Page V-20)

BBN COMMUNICATIONS, INC.
BBN 700
Processor Function: Message Switch, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Host Compatibility: IBM PC-XT, Apple, DEC PDP-11
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps
Asynchronous: 4,800 bps
Input Port Code Supported: Ascii, X.25
Protocols Supported: BSC, SDLC, ADCCP, HDLC, BDLC, UDLC, X.25, Bold, X.27, Asynchronous (Start/Stop), ICP
Maximum Output Lines: 10
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $1,500
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: 1980

BOR COMTEN, INC.
3660
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Distributed Processing Nodes
Compatibility Classification: IBM 37XX
Word Length: 32 bit
Host Compatibility: IBM 360/370, IBM 303X, 43XX, IBM 308X
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Port Code Supported: Ebcdic, Ascii, X.25
Protocols Supported: BSC, SDLC, HDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 2
Aggregate Transmission Rate: 2
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, User Programmable, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Distribution Method: End user
Number Installed to Date: 1,000 to 10,000
Date First Installed: 1975
(See Vendor Profile Page V-21)

BOR COMTEN, INC.
3670 MSS
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Distributed Processing Nodes
Compatibility Classification: IBM 370X
Word Length: 32 bit
Host Compatibility: IBM 360/370, IBM 303X, 43XX, IBM 308X
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Port Code Supported: Ebcdic, Ascii, X.25
Protocols Supported: BSC, SDLC, HDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 4
Aggregate Transmission Rate: 4
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, User Programmable, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Distribution Method: End user
Number Installed to Date: 1,000 to 10,000
Date First Installed: 1972

BOR COMTEN, INC.
3680
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Distributed Processing Nodes
Compatibility Classification: IBM 37XX
Word Length: 64 bit
Host Compatibility: IBM 360/370, IBM 303X 43XX, IBM 308X
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Port Code Supported: Ebcdic, Ascii, X.25
Protocols Supported: BSC, SDLC, HDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 8
Aggregate Transmission Rate: 8
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, Statistics Collection, Autodial/Autoanswer Capabilities, Downlined Loading of Remote Node
Distribution Method: End user
Number Installed to Date: 1,000 to 10,000
Date First Installed: 1978

BOWKER DATA COMMUNICATIONS, INC.
TRANSACTION CONCENTRATOR
Processor Function: Front-End Processor
Compatibility Classification: IBM 270X
Word Length: 8 bit
Host Compatibility: Datapoint, TI 990
Peripherals Supported: CRT, Printer, Disk Drive
Maximum Number Input Lines: 32
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 19,200 bps
Asynchronous: 19,200 bps
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: SDLC, Asynchronous (Start/Stop)
Maximum Output Lines: 32
Aggregate Transmission Rate: 32
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection
Price: $4,500
Distribution Method: End user
Number Installed to Date: 10 to 99
Date First Installed: 1982
(See Vendor Profile Page V-22)

BOWTHERN TELECOM, INC.
SBC
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: Model-Independent
Word Length: 8 bit
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test, Data Capture
Maximum Number Input Lines: 40
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 110 bps to 19,200 bps
Asynchronous: 110 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data
Protocols Supported: BSC, SDLC, HDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 16
Aggregate Transmission Rate: 16
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node, Internal Storage
Price: $17,000 to $125,000
Distribution Method: End user, OEM
Number Installed to Date: 10 to 50
Date First Installed: November 1982
(See Vendor Profile Page V-22)

BOWTHERN TELECOM, INC.
28X SERIES
Processor Function: Remote-Line Concentrator
Compatibility Classification: IBM 270X
Word Length: 8 bit
Host Compatibility: IBM
Peripherals Supported: CRT,

Printer, Diagnostic/Test, Asynchronous/Bisynchronous Devices
Maximum Number Input Lines: 1
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 9,600 bps
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: BSC, SDLC, IBM SNA
Maximum Output Lines: 1
Aggregate Transmission Rate: 96 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection
Distribution Method: End user
Number Installed to Date: 1,000 to 10,000
Date First Installed: 1980

NORTHERN TELECOM, INC. 585
Processor Function: Host Independent, Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Host Compatibility: IBM Mainframes, CDC Mainframes, Burroughs Mainframes
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test, Cardpunches
Maximum Number Input Lines: 2
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 9,600 bps
Asynchronous: 9,600 bps
Input Port Code Supported: Ascii, Parallel Binary Data, Baudot
Protocols Supported: BSC, SDLC, Asynchronous (Start/Stop)
Maximum Output Lines: 2
Aggregate Transmission Rate: 96 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities
Price: $10,000 to $30,000
Distribution Method: End user
Number Installed to Date: 1,000 to 10,000
Date First Installed: June 1981

NORTHERN TELECOM, INC. 586
Processor Function: Host Independent, Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Host Compatibility: IBM Mainframes, CDC Mainframes, Burroughs Mainframes
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test, Cardpunches
Maximum Number Input Lines: 8
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 9,600 bps
Asynchronous: 9,600 bps
Input Port Code Supported: Ascii, Parallel Binary Data, Baudot
Protocols Supported: BSC, SDLC, Asynchronous (Start/Stop)
Maximum Output Lines: 8
Aggregate Transmission Rate: 96 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial and Autoanswer Capabilities
Price: $15,000 to $60,000
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: April 1983

NORTHERN TELECOM, INC. 586
Processor Function: Host Independent, Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Host Compatibility: IBM 370, CDC Mainframes, Burroughs Mainframes
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test, Cardpunches
Maximum Number Input Lines: 14
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 9,600 bps
Asynchronous: 9,600 bps
Input Port Code Supported: Ascii, Parallel Binary Data, Baudot
Protocols Supported: BSC, SDLC, Asynchronous (Start/Stop)
Maximum Output Lines: 14
Aggregate Transmission Rate: 96 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial and Autoanswer Capabilities
Price: $50,000 to $200,000
Distribution Method: End user
Date First Installed: June 1980

NRI DATA CORP. 730 COMMUNICATIONS PROCESSOR
Processor Function: Front-End Processor, Message Switch, Host Independent
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Peripherals Supported: CRT
Maximum Number Input Lines: 4
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 56,000 bps
Asynchronous: 50 bps to 19,200 bps
Input Port Code Supported: Ascii, Baudot
Protocols Supported: SDLC
Maximum Output Lines: 4
Aggregate Transmission Rate: 4
Features: Protocol Conversion, Code Conversion, Error Control, Terminal Emulation and Terminal Controller
Price: $1,700
Distribution Method: Third-party
Date First Installed: 1982
(See Vendor Profile Page V-22)

PARADYNE CORP. PODET
Processor Function: Message Switch, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 16 bit
Host Compatibility: IBM 360/370, IBM 303X, IBM 308X, 430X
Peripherals Supported: CRT, Printer, Tape Drive, Diagnostic/Test
Maximum Number Input Lines: 10
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 56,000 bps
Asynchronous: 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data
Protocols Supported: SDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 10
Aggregate Transmission Rate: 3,000 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node, Self Configuring
Price: $25,000
Distribution Method: End user
Number Installed to Date: 1,000 to 10,000
Date First Installed: 1978

PARADYNE CORP. SYSTEM 9400
Processor Function: Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 16 bit
Host Compatibility: IBM 370, Paradyne 9200
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test
Maximum Number Input Lines: 28
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 19,200 bps
Asynchronous: 9,600 bps
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: BSC, SDLC, HDLC, Asynchronous (Start/Stop), Paradyne Planet
Maximum Output Lines: 8
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $30,000
Monthly Maintenance Fee: $185
Distribution Method: End user
Number Installed to Date: 1,000 to 10,000
Date First Installed: 1981

PERIPHERONICS CORP. T-CONN
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: Per Choice and Multiple
Word Length: 16 bit
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test, Acoustic Coupler
Maximum Number Input Lines: 416
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Synchronous: 9,600 bps
Asynchronous: 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Baudot
Protocols Supported: BSC, SDLC, ADCCP, BDLC, X.27, Asynchronous (Start/Stop)
Maximum Output Lines: 416
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control

Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $50,000 to $120,000
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: 1972
(See Vendor Profile Page V-33)

FERRANTI, INC.
DCP/88
Processor Function: Front-End Processor, Distributed Processing Nodes
Compatibility Classification: IBM General Purpose
Word Length: 16 bit
Host Compatibility: IBM
Peripherals Supported: Printer
Maximum Number Input Lines: 4
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 38,400 bps
Asynchronous: 38,400 bps
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: BSC, SDLC, HDLC, Asynchronous (Start/Stop)
Maximum Output Lines: 4
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $2,000
Distribution Method: End user, OEM, Third-party
(See Vendor Profile Page V-33)

FERRANTI, INC.
PC/3270
Processor Function: Front-End Processor
Compatibility Classification: IBM 3270
Word Length: 8 bit
Host Compatibility: IBM PC, TI Professional
Peripherals Supported: Printer, Disk Drive
Maximum Number Input Lines: 1
Input Transmission Mode: Half-Duplex
Input Port Code Supported: Ebcdic
Maximum Output Lines: 1
Features: Error Control, Terminal Emulation, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance
Price: $995
Distribution Method: End user, OEM, Third-party

FIELDS ELECTRONIC INSTRUMENTS, INC.
FLEXPAC PAD
Processor Function: Front-End Processor, Host Independent
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Peripherals Supported: Tape Drive, Diagnostic/Test
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Asynchronous: 50 bps to 9,600 bps
Input Port Code Supported: Ascii
Protocols Supported: X.25, Asynchronous (Start/Stop)
Aggregate Transmission Rate: 15
Features: Error Control, Automatic Transmission Speed (Baud Rate) Detection, Multiplexer/Demultiplexer, User Programmable, On-Line Maintenance, Statistics Collection, Downline Loading of Remote Node
Distribution Method: End user, OEM
(See Vendor Profile Page V-33)

FOXBORO DATA COMM.
DPAC-80/PC
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: IBM 370X
Word Length: 8 bit, 16 bit
Host Compatibility: DEC PDP-11/44, IBM Series/1, HP 1000
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test
Maximum Number Input Lines: 16
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 50 bps to 1,000,000 bps
Asynchronous: 50 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data
Protocols Supported: BSC, SDLC, ADCCP, HDLC, UDLC, X.25, Asynchronous (Start/Stop), ICP, DDCMP
Maximum Output Lines: 16
Aggregate Transmission Rate: 100,000 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $8,000 to $15,000
Number Installed to Date: 100 to 1,000
(See Vendor Profile Page V-33)

FRONTIER TECHNOLOGIES, INC.
SAM (SPEECH AIDED MODEM)
Processor Function: Front-End Processor
Compatibility Classification: IBM 370X
Word Length: 8 bit
Host Compatibility: HP 3000, DEC VAX, Burroughs
Peripherals Supported: CRT, Printer, Disk Drive
Maximum Number Input Lines: 16
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Asynchronous: 1,200 bps
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: BSC, Asynchronous (Start/Stop)
Maximum Output Lines: 1
Aggregate Transmission Rate: 192 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Multiplexer/Demultiplexer, Local Console (System Control Functions), Automatic Polling, Statistics Collection, Autodial/Autoanswer Capabilities
Price: $1,595 to $10,000
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: October 1978
(See Vendor Profile Page V-34)

RADIAN CORP.
UT-1 & UT-4
Processor Function: Remote Batch Only
Compatibility Classification: CDC, Sperry, Honeywell, IBM
Word Length: 16 bit
Host Compatibility: IBM, CDC, Sperry
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test, Plotter, Digitizer
Maximum Number Input Lines: 2
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 19,200 bps
Protocols Supported: BSC, Asynchronous (Start/Stop)
Maximum Output Lines: 7
Aggregate Transmission Rate: 2
Features: Terminal Emulation
Price: $39,500 to $100,000
Monthly Maintenance Fee: $500
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: 1971
(See Vendor Profile Page V-35)

RADIAN CORP.
UT-2 & UT-3
Processor Function: Remote Batch
Compatibility Classification: Sperry, CDC, IBM
Host Compatibility: IBM, Sperry, CDC
Peripherals Supported: CRT, Printer, Disk Drive, Diagnostic/Test, Card Punch
Maximum Number Input Lines: 1
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 9,600 bps
Protocols Supported: BSC
Maximum Output Lines: 1
Aggregate Transmission Rate: 96 bps
Features: Terminal Emulation
Price: $24,000 to $50,000
Monthly Maintenance Fee: $375
Distribution Method: End user
Number Installed to Date: 50 to 100

RAMTAM CORP.
ATTACHED PROCESSOR APS1
Processor Function: Front-End Processor
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 16 bit, 32 bit
Host Compatibility: DEC VAX, DEC PDP-11, DEC LSI-11
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive
Maximum Number Input Lines: 64
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 1,000,000 bps
Input Transmission Speeds:
Asynchronous: 110 bps to 56,000 bps
Input Port Code Supported: Ascii, X.25
Protocols Supported: X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 64
Aggregate Transmission Rate: 8,144 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial and Autoanswer Capabilities, Downline Loading of Remote Node
Price: $9,500 to $28,000
Distribution Method: End user
Date First Installed: April 1983
(See Vendor Profile Page V-35)

RAYTHEON CO.
RAYNET I, II, III
Processor Function: Remote-Line Concentrator
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 16 bit
Host Compatibility: IBM, Amdahl
Peripherals Supported: CRT, Printer, Disk Drive
Maximum Number Input Lines: 128
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 2,400 bps to 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, ALC
Protocols Supported: BSC, ALC,
Maximum Output Lines: 25
Aggregate Transmission Rate: 25
Aggregate Transmission Rate: 1,000 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission

Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Downline Loading of Remote Node
Price: $200,000 to $600,000
Monthly Maintenance Fee: $2,000
Distribution Method: End user, Third-party
Number Installed to Date: 50 to 100
(See Vendor Profile Page V-20)

GEC SEMICONDUCTORS
GDRP.
SAMSON
Processor Function: Front-End Processor, Host Independent
Compatibility Classification: IBM 370X
Word Length: 16 bit, 32 bit
Host Compatibility: IBM 3780, HP 300 Series, DEC VAX
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive
Maximum Number Input Lines: 34
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Asynchronous: 9,600 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Baudot
Protocols Supported: BSC, SDLC, X.25, X.27, Asynchronous (Start/Stop)
Maximum Output Lines: 1
Aggregate Transmission Rate: 66 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $24,900
Distribution Method: OEM
Number Installed to Date: 100 to 1,000
Date First Installed: January 1981
(See Vendor Profile Page V-29)

GENERAL GDRP.
MICRONET 6
Processor Function: Host Independent, Message Processor
Compatibility Classification: Telex, TWX, DDD, Private Line
Word Length: 16 bit
Peripherals Supported: CRT, Printer, Disk Drive
Maximum Number Input Lines: 6
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Asynchronous: 50 bps to 1,200 bps
Input Port Code Supported: Ascii, Baudot
Protocols Supported: Asynchronous (Start/Stop), Telex, TWX, IRC
Maximum Output Lines: 6
Aggregate Transmission Rate: 48 bps
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Local Console (System Control Functions), Programmable, Autodial/Autoanswer Capabilities
Price: $18,000 to $23,000
Monthly Maintenance Fee: $125
Distribution Method: End user, OEM
Number Installed to Date: 1,000 to 10,000
Date First Installed: 1981
(See Vendor Profile Page V-38)

GENERAL GDRP.
MICRONET 8
Processor Function: Message Switch, Host Independent, Message Processor
Compatibility Classification: Telex, TWX, DDD, Private Line
Word Length: 16 bit
Peripherals Supported: CRT, Printer, Disk Drive
Maximum Number Input Lines: 8
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 4,800 bps
Asynchronous: 50 bps to 1,200 bps
Input Port Code Supported: Ebcdic, Ascii, Baudot
Protocols Supported: BSC, Asynchronous (Start/Stop), Telex, TWX, IRC
Maximum Output Lines: 8
Aggregate Transmission Rate: 96 bps
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Local Console (System Control Functions), User Programmable, Statistics Collection, Autodial/Autoanswer Capabilities
Price: $21,000 to $26,000
Monthly Maintenance Fee: $150
Distribution Method: End user, OEM
Number Installed to Date: 100 to 1,000
Date First Installed: February 1983

GENERAL GDRP.
MICRONET 12
Processor Function: Host Independent, Message Processor
Compatibility Classification: Telex, TWX, DDD, Private Line
Word Length: 8 bit
Peripherals Supported: CRT, Printer
Maximum Number Input Lines: 1
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Asynchronous: 110 bps to 300 bps
Input Port Code Supported: Ascii, Baudot
Protocols Supported: Asynchronous (Start/Stop), Telex, TWX, DDD
Maximum Output Lines: 1
Features: Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, User Programmable, Autodial/Autoanswer Capabilities
Price: $2,500
Monthly Maintenance Fee: $35
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 1,000 to 10,000
Date First Installed: February 1984

GENERAL GDRP.
MICRONET 20
Processor Function: Host Independent, Message Processor
Compatibility Classification: Telex, TWX, DDD, Private Line
Word Length: 8 bit
Peripherals Supported: CRT, Printer, OCR Interface
Maximum Number Input Lines: 4
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Asynchronous: 50 bps to 1,200 bps
Input Port Code Supported: Ascii, Baudot
Protocols Supported: Asynchronous (Start/Stop), Telex, TWX, IRC
Maximum Output Lines: 4
Aggregate Transmission Rate: 4
Features: Protocol and Code Conversion, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, User Programmable, Autodial/Autoanswer Capabilities
Price: $4,200
Monthly Maintenance Fee: $40
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 1,000 to 10,000
Date First Installed: 1982

GENERAL GDRP.
MICRONET 25
Processor Function: Host Independent, Message Processor
Compatibility Classification: Telex, TWX, DDD, Private Line
Word Length: 8 bit
Peripherals Supported: CRT, Printer, Disk Drive, CRC Interface
Maximum Number Input Lines: 4
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Asynchronous: 50 bps to 1,200 bps
Input Port Code Supported: Ascii, Baudot
Protocols Supported: Asynchronous (Start/Stop), Telex, TWX
Maximum Output Lines: 4
Aggregate Transmission Rate: 4
Features: Protocol and Code Conversion, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, User Programmable, Autodial/Autoanswer Capabilities
Price: $5,600
Monthly Maintenance Fee: $60
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 1,000 to 10,000
Date First Installed: 1982

GENERAL GDRP.
MICRONET 404
Processor Function: Host Independent, Message Processor
Compatibility Classification: Telex, TWX, DDD, Private Line
Word Length: 16 bit
Peripherals Supported: CRT, Printer, Disk Drive
Maximum Number Input Lines: 4
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Asynchronous: 50 bps to 1,200 bps
Input Port Code Supported: Ascii, Baudot
Protocols Supported: Asynchronous (Start/Stop), Telex, TWX
Maximum Output Lines: 4
Aggregate Transmission Rate: 4
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Local Console (System Control Functions), User Programmable, Autodial/Autoanswer Capabilities
Price: $8,750 to $12,100
Monthly Maintenance Fee: $100
Distribution Method: End user, OEM
Date First Installed: September 1983

GENERAL GDRP.
THE MICRONET SWITCH (STORE/FORWARD MSG)
Processor Function: Message Switch, Host Independent
Compatibility Classification: Telex, TWX, DDD, Private Line
Word Length: 16 bit
Peripherals Supported: CRT, Printer, Disk Drive
Maximum Number Input Lines: 24
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 2,400 bps to 19,200 bps
Input Transmission Speeds:
Asynchronous: 50 bps to 2,400 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Baudot
Protocols Supported: BSC, HDLC, X.25, Asynchronous (Start/Stop), Telex, TWX, IRC
Maximum Output Lines: 24
Aggregate Transmission Rate: 768 bps
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Local Console (System Control Functions), Automatic Polling, User Programmable, Statistics Collection, Autodial and Autoanswer Capabilities
Price: $65,000 to $85,000

Communications Processors

Distribution Method: End user, OEM
Number Installed to Date: 1 to 10
Date First Installed: January 1984

SOFTWARE RESULTS CORP.
COMBOARD/HASP
Processor Function: Front-End Processor
Compatibility Classification: IBM 37XX
Word Length: 16 bit
Host Compatibility: IBM, CDC, DEC PDP-11, DEC VAX
Peripherals Supported: Printer
Maximum Number Input Lines: 1
Input Transmission Speeds:
Synchronous: 2,400 bps to 56,000 bps
Input Port Code Supported: Ebcdic, Ascii, Parallel Binary Data
Protocols Supported: BSC
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Local Console (System Control Functions), Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $13,900 to $26,900
Distribution Method: End user
Date First Installed: December 1983
(See Vendor Profile Page V-27)

SOFTWARE RESULTS CORP.
COMBOARD/SNA
Processor Function: Front-End Processor
Compatibility Classification: IBM 37XX
Word Length: 16 bit
Host Compatibility: IBM 3780, DEC VAX
Peripherals Supported: Printer
Maximum Number Input Lines: 1
Input Transmission Speeds:
Synchronous: 9,600 bps to 56,000 bps
Protocols Supported: SDLC
Maximum Output Lines: 1
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $18,000 to $32,800
Distribution Method: End user

SOFTWARE RESULTS CORP.
COMBOARD/3780
Processor Function: Front-End Processor
Compatibility Classification: IBM 37XX
Word Length: 16 bit
Host Compatibility: IBM 3780, CDC 3780, DEC PDP-11, DEC VAX
Peripherals Supported: Printer
Maximum Number Input Lines: 1
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Synchronous: 9,600 bps to 56,000 bps
Input Port Code Supported: Ebcdic, Ascii, Parallel Binary Data
Protocols Supported: BSC
Maximum Output Lines: 1
Features: Protocol and Code Conversion, Error Control, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $9,800 to $21,900
Distribution Method: End user
Number Installed to Date: 10 to 50
Date First Installed: November 1983

SPERRY CORP.
DISTRIBUTED COMM PROCESSOR/10
Processor Function: Front-End Processor, Remote-Line Concentrator
Compatibility Classification: Sperry
Word Length: 16 bit
Host Compatibility: Sperry 1100/60/70, Sperry System 11, Sperry 1100/80/90
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive
Maximum Number Input Lines: 8
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 2,400 bps to 64,000 bps
Asynchronous: 455 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data, Baudot
Protocols Supported: BSC, SDLC, ADCCP, HDLC, UDLC, X.25, Asynchronous (Start/Stop), Unicopa, NTR
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $28,000 to $50,000
Distribution Method: End user
Number Installed to Date: 10 to 50
(See Vendor Profile Page V-28)

SPERRY CORP.
DISTRIBUTED COMM PROCESSOR/20
Processor Function: Front-End Processor, Remote-Line Concentrator
Compatibility Classification: Sperry
Word Length: 8 bit, 32 bit
Host Compatibility: Sperry Series 1100, Sperry System 11, Sperry Series 90/60
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive
Maximum Number Input Lines: 48
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 2,400 bps to 64,000 bps
Asynchronous: 455 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data, Baudot
Protocols Supported: BSC, SDLC, ADCCP, HDLC, UDLC, X.25, Asynchronous (Start/Stop), Unicopa, NTR
Maximum Output Lines: 1
Aggregate Transmission Rate: 1
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $47,000 to $100,000
Distribution Method: End user
Number Installed to Date: 100 to 1,000

SPERRY CORP.
DISTRIBUTED COMM PROCESSOR/40
Processor Function: Front-End Processor, Remote-Line Concentrator
Compatibility Classification: Sperry
Word Length: 16 bit, 32 bit
Host Compatibility: Sperry Series 1100, Sperry Series 90/80, Sperry System 11
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive
Maximum Number Input Lines: 253
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 2,400 bps to 64,000 bps
Asynchronous: 455 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data, Baudot
Protocols Supported: BSC, SDLC, ADCCP, HDLC, UDLC, X.25, Asynchronous (Start/Stop), Unicopa, NTR
Maximum Output Lines: 8
Aggregate Transmission Rate: 8
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Processor-Initiated Dynamic Line Reconfiguration, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $103,000 to $999,999
Monthly Maintenance Fee: $1,200
Distribution Method: End user

SYSTEM FOUR
MCX & PCX SERIES
Processor Function: Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Peripherals Supported: CRT, Printer
Maximum Number Input Lines: 2
Input Transmission Speeds:
Asynchronous: 300 bps to 9,600 bps
Input Port Code Supported: Ascii
Protocols Supported: Asynchronous (Start/Stop)
Maximum Output Lines: 2
Aggregate Transmission Rate: 2
Features: Error Control, Terminal-Initiated Applications Switching, Automatic Disconnect, Automatic Polling, User Programmable, Downline Loading of Remote Node
Distribution Method: Third-party
Number Installed to Date: 1,000 to 10,000
(See Vendor Profile Page V-29)

SYSCOM, INC.
STORE & FORWARD MESSAGE SWITCH
Processor Function: Message Switch
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 16 bit
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive
Maximum Number Input Lines: 32
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 9,600 bps
Asynchronous: 9,600 bps
Input Port Code Supported: Ascii
Maximum Output Lines: 32
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Disconnect, Multiplexer/Demultiplexer, Local Console (System Control Functions), Automatic Polling, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities
Price: $50,000
Distribution Method: End user
Number Installed to Date: 10 to 50
(See Vendor Profile Page V-29)

TANDEM COMPUTERS, INC.
6100 COMMUNICATION SUBSYSTEM
Processor Function: Front-End Processor
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 16 bit, 32 bit
Peripherals Supported: CRT, Printer, Tape Drive, Disk Drive, Diagnostic/Test Systems
Maximum Number Input Lines: 300
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 50 bps to 56,000 bps

Asynchronous: 50 bps to 56,000 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Baudot
Protocols Supported: ADCCP, HDLC, Asynchronous (Start/Stop), Exchange 3780
Maximum Output Lines: 300
Aggregate Transmission Rate: 16
Features: Protocol and Code Conversion, Error Control, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Price: $24,000 to $300,000
Monthly Maintenance Fee: $119
Distribution Method: End user
Number Installed to Date: 10 to 50
Date First Installed: April 1983
(See Vendor Profile Page V-29)

TARRIER COMPUTERS, INC.
INFOBAT
Processor Function: Earth Station
Word Length: 16 bit, 32 bit
Maximum Number Input Lines: 8
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Synchronous: 56 bps to 56,000 bps
Asynchronous: 56 bps to 56,000 bps
Input Port Code Supported: Expand
Maximum Output Lines: 2
Aggregate Transmission Rate: 2
Price: $53,000
Monthly Maintenance Fee: $1,100
Distribution Method: End user

TECHLAS ENGINEERING
MZ-80
Processor Function: Front-End Processor
Compatibility Classification: IBM 370X
Word Length: 8 bit
Host Compatibility: Honeywell Series 60, DPS Series
Peripherals Supported: CRT, Printer, Disk Drive, Diagnostic/Test
Maximum Number Input Lines: 32
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Asynchronous: 110 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: BSC, SDCC, VIP
Maximum Output Lines: 32
Aggregate Transmission Rate: 3,072 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Local Console (System Control Functions), Automatic Polling, User Programmable, On-Line Maintenance
Price: $5,000 to $12,000
Distribution Method: End user
Number Installed to Date: 100 to 1,000
Date First Installed: December 1981
(See Vendor Profile Page V-30)

TTTM
68K30
Processor Function: Host Independent
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit, 16 bit, 32 bit
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 2
Input Transmission Mode: Full-Duplex, Half-Duplex
Input Transmission Speeds:
Synchronous: 600 bps to 307,200 bps
Asynchronous: 50 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii, X.25, Parallel Binary Data
Protocols Supported: BSC, SDLC, HDLC, X.25, Asynchronous (Start/Stop)
Maximum Output Lines: 2
Aggregate Transmission Rate: 8,144 bps
Features: Error Control, Automatic Transmission Speed (Baud Rate) Detection, Processor-Initiated Dynamic Line Reconfiguration, Terminal Controller, User Programmable
Price: $3,750
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: January 1982
(See Vendor Profile Page V-31)

TUCK ELECTRONICS, INC.
PEOPLE TO COMPUTER INTERFACE
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Host Independent
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 8 bit
Host Compatibility: IBM Series/1, Tandem
Peripherals Supported: CRT, Touch-Tone Phones
Maximum Number Input Lines: 64
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Asynchronous: 300 bps to 1,200 bps
Input Port Code Supported: Ascii
Protocols Supported: BSC, SDLC, X.25
Maximum Output Lines: 1
Aggregate Transmission Rate: 96 bps
Features: Protocol and Code Conversion, Error Control, Multiplexer/Demultiplexer, Automatic Polling, User Programmable, Autodial/Autoanswer Capabilities, Download-Loading of Remote Node
Distribution Method: End user
Date First Installed: January 1983
(See Vendor Profile Page V-32)

WINTERMALTER, INC.
DATATALKER
Processor Function: Front-End Processor
Compatibility Classification: IBM 370X
Word Length: 8 bit
Host Compatibility: IBM
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 1
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Synchronous: 1,200 bps to 19,200 bps
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: BSC
Maximum Output Lines: 1
Aggregate Transmission Rate: 192 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Automatic Disconnect, Terminal-Controller, Automatic Polling, User Programmable
Price: $995
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 100 to 1,000
Date First Installed: January 1983
(See Vendor Profile Page V-33)

WINTERMALTER, INC.
DATATALKER 2
Processor Function: Front-End Processor
Compatibility Classification: IBM 270X
Word Length: 8 bit
Host Compatibility: IBM Mainframes
Maximum Number Input Lines: 4
Input Transmission Mode: Half-Duplex
Input Transmission Speeds:
Asynchronous: 9,600 bps
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: BSC
Maximum Output Lines: 1
Aggregate Transmission Rate: 192 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Processor-Initiated Dynamic Line Reconfiguration, Automatic Polling, User Programmable, Autodial/Autoanswer Capabilities, Downlined Loading of Remote Node
Price: $895 to $995
Distribution Method: End user
Date First Installed: January 1984

XYPLEX, INC.
XP-UNIX
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 16 bit
Host Compatibility: DEC PDP-11, DEC VAX
Peripherals Supported: CRT, Printer
Maximum Number Input Lines: 64
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Asynchronous: 9,600 bps
Input Port Code Supported: Ebcdic, Ascii
Protocols Supported: Asynchronous (Start/Stop)
Maximum Output Lines: 64
Aggregate Transmission Rate: 999,999 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities
Price: $9,500
Monthly Maintenance Fee: $100
Distribution Method: End user
Date First Installed: September 1982
(See Vendor Profile Page V-33)

XYPLEX, INC.
XYPLEX SYSTEM
Processor Function: Front-End Processor, Message Switch, Remote-Line Concentrator, Host Independent, Distributed Processing Nodes
Compatibility Classification: Non-IBM (General Purpose)
Word Length: 16 bit
Host Compatibility: DEC VAX, DEC PDP-11
Peripherals Supported: CRT, Printer, Diagnostic/Test
Maximum Number Input Lines: 2,000
Input Transmission Mode: Full-Duplex
Input Transmission Speeds:
Asynchronous: 9,600 bps
Input Port Code Supported: Ascii, Parallel Binary Data
Protocols Supported: HDLC, Asynchronous (Start/Stop)
Maximum Output Lines: 2,000
Aggregate Transmission Rate: 10,000 bps
Features: Protocol and Code Conversion, Error Control, Terminal Emulation, Automatic Transmission Speed (Baud Rate) Detection, Terminal-Initiated Applications Switching, Automatic Disconnect, Multiplexer/Demultiplexer, Terminal Controller, Automatic Polling, User Programmable, On-Line Maintenance, Statistics Collection, Autodial/Autoanswer Capabilities, Downline Loading of Remote Node
Distribution Method: Third-party
Number Installed to Date: 50 to 100
Date First Installed: October 1982

SWITCHING EQUIPMENT

Index to Switching Equipment By Transmission Type

The index to switching systems has been broken down according to the transmission type — voice, data, nonintegrated voice/data or integrated voice/data — of the different products. Within each section of the index products are grouped alphabetically by vendor and contain the unit price as well as the page number on which the complete product listing can be found.

Voice Transmission Devices

VENDOR	MODEL	PRICE	PAGE
Action/Honeywell	ROADRUNNER DIGITAL EDITION	$1,000 to $1,500	B-46
Amteico	MCF	N/A	B-46
Conversational Voice Terminal Corp.	CON MODE VOICE TERMINAL	$4,000 to $6,000	B-46
Data Switch Corp.	ANA-MAX	N/A	B-46
Dynatech Data Systems	CTM 1000 MATRIX	N/A	B-46
GTE Business Communications Systems, Inc.	DPD 4800	$500	B-51
Information Dynamics Corp.	IDX 230	N/A	B-51
	IDX 2120	N/A	B-52
Intecom America, Inc.	OMEGA II MODEL 412	N/A	B-52
Mitel, Inc.	SX-100	N/A	B-55
	SX-200	N/A	B-55
Motorola, Inc.	EMX SERIES SWITCHING EXCHANGES	N/A	B-55
Siemens Communications Systems	SD-192	N/A	B-55
	SD-192MX	N/A	B-55
T-Bar, Inc.	5000 SERIES	$350 to $500	B-55
Telecom Technologies	ECD 1000	N/A	B-55
	ECD 2000	$300 to $400	B-55
Tie Communications	MERCURY PBX	$300 to $400	B-55
Toshiba America, Inc.	PERCEPTION	N/A	B-55

Data Switching Devices

VENDOR	MODEL	PRICE	PAGE
Atlantic Research Corp.	DPS-4	$100 to $1,000	B-46
	FBS-1	$100 to $1,000	B-46
	RCS-100	$100 to $1,000	B-46
Racine Data Systems, Inc.	TRI CHANNEL SECURITY SYSTEMS	N/A	B-46
RSN Communications Corp.	C 30 PSN	N/A	B-46
Sytex Corp.	AUTOSWITCH 240	$100 to $200	B-46
Codex Corp.	IMS 7700	N/A	B-46
	IMS 7800	N/A	B-46
Gammex, Ltd.	DNP-4R, -8R, -16E	N/A	B-46

Switching Equipment

ACTION/HONEYWELL
ROADRUNNER DIGITAL EDITION
Equipment Type: Tandem
Transmission: Voice, Data, Integrated Voice/Data, Video
Switch Technology: Digital
Switching Matrix: Time/Space/Time
Modulation Method: PCM
Maximum Trunks Supported: 4,096
Attendant Consoles (Maximum): 7
Matrix Architecture: Nonblocking, 100%
Maximum Transmission Speeds:
Voice: 64,000 bit/sec
Data: 1,544,000 bit/sec
Advanced Features: T-1 Carrier Interface, X.25 Interface, Security, Diagnostics, Data Security, Common Channel Switch
Price:
Purchase: $1,000 to $1,500
Distribution Method: End user
Number Installed to Date: 10 to 25
Date First Installed: September 1982
(See Vendor Profile Page V-1)

AMERICAN TELECOMM, INC.
FOCUS ELITE
Equipment Type: PBX
Transmission: Nonintegrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: DM
Maximum Trunks Supported: 56
Maximum Stations Supported: 280
Attendant Consoles (Maximum): 4
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 128
Advanced Features: User Programmable, Security, Diagnostics, Data Security
Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: September 1976
(See Vendor Profile Page V-2)

AMTELCO
5VE
Equipment Type: PBX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: PCM
Modulation Method: PCM
Maximum Trunks Supported: 24
Maximum Stations Supported: 2,000
Attendant Consoles (Maximum): 12
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 12
Maximum Transmission Speeds:
Voice: 64,000 bit/sec
Advanced Features: T-1 Carrier Interface, OA, Security, Data Security
Advanced Attendant Features: Paperless Phone
Distribution Method: End user
Number Installed to Date: 1 to 10
Date First Installed: May 1983
(See Vendor Profile Page V-3)

AMTELCO
LEPRECHAUN
Equipment Type: PBX
Transmission: Integrated Voice/Data
Switch Technology: Analog
Switching Matrix: Relay
Maximum Trunks Supported: 1
Maximum Stations Supported: 14
Attendant Consoles (Maximum): 1
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 1
Advanced Features: OA, Diagnostics
Distribution Method: End user
Number Installed to Date: 25 to 50
Date First Installed: September 1981

AMTELCO
LITTLE GUY
Equipment Type: PBX
Switch Technology: Analog
Switching Matrix: Relay
Maximum Trunks Supported: 4
Attendant Consoles (Maximum): 1
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 1
Advanced Features: OA, Diagnostics
Distribution Method: End user
Number Installed to Date: 25 to 50
Date First Installed: September 1982

AMTELCO
MCF
Equipment Type: PBX
Transmission: Voice
Switch Technology: Analog
Switching Matrix: Relay
Maximum Trunks Supported: 36
Maximum Stations Supported: 900
Attendant Consoles (Maximum): 12
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 36
Advanced Features: OA, Diagnostics
Advanced Attendant Features: Electronic Mail, Corporate Message Center, Information Retrieval
Distribution Method: End user
Number Installed to Date: 10 to 25
Date First Installed: March 1982

AMTELCO
MINI MESSAGE CENTER
Equipment Type: PBX
Transmission: Integrated Voice/Data
Switch Technology: Analog
Switching Matrix: Relay
Maximum Trunks Supported: 1
Maximum Stations Supported: 14
Attendant Consoles (Maximum): 100
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 1
Advanced Features: OA, Diagnostics
Distribution Method: End user
Date First Installed: March 1984

ANDERSON JACOBSON, INC.
10X-1000 (INTEGRATED OFFICE EXCHANGE)
Equipment Type: PABX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Modulation Method: PCM
Maximum Trunks Supported: 1,536
Maximum Stations Supported: 16,000
Matrix Architecture: Nonblocking, 100%
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), Voice Store and Forward, OA, Security, Diagnostics, Data Security, Energy Control/Management, RJE to Host Interface, Protocol Conversion
Price:
Lease: $40 to $60
Price:
Purchase: $500 to $800
Average Monthly Maintenance: $6
Distribution Method: OEM, Third-party
(See Vendor Profile Page V-2)

ATLANTIC RESEARCH CORP.
DPS-4
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Matrix Architecture: Nonblocking
Maximum Transmission Speeds:
Data: 2,000,000 bit/sec
Price:
Purchase: $100 to $1,000
Distribution Method: End user
Number Installed to Date: 10 to 25
Date First Installed: January 1978
(See Vendor Profile Page V-3)

ATLANTIC RESEARCH CORP.
PBS 1
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Matrix Architecture: Nonblocking
Maximum Transmission Speeds:
Data: 2,000,000 bit/sec
Price:
Purchase: $100 to $1,000
Distribution Method: End user
Number Installed to Date: 10 to 25
Date First Installed: January 1978

ATLANTIC RESEARCH CORP.
RCS-100
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Matrix Architecture: Nonblocking
Maximum Transmission Speeds:
Data: 2,000,000 bit/sec
Price:
Purchase: $100 to $1,000
Distribution Method: End user
Number Installed to Date: 10 to 25

AT&T INFORMATION SYSTEMS, INC.
DIMENSION
Equipment Type: ICBX
Transmission: Nonintegrated Voice/Data
Switch Technology: Analog
Switching Matrix: Time Division
Modulation Method: PAM
Maximum Trunks Supported: 1,100
Maximum Stations Supported: 7,000
Attendant Consoles (Maximum): 480
Matrix Architecture: Blocking
Maximum Transmission Speeds:
Data: 9,600 bit/sec
Advanced Features: User Programmable, T-1 Carrier Interface, X.25 Interface, Voice Store and Forward, OA, Security, Diagnostics, Data Security, Energy Control/Management, RJE to Host Interface
Advanced Attendant Features: Electronic Mail, Text Message, Uniform Wiring
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: March 1975
(See Vendor Profile Page V-3)

AT&T INFORMATION SYSTEMS, INC.
SYSTEM 85
Equipment Type: ICBX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 2,250
Maximum Stations Supported: 7,000
Attendant Consoles (Maximum): 480
Matrix Architecture: Nonblocking, 100%
Maximum Transmission Speeds:
Voice: 64,000 bit/sec
Data: 64,000 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), OA, Security, Diagnostics, Data Security, Energy Control/Management, RJE to Host Interface
Advanced Attendant Features: Electronic Mail, Text Message Uniform, Wiring
Price:
Purchase: $870 to $1,850
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: April 1983

BACKUS DATA SYSTEMS, INC.
TRI CHANNEL SECURITY SYSTEMS
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Switching Matrix: Time Division
Maximum Simultaneous Transmissions: 3
Maximum Transmission Speeds:
Data: 9,600 bit/sec
Advanced Features: LAN Capability (Micro/Mini), Security, Data Security

FIRST WE MADE IT SMART.

THEN WE MADE IT SIMPLE.

Switching Equipment

Number Installed to Date: 50 to 100
(See Vendor Profile Page V-5)

BBN COMMUNICATIONS CORP.
C 30 PSN (PACKET SWITCH NODE)
Equipment Type: Packet Processor
Transmission: Data
Switch Technology: Digital
Switching Matrix: Statistical
Maximum Trunks Supported: 14
Attendant Consoles (Maximum): 1
Maximum Simultaneous Transmissions: 500
Maximum Transmission Speeds:
Data: 64,000 bit/sec
Advanced Features: X.25 Interface, Security, Diagnostics, Data Security, Protocol Conversion
Distribution Method: End user, OEM
Number Installed to Date: More than 100
Date First Installed: 1981
(See Vendor Profile Page V-4)

Additional information provided for by vendor

BBNCC markets private packet-switching networks. The company's fully integrated line of products and services provides a total solution approach to managing network growth and controlling data communications cost. BBNCC designs, installs and maintains wide area X.25 networks for clients located worldwide.

BYTEX CORP.
AUTOSWITCH 240
Equipment Type: Matrix Switch
Transmission: Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PAM
Maximum Trunks Supported: 240
Attendant Consoles (Maximum): 16
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 120
Maximum Transmission Speeds:
Data: 306,000 bit/sec
Advanced Features: User Programmable, LAN Capability (Micro/Mini/Mainframe), OA, Security, Diagnostics, User Expandable
Price:
Purchase: $100 to $200
Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: September 1981
(See Vendor Profile Page V-6)

CODEX CORP.
MS 7700
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Stations Supported: 512
Attendant Consoles (Maximum): 1
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 256
Maximum Transmission Speeds:
Data: 19,200 bit/sec
Advanced Features: Diagnostics, Data Security
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: 1980
(See Vendor Profile Page V-6)

CODEX CORP.
MS 7750
Equipment Type: Data Switch
Transmission: Nonintegrated Voice/Data
Switch Technology: Digital
Switching Matrix: Space Division
Modulation Method: PCM
Maximum Stations Supported: 1,440
Attendant Consoles (Maximum): 6
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 720
Maximum Transmission Speeds:
Data: 64,000 bit/sec
Advanced Features: User Programmable, Security, Diagnostics
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: 1983

CODEX CORP.
MS 7800
Equipment Type: PABX
Transmission: Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Stations Supported: 508
Attendant Consoles (Maximum): 1
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 254
Maximum Transmission Speeds:
Data: 19,200 bit/sec
Advanced Features: Security, Diagnostics
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: September 1980

COMNEX, LTD.
DNP-4R, -8R, -16E
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Switching Matrix: Statistical
Maximum Transmission Speeds:
Data: 56,000 bit/sec
Advanced Features: RJE to Host Interface
Average Monthly Maintenance: $120
Distribution Method: End user
Number Installed to Date: 25 to 50
Date First Installed: 1982
(See Vendor Profile Page V-6)

COMNITEX, INC.
TERMINAL CONCENTRATOR; MDS-8078
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: External
Maximum Trunks Supported: 20
Maximum Stations Supported: 128
Maximum Simultaneous Transmissions: 125
Maximum Transmission Speeds:
Data: 19,200 bit/sec
Advanced Features: User Programmable, T-1 Carrier Interface, X.25 Interface, LAN Capability (Micro/Mini), OA, Security, Diagnostics, RJE to Host Interface, Protocol Conversion
Price:
Purchase: $800 to $820
Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: February 1981

COMPUTER SYSTEMS TS/88
Equipment Type: PABX
Transmission: Nonintegrated Voice/Data
Switch Technology: Digital
Switching Matrix: Space Division
Modulation Method: DM
Maximum Trunks Supported: 50
Maximum Stations Supported: 400
Attendant Consoles (Maximum): 100
Matrix Architecture: Blocking
Maximum Transmission Speeds:
Data: 19,200 bit/sec
Advanced Features: User Programmable, T-1 Carrier Interface, LAN Capability (Micro/Mini), Voice Store and Forward, OA, Diagnostics, Data Security, RJE to Host Interface, Protocol Conversion
Advanced Attendant Features: Integrated Communications, Data Switching
Price:
Purchase: $200 to $600
Distribution Method: End user, Third-party
Date First Installed: 1983
(See Vendor Profile Page V-7)

CONVERSATIONAL VOICE TERMINAL CORP.
CON MODE VOICE TERMINAL
Equipment Type: ACD
Transmission: Voice
Switch Technology: Analog/Digital
Advanced Features: User Programmable, Voice Store and Forward, OA
Price:
Lease: $200 to $300
Purchase: $4,000 to $6,000
Distribution Method: End user
Date First Installed: March 1984
(See Vendor Profile Page V-8)

CROSSPOINT SYSTEMS, INC.
SD480
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Analog
Maximum Trunks Supported: 256
Maximum Stations Supported: 256
Attendant Consoles (Maximum): 1
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 256
Maximum Transmission Speeds:
Data: 19,200 bit/sec
Advanced Features: User Programmable, Diagnostics
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: September 1982
(See Vendor Profile Page V-8)

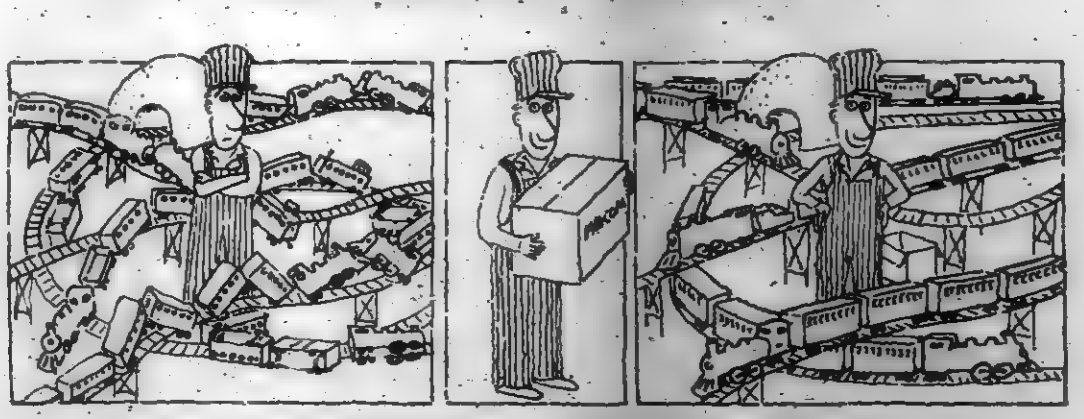
DEC CORP.
ROSE
Equipment Type: PBX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time/Space/Time
Modulation Method: PCM
Maximum Stations Supported: 12,288
Attendant Consoles (Maximum): 192
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 12,000
Maximum Transmission Speeds:
Voice: 512,000 bit/sec
Data: 512,000 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), Voice Store and Forward, OA, Security, Diagnostics, Data Security, RJE to Host Interface, Protocol Conversion
Distribution Method: OEM
Date First Installed: December 1983
(See Vendor Profile Page V-8)

DATAPROBE, INC.
3274 CONTROLLER BACKUP SWITCH
Equipment Type: Coaxial Switch
Transmission: Data
Switch Technology: Analog/Digital
Switching Matrix: Magnetic Latching
Maximum Stations Supported: 128
Matrix Architecture: Blocking
Advanced Features: X.25 Interface, Diagnostics, Data Security
Distribution Method: End user
Number Installed to Date: 1 to 19
Date First Installed: October 1982
(See Vendor Profile Page V-9)

DATA SWITCH CORP.
ANA-MAX
Equipment Type: Analog Switch
Transmission: Voice, Data
Switch Technology: Digital
Maximum Trunks Supported: 72
Maximum Stations Supported: 1,024
Attendant Consoles (Maximum): 7
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 1,024
Maximum Transmission Speeds:
Data: 19,200 bit/sec
Advanced Features: User Programmable, Security, Diagnostics
Advanced Attendant Features: CMS Control Console, Controls 16 ANA-MAX, XY-MAX Switches
Distribution Method: End user
Date First Installed: April 1983
(See Vendor Profile Page V-9)

WHEN IT COMES TO CONTROLLING YOUR DATA NETWORK,

THE IDX-3000™ PUTS YOU ON THE RIGHT TRACK.



Control can be a major problem with a large network. That's why our IDX-3000 Local Communication System features the IDX-Net™ network controller. With IDX-Net, you handle configuration management on-line. You can manage major network topology changes, such as disaster recovery, with only a few keystrokes.

IDX-Net lets you access network control commands and diagnostics from any terminal in the network, including dial-up. This means that you, or M/A-COM Linkabit's Hotline Service, can diagnose your problem in seconds without having to be in your computer room.

Programmability
IDX-Net's 68000-based network controller software provides you with the capability to interface host-resident application programs to the network. You can build-in your own custom-tailored network management features.

User convenience
In addition to traditional data PABX port contention and resource selection, IDX-Net provides your authorized users with many of the features offered by modern telephone systems. They can connect, disconnect and hold lines to multiple computer resources and execute third-party connects.

For the office of now
With the IDX-3000, you can start with a small system that fits your current needs and budget, then grow to obtain non-blocking, full-duplex asynchronous communication for as many as 3072 lines, all at data rates of up to 19.2 Kbps. The IDX-3000's proven TI-based technology is fault-tolerant, with optional redundancy features throughout its distributed architecture, and automatic, continuous self-testing. The IDX-3000 isn't one of those products of the future. It's here now—proven, in use, and backed by M/A-COM, one of the nation's largest communication companies.

If you want to get control of your network, contact Ruth Stoffel at M/A-COM Linkabit, 3033 Science Park Road, San Diego, CA 92121, toll-free (800) 626-6640 or (619) 457-2340. We'll put you in control.

THE NETWORK YOU CAN CONTROL

M/A-COM

DATA SWITCH CORP.
MODEL 600
Equipment Type: Computer/Peripheral Switch
Transmission: Data
Switch Technology: Digital
Maximum Trunks Supported: 4
Maximum Stations Supported: 12
Maximum Simultaneous Transmissions: 4
Maximum Transmission Speeds: Data: 8,000,000 bit/sec
Advanced Features: User Programmable
Advanced Attendant Features: Can be Upgraded to Model 1200, Larger Matrix Size and CMS Controlled
Distribution Method: End user
Date First Installed: December 1983

DATA SWITCH CORP.
MODEL 1000
Equipment Type: Computer/Peripheral Switch
Transmission: Data
Switch Technology: Digital
Maximum Trunks Supported: 16
Maximum Stations Supported: 48
Attendant Consoles (Maximum): 7
Maximum Simultaneous Transmissions: 16
Maximum Transmission Speeds: Data: 8,000,000 bit/sec
Advanced Features: User Programmable, Security, Diagnostics
Advanced Attendant Features: CMS Controlled Console Operates 56 Model 1000 Units, Switches at Remote and Local Sites
Distribution Method: End user
Date First Installed: 1978

DATA SWITCH CORP.
MODEL 1200
Equipment Type: Computer/Peripheral Switch
Transmission: Data
Switch Technology: Digital
Maximum Trunks Supported: 16
Maximum Stations Supported: 24
Attendant Consoles (Maximum): 7
Maximum Simultaneous Transmissions: 16
Maximum Transmission Speeds: Data: 8,000,000 bit/sec
Advanced Features: User Programmable, Security, Diagnostics
Advanced Attendant Features: CMS Controlled Console, Operates 56 Model 1200 Units, Switches at Remote and Local Sites
Distribution Method: End user
Date First Installed: 1978

DATA SWITCH CORP.
XY-MAX-2040
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Trunks Supported: 512
Maximum Stations Supported: 512
Attendant Consoles (Maximum): 7
Matrix Architecture: Nonblocking, 100%
Maximum Transmission Speeds: Data: 72,000 bit/sec
Advanced Features: User Programmable
Advanced Attendant Features: CMS Control Console, Controls 16 XY-MAX, ANA-MAX Switches
Average Monthly Maintenance: $75
Distribution Method: End user
Date First Installed: April 1983

DAYCOM CORP.
DAYCOM
Equipment Type: PBX
Transmission: Nonintegrated Voice/Data, Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division, Data
Modulation Method: PCM
Attendant Consoles (Maximum): 10
Matrix Architecture: Nonblocking, 100%
Maximum Transmission Speeds: Voice: 256,000 bit/sec
Distribution Method: End user
Number Installed to Date: More than 100
(See Vendor Profile Page V-10)

DCA/TAC
SYSTEM 2LS NETSWITCH
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Switching Matrix: STDM
Maximum Trunks Supported: 11
Maximum Stations Supported: 1,472
Attendant Consoles (Maximum): 1
Matrix Architecture: Nonblocking
Maximum Transmission Speeds: Data: 9,600 bit/sec
Advanced Features: User Programmable, OA, Security, Diagnostics, Energy Control/Management
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 10 to 25
Date First Installed: January 1982
(See Vendor Profile Page V-10)

DEVELCON ELECTRONICS, INC.
9002 DATA SWITCH
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Switching Matrix: Time/Space/Time
Maximum Stations Supported: 284
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 141
Maximum Transmission Speeds: Data: 19,200 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), Security, Diagnostics, Data Security, RJE to Host Interface, Protocol Conversion
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: 1978
(See Vendor Profile Page V-10)

DEVELCON ELECTRONICS, INC.
9006 DATA SWITCH
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Analog/Digital
Switching Matrix: Time Division
Maximum Stations Supported: 2,012
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 2,012
Maximum Transmission Speeds: Data: 19,200 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, LAN Capability (Micro/Mini/Mainframe), Security, Diagnostics, Data Security, RJE to Host Interface
Advanced Attendant Features: X.25 Interface, Protocol Converter
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: September 1978

DIALOG, INC.
NETWORK ACCESS SWITCH (NAS)
Equipment Type: Data Switch
Transmission: Data, Four-Wire Leased Lines
Switch Technology: Analog/Digital
Switching Matrix: Time Division
Maximum Stations Supported: 240
Attendant Consoles (Maximum): 2
Matrix Architecture: Nonblocking, 100%
Maximum Transmission Speeds: Voice: 9,600 bit/sec Data: 192 bit/sec
Price: Purchase: $600 to $700
Average Monthly Maintenance: $500
Distribution Method: End user
Date First Installed: February 1984
(See Vendor Profile Page V-10)

DIGITAL CONTROLS CORP.
DIGITAL CONTROLS 3403
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Trunks Supported: 16
Maximum Stations Supported: 8
Price: Purchase: $995 to $19,500
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: September 1982
(See Vendor Profile Page V-10)

DIGITAL CONTROLS CORP.
DIGITAL CONTROL 3421
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Trunks Supported: 16
Maximum Stations Supported: 8
Price: Purchase: $995 to $19,500
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: 1982

DIGITAL CONTROLS CORP.
DIGITAL CONTROLS 4101
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Trunks Supported: 16
Maximum Stations Supported: 8
Price: Purchase: $695 to $19,500
Distribution Method: End user
Number Installed to Date: 10 to 35
Date First Installed: 1983

DIGITAL LABORATORIES, INC.
3R
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Modulation Method: Operational Amplifiers
Maximum Trunks Supported: 3
Maximum Stations Supported: 3
Attendant Consoles (Maximum): 3
Price: Purchase: $395
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: 1977
(See Vendor Profile Page V-10)

DIGITAL LABORATORIES, INC.
MICRO MATRIX
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Modulation Method: Operational Amplifiers
Maximum Trunks Supported: 8
Maximum Stations Supported: 8
Attendant Consoles (Maximum): 8
Maximum Simultaneous Transmissions: 8
Price: Purchase: $995
Number Installed to Date: More than 100
Date First Installed: 1980

DIGITAL LABORATORIES, INC.
MICRO MATRIX II
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Modulation Method: Operational Amplifiers
Maximum Trunks Supported: 8
Maximum Stations Supported: 8
Attendant Consoles (Maximum): 8
Price: Purchase: $995
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: 1981

DIGITAL LABORATORIES, INC.
TLC
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Modulation Method: Operational Amplifiers
Maximum Trunks Supported: 3
Maximum Stations Supported: 3
Attendant Consoles (Maximum): 3
Price: Purchase: $245
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: 1982

DIGITAL LABORATORIES, INC.
WAP
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Modulation Method: Operational Amplifiers
Maximum Trunks Supported: 5
Maximum Stations Supported: 5
Attendant Consoles (Maximum): 5
Price:
Purchase: $395
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: 1983

DIRACOM CORP.
SELECT 8
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Analog
Maximum Stations Supported: 8
Price:
Purchase: $335 to $420
Distribution Method: End user, OEM, Third-party
Number Installed to Date: More than 100
Date First Installed: September 1982
(See Vendor Profile Page V-11)

DYNATECH DATA SYSTEMS
CHANNEL ACCESS SWITCH
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Stations Supported: 16
Price:
Purchase: $400 to $6,000
Number Installed to Date: 50 to 100
(See Vendor Profile Page V-11)

DYNATECH DATA SYSTEMS
CTM 1000
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Switching Matrix: Time/Space/Time
Maximum Stations Supported: 16
Price:
Purchase: $400 to $6,000
Distribution Method: End user
Number Installed to Date: 10 to 25

DYNATECH DATA SYSTEMS
CTM 1000 MATRIX
Equipment Type: Data Switch
Transmission: Voice, Data, Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division, Space Division
Modulation Method: Analog
Maximum Stations Supported: 2,000
Attendant Consoles (Maximum): 16
Matrix Architecture: Nonblocking, 100%
Maximum Transmission Speeds:
Voice: 1,000,000 bit/sec
Data: 64,000 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), LAN Capability (Micro/Mini/Mainframe), Security, Diagnostics, Data Security
Advanced Attendant Features: Storage Capability, Loading Reconfiguration, LED Alarm
Price:
Purchase: $800
Distribution Method: End user, Third-party
Number Installed to Date: 10 to 25
Date First Installed: 1983

DYNATECH DATA SYSTEMS
DYNASWITCH
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Stations Supported: 16
Price:
Purchase: $400 to $6,000
Distribution Method: End user
Number Installed to Date: More than 100

DYNATECH DATA SYSTEMS
DYNASWITCH MARK II
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Stations Supported: 16
Price:
Purchase: $400 to $6,000
Distribution Method: End user
Number Installed to Date: More than 100

DYNATECH DATA SYSTEMS
VS CHANNEL ACCESS SWITCH
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Analog
Maximum Stations Supported: 16
Price:
Purchase: $400 to $6,000
Distribution Method: End user
Number Installed to Date: 25 to 50

DYNATECH PACKET TECHNOLOGY, INC.
MULTI SWITCH X.2
Equipment Type: Packet Processor
Transmission: Data
Switch Technology: Digital
Switching Matrix: Time Division
Maximum Trunks Supported: 8
Maximum Stations Supported: 127
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 127
Maximum Transmission Speeds:
Data: 14,400 bit/sec
Advanced Features: User Programmable, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), Security, Diagnostics, Data Security, Protocol Conversion
Price:
Purchase: $4,000
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: June 1982
(See Vendor Profile Page V-11)

ELECTROGATA, INC.
CLS 2
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Stations Supported: 2
Price:
Purchase: $125
Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: December 1978
(See Vendor Profile Page V-11)

ELECTRONIC INTERFACE ASSOCIATES
8 8
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Stations Supported: 8
Price:
Purchase: $100 to $200
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: 1980
(See Vendor Profile Page V-11)

ELECTRONIC INTERFACE ASSOCIATES
8 24
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Stations Supported: 8
Price:
Purchase: $100 to $200
Distribution Method: End user
Number Installed to Date: More than 100

EMERSON PRODUCTIC, INC.
ENPAX
Equipment Type: Packet Processor
Transmission: Data
Switch Technology: Digital
Maximum Trunks Supported: 1,500
Maximum Stations Supported: 1,500
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 1,500
Maximum Transmission Speeds:
Data: 16,000 bit/sec
Advanced Features: X.25 Interface, LAN Capability (Micro/Mini/Mainframe), OA, Diagnostics, Data Security, Energy Control/Management, Protocol Conversion
Price:
Lease: $30 to $40
Purchase: $1,600 to $1,800
Distribution Method: End user
Number Installed to Date: 10 to 25
Date First Installed: January 1983
(See Vendor Profile Page V-11)

GANDALF DATA, INC.
PACX TM
Equipment Type: PACX
Transmission: Data
Switch Technology: Digital
Switching Matrix: Time Division, Space Division
Maximum Trunks Supported: 1,024
Maximum Stations Supported: 2,048
Attendant Consoles (Maximum): 1
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 1,024
Maximum Transmission Speeds:
Data: 19,200 bit/sec
Advanced Features: User Programmable, T-1 Carrier Interface, X.25 Interface, OA, Security, Diagnostics, Data Security, RJE to Host Interface, Protocol Conversion
Price:
Purchase: $135 to $600
Average Monthly Maintenance: $300
Distribution Method: End user
Number Installed to Date: More than 100
(See Vendor Profile Page V-12)

GTE [illegible]
COMMUNICATIONS SYSTEMS, INC.
GPD 4000
Equipment Type: PBX
Transmission: Voice, Data, Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division, Space Division
Modulation Method: PCM
Maximum Trunks Supported: 4,000
Maximum Stations Supported: 12,288
Attendant Consoles (Maximum): 32
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 4,000
Maximum Transmission Speeds:
Data: 64,000 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), Voice Store and Forward, OA, Security, Diagnostics, Data Security, RJE to Host Interface, Protocol Conversion
Advanced Attendant Features: Dual Bus Architecture
Price:
Purchase: $300 to $600
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: September 1976
(See Vendor Profile Page V-12)

GTE [illegible]
COMMUNICATIONS SYSTEMS, INC.
GSM PBX
Equipment Type: PBX
Transmission: Voice, Data, Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division, Space Division
Modulation Method: PCM
Maximum Trunks Supported: 1,024
Maximum Stations Supported: 2,000
Attendant Consoles (Maximum): 8
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 384
Maximum Transmission Speeds:
Data: 64,000 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), Voice Store and Forward, OA,

Security, Diagnostics, Data Security, RJE to Host Interface, Protocol Conversion
Advanced Attendant Features: Dual Bus Architecture
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: September 1978

HARRIS CORP.
480-L (480L-2 AC OR DC)
Equipment Type: PABX
Transmission: Nonintegrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: DM
Maximum Trunks Supported: 56
Maximum Stations Supported: 440
Attendant Consoles (Maximum): 2
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 145
Maximum Transmission Speeds: Data: 9,600 bit/sec
Advanced Features: User Programmable, LAN Capability (Micro/Mini/Mainframe), Data Security
Price: Purchase: $320 to $500
Distribution Method: Third-party
Number Installed to Date: 1 to 10
Date First Installed: January 1984
(See Vendor Profile Page V-14)

HARRIS CORP.
480-M (480M-2 AC OR DC)
Equipment Type: PABX
Transmission: Nonintegrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: DM
Maximum Trunks Supported: 32
Maximum Stations Supported: 216
Attendant Consoles (Maximum): 2
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 145
Maximum Transmission Speeds: Data: 9,600 bit/sec
Advanced Features: User Programmable, LAN Capability (Micro/Mini/Mainframe), Data Security
Price: Purchase: $350 to $500
Distribution Method: Third-party
Number Installed to Date: 1 to 10
Date First Installed: January 1984

HARRIS CORP.
1201 (1201-3 AC OR DC)
Equipment Type: PABX
Transmission: Nonintegrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: DM
Maximum Trunks Supported: 48
Maximum Stations Supported: 448
Attendant Consoles (Maximum): 4
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 145
Maximum Transmission Speeds: Data: 9,600 bit/sec
Advanced Features: User Programmable, LAN Capability (Micro/Mini/Mainframe), Data Security
Price: Purchase: $350 to $500
Distribution Method: End user
Number Installed to Date: 8,000
Date First Installed: January 1975

HARRIS CORP.
1202 (1202-6 AC OR DC)
Equipment Type: PABX
Transmission: Nonintegrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: DM
Maximum Trunks Supported: 128
Maximum Stations Supported: 928
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 145
Maximum Transmission Speeds: Data: 9,600 bit/sec
Advanced Features: User Programmable, LAN Capability (Micro/Mini/Mainframe), Data Security
Price: Purchase: $280 to $500
Distribution Method: End user
Number Installed to Date: 8,000
Number Installed to Date: More than 100
Date First Installed: June 1977

HARRIS CORP.
1204/1204-6 DC
Equipment Type: PACX
Transmission: Nonintegrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: DM
Maximum Trunks Supported: 120
Maximum Stations Supported: 840
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 145
Maximum Transmission Speeds: Data: 9,600 bit/sec
Advanced Features: User Programmable, LAN Capability (Micro/Mini/Mainframe), Data Security
Price: Purchase: $400 to $500
Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: October 1979

HARRIS CORP.
1205/1205-3 DC
Equipment Type: PABX
Transmission: Nonintegrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: DM
Maximum Trunks Supported: 56
Maximum Stations Supported: 320
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 145
Maximum Transmission Speeds: Data: 9,600 bit/sec
Advanced Features: User Programmable, LAN Capability (Micro/Mini/Mainframe), Data Security
Price: Purchase: $450 to $600
Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: May 1979

HARRIS CORP.
HARRIS 1186 & 1188
Equipment Type: PBX
Transmission: Nonintegrated Voice/Data
Switch Technology: Analog
Switching Matrix: Time Division
Modulation Method: PAM
Maximum Trunks Supported: 20
Maximum Stations Supported: 111
Attendant Consoles (Maximum): 1
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 30
Maximum Transmission Speeds: Data: 9,600 bit/sec
Advanced Features: Data Security
Price: Purchase: $650
Distribution Method: OEM, Third-party
Number Installed to Date: More than 100
Date First Installed: April 1982

HITACHI AMERICA, LTD.
DX 30/40
Equipment Type: PBX
Transmission: Nonintegrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 256
Maximum Stations Supported: 1,272
Attendant Consoles (Maximum): 8
Maximum Simultaneous Transmissions: 128
Maximum Transmission Speeds: Voice: 19,200 bit/sec Data: 19,200 bit/sec
Advanced Features: User Programmable, Voice Store and Forward, OA, Diagnostics
Distribution Method: Third-party
Number Installed to Date: 50 to 100
Date First Installed: 1982
(See Vendor Profile Page V-14)

I P C TECHNOLOGY, LTD.
DPX III (100, 160, 1600)
Equipment Type: PABX
Transmission: Nonintegrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PWM
Maximum Trunks Supported: 1,000
Maximum Stations Supported: 1,000
Attendant Consoles (Maximum): 4
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 500
Maximum Transmission Speeds: Voice: 9,600 bit/sec Data: 9,600 bit/sec
Advanced Features: User Programmable, Voice Store and Forward, OA, Security, Diagnostics, Data Security, RJE to Host Interface
Advanced Attendant Features: 40-Key Programmable Console
Advanced Attendant Features: Electronic Key Set
Average Monthly Maintenance: $4
Distribution Method: End user, Third-party
Number Installed to Date: More than 100
Date First Installed: 1979
(See Vendor Profile Page V-14)

IMAGEGRAPHIX, INC.
IPX 5410
Equipment Type: Message Switch
Transmission: Data
Switch Technology: Digital
Switching Matrix: Interrupt
Modulation Method: Multiplexer
Maximum Trunks Supported: 128
Maximum Stations Supported: 256
Attendant Consoles (Maximum): 256
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 1
Maximum Transmission Speeds: Data: 9,600 bit/sec
Advanced Features: X.25 Interface, Security, Diagnostics, Protocol Conversion
Distribution Method: Third-party
Number Installed to Date: 1 to 10
Date First Installed: 1972
(See Vendor Profile Page V-15)

INFORMATION DYNAMICS CORP.
IDX 220
Equipment Type: PBX
Transmission: Voice, Transparent to Data
Switching Matrix: Space Division
Maximum Trunks Supported: 10
Maximum Stations Supported: 30
Attendant Consoles (Maximum): 2
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 14
Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: 1973
(See Vendor Profile Page V-15)

INFORMATION DYNAMICS CORP.
IDX 2120
Equipment Type: PBX
Transmission: Voice, Transparent to Data
Switching Matrix: Space Division
Maximum Trunks Supported: 120
Maximum Stations Supported: 30
Attendant Consoles (Maximum): 2
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 14
Advanced Features: Diagnostics

Nearly Nine Million Computer-Involved People Around the World Rely on Our Publications For the News They Need.

We're CW Communications/Inc.; the world's largest publisher of computer-related newspapers and magazines. And wherever you go in the computer world, you'll find computer-involved professionals reading—and relying on—our publications. With highly trained and experienced editorial staffs all over the world, our publications give readers the best and most up-to-date information available in this rapidly changing industry.

Around the world:

We publish, co-publish or provide editorial services to the leading computer publications in the world, including publications in all of the following countries:
Scandinavia—Denmark, Sweden, Finland and Norway.
Western Europe—Germany, United Kingdom, France, Italy, Spain, Greece, the Netherlands.
The Mid-East—Kuwait, Saudi Arabia.
Asia/Africa—People's Republic of China, Korea, Japan, Singapore, Southeast Asia, South Africa.
The Southern Pacific—Australia.
Central and South America—Mexico, Brazil, Argentina, Chile.

In the United States:

In the world's largest computer market, we publish a whole series of publications that cover different aspects of the industry. Our largest publication, with more than half-a-million readers every week, is *Computerworld*, a weekly newspaper aimed primarily at larger computer users. Its companion publications include *Computerworld Office Automation*; *Computerworld On Communications* (each published semi-monthly) and a series of *Buyer's Guides* covering all major segments of the industry.

In addition, we publish *MICRO MARKETWORLD* for dealers, distributors, retailers and others involved in the microcomputer marketplace. For microcomputer users, we publish *InfoWorld*, *Microcomputing*, *PC WORLD*, *80 Micro*, *inCider*, *Run*, and *Hot CoCo*.

No one in the world publishes more computer information for more people in more countries than we do. And we'd be happy to give you more information on any of our publications. Just send a telex to our U.S. offices, attention CW International Marketing Services, (telex #95-1153) or write us at the address below.

CW COMMUNICATIONS/INC.

Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: 1978

SPOTRON SYSTEMS CORP.
IS 4000/4002 INTELLIGENT SWITCHING SYSTEM
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Switching Matrix: Space/Time/Space
Maximum Stations Supported: 4,000
Attendant Consoles (Maximum): 2
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 2,000
Maximum Transmission Speeds:
Data: 64,000 bit/sec
Advanced Features: User Programmable, LAN Capability (Micro/Mini/Mainframe), OA, Security, Diagnostics, Data Security, RJE to Host Interface
Price:
Lease: $9 to $15
Purchase: $140 to $240
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: November 1981
(See Vendor Profile Page V-16)

SYTEK, INC.
IBX TM
Equipment Type: IBX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 8,192
Maximum Stations Supported: 8,192
Attendant Consoles (Maximum): 16
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 8,192
Maximum Transmission Speeds:
Voice: 64,000 bit/sec
Data: 10,000,000 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, X.25 Interface, Voice Store and Forward, OA, Diagnostics, RJE to Host Interface, Integrated
Price:
Purchase: $1,000
Distribution Method: End user
Number Installed to Date: 25 to 50
Date First Installed: September 1981
(See Vendor Profile Page V-16)

INTELLIGENT BUSINESS SYSTEMS, INC.
CBX 1024
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Switching Matrix: Time Division
Maximum Trunks Supported: 2,048
Maximum Stations Supported: 2,048
Attendant Consoles (Maximum): 10
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 512
Maximum Transmission Speeds:
Data: 64,000 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), X.25 Interface, LAN Capability (Micro/Mini/Mainframe), Diagnostics, Data Security, Protocol Conversion
Distribution Method: End user
Number Installed to Date: 1 to 10
Date First Installed: January 1984
(See Vendor Profile Page V-16)

INTERCONNECT PLANNING CORP.
DPX 100
Equipment Type: PABX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PWM
Maximum Trunks Supported: 88
Maximum Stations Supported: 88
Attendant Consoles (Maximum): 2
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 44
Maximum Transmission Speeds:
Voice: 9,600 bit/sec
Data: 9,600 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, LAN Capability (Mainframe), Security, Diagnostics
Price:
Purchase: $600 to $800
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: September 1977
(See Vendor Profile Page V-16)

INTERCONNECT PLANNING CORP.
DPX 160
Equipment Type: PABX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PWM
Maximum Trunks Supported: 152
Maximum Stations Supported: 152
Attendant Consoles (Maximum): 2
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 76
Maximum Transmission Speeds:
Data: 9,600 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, Voice Store and Forward, Security, Diagnostics
Price:
Purchase: $600 to $800
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: January 1977

INTERCONNECT PLANNING CORP.
DPX 1000
Equipment Type: PABX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PWM
Maximum Trunks Supported: 1,016
Maximum Stations Supported: 1,016
Attendant Consoles (Maximum): 4
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 508
Maximum Transmission Speeds:
Voice: 9,600 bit/sec
Data: 9,600 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, Voice Store and Forward, Security, Diagnostics, Data Security
Price:
Purchase: $600 to $1,200
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: January 1977

ITT BUSINESS COMMUNICATIONS CORP.
SYSTEM 3100
Equipment Type: PBX
Transmission: Nonintegrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 256
Maximum Stations Supported: 256
Attendant Consoles (Maximum): 4
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 190
Maximum Transmission Speeds:
Voice: 9,600 bit/sec
Data: 56,000 bit/sec
Advanced Features: User Programmable, Diagnostics, Protocol Conversion
Price:
Purchase: $600 to $650
Average Monthly Maintenance: $4
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: January 1981
(See Vendor Profile Page V-17)

ITT TELECOM PRODUCTS, INC.
1210 SYSTEM
Equipment Type: Data Switch
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time/Space/Time
Modulation Method: PCM
Maximum Trunks Supported: 15
Maximum Stations Supported: 50,000
Attendant Consoles (Maximum): 120
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 7,500
Maximum Transmission Speeds:
Voice: 64,000 bit/sec
Data: 64,000 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, X.25 Interface, Voice Store and Forward, Diagnostics, Data Security
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: 1978
(See Vendor Profile Page V-17)

ITT TELECOM PRODUCTS, INC.
1240
Equipment Type: DCU
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division, Space Division
Modulation Method: PCM
Maximum Trunks Supported: 60,000
Maximum Stations Supported: 100,000
Attendant Consoles (Maximum): 300
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 12,000
Maximum Transmission Speeds:
Voice: 64,000 bit/sec
Data: 4,000,000 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), Voice Store and Forward, OA, Security, Diagnostics, Data Security, Energy Control/Management, Protocol Conversion
Price:
Purchase: $200 to $300
Distribution Method: End user
Number Installed to Date: 10 to 25
Date First Installed: 1981

ITT TELECOM PRODUCTS, INC.
DPS 1000
Equipment Type: Packet Processor
Transmission: Data
Switch Technology: Digital
Maximum Trunks Supported: 1,000
Maximum Simultaneous Transmissions: 2,000
Maximum Transmission Speeds:
Data: 25,600 bit/sec
Advanced Features: User Programmable, X.25 Interface, Security, Diagnostics, Protocol Conversion, IBM 3270, 2780, X.27 Interface
Distribution Method: End user
Number Installed to Date: 10 to 25
Date First Installed: 1981

HITACHI AMERICA, INC.
OMEGA IV IDS-120
Equipment Type: Hybrid
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division

Modulation Method: PCM
Maximum Trunks Supported: 36
Maximum Stations Supported: 128
Attendant Consoles (Maximum): 2
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 128
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), Voice Store and Forward, OA, Diagnostics, Data Security
Advanced Attendant Features: Voice Synthesis, Station to Station, Facsimile
Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: February 1983
(See Vendor Profile Page V-17)

MATSU AMERICA, INC.
OMEGA III MODEL 412
Equipment Type: Key System
Transmission: Voice, Data
Switch Technology: Analog/Digital
Switching Matrix: Space Divsion
Modulation Method: PAM
Maximum Trunks Supported: 4
Maximum Stations Supported: 12
Attendant Consoles (Maximum): 1
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 4
Advanced Features: User Programmable, LAN Capability (Micro/Mini)
Advanced Attendant Features: Message Connect/Override
Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: 1979

MATSU AMERICA, INC.
OMEGA III MODEL 816
Equipment Type: Key System
Transmission: Voice, Data
Switch Technology: Analog/Digital
Switching Matrix: Space Divsion
Modulation Method: PAM
Maximum Trunks Supported: 8
Maximum Stations Supported: 16
Attendant Consoles (Maximum): 1
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 8
Advanced Features: LAN Capability (Micro/Mini)
Advanced Attendant Features: Message Connect/Override
Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: 1979

MATSU AMERICA, INC.
OMEGA IV ES-624/1648
Equipment Type: Hybrid
Transmission: Integrated Voice/Data
Switch Technology: Analog
Switching Matrix: Space Divsion
Maximum Trunks Supported: 16
Maximum Stations Supported: 48
Attendant Consoles (Maximum): 2
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 24
Advanced Features: User Programmable, Voice Store and Forward, OA, Diagnostics
Advanced Attendant Features: Voice Synthesis, Hand-Free Reply
Distribution Method: Third-party
Date First Installed: January 1984

MATSU AMERICA, INC.
OMEGA III MODEL 2460
Equipment Type: Key System
Transmission: Voice, Data
Switch Technology: Analog/Digital
Switching Matrix: Space Divsion
Modulation Method: PAM
Maximum Trunks Supported: 20
Maximum Stations Supported: 60
Attendant Consoles (Maximum): 2
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 20
Advanced Features: LAN Capability (Micro/Mini)
Advanced Attendant Features: Call-Waiting, Message Connect/Override
Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: 1979

M/A-COM, INC.
IDX 3000
Equipment Type: CBX
Transmission: Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: Bipolar
Maximum Trunks Supported: 128
Maximum Stations Supported: 3,072
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 3,072
Maximum Transmission Speeds:
Data: 19,200 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, LAN Capability (Micro/Mini/Mainframe), Security, Diagnostics, Data Security, Energy Control/Management, RJE to Host Interface, Protocol Conversion
Advanced Attendant Features: Optional, Autobaud Terminals, On-Line Reconfiguration
Price:
Purchase: $200
Distribution Method: OEM, Third-party
Number Installed to Date: 25 to 50
Date First Installed: October 1982
(See Vendor Profile Page V-18)

MELCO LABS, INC.
MAX-128P
Equipment Type: PBX
Transmission: Nonintegrated Voice/Data
Switch Technology: Analog
Switching Matrix: Space Divsion
Maximum Trunks Supported: 40
Maximum Stations Supported: 128
Attendant Consoles (Maximum): 2
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 48
Maximum Transmission Speeds:
Data: 4,800 bit/sec
Advanced Features: User Programmable, Security, Diagnostics
Price:
Purchase: $189
Distribution Method: Third-party
(See Vendor Profile Page V-19)

MELCO LABS, INC.
MAX-212
Equipment Type: PBX
Transmission: Nonintegrated Voice/Data
Switch Technology: Analog
Switching Matrix: Space Divsion
Maximum Trunks Supported: 2
Maximum Stations Supported: 12
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 3
Maximum Transmission Speeds:
Data: 4,800 bit/sec
Advanced Features: User-Programmable
Price:
Purchase: $75
Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: September 1982

MELCO LABS, INC.
MAX-424
Equipment Type: PBX
Transmission: Nonintegrated Voice/Data
Switch Technology: Analog
Switching Matrix: Space Divsion
Maximum Trunks Supported: 4
Maximum Stations Supported: 24
Attendant Consoles (Maximum): 1
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 6
Maximum Transmission Speeds:
Data: 4,800 bit/sec
Advanced Features: User Programmable, Diagnostics
Price:
Purchase: $120
Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: July 1980

MELCO LABS, INC.
MAX-624
Equipment Type: PBX
Transmission: Nonintegrated Voice/Data
Switch Technology: Analog
Switching Matrix: Space Divsion
Maximum Trunks Supported: 12
Maximum Stations Supported: 24
Attendant Consoles (Maximum): 1
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 16
Maximum Transmission Speeds:
Data: 4,800 bit/sec
Advanced Features: User Programmable, Diagnostics
Price:
Purchase: $140
Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: 1981

MICRO SYSTEMS, INC.
MICRO 800
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Switching Matrix: Time Division
Maximum Stations Supported: 1,504
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 400
Maximum Transmission Speeds:
Data: 9,600 bit/sec
Advanced Features: T-1 Carrier Interface, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), OA, Security, Diagnostics, Data Security, Protocol Conversion
Price:
Purchase: $100 to $250
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: November 1979
(See Vendor Profile Page V-19)

MITEL, INC.
SX-5
Equipment Type: PABX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Space Divsion
Modulation Method: PAM
Maximum Trunks Supported: 2
Maximum Stations Supported: 6
Matrix Architecture: Blocking
Advanced Features: User Programmable, Diagnostics, Data Security, Protocol Conversion, Ring Group
(See Vendor Profile Page V-20)

MITEL, INC.
SX-10
Equipment Type: PABX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Space Divsion
Modulation Method: PAM
Maximum Trunks Supported: 8
Maximum Stations Supported: 16
Attendant Consoles (Maximum): 1
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 8
Advanced Features: User Programmable, OA, Security, Diagnostics, Data Security, Protocol Conversion, External Call Forwarding
Price:
Purchase: $3,000
Distribution Method: Third-party
Date First Installed: 1981

MITEL, INC.
SX-20
Equipment Type: PABX
Transmission: Integrated Voice/Data
Switch Technology: Analog

Switching Equipment

Switching Matrix: Space Division
Modulation Method: PAM
Maximum Trunks Supported: 112
Maximum Stations Supported: 72
Attendant Consoles (Maximum): 2
Matrix Architecture: Blocking
Advanced Features: User Programmable, OA, Security, Diagnostics, Data Security, Protocol Conversion, External Call Forwarding
Price:
Purchase: $6,300
Distribution Method: Third-party
Date First Installed: January 1980

BYTEL, INC.
SX-100
Equipment Type: PABX
Transmission: Voice
Switch Technology: Analog
Switching Matrix: Space Division
Maximum Trunks Supported: 112
Maximum Stations Supported: 112
Attendant Consoles (Maximum): 2
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 31
Maximum Transmission Speeds:
Data: 4,800 bit/sec
Advanced Features: User Programmable, Security, Diagnostics, Data Security
Distribution Method: Third-party
Number Installed to Date: 5,000
Date First Installed: 1979

BYTEL, INC.
SX-300
Equipment Type: PABX
Transmission: Voice
Switch Technology: Analog
Switching Matrix: Space Division
Maximum Trunks Supported: 208
Maximum Stations Supported: 208
Attendant Consoles (Maximum): 2
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 31
Maximum Transmission Speeds:
Data: 4,800 bit/sec
Advanced Features: User Programmable, Security, Diagnostics, Data Security
Distribution Method: Third-party
Number Installed to Date: 8,000
Date First Installed: September 1978

CORDAN DATA SYSTEMS
ANSWERNET
Equipment Type: PCM Switch
Transmission: Nonintegrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division, Space Division
Modulation Method: PCM
Maximum Trunks Supported: 200
Maximum Stations Supported: 20
Attendant Consoles (Maximum): 30
Maximum Simultaneous Transmissions: 24
Maximum Transmission Speeds:
Voice: 1,536,000 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), LAN Capability (Micro/Mini), Voice Store and Forward, OA, Diagnostics
Advanced Attendant Features: Call Distribution
Price:
Purchase: $275
Distribution Method: End user, Third-party
Number Installed to Date: 1 to 10
Date First Installed: August 1983
(See Vendor Profile Page V-20)

MOTOROLA, INC.
EMX SERIES SWITCHING EXCHANGES
Equipment Type: Cellular Telephone Switch
Transmission: Voice, Nonintegrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Matrix Architecture: Nonblocking
Advanced Features: T-1 Carrier Interface, Voice Store and Forward, Security, Diagnostics
Distribution Method: End user
Number Installed to Date: 10 to 25
Date First Installed: September 1980
(See Vendor Profile Page V-20)

MOTOROLA, INC.
EMX SERIES (RADIO TELEPHONE)
Equipment Type: PCM
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 15,000
Maximum Stations Supported: 200,000
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 7,500
Advanced Features: User Programmable, T-1 Carrier Interface, Diagnostics, Digital Radio Telephone Extension
Distribution Method: End user
Number Installed to Date: 25 to 50

NETWORK PRODUCTS, INC.
BABYNET
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Switching Matrix: Packet
Maximum Trunks Supported: 1
Maximum Stations Supported: 56
Attendant Consoles (Maximum): 64
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 22
Maximum Transmission Speeds:
Data: 9,600 bit/sec
Advanced Features: User Programmable, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), OA, Security, Diagnostics, Data Security, RJE to Host Interface, Protocol Conversion
Price:
Purchase: $1,450
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: 1982
(See Vendor Profile Page V-21)

NORTHERN TELECOM, INC.
CSV 248
Equipment Type: PABX
Transmission: Digital
Switch Technology: Analog/Digital
Switching Matrix: Time Division
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 1
Maximum Transmission Speeds:
Data: 56,000 bit/sec
Advanced Features: X.25 Interface, OA, Security, Diagnostics, Data Security, RJE to Host Interface, Protocol Conversion
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: 1973
(See Vendor Profile Page V-22)

NORTHERN TELECOM, INC.
DMS 10
Equipment Type: C.O. Switch
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division, Space Division
Modulation Method: PCM
Maximum Trunks Supported: 1,120
Maximum Stations Supported: 10,000
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 3,360
Maximum Transmission Speeds:
Voice: 64,000 bit/sec
Data: 56,000 bit/sec
Advanced Features: T-1 Carrier Interface, X.25 Interface, Security, Diagnostics, RJE to Host Interface, Protocol Conversion
Price:
Purchase: $250 to $600
Distribution Method: End user
Number Installed to Date: 1,000
Date First Installed: September 1977

NORTHERN TELECOM, INC.
DMS 100
Equipment Type: C.O. Switch
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 60,000
Maximum Stations Supported: 100,000
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 61,440
Maximum Transmission Speeds:
Voice: 64,000 bit/sec
Data: 64,000 bit/sec
Advanced Features: T-1 Carrier Interface, X.25 Interface, Voice Store and Forward, Security, Diagnostics, RJE to Host Interface, Protocol Conversion
Price:
Purchase: $300 to $500
Distribution Method: End user
Number Installed to Date: 600
Date First Installed: December 1979

NORTHERN TELECOM, INC.
DMS 200
Equipment Type: Toll Tandem Switch
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 60,000
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 30,000
Maximum Transmission Speeds:
Voice: 64,000 bit/sec
Data: 64,000 bit/sec
Advanced Features: T-1 Carrier Interface, X.25 Interface, Security, Diagnostics, Data Security, Protocol Conversion
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: April 1979

NORTHERN TELECOM, INC.
SL-1
Equipment Type: PABX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 600
Maximum Stations Supported: 5,000
Attendant Consoles (Maximum): 15
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 1,000
Maximum Transmission Speeds:
Data: 56,000 bit/sec
Advanced Features: Voice Store and Forward, OA, Diagnostics, Data Security, RJE to Host Interface, Protocol Conversion
Price:
Purchase: $1,000 to $2,000
Distribution Method: End user, Third-party
Number Installed to Date: 6,000
Date First Installed: 1976

NORTHERN TELECOM, INC.
SL-100
Equipment Type: PABX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 5,000
Maximum Stations Supported: 30,000
Attendant Consoles (Maximum): 255
Matrix Architecture: Nonblocking
Maximum Transmission Speeds:
Data: 64,000 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), Voice Store and Forward, OA, Security, Diagnostics, Data Security, RJE to Host Interface,

Protocol Conversion
Distribution Method: End user, Third-party
Number Installed to Date: 18
Date First Installed: 1978

OKI ELECTRONICS OF AMERICA, INC.
SPECTRUM 160
Equipment Type: PABX Hybrid Key
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division, PCM
Modulation Method: PCM
Maximum Trunks Supported: 48
Maximum Stations Supported: 256
Attendant Consoles (Maximum): 2
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 256
Maximum Transmission Speeds:
Voice: 8,000 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), LAN Capability (Micro/Mini), OA, Diagnostics, Data Security, Protocol Conversion
Advanced Attendant Features: Voice Digital Station, 18 Programmable Function Line Keys, DDS, BLF Line Appearance
Distribution Method: Third-party
Number Installed to Date: 50 to 100
Date First Installed: January 1983
(See Vendor Profile Page V-22)

OKI ELECTRONICS OF AMERICA, INC.
SPECTRUM 700
Equipment Type: PABX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 176
Maximum Stations Supported: 768
Attendant Consoles (Maximum): 8
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 256
Maximum Transmission Speeds:
Voice: 8,000 bit/sec
Data: 192,000 bit/sec
Advanced Features: User Programmable, T-1 Carrier Interface, Voice Store and Forward, OA, Diagnostics
Distribution Method: Third-party
Number Installed to Date: 50 to 100
Date First Installed: January 1983

OKI ELECTRONICS OF AMERICA, INC.
SPECTRUM 4000
Equipment Type: PABX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 960
Maximum Stations Supported: 4,096
Attendant Consoles (Maximum): 24
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 960
Maximum Transmission Speeds:
Voice: 8,000 bit/sec
Data: 19,200 bit/sec
Advanced Features: User Programmable, T-1 Carrier Interface, Voice Store and Forward, OA, Diagnostics
Distribution Method: Third-party

PARADYNE CORP.
PDN 8300
Equipment Type: Packet Processor
Transmission: Data
Switch Technology: Digital
Switching Matrix: Packet
Maximum Trunks Supported: 16
Maximum Stations Supported: 10,000
Attendant Consoles (Maximum): 14
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 13,000
Maximum Transmission Speeds:
Data: 72,000 bit/sec
Advanced Features: User Programmable, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), OA, Security, Diagnostics, Data Security, RJE to Host Interface, Protocol Conversion
Prices:
Purchase: $600 to $2,000
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: January 1982
(See Vendor Profile Page V-23)

PERIPHONICS CORP.
T-COMM
Equipment Type: PBX
Transmission: Integrated Voice/Data
Switch Technology: Analog/Digital
Switching Matrix: Space Division
Modulation Method: FM
Maximum Simultaneous Transmissions: 416
Advanced Features: User Programmable, T-1 Carrier Interface, LAN Capability (Micro/Mini/Mainframe), Security, Diagnostics, Data Security, Energy Control/Management, RJE to Host Interface, Protocol Conversion
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: January 1973
(See Vendor Profile Page V-23)

PHILIPS ELECTRONICS INSTRUMENTS, INC.
FLEXPAC
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Trunks Supported: 18
Maximum Simultaneous Transmissions: 70
Advanced Features: User Programmable, X.25 Interface, Security, Diagnostics
Advanced Attendant Features: X.25 Monitoring
Advanced Station Features: Software Downline Loading, Billing
Distribution Method: End user, Third-party
Number Installed to Date: More than 100
(See Vendor Profile Page V-23)

PROLINX CORP.
PROLINX
Equipment Type: PBX
Transmission: Integrated Voice/Data
Switch Technology: Analog/Digital
Switching Matrix: Space Division
Modulation Method: PCM
Maximum Trunks Supported: 48
Maximum Stations Supported: 128
Attendant Consoles (Maximum): 8
Matrix Architecture: Blocking
Maximum Transmission Speeds:
Voice: 1,000,000 bit/sec
Data: 1,000,000 bit/sec
Advanced Features: User Programmable, T-1 Carrier Interface, LAN Capability (Micro/Mini/Mainframe), OA, Diagnostics, Data Security, Protocol Conversion
Advanced Attendant Features: Busy Lamp Field, Internal Directory
Advanced Station Features: Personal Speed Code No., Call-Waiting Voice Button, Speaker
Prices:
Purchase: $600 to $900
Distribution Method: OEM
Number Installed to Date: 25 to 50
Date First Installed: 1982
(See Vendor Profile Page V-23)

ROCKWELL INTERNATIONAL CORP.
GALAXY ACD
Equipment Type: ACD
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time/Space/Time
Modulation Method: PCM
Maximum Trunks Supported: 1,536
Maximum Stations Supported: 1,536
Attendant Consoles (Maximum): 512
Matrix Architecture: Nonblocking: 100%
Maximum Simultaneous Transmissions: 768
Maximum Transmission Speeds:
Voice: 9,600 bit/sec
Data: 9,600 bit/sec
Advanced Features: T-1 Carrier Interface, X.25 Interface, OA, Diagnostics, Protocol Conversion
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: April 1974
(See Vendor Profile Page V-25)

ROLM CORP.
CBX II (8000 CPU)
Equipment Type: CBX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 4,000
Maximum Stations Supported: 10,000
Attendant Consoles (Maximum): 6
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 11,520
Maximum Transmission Speeds:
Voice: 64,000 bit/sec
Data: 64,000 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), Voice Store and Forward, OA, Security, Diagnostics, Data Security, RJE to Host Interface, Protocol Conversion
Advanced Attendant Features: Attendant Directory, Telephone Message Management System, Mail
Distribution Method: End user, Third-party
Number Installed to Date: More than 100
Date First Installed: October 1986
(See Vendor Profile Page V-26)

ROLM CORP.
CBX II (8000 CPU)
Equipment Type: CBX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 4,000
Maximum Stations Supported: 10,000
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 11,520
Maximum Transmission Speeds:
Voice: 64,000 bit/sec
Data: 64,000 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), Voice Store and Forward, OA, Security, Diagnostics, Data Security, RJE to Host Interface, Protocol Conversion
Advanced Attendant Features: Attendant Directory, Telephone Message Management System
Distribution Method: End user, Third-party
Number Installed to Date: More than 100
Date First Installed: October 1983

ROLM CORP.
VSCBX
Equipment Type: CBX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 40
Maximum Stations Supported: 144
Attendant Consoles (Maximum): 2
Maximum Simultaneous Transmissions: 67
Maximum Transmission Speeds:
Voice: 64,000 bit/sec
Data: 64,000 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier

Interface, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), Voice Store and Forward, OA, Security, Diagnostics, Data Security, RJE to Host Interface, Protocol Conversion
Advanced Attendant Features: Attendant Directory, Telephone Message Management System
Advanced Station Features: Data Sheet Listing
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: September 1979

SIEMENS COMMUNICATIONS SYSTEMS
SATURN II
Equipment Type: PABX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 72
Maximum Stations Supported: 224
Attendant Consoles (Maximum): 4
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 224
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), OA, Diagnostics, Message Waiting Privacy
Advanced Station Features: Hold, Transfer, Conference Call, Queuing, Call Pick-up, Speed Calling, Station Hunting
Distribution Method: OEM, Third-party
Number Installed to Date: More than 100
Date First Installed: September 1982
(See Vendor Profile Page V-68)

SIEMENS COMMUNICATIONS SYSTEMS
SATURN III
Equipment Type: PABX
Transmission: Integrated Voice/Data
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 224
Maximum Stations Supported: 864
Attendant Consoles (Maximum): 8
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 864
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), OA, Diagnostics, Message Waiting Privacy
Advanced Station Features: Hold, Transfer, Conference Call, Queuing, Call Pick-up, Speed Calling, Station Hunting
Distribution Method: OEM, Third-party
Number Installed to Date: More than 100
Date First Installed: 1988

SIEMENS COMMUNICATIONS SYSTEMS
SD-192
Equipment Type: PABX
Transmission: Voice
Switch Technology: Analog
Switching Matrix: Space Division
Modulation Method: Analog AD
Maximum Trunks Supported: 48
Maximum Stations Supported: 192
Attendant Consoles (Maximum): 2
Matrix Architecture: Full Availability
Maximum Simultaneous Transmissions: 48
Maximum Transmission Speeds: Data: 4,800 bit/sec
Advanced Features: User Programmable, Diagnostics, Data Security
Number Installed to Date: 8,000
Date First Installed: September 1978

SIEMENS COMMUNICATIONS SYSTEMS
SD-192EX
Equipment Type: PABX
Transmission: Voice
Switch Technology: Analog
Switching Matrix: Space Division
Maximum Trunks Supported: 48
Maximum Stations Supported: 192
Attendant Consoles (Maximum): 2
Matrix Architecture: Full Availability
Maximum Simultaneous Transmissions: 48
Maximum Transmission Speeds: Data: 4,800 bit/sec
Advanced Features: User Programmable, Diagnostics, Data Security
Advanced Attendant Features: Call Parking, Trunk-to-Trunk Station Callback
Distribution Method: Third-party
Number Installed to Date: 8,000
Date First Installed: June 1980

SOLID STATE SYSTEMS, INC.
CEO
Equipment Type: CBX
Transmission: Nonintegrated Voice/Data
Switch Technology: Analog
Switching Matrix: Space Division
Maximum Trunks Supported: 384
Maximum Stations Supported: 1,792
Attendant Consoles (Maximum): 16
Matrix Architecture: Nonblocking, 90%
Maximum Simultaneous Transmissions: 512
Maximum Transmission Speeds: Voice: 9,600 bit/sec Data: 9,600 bit/sec
Advanced Features: User Programmable, T-1 Carrier Interface, LAN Capability (Micro/Mini/Mainframe), OA, Security, Diagnostics, Data Security, Energy Control/Management, RJE to Host Interface, Protocol Conversion
Price: Purchase: $300 to $750
Distribution Method: Third-party
Number Installed to Date: 25 to 99
Date First Installed: June 1981
(See Vendor Profile Page V-28)

SYSCOM, INC.
STORE & FORWARD MESSAGE SWITCH
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Trunks Supported: 32
Maximum Simultaneous Transmissions: 32
Maximum Transmission Speeds: Data: 9,600 bit/sec
Advanced Features: User Programmable, LAN Capability (Mainframe), Security, Diagnostics, Data Security
Average Monthly Maintenance: $1
Distribution Method: End user
Number Installed to Date: 25 to 99
Date First Installed: 1980
(See Vendor Profile Page V-29)

T-BAR, INC.
3000/3000 SERIES COMPUTER SWITCH MATRIX
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Analog
Switching Matrix: Space Division
Attendant Consoles (Maximum): 7
Matrix Architecture: Nonblocking, 100%
Maximum Transmission Speeds: Data: 8,000,000 bit/sec
Advanced Features: User Programmable, Security, Diagnostics
Advanced Attendant Features: Real-Time Configuration, Display User Data Base Switching
Advanced Attendant Features: Channel Interface, Diagnostic Module, Connectivity, Insensitivity to Power Loss
Price: Purchase: $900 to $1,100
Distribution Method: End user
Number Installed to Date: 1,700
Date First Installed: February 1975
(See Vendor Profile Page V-29)

T-BAR, INC.
5000 SERIES
Equipment Type: Data Switch
Transmission: Voice, Data, Nonintegrated Voice/Data, Integrated Voice/Data
Switch Technology: Analog
Switching Matrix: Space Division
Maximum Trunks Supported: 96
Attendant Consoles (Maximum): 1
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 96
Maximum Transmission Speeds: Voice: 64,000 bit/sec Data: 2,040,000 bit/sec
Advanced Features: T-1 Carrier Interface, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), Security, Diagnostics
Advanced Attendant Features: Individual Line and Bulk Line Switch
Advanced Station Features: Speed and Protocols, Transparency, Insensitivity to Power Loss
Price: Purchase: $100 to $150
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 100,000
Date First Installed: 1972

T-BAR, INC.
5600 SERIES PATCH
Equipment Type: Analog Switch
Transmission: Voice, Data, Nonintegrated Voice/Data, Integrated Voice/Data
Switch Technology: Analog
Switching Matrix: Space Division
Maximum Trunks Supported: 96
Attendant Consoles (Maximum): 1
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 96
Maximum Transmission Speeds: Voice: 64,000 bit/sec Data: 2,040,000 bit/sec
Advanced Features: T-1 Carrier Interface, X.25 Interface, Diagnostics
Advanced Attendant Features: Circuit Reconfiguration, Modem Subset and Sparing, Monitor and Break
Advanced Station Features: Line Activity Display, Connectivity, Insensitivity to Power Loss
Price: Purchase: $85 to $150
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 100,000

T-BAR, INC.
MASS
Equipment Type: Data Switch
Transmission: Voice, Data, Nonintegrated Voice/Data, Integrated Voice/Data
Switch Technology: Analog
Switching Matrix: Direct
Maximum Trunks Supported: 8,192
Attendant Consoles (Maximum): 8
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 8,192
Maximum Transmission Speeds: Data: 2,040,000 bit/sec
Advanced Features: User Programmable, T-1 Carrier Interface, X.25 Interface, Security, Diagnostics
Advanced Attendant Features: Central Distribution, Control Preprogrammed Configuration, Automatic Alarms
Advanced Station Features: Transparency to Protocol and Data Rate
Price: Purchase: $350 to $600
Distribution Method: End user, OEM
Number Installed to Date: More than 100
Date First Installed: March 1980

T-BAR, INC.
VIRTUAL SWITCH MATRIX
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Switching Matrix: Space Division
Maximum Trunks Supported: 4,096
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 4,096

Maximum Transmission Speeds:
Data: 230,000 bit/sec
Advanced Features: User Programmable, Security, Diagnostics, RJE to Host Interface, Protocol Transparency
Advanced Attendant Features: Central Distribution, Control Preprogrammed Configuration, Automatic Alarms, Network Management, Data Base
Price:
Purchase: $585
Distribution Method: End user, OEM
Number Installed to Date: More than 100
Date First Installed: January 1982

TECHTRAN INDUSTRIES, INC.
SC 96 96T
Equipment Type: PBX
Transmission: Integrated Voice/Data
Switch Technology: Analog
Matrix Architecture: Nonblocking, 100%
Maximum Transmission Speeds:
Data: 5,000,000 bit/sec
Advanced Features: User Programmable
Distribution Method: End user
Date First Installed: September 1982
(See Vendor Profile Page V-29)

TEKNEKRON INFO SWITCH
INFO SWITCH ACD
Equipment Type: ACD
Transmission: Nonintegrated Voice/Data
Switch Technology: Analog
Switching Matrix: Space Division
Maximum Trunks Supported: 500
Maximum Stations Supported: 700
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 500
Maximum Transmission Speeds:
Voice: 9,600 bit/sec
Advanced Features: User Programmable, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), OA, Diagnostics
Distribution Method: End user
Number Installed to Date: More than 100
(See Vendor Profile Page V-30)

TELECOM TECHNOLOGIES
ECD 1000
Equipment Type: ACD
Transmission: Voice
Switch Technology: Analog
Switching Matrix: Space Division
Maximum Trunks Supported: 20
Maximum Stations Supported: 20
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 20
Advanced Features: User Programmable, RJE to Host Interface, 8 Agent Groups
Distribution Method: Third-party
Number Installed to Date: 10 to 25
Date First Installed: September 1983
(See Vendor Profile Page V-30)

TELECOM TECHNOLOGIES
ECD 2000
Equipment Type: ACD
Transmission: Voice
Switch Technology: Analog
Switching Matrix: Space Division
Maximum Trunks Supported: 48
Maximum Stations Supported: 48
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 48
Advanced Features: User Programmable, Diagnostics, RJE to Host Interface
Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: November 1982

TELE/RESOURCES
T R 180 SERIES
Equipment Type: PBX
Transmission: Voice, Data
Switch Technology: Analog
Switching Matrix: Time Division
Modulation Method: PAM
Maximum Trunks Supported: 64
Maximum Stations Supported: 256
Attendant Consoles (Maximum): 2
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 64
Maximum Transmission Speeds:
Voice: 4,800 bit/sec
Data: 4,800 bit/sec
Advanced Features: User Programmable, Diagnostics, Data Security, Four-Wire Transmission
Price:
Purchase: $390
Distribution Method: Third-party
Number Installed to Date: More than 100
Date First Installed: 1979
(See Vendor Profile Page V-30)

TELLABS, INC.
331 XPLEXER
Equipment Type: Packet Processor
Transmission: Data
Switch Technology: Digital
Switching Matrix: STDM
Maximum Trunks Supported: 18
Maximum Stations Supported: 32
Maximum Transmission Speeds:
Data: 76,800 bit/sec
Advanced Features: Security, Diagnostics, Data Security, Speed and Parity Conversion
Advanced Attendant Features: Configuration Status, TICS Messages
Advanced Station Features: Autobaud, Echoplex, Host Select Message, Broadcast, Port Contention, Queuing Option
Price:
Purchase: $2,900 to $12,900
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 25 to 50
Date First Installed: 1983
(See Vendor Profile Page V-30)

TERMINAL DATA CORP.
DATA SWITCH
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Trunks Supported: 1
Maximum Stations Supported: 4
Attendant Consoles (Maximum): 1
Matrix Architecture: Blocking
Maximum Transmission Speeds:
Data: 19,200 bit/sec
Price:
Purchase: $129 to $300
Average Monthly Maintenance: $10
Distribution Method: End user
Number Installed to Date: More than 100
Date First Installed: May 1982
(See Vendor Profile Page V-30)

TIE COMMUNICATIONS, INC.
MERCURY PBX
Equipment Type: PABX
Transmission: Voice
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 480
Maximum Stations Supported: 1,920
Attendant Consoles (Maximum): 8
Matrix Architecture: Blocking
Maximum Simultaneous Transmissions: 255
Advanced Features: Diagnostics, Data Security
Price:
Purchase: $300 to $400
Distribution Method: Third-party
Number Installed to Date: 50 to 100
(See Vendor Profile Page V-31)

TOSHIBA AMERICA, INC.
PERCEPTION
Equipment Type: PABX
Transmission: Voice
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 32
Maximum Stations Supported: 120
Attendant Consoles (Maximum): 2
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 120
Maximum Transmission Speeds:
Voice: 20,000 bit/sec
Advanced Features: User Programmable, LAN Capability (Micro/Mini/Mainframe), Diagnostics
Distribution Method: Third-party
Date First Installed: March 1983
(See Vendor Profile Page V-31)

UNITED TECHNOLOGIES/LEXAR CORP.
UTX 1681
Equipment Type: PBX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: ADM
Maximum Trunks Supported: 3,069
Maximum Stations Supported: 3,000
Attendant Consoles (Maximum): 16
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 512
Maximum Transmission Speeds:
Voice: 56,000 bit/sec
Data: 64,000 bit/sec
Advanced Features: Digitone at Handset (End-to-End Digital), LAN Capability (Micro/Mini/Mainframe), Voice Store and Forward, OA, Diagnostics, Energy Control/Management, Protocol Conversion
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: January 1981
(See Vendor Profile Page V-32)

UNITED TECHNOLOGIES/LEXAR CORP.
UTX 1200
Equipment Type: PBX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 1,200
Maximum Stations Supported: 1,344
Attendant Consoles (Maximum): 12
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 672
Maximum Transmission Speeds:
Voice: 64,000 bit/sec
Data: 9,600 bit/sec
Advanced Features: T-1 Carrier Interface, X.25 Interface, Security, Diagnostics, Data Security
Price:
Purchase: $650
Distribution Method: End user
Number Installed to Date: More than 100

UNITED TECHNOLOGIES/LEXAR CORP.
UTX 5000
Equipment Type: PBX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Trunks Supported: 5,376
Maximum Stations Supported: 5,376
Attendant Consoles (Maximum): 48
Matrix Architecture: Nonblocking
Maximum Simultaneous Transmissions: 2,688
Maximum Transmission Speeds:
Voice: 64,000 bit/sec
Data: 9,600 bit/sec
Advanced Features: T-1 Carrier Interface, X.25 Interface, Security Access Control, Diagnostics, Data Security
Price:
Purchase: $650
Distribution Method: End user
Number Installed to Date: More than 100

WESTERN DATACOM
UNISWITCH 1020
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital

Switching Matrix: Physical Switch
Maximum Trunks Supported: 8
Maximum Stations Supported: 8
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 4
Maximum Transmission Speeds:
Data: 19,200 bit/sec
Advanced Features: User Programmable, LAN Capability (Micro/Mini), OA, Security, Diagnostics, Data Security, RJE to Host Interface
Price:
Purchase: $575
Average Monthly Maintenance: $6
Distribution Method: Third-party
Number Installed to Date: 50 to 100
Date First Installed: September 1982
(See Vendor Profile Page V-33)

WESTERN TELEMATIC, INC.
ABS
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Stations Supported: 2
Price:
Purchase: $89
Distribution Method: End user, OEM, Third-party
Number Installed to Date: More than 100
Date First Installed: 1982
(See Vendor Profile Page V-33)

WESTERN TELEMATIC, INC.
CAS 41
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Stations Supported: 4
Distribution Method: End user, OEM, Third-party
Number Installed to Date: More than 100
Date First Installed: 1982

WESTERN TELEMATIC, INC.
CAS 164
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Stations Supported: 64
Price:
Purchase: $795
Distribution Method: End user, OEM, Third-party
Number Installed to Date: More than 100
Date First Installed: 1982

WESTERN TELEMATIC, INC.
PSU 41
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Stations Supported: 4
Price:
Purchase: $395
Distribution Method: End user, OEM, Third-party
Number Installed to Date: More than 100
Date First Installed: 1982

WESTERN TELEMATIC, INC.
TM 41
Equipment Type: Data Switch
Transmission: Data
Switch Technology: Digital
Maximum Stations Supported: 4
Price:
Purchase: $295
Distribution Method: End user, OEM, Third-party
Number Installed to Date: More than 100

XYPLEX, INC.
XYPLEX SYSTEM
Equipment Type: Packet Processor
Transmission: Data
Switch Technology: Digital
Switching Matrix: STDM
Modulation Method: FM
Maximum Stations Supported: 2,000
Matrix Architecture: Nonblocking, 100%
Maximum Simultaneous Transmissions: 2,000
Maximum Transmission Speeds:
Data: 9,600 bit/sec
Advanced Features: User Programmable, LAN Capability (Micro/Mini/Mainframe), OA, Security, Diagnostics, Protocol Conversion
Price:
Purchase: $950
Distribution Method: OEM, Third-party
Date First Installed: October 1982
(See Vendor Profile Page V-33)

ZTEL, INC.
PNX
Equipment Type: PABX
Transmission: Integrated Voice/Data
Switch Technology: Digital
Switching Matrix: Time Division
Modulation Method: PCM
Maximum Stations Supported: 30,000
Matrix Architecture: Nonblocking
Maximum Transmission Speeds:
Voice: 64,000 bit/sec
Data: 56,000 bit/sec
Advanced Features: User Programmable, Digitizes at Handset (End-to-End Digital), T-1 Carrier Interface, X.25 Interface, LAN Capability (Micro/Mini/Mainframe), Voice Store and Forward, OA, Security, Diagnostics, Data Security, RJE to Host Interface, Protocol Conversion, IEEE 802.5 Interface
Price:
Purchase: $800 to $1,000
Distribution Method: Third-party
Date First Installed: June 1984
(See Vendor Profile Page V-34)

Network Designers—Introducing the simplicity of a Remote Procedure Call ...ACCES XNS.

ACCES XNS is ACC's networking protocol package ready for use on popular minicomputers and work stations. It links applications and system level programs to data files and processing services in your distributed computer environment...through simple Remote Procedure Calls.

The ACCES XNS Protocol Package adheres to Xerox protocol standards: Courier, SPP, and IDP—making it compatible with other standard products, present and future.

Whether you are responsible for designing a communication environment around your company's product line, or interconnecting your company's computer resources, ACCES XNS meets your network design requirements.

To learn more about ACCES XNS, Courier, and Remote Procedure Calls, phone ACC at (805) 963-9431 and we'll gladly send you the ACCES XNS Brochure.

We Make Advanced Computer Communication.

Index to Local-Area Networks by Topology

A local-area network is a communications network that permits the interconnection of data communications devices within a limited distance. The local network shares a common medium, has high-speed broadcasting ability and is generally shared by all users. In addition, the network must support distributed processing, file transfer, data base management and access to long-haul networks. The index has been sorted by network topology — bus (linear or tree), star or ring. The final section of the index includes all networks which utilize other topologies or have unspecified topologies. Within each section, products are listed alphabetically by vendor and contain information on transmission technique, price and the page on which the complete listing can be found.

Bus (Linear) Networks

VENDOR	MODEL	TECHNIQUE	PRICE	PAGE
Alspa Computer, Inc.	ALSPA NET	Baseband	$1,500	C-4
AST Research, Inc.	AST PCNET	Baseband	$695	C-4
Bridgar	8500 LOCAL CONTROLLER (ELAN SYSTEM)	Broadband	$18,495 to $29,495	C-5
Bumblebee Energy Systems	BUMBLEBEE NETWORK	Baseband	$100 to $150	C-5
Cadax Corp.	4000 SERIES LAN	Baseband	N/A	C-5
Commtex, Inc.	MDS 8070 NETWORKING OPTION	Baseband	N/A	C-5
Complex Systems,Inc.	X LAN	Baseband	$282	C-6
Compsocorp	OMEGANET	Baseband	N/A	C-6
Computer Automation, Inc.	SYFANET	Broadband	N/A	C-6
Computrol	MEGA LINK	Baseband	$100 to $3,000	C-6
Convergent Technologies, Inc.	CT-CLUSTER	Baseband	N/A	C-6
Corvus Systems, Inc.	OMNINET	Baseband	$495 to $1,500	C-6
CYB Systems, Inc.	UNITE	Baseband	N/A	C-6
Data General Corp.	XODIAC/NETWORK BUS SYSTEM/4480	Baseband	N/A	C-6
DCA/TAC	DCA INA/NETWORK	Broadband/Baseband	N/A	C-7
Delta Systems, Inc.	WHITE BOX I	Broadband	$1,500	C-7
The Destek Group	DESNET	Fiber Optics	$600 to $700	C-7
Digital Equipment Corp.	DECNET	Broadband/Baseband	N/A	C-7
Gateway Communications, Inc.	G/NET	Baseband	$595	C-7
Harris Corp.	HARRIS 9070 (BASEBAND)	Baseband	$1,250	C-8
	HARRIS 9070 (BROADBAND)	Broadband	$1,250	C-8
IMI Associates, Inc.	IDEANET/NPR-001 SPR-1N	Baseband	N/A	C-8
Interlan, Inc.	INTERLAN NET/PLUS	Baseband	$400	C-8
Inter-Link	STATIONMATE	Baseband	$1,450	C-8
Interoll Systems, Inc.	GE NET	Broadband	$800 to $1,000	C-9
JC Systems	JCS A-10	Broadband	$495	C-9
Metapath, Inc.	ROBIN DESKTOP DATA SWITCH	Baseband	$400	C-9
NBI, Inc.	NBI NET	Baseband	$900	C-9
NCR Corp.	NCR DECISION NET	Baseband	$500	C-9
Network Systems Corp.	HYPER CHANNEL	Baseband	$40,000	C-10
Novell Inc.	NETWARE-X	Baseband	$995	C-10
Omnidata	OMNINET	Baseband	$500 to $1,000	C-10
Programdrive, Inc.	TIENET	Baseband	$600 to $900	C-10
Raytheon Co.	RAYNET IV	Broadband	N/A	C-11
Standard Data Corp.	STANDARD NET	Baseband	$995	C-11
Toomer, Inc.	ELAN	Baseband	$1,495 to $3,395	C-12
Ungermann-Bass, Inc.	NET/ONE BASEBAND NETWORK INTERFACE UNIT	Baseband	N/A	C-12
Xerox Corp.	ETHERNET	Baseband	$600 to $20,000	C-12
Xyplex Inc.	XYPLEX SYSTEM	Broadband	$300	C-12

Bus (Tree) Networks

VENDOR	MODEL	TECHNIQUE	PRICE	PAGE

ABLE COMPUTER
EASYWAY/E ETHERNET CONTROLLER
Topology: Bus (tree)
Network Type: Baseband
Maximum Physical Connections: 1,024
Maximum Distance: 9,240 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: IEEE 802.3 Ethernet
Network Compatibility: DEC DNA/Decnet, IEEE 802.3, NBS4 Intel
Advanced Functions: Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $7,200
Distribution Method: End user
Date First Installed: September 1983
(See Vendor Profile Page V-1)

AETNA TELECOMM LABS
ATL NET
Topology: Star
Network Type: Baseband
Maximum Physical Connections: 19
Transmission Media: Terrestrial Fiber Optics
Access Method: Round Robin
Protocols Supported: Asynchronous, Synchronous, X.25, Bisynchronous, T-1, SDLC, HDLC, Ascii
Network Compatibility: DEC DNA/Decnet, IBM BSC, Telenet, DDS, Tymnet
Interfaces Supported: RS 232C, RS 422/423, RS 449, CCITT
(See Vendor Profile Page V-1)

ALSPA COMPUTER, INC.
ALSPA NET
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 255
Maximum Distance: 2,000 Feet
Transmission Media: Terrestrial Twisted Wire
Access Method: CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, SDLC, HDLC, Ascii
Network Compatibility: Telenet
Interfaces Supported: RS 232C, RS 422/423
Advanced Functions: Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $1,560
Distribution Method: Third-party
Number Installed to Date: Over 100
Date First Installed: April 1983
(See Vendor Profile Page V-1)

AMERICAN LASER SYSTEMS, INC.
720 & ROVA-SR INFRARED OPTICAL DATA/VOICE SYSTEM
Topology: Point to Point
Network Type: Digital
Maximum Distance: 10 Miles
Transmission Media: Free Space Infrared Light, Laser
Protocols Supported: Asynchronous, Synchronous, Bisynchronous
Interfaces Supported: RS 232C, TTL Input
Price:
Lease: $1,300
Purchase: $7,000 to $13,000
Distribution Method: End user
Number Installed to Date: 231
Date First Installed: 1974
(See Vendor Profile Page V-2)

AMERICAN LASER SYSTEMS, INC.
MODEL 761 VIDEO TRANSMISSION SYSTEM
Network Type: Baseband
Maximum Physical Connections: 4
Transmission Media: Free Space Infrared Light
Price:
Lease: $775
Purchase: $7,750
Average Monthly Maintenance: $60
Distribution Method: End user
Number Installed to Date: 210
Date First Installed: 1975

AMERICAN LASER SYSTEMS, INC.
MODEL 920 WIDEBAND DIGITAL INFRARED TRANSMISSION SYSTEM
Topology: Point to Point
Network Type: Baseband
Maximum Physical Connections: 1
Maximum Distance: 7,500 Feet
Transmission Media: Free Space Infrared Light, Laser
Protocols Supported: T-1
Interfaces Supported: TI OR TTL
Advanced Functions: Security/Encryption
Price:
Lease: $700
Purchase: $14,000
Distribution Method: End user
Number Installed to Date: 1 to 10
Date First Installed: 1983

AMERICAN PHOTONICS, INC.
64 NET
Topology: Star
Network Type: Fiber Optic
Maximum Physical Connections: 1
Maximum Distance: 1,000 Feet
Transmission Media: Terrestrial Fiber Optics, Free Space Laser
Protocols Supported: Asynchronous
Interfaces Supported: RS-232C, IEEE 488
Distribution Method: End user
Number Installed to Date: 1 to 10
Date First Installed: November 1983
(See Vendor Profile Page V-2)

APPLITEK CORP.
UNILAN FIBER OPTIC
Topology: Bus (tree)
Network Type: Fiber Optic
Maximum Physical Connections: 1,000
Maximum Distance: 30 Miles
Transmission Media: Terrestrial Coaxial Cable, Fiber Optics
Access Method: Distributed CSMA/CD (Contention Type), Token Passing (Polling Types)
Protocols Supported: Asynchronous, Synchronous, X.25, Bisynchronous, HDLC, Ascii
Interfaces Supported: RS-232C, IEEE 488, RS-449, V.35
Advanced Functions: Security/Encryption
Distribution Method: End user
(See Vendor Profile Page V-2)

APPLITEK CORP.
UNILAN I
Topology: Bus (tree)
Network Type: Baseband
Maximum Physical Connections: 1,000
Maximum Distance: 2 Miles
Transmission Media: Terrestrial Coaxial Cable, Fiber Optics
Access Method: Distributed CSMA/CD (Contention Type), Token Passing (Polling Types)
Protocols Supported: Asynchronous, Synchronous, X.25, Bisynchronous, HDLC, Ascii
Interfaces Supported: RS-232C, IEEE 488, RS-449, V.3.5
Advanced Functions: Security/Encryption, Diagnostics
Distribution Method: End user

APPLITEK CORP.
UNILAN II
Topology: Bus (tree)
Network Type: Broadband
Maximum Physical Connections: 40,000
Maximum Distance: 30 Miles
Transmission Media: Terrestrial Coaxial Cable, Fiber Optics
Access Method: Distributed CSMA/CD (Contention Type), Token Passing (Polling Types)
Protocols Supported: Asynchronous, Synchronous, X.25, Bisynchronous, HDLC, Ascii
Interfaces Supported: RS-232C, IEEE 488, RS-449, V.35
Distribution Method: End user

ARTEL COMMUNICATIONS CORP.
CV100 CAD/CAM SYSTEM
Topology: End to End
Network Type: Baseband
Maximum Distance: 2 Miles
Protocols Supported: Asynchronous, Synchronous
Network Compatibility: Computervision
Distribution Method: End user
(See Vendor Profile Page V-3)

ARTEL COMMUNICATIONS CORP.
LS100 INTERFACE MODEM
Topology: End to End
Network Type: Baseband
Maximum Distance: 16,400 Feet
Transmission Media: Terrestrial Fiber Optics
Network Compatibility: IBM 3299 Compatible
Distribution Method: End user

ARTEL COMMUNICATIONS CORP.
T2010/K2010 HIGH SPEED DATA TRANSMISSION
Topology: End to End
Network Type: Baseband
Maximum Distance: 2 Miles
Transmission Media: Terrestrial Fiber Optics
Protocols Supported: Asynchronous
Interfaces Supported: RS-232C, TTL/ECL
Distribution Method: End user

ARTEL COMMUNICATIONS CORP.
TR2016/TR2017 RGB VIDEO & DATA MODULES
Topology: End to End
Network Type: Baseband
Maximum Distance: 10,000 Feet
Protocols Supported: Asynchronous
Interfaces Supported: RS-232C, TTL
Distribution Method: End user

AST RESEARCH, INC.
AST PCNET
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 256
Maximum Distance: 7,000 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Bisynchronous
Network Compatibility: IBM BSC
Advanced Functions: Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $695
Date First Installed: May 1983
(See Vendor Profile Page V-3)

AXIOOMS, INC.
6911A PROGRAMMABLE CHANNEL INTERFACE
Network Type: IBM to LAN
(See Vendor Profile Page V-3)

BACKUS DATA SYSTEMS, INC.
SIX PORT SWITCHING SYSTEMS
Protocols Supported: Asynchronous, Synchronous, Ascii
Interfaces Supported: RS-232C
Advanced Functions: Security/Encryption, Usage/Traffic Reporting
Distribution Method: End user
Number Installed to Date: 50 to 100
(See Vendor Profile Page V-3)

BBN COMMUNICATIONS CORP.
BBNCC X.25 PACKET SWITCHING NETWORK
Topology: Bus (tree), Star, Ring, Arbitrary Mesh
Network Type: Packet-Switched
Maximum Physical Connections: 255
Transmission Media: Terrestrial Twisted Wire, Free Space Microwaves and Satellite
Access Method: X.25, X.28
Protocols Supported: Asynchronous, Synchronous, X.25, Bisynchronous, SDLC, HDLC, Ascii,

X.3, X.28, X.29
Network Compatibility: IBM SNA, DEC DNA/Decnet, IBM BSC, Honeywell DSE/DSA, Burroughs BNA, Primenet, HP DSN, Telenet, DDS, Tymnet, X.25 Packet SVS
Interfaces Supported: RS-232C, RS-422/423, MIL 188C, RS-449, CCITT, V.28, V.24
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Accounting and Billing, Downline Loading
Average Monthly Maintenance: $1
Distribution Method: End user, OEM
Number Installed to Date: 10 to 25
Date First Installed: January 1988
(See Vendor Profile Page V-4)

BETACOM CORP.
PROF COMMUNICATIONS MANAGER 2000
Topology: Star
Network Type: Baseband
Transmission Media: Free Space Laser, PBX to Satellite
Access Method: Centralized PBX (Switching Type)
Protocols Supported: Asynchronous, Synchronous, Bisynchronous, SDLC, Ascii, Bausot, TWX, Telex
Network Compatibility: IBM SNA, IBM BSC, Telenet, Tymnet, TWX
Interfaces Supported: RS-232C
Advanced Functions: Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $1,300 to $2,500
Average Monthly Maintenance: $13
Distribution Method: End user
Number Installed to Date: Over 100
(See Vendor Profile Page V-4)

BRANDEN CORP.
6800 LOCAL CONTROLLER (BLAN SYSTEM)
Topology: Bus (Linear)
Network Type: Broadband
Maximum Physical Connections: 120
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Bisynchronous, SDLC, SNA SDLC
Network Compatibility: IBM SNA, IBM BSC
Interfaces Supported: RS-232C
Advanced Functions: Security/Encryption, Diagnostics, Screen Format Selectable
Price:
Lease: $525 to $725
Purchase: $19,495 to $29,495
Average Monthly Maintenance: $85
Distribution Method: End user
Number Installed to Date: 10 to 25
Date First Installed: 1983
(See Vendor Profile Page V-4)

BURROUGHS ENERGY SYSTEMS
BURRLESS NETWORK
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 255
Maximum Distance: 4 Miles
Transmission Media: Terrestrial Twisted Wire
Access Method: Centralized Master/Slave Polling
Protocols Supported: Asynchronous
Interfaces Supported: RS-232C
Advanced Functions: Diagnostics
Price:
Purchase: $100 to $150
Average Monthly Maintenance: $10
Distribution Method: End user
Number Installed to Date: 10 to 25
Date First Installed: June 1981
(See Vendor Profile Page V-4)

CODENOLL TECHNOLOGY CORP.
CODENET
Topology: Star
Network Type: Baseband
Maximum Physical Connections: 1,024
Maximum Distance: 4 Miles
Transmission Media: Fiber Optics
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Transparent
Network Compatibility: IBM SNA, DEC DNA/Decnet, Primenet, Omninet, Tymnet
Interfaces Supported: IEEE 488, Ethernet
Advanced Functions: Security/Encryption, Performance Analysis
Price:
Purchase: $150 to $600
Distribution Method: End user
Number Installed to Date: 25 to 50
Date First Installed: June 1981
(See Vendor Profile Page V-5)

COMBEX CORP.
4000 SERIES LAN
Topology: Bus (Linear)
Network Type: Baseband
Transmission Media: Terrestrial Coaxial Cable , Fiber Optics
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Synchronous, X.25, Bisynchronous, HDLC, Ascii
Network Compatibility: IBM SNA, IBM BSC, Honeywell DSE/DSA, Burroughs BNA, Sperry DCA, XNS (Xerox), HP DSN
Interfaces Supported: RS-232C, IEEE 488, RS-422/423, RS-449
Advanced Functions: Diagnostics, Usage/Traffic Reporting
Distribution Method: End user
Date First Installed: January 1984
(See Vendor Profile Page V-5)

COMMTEX, INC.
MDS 9070 NETWORKING OPTION
Topology: Bus (Linear and Tree), Star
Network Type: Baseband
Maximum Physical Connections: 255
Maximum Distance: 20,000 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Asynchronous, Bisynchronous, SDLC, Ascii, 3270
Network Compatibility: IBM SNA, IBM BSC
Interfaces Supported: RS-232C, RS-422/423, MIL 188C, 20 mA Current Loop
Advanced Functions: Security/Encryption, Diagnostics
Distribution Method: Third-party
(See Vendor Profile Page V-5)

COMPLEX SYSTEMS, INC.
X LAN
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 64
Maximum Distance: 10,000 Feet
Transmission Media: Terrestrial Twisted Wire
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Ascii
Interfaces Supported: RS-232C
Advanced Functions: Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $292
Distribution Method: Third-party
Date First Installed: November 1983
(See Vendor Profile Page V-5)

COMPUCORP
OMEGANET
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 33
Maximum Distance: 5,000 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: CSMA/CA
Protocols Supported: Asynchronous
Network Compatibility: Proprietary
Interfaces Supported: RS-232C, RS-422/423
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting
Distribution Method: Third-party
Number Installed to Date: Over 100
Date First Installed: February 1982
(See Vendor Profile Page V-5)

COMPUTER AUTOMATION, INC.
SYFANET
Topology: Bus (Linear)
Network Type: Broadband
Maximum Physical Connections: 64
Maximum Distance: 5,000 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: Broadcast
Protocols Supported: X.25, Bisynchronous, SNA
Network Compatibility: IBM SNA, IBM BSC
Interfaces Supported: RS-232C
Advanced Functions: Security/Encryption, Diagnostics, Usage/Traffic Reporting
Distribution Method: End user, Third-party
Number Installed to Date: 1 to 10
Date First Installed: 1983
(See Vendor Profile Page V-6)

COMPUTER COMMUNICATIONS SPECIALISTS, INC.
TASK 1000
Topology: Star
Network Type: Baseband
Maximum Physical Connections: 64
Maximum Distance: 8,000 Feet
Transmission Media: Terrestrial Twisted Wire
Access Method: Interrupt
Protocols Supported: Ansi
Interfaces Supported: RS-232C, Parallel
Advanced Functions: Diagnostics, Performance Analysis, Usage/Traffic Reporting
Distribution Method: End user
Number Installed to Date: 1 to 10
Date First Installed: 1982
(See Vendor Profile Page V-6)

COMPUTROL
MEGA LINK
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 100
Maximum Distance: 50,000 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: Centralized Master/Slave Polling, Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, SDLC, HDLC
Network Compatibility: DEC DNA/Decnet
Interfaces Supported: RS-232C, IEEE 488, High-Speed Bus
Advanced Functions: Diagnostics
Price:
Purchase: $100 to $3,000
Distribution Method: End user, OEM, Third-party
Number Installed to Date: Over 100
Date First Installed: May 1980
(See Vendor Profile Page V-7)

CONCORD DATA SYSTEMS INC.
TOKENNET
Topology: Bus (tree)
Network Type: Broadband
Maximum Physical Connections: 2,000
Maximum Distance: 25 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Asynchronous, Hasp, Synchronous, X.25, Bisynchronous, T-1, SDLC, HDLC, Ascii
Network Compatibility: IEEE 802.4
Interfaces Supported: RS-232C, IEEE 488, RS-449, V.24
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $699 to $1,000

Distribution Method: End user, OEM
Number Installed to Date: 1 to 10
Date First Installed: October 1983
(See Vendor Profile Page V-7)

CONTEL INFORMATION SYSTEMS
CONTEL NET
Topology: Bus (tree)
Network Type: Both
Maximum Physical Connections: 5,000
Maximum Distance: 5 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, X.25, Bisynchronous, 3270
Interfaces Supported: RS-232C
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $300 to $500
Distribution Method: End user
Number Installed to Date: 25 to 50
Date First Installed: 1981
(See Vendor Profile Page V-7)

CONVERGENT TECHNOLOGIES, INC.
CT-CLUSTER
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 255
Maximum Distance: 2,500 Feet
Transmission Media: Terrestrial Twisted Wire
Access Method: Centralized Master/Slave Polling
Protocols Supported: Synchronous, X.25, Bisynchronous, SDLC, HDLC, Ascii, SNA
Network Compatibility: IBM SNA, IBM BSC, Telenet, Tymnet
Interfaces Supported: RS-232C
Distribution Method: OEM
Number Installed to Date: Over 100
Date First Installed: November 1980
(See Vendor Profile Page V-8).

CORVUS SYSTEMS, INC.
OMNINET
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 64
Maximum Distance: 4,000 Feet
Transmission Media: Terrestrial Twisted Wire
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, X.25, Ascii
Network Compatibility: IBM SNA
Interfaces Supported: RS-232C, IEEE 488, RS-422/423
Advanced Functions: Diagnostics
Price:
Purchase: $495 to $1,500
Distribution Method: Third-party
Number Installed to Date: Over 100
Date First Installed: September 1979
(See Vendor Profile Page V-8)

CPT CORP.
OFFICE DIALOGUE
Topology: Star
Network Type: Baseband
Maximum Physical Connections: 16
Transmission Media: Terrestrial Twisted Wire
Access Method: Master/Slave Polling (Centralized)
Protocols Supported: Bisynchronous, SDLC, Ascii, X.25 HDLC
Network Compatibility: IBM SNA, X.25
Interfaces Supported: RS-232C, RS-422/423
Advanced Functions: Security/Encryption, Diagnostics
Price:
Purchase: $30,000 to $42,000
Distribution Method: Third-party
(See Vendor Profile Page V-8)

CR COMPUTER SYSTEMS
X-NET
Topology: Bus (tree)
Network Type: Baseband
Maximum Physical Connections: 2,032
Maximum Distance: 3 Miles
Transmission Media: Twin-Ax
Access Method: Centralized Master/Slave Polling
Protocols Supported: Asynchronous, Synchronous, X.25, Bisynchronous, SDLC, HDLC, Ascii
Network Compatibility: IBM SNA, DEC DNA/Decnet, IBM BSC, Honeywell DSE/DSA, Burroughs BNA, Sperry DCA, HP DSN
Interfaces Supported: RS-232C
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $1,000
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: February 1972
(See Vendor Profile Page V-8)

CYB SYSTEMS, INC.
UNITE
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 32
Maximum Distance: 1,000 Feet
Transmission Media: Terrestrial Coaxial Cable
Interfaces Supported: RS-232C
Advanced Functions: MOD, DOS, Unix, Passwording
Distribution Method: End user
Number Installed to Date: 1 to 10
(See Vendor Profile Page V-8)

CYGNET TECHNOLOGIES,INC.
COSYSTEM
Topology: Star
Network Type: Broadband
Maximum Distance: 3,000 Miles
Transmission Media: Terrestrial Twisted Wire
Protocols Supported: Hasp, Synchronous, X.25, Bisynchronous, T-1, SDLC, HDLC
Network Compatibility: IBM BSC, HP DSN
Interfaces Supported: Ascii Asynchronous
Advanced Functions: Security/Encryption, Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $1,495 to $1,845
Distribution Method: Third-party
Date First Installed: September 1983
(See Vendor Profile Page V-8)

DAROMEL, INC.
CONVENER-NETWORK CONFERENCING UNIT
Topology: Ring
Network Type: Baseband
Maximum Physical Connections: 20
Transmission Media: Terrestrial Twisted Wire
Access Method: Dial-up
Price:
Purchase: $550 to $1,700
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: 1972
(See Vendor Profile Page V-8)

DAROMEL, INC.
CONVENER-PHONE CONFERENCING UNIT
Topology: Ring
Network Type: Baseband
Maximum Physical Connections: 20
Transmission Media: Terrestrial Twisted Wire
Access Method: Dial-up
Price:
Purchase: $550 to $1,700
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: 1972

DAROMEL, INC.
DAROME 2020 COCONVENER
Topology: Ring
Network Type: Baseband
Maximum Physical Connections: 20
Access Method: Dial-up
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: 1978

DATAMET, INC.
ANP 2020 (ADVANCED NETWORK PROCESSOR)
Topology: Wide Area Packet-Switching
Network Type: Packet-Switching
Protocols Supported: Asynchronous, X.25, Bisynchronous, Ascii, 3270 BSC
Network Compatibility: IBM BSC, Telenet, Tymnet, X.25, X.75, Gateway
Interfaces Supported: RS-232C, RS-422/423, V.35
Advanced Functions: Performance Analysis, Alarms, On-line Configuration
Number Installed to Date: 10 to 25
Date First Installed: September 1983
(See Vendor Profile Page V-8)

DATAMET, INC.
EDX-P
Network Type: Packet-Switching
Transmission Media: Terrestrial Twisted Wire, Coaxial Cable; Free-Space Fiber Optics, Infrared Light, Microwaves; Satellite
Access Method: Centralized PBX (Switching Type), Master/Slave Polling, X.25, X.75
Protocols Supported: Asynchronous, Synchronous, X.25, Bisynchronous, HDLC, Ascii
Network Compatibility: IBM BSC, Telenet, DDS, Tymnet, Packet
Interfaces Supported: RS-232C, CCITT
Advanced Functions: Diagnostics, Performance Analysis, Usage/Traffic Reporting, Error Checking, Congestion Control
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: 1981

DATA GENERAL CORP.
XODIAC/NETWORK BUS SYSTEM/4400
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 32
Maximum Distance: 1 Mile
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Xodiac
Network Compatibility: IBM SNA, IBM BSC, Telenet, Tymnet
Interfaces Supported: RS-232C, RS-422/423, Mil. 188C, RS-449, CCITT
Distribution Method: End user
Date First Installed: February 1982
(See Vendor Profile Page V-9)

DATAPOINT CORP.
ARC
Topology: Bus (tree)
Network Type: Baseband
Maximum Physical Connections: 255
Maximum Distance: 4 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Asynchronous, Synchronous, X.25, Bisynchronous, T-1, SDLC, HDLC, Ascii
Network Compatibility: IBM SNA, IBM BSC, Honeywell DSE/DSA, Burroughs BNA, Sperry DCA, Arc Link, Telenet, Tymnet
Interfaces Supported: RS-232C
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Lease: $280 to $5
Purchase: $5,950 to $8,950
Average Monthly Maintenance: $70
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: October 1977
(See Vendor Profile Page V-9)

DATASTREAM COMMUNICATIONS, INC.
774
Network Type: Baseband
Maximum Physical Connections: 64
Transmission Media: Terrestrial Coaxial Cable
Access Method: Dial-up
Protocols Supported: Bisynchronous, Ascii, Ebcdic
Network Compatibility: IBM SNA
Interfaces Supported: RS-232C
Advanced Functions: Security/Encryption, Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $4,000 to $10,000
Average Monthly Maintenance: $125
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: 1980
(See Vendor Profile Page V-9)

DATASTREAM COMMUNICATIONS, INC.
776
Network Type: Baseband
Maximum Physical Connections: 64
Transmission Media: Terrestrial Coaxial Cable
Access Method: Dial-up
Protocols Supported: Bisynchronous, Ascii, Ebcdic
Network Compatibility: IBM SNA
Interfaces Supported: RS-232C
Advanced Functions: Security/Encryption, Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $4,000 to $8,000
Average Monthly Maintenance: $100
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: 1980

DATASTREAM COMMUNICATION, INC.
874
Network Type: Baseband
Maximum Physical Connections: 64
Transmission Media: Terrestrial Coaxial Cable
Access Method: Dial-up
Protocols Supported: Ascii, Ebcdic
Network Compatibility: IBM SNA
Interfaces Supported: RS-232C
Advanced Functions: Security/Encryption, Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $16,000
Average Monthly Maintenance: $115
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: 1981

DATASTREAM COMMUNICATIONS, INC.
MPC
Network Type: Baseband
Maximum Physical Connections: 64
Transmission Media: Terrestrial Coaxial Cable
Access Method: Dial-up
Protocols Supported: Ascii, Ebcdic
Network Compatibility: IBM SNA
Interfaces Supported: RS-232C
Advanced Functions: Security/Encryption, Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $6,000 to $12,000
Average Monthly Maintenance: $150
Distribution Method: End user
Number Installed to Date: 1 to 10
Date First Installed: January 1984

DAVONG SYSTEMS, INC.
D6300-015
Topology: Ring
Network Type: Baseband
Maximum Physical Connections: 255
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed Token Passing (Polling Types)
Network Compatibility: IBM SNA, XNS (Xerox)
Advanced Functions: Diagnostics
Price:
Purchase: $645
Distribution Method: Third-party
Number Installed to Date: 50 to 100
Date First Installed: April 1983
(See Vendor Profile Page V-10)

DCA/TAC
DCA INA/NETWORK
Topology: Bus (Linear and Tree), Ring
Network Type: Both
Maximum Physical Connections: 32,767
Transmission Media: Terrestrial Twisted Wire, Coaxial Cable, Fiber Optics; Free Space Infrared Light, Microwaves, Laser, Satellite
Protocols Supported: Asynchronous, HASP, Synchronous, X.25, Bisynchronous, T-1, SDLC, HDLC, Ascii
Network Compatibility: IBM SNA, DEC DNA/Decnet, IBM BSC, Honeywell DSE/DSA, Burroughs BNA, Primenet, Sperry DCA, XNS (Xerox), HP DSN, Arc Link, Gminet, Telenet, DDS, Tymnet
Interfaces Supported: RS-232C, RS-422/423, CCITT
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting
Distribution Method: End user, OEM, Third-party
(See Vendor Profile Page V-10)

DELTA SYSTEMS, INC.
WHITE BOX I
Topology: Bus (Linear)
Network Type: Broadband
Maximum Physical Connections: 2
Maximum Distance: 13,000 Miles
Transmission Media: Leased Lines
Access Method: Centralized Master/Slave Polling
Protocols Supported: Asynchronous, Synchronous, Ascii
Network Compatibility: ICL System
Interfaces Supported: RS-232C
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis
Price:
Purchase: $1,500
Average Monthly Maintenance: $75
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: December 1980
(See Vendor Profile Page V-10)

THE DESTEK GROUP
DESNET
Topology: Bus (Linear)
Network Type: Fiberoptics
Maximum Physical Connections: 350
Maximum Distance: 6,500 Feet
Transmission Media: Terrestrial Coaxial Cable, Fiber Optics
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: HDLC
Network Compatibility: IBM SNA
Interfaces Supported: RS-232C, IEEE 488, IBM PC
Advanced Functions: Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $600 to $700
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: November 1982
(See Vendor Profile Page V-10)

DIGITAL EQUIPMENT CORP.
DECNET
Topology: Bus (Linear), Star
Network Type: Both
Maximum Physical Connections: 1,023
Transmission Media: Terrestrial Coaxial Cable
Access Method: Controlled Master/Slave Polling, Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Hasp, Synchronous, X.25, Bisynchronous, SDLC, Ascii
Network Compatibility: IBM SNA, DEC DNA/Decnet, IBM BSC, Telenet, Tymnet
Interfaces Supported: RS-232C, RS-422/423, RS-449, CCITT
Advanced Functions: Diagnostics, Performance Analysis, Usage/Traffic Reporting
Distribution Method: End user
Date First Installed: 1976
(See Vendor Profile Page V-10)

DIGITAL MICROSYSTEMS, INC. (DMSI)
HINET
Topology: Star, Ring
Network Type: Baseband
Maximum Physical Connections: 32
Transmission Media: Terrestrial Fiber Optics
Access Method: Master/Slave Polling (Centralized)
Protocols Supported: Uniscope
Network Compatibility: IBM BSC, Sperry DCA
Interfaces Supported: RS-232C, RS-444
Advanced Functions: Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $600
Distribution Method: End user
Date First Installed: January 1984
(See Vendor Profile Page V-12)

GANDALF DATA, INC.
PACXNET
Topology: Star
Network Type: Baseband
Maximum Physical Connections: 8
Transmission Media: Terrestrial Twisted Wire, Coaxial Cable, Fiber Optics
Access Method: Centralized PBX (Switching Type)
Protocols Supported: Asynchronous, Synchronous, X.25, Bisynchronous, T-1, SDLC, HDLC, Ascii
Network Compatibility: IBM SNA, IBM BSC, Telenet, DDS, Tymnet
Interfaces Supported: RS-232C, RS-422/423, MIL 188C, RS-449, CCITT, 20 mA
Advanced Functions: Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $600 to $135
Average Monthly Maintenance: $300
Distribution Method: End user
Number Installed to Date: 25 to 50
Date First Installed: October 1982
(See Vendor Profile Page V-12)

GATEWAY COMMUNICATIONS, INC.
G/NET
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 255
Maximum Distance: 7,000 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Hasp, Synchronous, X.25, Bisynchronous, SDLC, HDLC, Ascii
Network Compatibility: IBM SNA, IBM BSC, Primenet, Tymnet
Interfaces Supported: RS-232C, RS-422/423, V35

Advanced Functions: Diagnostics, Performance Analysis
Price:
Purchase: $585
Distribution Method: OEM
Number Installed to Date: Over 100
Date First Installed: September 1983
(See Vendor Profile Page V-15)

GENERAL ELECTRIC CO.
GESLINK LDS-072A
Topology: Point to Point
Network Type: Microwave
Maximum Distance: 10 Miles
Transmission Media: Free Space Microwaves
Protocols Supported: Asynchronous
Interfaces Supported: RS-232C
Distribution Method: Third-party
Number Installed to Date: 1,000
Date First Installed: March 1982
(See Vendor Profile Page V-13)

GENERAL ELECTRIC CO.
GESLINK LDS-063A
Network Type: Microwave
Maximum Distance: 10 Miles
Transmission Media: Free Space Microwaves
Protocols Supported: Synchronous
Network Compatibility: All Synchronous
Interfaces Supported: RS-232C, RS-422/423, RS-449
Distribution Method: Third-party
Number Installed to Date: 1,000
Date First Installed: March 1982

GENERAL ELECTRIC CO.
GESLINK LSD-112A/122A
Topology: Point to Point
Network Type: Microwave
Maximum Distance: 7 Miles
Transmission Media: Free Space Microwaves
Protocols Supported: Synchronous, T-1
Network Compatibility: All Synchronous
Interfaces Supported: RS-422/423, DSX-1,1C
Distribution Method: Third-party
Number Installed to Date: 1,000
Date First Installed: March 1982

GENERAL ELECTRIC CO.
LSD-062A
Topology: Point to Point
Network Type: Microwave
Maximum Distance: 7 Miles
Transmission Media: Free Space Microwaves
Protocols Supported: Synchronous
Interfaces Supported: RS-232C, RS-422/423, RS-449, V.35
Distribution Method: Third-party
Number Installed to Date: 1,000
Date First Installed: March 1982

GOULD, INC.
NODWAY
Topology: Bus (tree)
Network Type: Both
Maximum Physical Connections: 250
Maximum Distance: 3 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Asynchronous, Synchronous, X.25, Bisynchronous, T-1, SDLC, HDLC, Ascii, Modbus
Interfaces Supported: RS-232C, RS-449, DMA
Advanced Functions: Diagnostics, Performance Analysis, Usage/Traffic Reporting, Network Reconfiguration
Price:
Purchase: $1,500
Distribution Method: End user
Date First Installed: January 1983
(See Vendor Profile Page V-13)

HARRIS CORP.
HARRIS 9070 (BASEBAND)
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 32
Maximum Distance: 5,000 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Asynchronous, Synchronous, Bisynchronous, SDLC
Network Compatibility: IBM SNA
Interfaces Supported: RS-232C, RS-422/423, RS-449
Advanced Functions: Diagnostics, Performance Analysis
Price:
Purchase: $1,200
Distribution Method: End user
(See Vendor Profile Page V-14)

HARRIS CORP.
HARRIS 9070 (BROADBAND)
Topology: Bus (Linear)
Network Type: Broadband
Maximum Physical Connections: 1,000
Maximum Distance: 3 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Asynchronous, Synchronous, Bisynchronous, SDLC
Network Compatibility: IBM SNA
Interfaces Supported: RS-232C, RS-422/423, RS-449
Advanced Functions: Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $1,250
Distribution Method: End user

IDEAS, INC.
INET
Topology: Bus (tree)
Network Type: Broadband
Maximum Physical Connections: 1,000
Maximum Distance: 5 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Synchronous, X.25, Bisynchronous, SDLC, HDLC, Ascii
Network Compatibility: DEC DNA/Decnet, Honeywell DSE/DSA, Burroughs BNA, Sperry, DCA, HP DSN, Telenet, Tymnet
Interfaces Supported: RS-232C
Advanced Functions: Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $500
Average Monthly Maintenance: $20
Distribution Method: End user
Date First Installed: July 1981
(See Vendor Profile Page V-15)

IDE ASSOCIATES, INC.
IDEANET/NPR-001 SPR-1N
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 64,000
Maximum Distance: 2,000 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: SDLC, HDLC
Network Compatibility: PC-Net
Interfaces Supported: Coaxial Connections
Advanced Functions: Diagnostics
Distribution Method: Third-party
(See Vendor Profile Page V-15)

IDE ASSOCIATES, INC.
IDEASHARE/SPB-III
Topology: Star
Network Type: RS-232
Maximum Physical Connections: 4
Maximum Distance: 200 Feet
Transmission Media: RS-232
Network Compatibility: None
Interfaces Supported: RS-232C
Advanced Functions: Diagnostics
Distribution Method: Third-party
Date First Installed: December 1983

INFOLINK
SYSTEM 5000
Topology: Multidrop
Network Type: Baseband
Maximum Distance: 15,000 Feet
Transmission Media: Terrestrial Twisted Wire
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Asynchronous, Synchronous, SDLC
Network Compatibility: IBM SNA, DEC DNA/Decnet, IBM BSC, Honeywell DSE/DSA, Burroughs BNA, Primenet, Sperry DCA, DDS
Interfaces Supported: RS-232C, Teletype
Advanced Functions: Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Lease: $60 to $180
Purchase: $2,000 to $4,000
Average Monthly Maintenance: $30
Distribution Method: End user
(See Vendor Profile Page V-15)

INTECOM, INC.
LANMARK
Topology: Star
Network Type: Baseband
Maximum Physical Connections: 32
Maximum Distance: 54,000 Feet
Transmission Media: Terrestrial Twisted Wire, Fiber Optics
Access Method: Controlled PBX (Switching Type)
Network Compatibility: IBM SNA, Ethernet
Interfaces Supported: IEEE 802
Advanced Functions: Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $500 to $600
Distribution Method: End user
(See Vendor Profile Page V-16)

INTERACTIVE SYSTEMS/3M
VIDEODATA LAN/1
Topology: Bus (tree)
Network Type: Broadband
Maximum Physical Connections: 256
Maximum Distance: 14 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Asynchronous, Hasp, Ascii
Network Compatibility: IBM SNA, IBM BSC, Sperry DCA
Interfaces Supported: RS-232C
Advanced Functions: Diagnostics, Performance Analysis
Price:
Lease: $15 to $25
Purchase: $400 to $600
Distribution Method: End user
Number Installed to Date: 1 to 10
Date First Installed: August 1983
(See Vendor Profile Page V-16)

INTERLAN, INC.
INTERLAN NET/PLUS
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 1,024
Maximum Distance: 2 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Ascii
Network Compatibility: DEC DNA/Decnet, XNS (Xerox), Telenet, Tymnet
Interfaces Supported: RS-232C
Advanced Functions: Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $400
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: September 1983
(See Vendor Profile Page V-16)

INTER-LINK
STATIONMATE
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 64
Maximum Distance: 10,000 Feet
Transmission Media: Terrestrial Twisted Wire

Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Ascii
Network Compatibility: Telenet, Tymnet, Uninet Compuserve
Interfaces Supported: RS-232C, CCITT.
Advanced Functions: Diagnostics, Usage/Traffic Reporting, Password Protection
Price:
Purchase: $1,450
Average Monthly Maintenance: $15
Distribution Method: Third-party
Number Installed to Date: 1 to 10
Date First Installed: November 1983
(See Vendor Profile Page V-16)

INTERGIL SYSTEMS, INC.
GE NET
Topology: Bus (Linear)
Network Type: Broadband
Maximum Physical Connections: 1,000
Maximum Distance: 3 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, HDLC, Ascii, CCM
Network Compatibility: DEC DNA/Decnet, DDS
Interfaces Supported: RS-232C
Advanced Functions: Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $800 to $1,000
Distribution Method: End user
Number Installed to Date: 25 to 50
Date First Installed: December 1982
(See Vendor Profile Page V-17)

ITT TELECOM PRODUCTS, INC.
MULTITENENT
Network Type: Baseband
Access Method: Centralized PBX (Switching Type)
Protocols Supported: Asynchronous, Synchronous, T-1, Ascii
Network Compatibility: DEC DNA/Decnet
Interfaces Supported: RS-232C
Advanced Functions: Diagnostics, Usage/Traffic Reporting
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: 1980
(See Vendor Profile Page V-17)

JG SYSTEMS
JCS A-10
Topology: Bus (Linear)
Network Type: Broadband
Maximum Distance: 600 Feet
Access Method: Centralized Master/Slave Polling
Protocols Supported: Synchronous
Network Compatibility: IBM SNA, IBM BSC
Interfaces Supported: RS-232C, Centronics
Advanced Functions: Security/Encryption, Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $495
Average Monthly Maintenance: $150
Distribution Method: OEM, Third-party
Number Installed to Date: 2,000
Date First Installed: May 1982
(See Vendor Profile Page V-17)

LOGICA, INC.
POLYNET
Topology: Ring
Network Type: Baseband
Maximum Distance: 2 Miles
Transmission Media: Terrestrial Twisted Wire, Fiber Optics
Access Method: DMA
Protocols Supported: Asynchronous, Ascii
Interfaces Supported: RS-232C, DEC Unibus
Advanced Functions: Built-in Error Correction
Price:
Purchase: $1,400 to $4,900
Distribution Method: Third-party
Number Installed to Date: 1 to 10
Date First Installed: January 1984
(See Vendor Profile Page V-18)

LYNCH COMMUNICATION SYSTEMS, INC.
VOICE PLUS DATA SUBSCRIBER CARRIER
Topology: Point to Point
Network Type: FSK
Maximum Physical Connections: 1
Transmission Media: Terrestrial Twisted Wire
Protocols Supported: Asynchronous, Hasp, Synchronous, X.25, Bisynchronous, T-1, SDLC, HDLC, Ascii
Interfaces Supported: 4 Wire
Advanced Functions: Diagnostics
Price:
Purchase: $203 to $256
Distribution Method: End user
Number Installed to Date: 25 to 50
(See Vendor Profile Page V-18)

METAPATH, INC.
ROBIN DESKTOP DATA SWITCH
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 225
Maximum Distance: 5,000 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: Absent Token
Protocols Supported: Asynchronous, Ascii
Network Compatibility: IBM SNA, IBM BSC, XNS (Xerox), Tplanet, DDS, Tymnet
Interfaces Supported: RS-232C, Centronics
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $400
Distribution Method: OEM, Third-party
Number Installed to Date: 50 to 100
(See Vendor Profile Page V-18)

MICOM SYSTEMS, INC.
INSTANET
Topology: Star
Network Type: TDM
Transmission Media: Terrestrial Twisted Wire; Free Space Microwaves, Laser
Access Method: Centralized PBX (Switching Type)
Protocols Supported: Asynchronous, X.25, T-1, Ascii
Network Compatibility: Telenet, Tymnet
Interfaces Supported: RS-232C, RS-422/423
Advanced Functions: Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $100 to $250
Average Monthly Maintenance: $400
Distribution Method: End user
Number Installed to Date: More Than 100
Date First Installed: September 1979
(See Vendor Profile Page V-19)

MODULAR COMPUTER SYSTEMS, INC. (MODCOMP)
MAXNET
Topology: Bus (Inear)
Network Type: Baseband
Maximum Physical Connections: 255
Maximum Distance: 600 Miles
Transmission Media: Terrestrial Twisted Wire, Coaxial Cable, Ribbon/Parallel Wire, Fiber Optics; 4 Wire
Access Method: Maxnet
Protocols Supported: Maxnet Proprietary
Interfaces Supported: RS-232C, V.25, WE301
Advanced Functions: Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $3,500 to $30,000
Distribution Method: OEM
Number Installed to Date: Over 100
Date First Installed: September 1974
(See Vendor Profile Page V-20)

NBS, INC.
NBI NET
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 500
Maximum Distance: 6,000 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Bisynchronous
Network Compatibility: IBM SNA, IBM BSC
Interfaces Supported: RS-232C, IEEE 802.3
Advanced Functions: Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $900
Distribution Method: Third-party
Date First Installed: June 1984
(See Vendor Profile Page V-21)

NCR CORP.
MIRLAN (MID RANGE LAN)
Topology: Bus (tree)
Network Type: Baseband
Maximum Distance: 12,000 Feet
Access Method: Distributed CSMA/CD (Contention Type)
Distribution Method: End user
(See Vendor Profile Page V-21)

NCR CORP.
NCR DECISION NET
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 64
Maximum Distance: 4,000 Feet
Transmission Media: Terrestrial Twisted Wire
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Omninet
Network Compatibility: Omninet
Advanced Functions: Diagnostics, Usage/Traffic Reporting, File Sharing
Price:
Purchase: $500
Distribution Method: End user
Date First Installed: October 1983

NESTAR SYSTEMS, INC.
PLAN SERIES
Topology: Star
Network Type: Baseband
Maximum Physical Connections: 255
Maximum Distance: 4 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Asynchronous, Hasp, Synchronous, Bisynchronous, T-1, SDLC, HDLC, Ascii, Spreadsheets
Network Compatibility: IBM SNA, IBM BSC, XNS (Xerox), Arc Link, Telenet, Tymnet
Interfaces Supported: RS-232C, CCITT
Advanced Functions: Security/Encryption, Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $2,000 to $100,000
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: January 1982
(See Vendor Profile Page V-21)

NETWORK PRODUCTS, INC.
LOCAL MUX
Topology: Point to Point
Network Type: Baseband
Maximum Physical Connections: 1
Maximum Distance: 10,000 Feet
Transmission Media: Terrestrial Twisted Wire
Access Method: Direct
Protocols Supported: Asynchronous, Hasp, Synchronous, X.25, Bisynchronous, SDLC, HDLC, Ascii
Interfaces Supported: RS-232C
Advanced Functions: Diagnostics
Price:
Purchase: $106
Average Monthly Maintenance: $13
Distribution Method: End user

Number Installed to Date: Over 100
Date First Installed: April 1983
(See Vendor Profile Page V-21)

NETWORK SYSTEMS CORP.
HYPER BUS
Topology: Bus (tree)
Network Type: Baseband
Maximum Physical Connections: 200
Maximum Distance: 4,000 Feet
Transmission Media: Terrestrial Coaxial Cable; Free Space Infrared Light, Microwaves, Laser; Satellite
Access Method: Virtual Time-sharing
Protocols Supported: Asynchronous, Synchronous, Bisynchronous, T-1, SDLC, Ascii
Network Compatibility: IBM SNA, IBM BSC, DDS
Interfaces Supported: RS-232C, IEEE 488, RS-422/423, MIL 188C, RS-449, CCITT, 306
Advanced Functions: Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $8,000
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: 1982
(See Vendor Profile Page V-21)

NETWORK SYSTEMS CORP.
HYPER CHANNEL
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 64
Maximum Distance: 1,200 Feet
Transmission Media: Terrestrial Coaxial Cable; Free Space Infrared Light, Microwaves, Laser; Satellite
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Heap, Synchronous, Bisynchronous, T-1, SDLC, HDLC, Ascii, T-2, T-3
Network Compatibility: IBM SNA, IBM BSC, Burroughs BNA, DDS
Interfaces Supported: RS-232C, IEEE 488, RS-422/423, MIL 188C, RS-449, CCITT, 306
Advanced Functions: Security/Encryption, Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $40,000
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: 1974

NORTHERN TELECOM, INC.
Topology: Ring
Network Type: Baseband
Maximum Physical Connections: 20
Maximum Distance: 5,000 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Asynchronous, Heap, Synchronous, Bisynchronous, SDLC, Ascii
Network Compatibility: IBM SNA, IBM BSC, Burroughs BNA, Sperry DCA, Telenet, Tymnet
Interfaces Supported: RS-232C
Advanced Functions: Diagnostics
Price:
Purchase: $1,600 to $1,800
Distribution Method: End user
Date First Installed: 1977
(See Vendor Profile Page V-22)

NOVELL, INC.
NETWARE-S
Topology: Star
Network Type: Baseband
Maximum Physical Connections: 24
Maximum Distance: 3,000 Feet
Transmission Media: Terrestrial Twisted Wire
Access Method: Proprietary
Protocols Supported: Asynchronous, X.25, Ascii
Network Compatibility: Arc Lnk, DDS
Interfaces Supported: RS-232C, RS-422/423, MIL 188C
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $250
Distribution Method: OEM, Third-party
Number Installed to Date: 600
Date First Installed: December 1981
(See Vendor Profile Page V-22)

NOVELL, INC.
NETWARE-X
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 250
Maximum Distance: 4,000 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: Novel Proprietary
Protocols Supported: Asynchronous, X.25, Ascii
Network Compatibility: Arc Lnk, Omninet
Interfaces Supported: RS-232C, RS-422/423, MIL 188C
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $695
Average Monthly Maintenance: $35
Distribution Method: Third-party
Date First Installed: April 1983

OMNIDATA
OMNINET
Topology: Bus (Linear and Tree
Network Type: Baseband
Maximum Physical Connections: 64
Maximum Distance: 4,000 Feet
Transmission Media: Terrestrial Twisted Wire
Access Method: Distributed CSMA/CD (Contention Type)
Network Compatibility: SDLC
Interfaces Supported: RS-422/423
Advanced Functions: Security/Encryption, Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $600 to $1,000
Distribution Method: OEM, Third-party
Number Installed to Date: 50 to 100
Date First Installed: October 1982
(See Vendor Profile Page V-22)

ORCHID TECHNOLOGY, INC.
PC NET
Topology: Distributed Bus
Network Type: Baseband
Maximum Physical Connections: 256
Maximum Distance: 7,000 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: SDLC
Network Compatibility: IBM SNA
Interfaces Supported: RS-232C
Advanced Functions: Performance Analysis, Usage/Traffic Reporting, Execution
Price:
Purchase: $695
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: October 1982
(See Vendor Profile Page V-22)

PERCOM DATA CORP.
PERCOM NET
Topology: Ring
Network Type: Baseband
Maximum Physical Connections: 255
Maximum Distance: 25 Miles
Transmission Media: Terrestrial Twisted Wire
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Western Digital
Network Compatibility: Western Digital 2840
Interfaces Supported: RS-422/423
Advanced Functions: Security/Encryption
Price:
Purchase: $695 to $1,700
Distribution Method: Third-party
Number Installed to Date: 1 to 10
Date First Installed: November 1983
(See Vendor Profile Page V-23)

PERIPHERAL TECHNOLOGY, INC.
SNC
Topology: Star
Network Type: Baseband
Maximum Physical Connections: 5
Maximum Distance: 8,000 Feet
Transmission Media: Twisted Wire
Access Method: Centralized Master/Slave Polling
Protocols Supported: Asynchronous, Synchronous, Bisynchronous, Ascii
Network Compatibility: IBM BSC
Interfaces Supported: RS-232C, RS-422
Advanced Functions: Security/Encryption, Diagnostics
Price:
Purchase: $800
Distribution Method: End user
Number Installed to Date: 10 to 25
Date First Installed: November 1983
(See Vendor Profile Page V-23)

PERQ SYSTEMS
ETHERNET
Topology: Bus (tree)
Network Type: Broadband
Maximum Physical Connections: 1,024
Maximum Distance: 2 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Synchronous, X.25
Network Compatibility: DEC DNA/Decnet
Interfaces Supported: RS-232C, IEEE 488, GPIB-1
Advanced Functions: Security/Encryption, Diagnostics
Price:
Lease: $1,800
Distribution Method: OEM
Number Installed to Date: Over 100
Date First Installed: 1982
(See Vendor Profile Page V-23)

PROTEON DIGITAL CORP.
OPTONET
Topology: Ring, Single/Multiple Ring
Network Type: Baseband
Maximum Physical Connections: 256
Maximum Distance: 2 Miles
Transmission Media: Terrestrial Twisted Wire, Fiber Optics; Free Space Infrared Light, Laser
Access Method: Centralized Master/Slave Polling; Distributed Token Passing (Polling Types)
Protocols Supported: Asynchronous, Heap, Synchronous, X.25, Bisynchronous, SDLC, HDLC, Ascii, DDCMP
Network Compatibility: IBM SNA, DEC DNA/Decnet, Honeywell DSE/DSA, Modbus, Asynchronous/Bisynchronous Data Highway
Interfaces Supported: RS-232C, IEEE 488, RS-422/423, RS-449, CCITT
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting, Network Monitor
Price:
Purchase: $100,000
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: August 1980
(See Vendor Profile Page V-23)

PRAGMATRONICS, INC.
TBNET
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 2,000
Maximum Distance: 5 Miles
Transmission Media: Terrestrial Coaxial Cable; Free Space Infrared Light
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Synchronous, HDLC, Ascii
Network Compatibility: Transport
Interfaces Supported: RS-232C, RS-422/423

Advanced Functions: Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Lease: $25 to $33
Purchase: $600 to $800
Distribution Method: End user
Number Installed to Date: 1 to 10
Date First Installed: 1979
(See Vendor Profile Page V-34)

PRIME COMPUTER, INC.
RINGNET
Topology: Ring
Network Type: Baseband
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Asynchronous, HASP, Synchronous, X.25, Bisynchronous, SDLC, HDLC, Ascii
Network Compatibility: IBM BSC, Honeywell DSE/DSA, Primenet, Sperry DCA, Telenet, Tymnet
Interfaces Supported: RS-232C, CCITT
Price:
Purchase: $5,000
Average Monthly Maintenance: $30
Distribution Method: End user
(See Vendor Profile Page V-34)

PROLINK CORP.
PROLOOP NETWORK
Topology: Ring
Network Type: Baseband
Maximum Physical Connections: 62
Maximum Distance: 62,000 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: Slotted Bus
Protocols Supported: Synchronous, Bisynchronous, SDLC, Ascii, ISO Equivalent
Network Compatibility: IBM SNA, IBM BSC, IBM 3101, ST 100
Interfaces Supported: RS-232C
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting, System Customization
Distribution Method: End user
Number Installed to Date: 10 to 25
Date First Installed: October 1983
(See Vendor Profile Page V-34)

PROTEON ASSOCIATES, INC.
PRONET
Topology: Star
Network Type: Baseband, Broadband and Fiber Optic
Maximum Physical Connections: 255
Maximum Distance: 620 Miles
Transmission Media: Terrestrial Twisted Wire, Coaxial Cable, Fiber Optics; Free Space Infrared Light
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Asynchronous, Hasp, Synchronous, X.25, Bisynchronous, HDLC
Network Compatibility: IBM SNA, DEC DNA/Decnet, HP
Interfaces Supported: RS-232C, IEEE 488
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $600 to $2,800
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: June 1981
(See Vendor Profile Page V-34)

RACAL-MILGO, INC.
PLANET
Topology: Ring
Network Type: Baseband
Maximum Physical Connections: 250
Maximum Distance: 7 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Asynchronous, Hasp, Synchronous, X.25, Bisynchronous, T-1, SDLC, HDLC, Ascii
Interfaces Supported: RS-232C
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting, On-line Inventory
Price:
Lease: $25 to $60
Price:
Purchase: $600 to $800
Distribution Method: End user
Number Installed to Date: 50 to 100
Date First Installed: March 1983
(See Vendor Profile Page V-34)

RAYTHEON CO.
RAYNET IV
Topology: Bus (Linear)
Network Type: Broadband
Maximum Physical Connections: 31
Transmission Media: Terrestrial Coaxial Cable, Ribbon/Parallel Wire; Satellite
Access Method: Controlled Master/Slave Polling
Protocols Supported: Bisynchronous, ALC
Network Compatibility: IBM BSC, Sperry DCA, Telenet, Tymnet
Interfaces Supported: RS-232C, MIL 188C
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting, Message Switching
Price:
Lease: $5,000
Average Monthly Maintenance: $2,500
Distribution Method: End user
Number Installed to Date: 1 to 10
Date First Installed: 1982
(See Vendor Profile Page V-35)

SCIENTIFIC DATA SYSTEMS, INC.
SDS NETWORK
Topology: Ethernet Bus
Network Type: Broadband
Maximum Physical Connections: 254
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Synchronous, HDLC, Ascii
Interfaces Supported: RS-232C
Price:
Purchase: $5,000 to $6,000
Average Monthly Maintenance: $95
Distribution Method: Third-party
Number Installed to Date: 25 to 50
Date First Installed: November 1982
(See Vendor Profile Page V-35)

STANDARD DATA CORP.
STANDARD NET
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 255
Maximum Distance: 4,000 Feet
Transmission Media: Terrestrial Coaxial Cable, Fiber Optics; Free Space Microwaves, Laser
Access Method: Distributed CSMA/CD (Contention Type) , CSMA/CA
Network Compatibility: IBM SNA, DEC DNA/Decnet, IBM BSC, Honeywell DSE/DSA, Burroughs BNA, Primenet, Sperry DCA, XNS (Xerox), HP DSN, Arc Link, Omninet, Telenet, DDS, Tymnet
Interfaces Supported: RS-232C, IEEE 488, IEEE 696
Advanced Functions: Security/Encryption, Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $995
Distribution Method: Third-party
Number Installed to Date: 10 to 25
Date First Installed: October 1983
(See Vendor Profile Page V-35)

STRAND COMPUTER SYSTEMS
MICRONETWORK
Topology: Star
Network Type: Baseband
Maximum Physical Connections: 32
Maximum Distance: 6,000 Feet
Transmission Media: Terrestrial Fiber Optics
Protocols Supported: SDLC
Interfaces Supported: RS-422/423
Advanced Functions: Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $4,000 to $6,000
Distribution Method: Third-party
(See Vendor Profile Page V-35)

STRATUS COMPUTER, INC.
STRATALINK
Topology: Ring
Network Type: Baseband
Maximum Physical Connections: 32
Maximum Distance: 2,500 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: Proprietary X.25-Based
Protocols Supported: Asynchronous, Synchronous, X.25, Bisynchronous, SDLC, HDLC, Ascii, X.29 FTPS
Network Compatibility: IBM SNA, IBM BSC
Interfaces Supported: RS-232C, RS-422/423, Bus Interface
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting
Distribution Method: End user
Number Installed to Date: 25 to 50
Date First Installed: November 1981
(See Vendor Profile Page V-35)

SYNTREX, INC.
SYNNET
Topology: Bus (tree)
Network Type: Baseband
Maximum Physical Connections: 420
Maximum Distance: 1,700 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Synchronous, Bisynchronous, SDLC, Ascii, Syntrex Proprietary
Network Compatibility: Syntrex Proprietary
Interfaces Supported: RS-232C, Syntrex Proprietary
Advanced Functions: Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $650
Average Monthly Maintenance: $60
Distribution Method: End user, Third-party
Number Installed to Date: 10 to 25
Date First Installed: 1983
(See Vendor Profile Page V-35)

SYTEK, INC.
LOCAL NET
Topology: Bus (tree)
Network Type: Broadband
Maximum Physical Connections: 24,000
Maximum Distance: 70 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Synchronous, X.25, Bisynchronous, Ascii
Network Compatibility: IBM BSC, XNS (Xerox), HP DSN, Telenet, Tymnet, X.25
Interfaces Supported: RS-232C
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting, Name-Serving, Access Control
Price:
Purchase: $345 to $545
Average Monthly Maintenance: $6
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: January 1981
(See Vendor Profile Page V-35)

TANDEM COMPUTERS, INC.
NONSTOP II
Topology: Double Ring
Network Type: Fiber Optics
Maximum Physical Connections: 255
Transmission Media: Fiber Optics

Access Method: EXP (Proprietary) Fox
Protocols Supported: Asynchronous, X.25, HDLC
Average Monthly Maintenance: $500
Distribution Method: End user
Number Installed to Date: 25 to 50
(See Vendor Profile Page V-29)

TANDEM COMPUTERS, INC.
NONSTOP TXP
Topology: Double Ring
Network Type: Fiber Optics
Maximum Physical Connections: 255
Maximum Distance: 3,000 Feet
Transmission Media: Terrestrial Fiber Optics
Access Method: Expand (TM), Fox
Protocols Supported: Asynchronous, X.25, HDLC
Average Monthly Maintenance: $500
Distribution Method: End user
Number Installed to Date: 25 to 50

TANDEM COMPUTERS, INC.
NONSTOP 1
Topology: Double Ring
Network Type: Fiber Optics
Maximum Physical Connections: 255
Transmission Media: Fiber Optics
Access Method: Expand (TM), Fox
Protocols Supported: Asynchronous, X.25, HDLC
Average Monthly Maintenance: $500
Distribution Method: End user
Number Installed to Date: 25 to 50

TECMAR, INC.
SLAN
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 1,024
Maximum Distance: 6,000 Feet
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Ascii
Network Compatibility: Telenet, Tymnet
Interfaces Supported: RS-232C, CCITT
Advanced Functions: Security/Encryption, Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $1,695 to $3,395
Average Monthly Maintenance: $10
Distribution Method: Third-party
Number Installed to Date: 1 to 10
Date First Installed: July 1983
(See Vendor Profile Page V-29)

TELTONE CORP.
DCS-2
Topology: Star
Network Type: Broadband
Maximum Distance: 18,000 Feet
Transmission Media: Terrestrial Twisted Wire; Free Space, Microwaves; T-1
Access Method: Centralized PBX (Switching Type)
Protocols Supported: Asynchronous, X.25, Bisynchronous, T-1, SDLC, HDLC, Ascii
Interfaces Supported: RS-232C
Advanced Functions: Diagnostics
Price:
Purchase: $490
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: 1979
(See Vendor Profile Page V-30)

TRANTOR SYSTEMS LTD.
WEB
Topology: Star
Network Type: Broadband
Maximum Physical Connections: 4
Maximum Distance: 100 Feet
Transmission Media: Terrestrial Twisted Wire, Ribbon/Parallel Wire
Access Method: Centralized PBX (Switching Type)
Protocols Supported: Asynchronous
Network Compatibility: IBM SNA, Burroughs BNA, XNS (Xerox)
Interfaces Supported: RS-232C, IEEE 488
Advanced Functions: Security/Encryption, Diagnostics, Usage/Traffic Reporting
Average Monthly Maintenance: $10
Distribution Method: Third-party
Number Installed to Date: 50 to 100
Date First Installed: June 1983
(See Vendor Profile Page V-31)

UNGERMANN-BASS, INC.
NET/ONE BASEBAND NETWORK INTERFACE UNIT
Topology: Bus (Linear)
Network Type: Baseband
Maximum Physical Connections: 1,024
Maximum Distance: 9,184 Feet
Transmission Media: Terrestrial Coaxial Cable, Free Space Infrared Light
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Synchronous, Bisynchronous, SDLC, HDLC, Ascii
Network Compatibility: IBM SNA, DEC DNA/Decnet, IBM BSC, Honeywell DSE/DSA, Burroughs BNA, Sperry DCA, XNS (Xerox), Telenet
Interfaces Supported: RS-232C, IEEE 488, CCITT
Advanced Functions: Performance Analysis, Usage/Traffic Reporting, Configuration Control
Price:
Lease: $500
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 3,300
Date First Installed: July 1980
(See Vendor Profile Page V-32)

UNGERMANN-BASS, INC.
NET/ONE BROADBAND NETWORK INTERFACE UNIT
Topology: Bus (tree)
Network Type: Broadband
Maximum Physical Connections: 1,500
Maximum Distance: 10 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: CSMA
Protocols Supported: Asynchronous, Synchronous, Bisynchronous, SDLC, HDLC, Ascii
Network Compatibility: IBM SNA, DEC DNA/Decnet, IBM BSC, Honeywell DSE/DSA, Burroughs BNA, Sperry DCA, XNS (Xerox), Telenet
Interfaces Supported: RS-232C, IEEE 488, CCITT, Dril W-8
Advanced Functions: Performance Analysis, Configuration Control
Price:
Lease: $525
Distribution Method: End user, OEM, Third-party
Number Installed to Date: Over 100
Date First Installed: July 1982

UNGERMANN-BASS, INC.
NET/ONE FIBER OPTICS NETWORK INTERFACE UNIT
Topology: Star
Network Type: Baseband
Maximum Physical Connections: 1,024
Maximum Distance: 9,184 Feet
Transmission Media: Fiber Optics
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Synchronous, Bisynchronous, SDLC, HDLC, Ascii, DDCMP
Network Compatibility: IBM SNA, DEC DNA/Decnet, IBM BSC, Honeywell DSE/DSA, Burroughs BNA, Sperry DCA, XNS (Xerox), Telenet
Interfaces Supported: RS-232C, IEEE 488, CCITT, Dril W-8
Advanced Functions: Performance Analysis, Usage/Traffic Reporting, Configuration Control
Price:
Lease: $620
Distribution Method: End user, OEM, Third-party

UNGERMANN-BASS, INC.
SERIES 600 PRODUCTS
Topology: Bus (tree)
Network Type: Broadband
Transmission Media: Terrestrial Coaxial Cable
Access Method: Modems
Protocols Supported: Asynchronous, Synchronous
Interfaces Supported: RS-232C, CCITT
Distribution Method: End user, OEM, Third-party
Number Installed to Date: 8,100
Date First Installed: August 1977

WESTERN TELEMATIC, INC.
SS-6
Topology: Bus (tree)
Network Type: Baseband
Maximum Physical Connections: 8
Maximum Distance: 1,000 Feet
Transmission Media: Terrestrial Twisted Wire, Ribbon/Parallel Wire
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Asynchronous
Interfaces Supported: RS-232C
Advanced Functions: Status Indicator
Price:
Purchase: $995
Distribution Method: End user, OEM, Third-party
Number Installed to Date: Over 100
Date First Installed: January 1983
(See Vendor Profile Page V-33)

WINDROCK, INC.
WINNET
Topology: Ring
Network Type: Broadband
Maximum Physical Connections: 432
Maximum Distance: 2,000 Feet
Transmission Media: Terrestrial Twisted Wire
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Synchronous, Bisynchronous, Ascii
Network Compatibility: IBM SNA
Interfaces Supported: RS-232C, RS-449
Advanced Functions: Security/Encryption, Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $100
Average Monthly Maintenance: $1
Distribution Method: End user
Number Installed to Date: Over 100
Date First Installed: November 1982
(See Vendor Profile Page V-33)

XEROX CORP.
ETHERNET
Topology: Bus (Linear and Tree)
Network Type: Baseband
Maximum Physical Connections: 1,024
Maximum Distance: 2 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: Asynchronous, Synchronous, Bisynchronous
Network Compatibility: IBM BSC, XNS (Xerox)
Interfaces Supported: RS-232C, X.25
Advanced Functions: Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $500 to $20,000
Distribution Method: Third-party
Number Installed to Date: Over 100
Date First Installed: 1981
(See Vendor Profile Page V-33)

XYPLEX, INC.
XYPLEX SYSTEM
Topology: Bus (Linear)
Network Type: Broadband
Maximum Physical Connections: 255
Maximum Distance: 8 Miles
Transmission Media: Terrestrial Coaxial Cable
Access Method: Distributed CSMA/CD (Contention Type)

Protocols Supported: Asynchronous
Interfaces Supported: RS-232C, RS-422/423, RS-449, CCITT
Advanced Functions: Diagnostics, Performance Analysis, Usage/Traffic Reporting
Price:
Purchase: $300
Distribution Method: End user
(See Vendor Profile Page V-33)

ZYTEL, INC.
ZTEL LAN
Topology: Ring
Network Type: Baseband
Transmission Media: Terrestrial Twisted Wire, Coaxial Cable, Fiber Optics
Access Method: Distributed Token Passing (Polling Types)
Protocols Supported: Asynchronous, Hasp, Synchronous, X.25, Bisynchronous, T-1, SDLC, HDLC, Ascii
Network Compatibility: IBM SNA, DEC DNA/Decnet, IBM BSC, Honeywell DSE/DSA, Burroughs BNA, Primenet, Sperry DCA, XNS (Xerox), HP DSN, Arc Unit, Omninet, Telenet, DDS, Tymnet
Interfaces Supported: RS-232C, RS-449, IEEE 802.5
Advanced Functions: Diagnostics, Performance Analysis, Usage/Traffic Reporting
Distribution Method: Third-party
(See Vendor Profile Page V-34)

3 COM CORP.
ETHERSERIES
Topology: Bus (tree)
Network Type: Baseband
Maximum Physical Connections: 1,024
Maximum Distance: 7,000 Feet
Transmission Media: Terrestrial Coaxial Cable, Fiber Optics
Access Method: Distributed CSMA/CD (Contention Type)
Protocols Supported: XNS
Network Compatibility: IBM SNA, XNS (Xerox)
Interfaces Supported: RS-232C, SNA, X.25
Advanced Functions: Diagnostics, Usage/Traffic Reporting
Price:
Purchase: $950
Distribution Method: Third-party
(See Vendor Profile Page V-34)

SOFTWARE

Index to Communications Software

This product category includes software products that are specifically designed to perform communications functions, including teleprocessing monitoring and terminal and network management. The index has been arranged alphabetically by vendor and contains information on the memory required to run the product, the price and the page on which the complete product listing can be found.

VENDOR	MODEL	MEMORY REQUIRED	PRICE	PAGE
A. B. Dick Co.	A B DICK COMPANY HASP	64.0K bytes	$418	C-21

Additional Product Classification: Communications/TP Monitors
Specific Application: Data Communications
System Requirements: AB Dick Magna Writer, CP/M; AB Dick Magna III, CP/M; AB Dick Magna SL, CP/M
Memory Required: 64.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $400
Date First Installed: March 1983

A. B. DICK CO.
A B DICK BIS 3780TM
Additional Product Classification: Communications/TP Monitors
Specific Application: Data Communications 2780/3780
System Requirements: AB Dick Magna Writer, CP/M; AB Dick Magna III, CP/M; AB Dick Magna SL, CP/M
Memory Required: 64.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $400
Date First Installed: March 1983

ABT ASSOCIATES
DATA TRANS
Additional Product Classification: Communications/TP Monitors
Specific Application: Automatic Telecommunication and Data Transfer; Will Run at 300 or 1200 Baud
System Requirements: Apple II+, Apple DOS
Memory Required: 48.0K bytes
Source Language: Basic
Source Code Available: No
Purchase Terms: Purchase (license) - $100
Number Installed to Date: 1,000
Date First Installed: September 1982
(See Vendor Profile Page V-1)

ACCESS TELECOMMUNICATIONS
ACCESS 34/36/38
Additional Product Classification: Communications/TP Monitors
Specific Application: Provides Asynchronous Communication for IBM System/34, 36, 38
System Requirements: IBM System/34, 36, 38: DOS
Source Language: RPG-II, Assembler
Source Code Available: No
Purchase Terms: Purchase (license)
Number Installed to Date: 100
Date First Installed: November 1981
(See Vendor Profile Page V-1)

ADTECH/HONEYWELL
6I
Additional Product Classification: Communications/TP Monitors
Specific Application: Analog Communications Package
Specific Industry: Telecommunications
System Requirements: DG: RTOS
Memory Required: 256.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license)
Number Installed to Date: 94
Date First Installed: 1978
(See Vendor Profile Page V-1)

ADTECH/HONEYWELL
6I
Additional Product Classification: Communications/TP Monitors
Specific Application: Digital Communication Package
Specific Industry: Telecommunications
System Requirements: DG: RTOS
Memory Required: 256.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license)
Number Installed to Date: 94

ADVANCED COMPUTER TECHNIQUES
ACT NETWORK PROCESSOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Comprehensive Communications Controller
Specific Industry: Communication
System Requirements: Honeywell DPS 6, Honeywell Level 6
Source Language: Assembler
Purchase Terms: Purchase (license)
Number Installed to Date: 10
Date First Installed: 1981
(See Vendor Profile Page V-1)

ADVANCED INFORMATION MANAGEMENT
ABI/FILE CONVERSION SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Menu-Driven Aid for Converting from One Machine to Another
System Requirements: IBM 370; IBM 30XX; IBM 43XX
Source Language: Cobol
Purchase Terms: Purchase (license); Rental; Lease
Date First Installed: 1982

ADVANCED MICRO TECHNIQUES
INTELLIGENT TERMINAL - VERSION 1
Additional Product Classification: Communications/TP Monitors
Specific Application: Asynchronous Communication Package
System Requirements: CP/M, MP/M
Memory Required: 48.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $150
Number Installed to Date: 500
Date First Installed: June 1981
(See Vendor Profile Page V-1)

ADVANCED MICRO TECHNIQUES
MICROTLX - VERSION 1.02
Additional Product Classification: Communications/TP Monitors
Specific Application: Converts CP/M Into Telex/TWX Machine
System Requirements: MP/M, CP/M
Memory Required: 48.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $150
Number Installed to Date: 7,000
Date First Installed: 1982

ADVANCED SOFTWARE PRODUCTS, INC.
3101 EMULATOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Emulates 3101 Terminal
System Requirements: IBM PC
Memory Required: 128.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $300
Number Installed to Date: 100
Date First Installed: 1982
(See Vendor Profile Page V-1)

ADVANCED SYSTEMS CONCEPTS, INC.
PRISM PROFESSIONAL INTER SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Emulates IBM 3278 With 3278 Model 2 Display Station Intersystem Communications Via Tasks
System Requirements: DEC Professional 300, P/OS
Memory Required: 512.0K bytes
Source Language: Basic
Source Code Available: No
Purchase Terms: Purchase (license) - $585
Number Installed to Date: 120
Date First Installed: June 1983

ADVANCED SYSTEMS CONCEPTS, INC.
REMOTE PRINTER SUPPORT
Additional Product Classification: Communications/TP Monitors
Specific Application: Transports, Queues and Spools Report to Other Remote Systems Via Decnet
System Requirements: DEC VAX, VMS
Memory Required: 1.0M bytes
Source Language: Macro
Source Code Available: No
Purchase Terms: Purchase (license) - $1,500
Number Installed to Date: 1
Date First Installed: June 1983

ALPHAMASTRIX, INC.
BATCH EMULATOR 2780/3780/3741
Additional Product Classification: Communications/TP Monitors
Specific Application: Batch File Transfer from Micro to Mainframe
System Requirements: IBM, MTX-80; Burroughs; Sperry
Memory Required: 16.0K bytes
Source Language: Assembler
Number Installed to Date: 600
Date First Installed: 1978
(See Vendor Profile Page V-1)

ALPHA SYSTEMS LTD.
ALPHACOMM
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Package
System Requirements: Compucorp 600, 700 Series; Zebra
Memory Required: 64.0K bytes
Source Language: Compiled Basic
Purchase Terms: Purchase (license) - $200
Number Installed to Date: 7
Date First Installed: 1980
(See Vendor Profile Page V-1)

ALPHA SYSTEMS LTD.
MICOMM
Additional Product Classification: Communications/TP Monitors
Specific Application: TTY Terminal Simulator
System Requirements: Jeequard 100, 200, 300, 500
Memory Required: 64.0K bytes
Source Language: Compiled Basic
Purchase Terms: Purchase (license) - $100
Number Installed to Date: 5
Date First Installed: 1978

ALTERGO PRODUCTS, INC.
ALTERGO PRODUCTS SHADOW II
Additional Product Classification: Communications/TP Monitors
Specific Application: Full Function Teleprompter Monitor
System Requirements: IBM 30XX, 4300: DOS/VSE, OS, VS
Memory Required: 100.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license;

Rental - $26,000
Number Installed to Date: 7,400
Date First Installed: 1975
(See Vendor Profile Page V-1)

THE ALTERNATE SOURCE
TCOM
Additional Product Classification: Communications/TP Monitors
Specific Application: Tape-Based Communication; Full Uploading and Downloading
System Requirements: TRS-80/3: DOS/80; TRS-80/4: TRS-DOS, DOS/Plus, MultI-DOS
Purchase Terms: Purchase (license) - $29
Number Installed to Date: 50
Date First Installed: October 1982
(See Vendor Profile Page V-2)

THE ALTERNATE SOURCE
TRAKCESS
Additional Product Classification: Communications/TP Monitors
Specific Application: Access Floppy Disk Controller, Perform Track I/O
System Requirements: TRS-80/t: MultI-DOS; TRS-80/3: DOS/80; TRS-80/4: TRS-DOS, DOS/Plus
Source Language: Basic
Purchase Terms: Purchase (license) - $29
Number Installed to Date: 500
Date First Installed: November 1982

THE ALTERNATE SOURCE
TRS-80 COMMUNICATION
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows TRS-80 to Talk to Micros and Mainframes
System Requirements: TRS-80/t: MultI-DOS; TRS-80/3: DOS/80; TRS-80/4: TRS-DOS, DOS/Plus
Memory Required: 32.0K bytes
Source Language: Z80
Purchase Terms: Purchase (license) — $39
Number Installed to Date: 1,000
Date First Installed: February 1980

AMERICAN COMPUTER & ELECTRONICS CORP.
HASP 950
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Link Between TI and IBM
Memory Required: 25.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $5,000
Date First Installed: 1981
(See Vendor Profile Page V-2)

APPLIED SYNERGETICS, INC.
FREEFORM/3000
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Interface for HP Terminals Only
System Requirements: HP 3000, MPE
Source Language: SPL
Source Code Available: No
Number Installed to Date: 34
Date First Installed: 1977
(See Vendor Profile Page V-2)

APPLIED SYNERGETICS, INC.
TERMINAL/3000
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Interface Between HP 3000 and Non-HP Terminals
System Requirements: HP 3000, MPE
Source Language: SPL
Source Code Available: No
Purchase Terms: Purchase (license); Lease - $2,500
Number Installed to Date: 34
Date First Installed: 1977

APPLIED DATA RESEARCH, INC.
ADR/DATACOM/DC - RELEASE 4
Additional Product Classification: Communications/TP Monitors
Specific Application: TP Monitor
System Requirements: IBM Series 370, 30XX: OS, DOS
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license); Rental; Lease - $13,600 to $51,500
(See Vendor Profile Page V-2)

APPLIED INFORMATION SYSTEMS, INC.
COMMUNICATION SYSTEM-VERSION 2.0
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications
System Requirements: DEC PDP-11 Series, VAX-11 Series, Professional 300
Memory Required: 3.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license) - $4,400
Number Installed to Date: 75
Date First Installed: 1974
(See Vendor Profile Page V-2)

ARBAT SYSTEMS LTD.
ARBAT SERIES 700 INTELEX SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Automatic Telex System
Specific Industry: Banking/Financial
System Requirements: DEC PDP-11; DEC VAX, VMS
Memory Required: 512.0K bytes
Source Language: Aims Basic
Purchase Terms: Purchase (license); Source Code Available: No
Number Installed to Date: 25
Date First Installed: 1980
(See Vendor Profile Page V-2)

ASHTON, INC.
ELECTRONIC MESSAGE SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Simulates Electronic Mail Center and Remote Data Base
System Requirements: IBM PC; MS-DOS; Apple III: DOS
Memory Required: 64.0K bytes
Source Language: Basic
Purchase Terms: Purchase (license) - $495
Number Installed to Date: 10
Date First Installed: February 1983
(See Vendor Profile Page V-3)

ATOM INTERNATIONAL, INC.
MICRO/REMOTE 2780/3780 EMULATOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows Micro or Minicomputer to Emulate IBM 2780 or 3780 Remote Batch Terminals
System Requirements: CP/M
Memory Required: 24.0K bytes
Source Language: C
Purchase Terms: Purchase (license) - $25,000
Date First Installed: November 1982
(See Vendor Profile Page V-3)

ATOM INTERNATIONAL, INC.
MICRO/REMOTE 3270 EMULATOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Emulates IBM 3275 Interactive Data Terminal Using Bisynchronous Protocol
System Requirements: Unix, CP/M
Memory Required: 24.0K bytes
Source Language: C
Purchase Terms: Purchase (license) - $25,000
Date First Installed: November 1982

AUTOMATED BUSINESS CENTERS
COMM-HANDLER
Additional Product Classification: Communications/TP Monitors
Specific Application: Remote Communication With Other Computers
System Requirements: SWT, Unilex
Memory Required: 128.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license) - $295
Number Installed to Date: 25
Date First Installed: 1982
(See Vendor Profile Page V-3)

AUTOMATED PROFESSIONAL SYSTEMS
APSTRAN
Additional Product Classification: Communications/TP Monitors
Specific Application: Transfers Data Between Various Incompatible File Formats
System Requirements: CP/M 80, CP/M 86, MS-DOS, PC-DOS
Memory Required: 64.0K bytes
Source Language: Pascal
Source Code Available: No
Purchase Terms: Purchase (license)
Date First Installed: September 1983
(See Vendor Profile Page V-3)

AUTOMATION SCIENCE, INC.
THINKER-PC
Additional Product Classification: Communications/TP Monitors
Specific Application: Uses IBM PC to Interface With Online Systems
System Requirements: IBM PC
Purchase Terms: Lease
(See Vendor Profile Page V-3)

BARR SYSTEMS, INC.
BARR/HASP
Additional Product Classification: Communications/TP Monitors
Specific Application: HASP Multileaving Work Station Package for The IBM PC
System Requirements: IBM PC, PC-DOS
Memory Required: 128.0K bytes
Source Language: Macro Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $750
Number Installed to Date: 20
Date First Installed: August 1983
(See Vendor Profile Page V-3)

BASIC BUSINESS CONTROL SYSTEMS, INC.
ELECTRONIC SCALE POLLING SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Sends and Retrieves Data to and from Multiple Electronic Scales
Specific Industry: Retail
System Requirements: IBM Series 1, EDX; IBM, DOS
Memory Required: 128.0K bytes
Source Language: EDL, Assembler
Source Code Available: No
Purchase Terms: Purchase (license)
Number Installed to Date: 1
Date First Installed: May 1983
(See Vendor Profile Page V-4)

BASIC BUSINESS CONTROL SYSTEMS, INC.
ELECTRONIC TIME CLOCK POLLING SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Sends and Retrieves Data to and from Intelligent Stand-Alone Electronic Time Clock
System Requirements: IBM Series/1, EDX
Memory Required: 128.0K bytes
Source Language: EDL
Source Code Available: No
Purchase Terms: Purchase (license)
Number Installed to Date: 1
Date First Installed: May 1983

BASS SPEED ASSOCIATES, INC.
VMDS
Additional Product Classification: Communications/TP Monitors
Specific Application: Connecting Intel Development Stations to Minicomputers for Shared Use
System Requirements: HP 1000: RTE; DEC PDP: RSX-11M
Source Language: Fortran
Source Code Available: No
Purchase Terms: Purchase (license) - $15,000
Number Installed to Date: 1

Date First Installed: October 1982
(See Vendor Profile Page V-4)

BENSON G. STONE & ASSOCIATES
TRSIS
Additional Product Classification: Communications/TP Monitors
Specific Application: Telecommunication Resources Improvement System
System Requirements: IBM, OS-DOS; Sperry; DEC PDP-11; TRS-80
Memory Required: 64.0K bytes
Source Language: Fortran
Purchase Terms: Purchase (license); Lease - $20,000 to $35,000
Number Installed to Date: 20
Date First Installed: June 1979

BORNEGAIN, HOLLERBY & HARRISON
VIRTEX
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications
System Requirements: NCR 8500; NCR 8600
Memory Required: 1.0M bytes
Source Language: Cobol 74
Purchase Terms: Purchase (license); Rental - $9,500
Number Installed to Date: 145
Date First Installed: May 1979
(See Vendor Profile Page V-4)

GAP INFORMATION SYSTEMS
LINEAR AND MATHEMATICAL PROGRAMMING SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: X.25 Software for Equipment Attached to Packet Switching Networks
System Requirements: IBM; DEC 20, VAX, Tops 20, VMS; Prime 650: Primos; Perkin-Elmer 3200: OS/32
Memory Required: 5.1M bytes
Source Language: PL/M-86, Assembler
Source Code Available: No
Purchase Terms: Purchase (license); Rental - $12,000
Number Installed to Date: 20
Date First Installed: June 1980
(See Vendor Profile Page V-5)

GAP INFORMATION SYSTEMS
TRANSIT INFORMATION TRANSFER SERVICES
Additional Product Classification: Communications/TP Monitors
Specific Application: Communication Betwen Computers Connected By Racal-Milgo's Planet
System Requirements: DEC PDP-11: RSX-11M; DEC VAX: VMS
Memory Required: 50.0K bytes
Source Language: C, Assembler
Purchase Terms: Purchase (license)

GARNEY ASSOCIATES, INC.
IMI/TELXON RECEIVE
Additional Product Classification: Communications/TP Monitors
Specific Application: Receive Data from Hand-Held Entry Devices to Computer
System Requirements: IBM Series/1, EDX
Memory Required: 64.0K bytes
Source Language: EDX - Series/1
Source Code Available: No
Purchase Terms: Purchase (license) - $3,000
Number Installed to Date: 4
(See Vendor Profile Page V-5)

GENTURY ANALYSIS, INC.
BOSS-3
Additional Product Classification: Communications/TP Monitors
Specific Application: Transaction Processor, Data-Entry Monitor and On-Line Program Development System for NCR Mainframe
System Requirements: NCR, VRX
Memory Required: 256.0K bytes
Source Language: Cobol, Next 3
Source Code Available: No
Purchase Terms: Purchase (license) - $12,000
Number Installed to Date: 500
Date First Installed: September 1977
(See Vendor Profile Page V-5)

GENCOM SYSTEMS, INC.
ENVIRON/1
Additional Product Classification: Communications/TP Monitors
Specific Application: On-Line Teleprocessing Communication Monitor
System Requirements: IBM: DOS, EDOS, OS, MVS
Source Language: Cobol
Source Code Available: No
Purchase Terms: Purchase (license) - $59,400
(See Vendor Profile Page V-5)

GENNETWORK
C-N-COMM MICRO/MAINFRAME COMMUNICATIONS
Additional Product Classification: Communications/TP Monitors
Specific Application: Permits The IBM PC to Upload and Download from An IBM Mainframe, Special Error Checking Protocol Insures Data Integrity
System Requirements: IBM PC, MS-DOS
Memory Required: 128.0K bytes
Source Language: Compiled Basic
Purchase Terms: Purchase (license) - $400
Date First Installed: June 1983
(See Vendor Profile Page V-5)

GENSI CORP.
TELECOMMUNICATIONS
Additional Product Classification: Communications/TP Monitors
Specific Application: Communicates With Service Bureau for Inquiry and Input
Specific Industry: Banking/Financial
System Requirements: Wang 2200
Memory Required: 32.0K bytes
Source Language: Basic
Source Code Available: No
Purchase Terms: Purchase (license) - $2,500
Number Installed to Date: 18
(See Vendor Profile Page V-5)

GESEN PRO ASSOCIATES
NAS (NETWORK ACCESS SYSTEM)
Additional Product Classification: Communications/TP Monitors
Specific Application: X.25 Support 3705
System Requirements: IBM 3705, VS; IBM 4705, MVS, VM, MVT
Memory Required: 64.0K bytes
Source Language: Assembler
Purchase Terms: Lease
Number Installed to Date: 200
Date First Installed: 1977
(See Vendor Profile Page V-5)

GESEN PRO ASSOCIATES
PP01
Additional Product Classification: Communications/TP Monitors
Specific Application: Automatic Speed Select
System Requirements: IBM 3705: VM; IBM 4705: MVS, VS, MVT
Memory Required: 48.0K bytes
Source Language: Assembler
Source Code Available: Yes
Purchase Terms: Lease
Number Installed to Date: 25
Date First Installed: 1973

GESEN PRO ASSOCIATES
PP02
Additional Product Classification: Communications/TP Monitors
Specific Application: Code Conversion (ASCII to 2741)
System Requirements: IBM 3705: VM; IBM 4705: MVS, VS, MVT
Memory Required: 48.0K bytes
Source Language: Assembler
Purchase Terms: Lease
Number Installed to Date: 25
Date First Installed: 1973

GESEN PRO ASSOCIATES
PP03
Additional Product Classification: Communications/TP Monitors
Specific Application: PP01 and PP02 Combined
System Requirements: IBM 3705: VS; IBM 4705: MVS, VM, MVT
Memory Required: 48.0K bytes
Source Language: Assembler
Purchase Terms: Lease
Number Installed to Date: 25
Date First Installed: September 1973

GESEN PRO ASSOCIATES
PP04
Additional Product Classification: Communications/TP Monitors
Specific Application: Terminal Switching Plus PP03 Features
System Requirements: IBM 3705: VS; IBM 4705: MVS, VM, MVT
Memory Required: 48.0K bytes
Source Language: Assembler
Purchase Terms: Lease
Number Installed to Date: 75
Date First Installed: 1983

GESEN PRO ASSOCIATES
VLSW (VIRTUAL LINE SWITCH)
Additional Product Classification: Communications/TP Monitors
Specific Application: Switch Between EP and NPP (PP01-PP04 Integrated)
System Requirements: IBM 3705, VS; IBM 4705, MVS, VM, MVT
Memory Required: 256.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Lease
Number Installed to Date: 27
Date First Installed: 1977

GOSEPCOM GOSEP.
ACCESS
Additional Product Classification: Communications/TP Monitors
Specific Application: Network Communications Package That Provides Network Protocol for Interconnecting Computers
System Requirements: DEC VAX, VMS
Source Language: C
Purchase Terms: Purchase (license) - $15,000
Number Installed to Date: 25
Date First Installed: 1982
(See Vendor Profile Page V-6)

GOSEPH-GRANT
COSCOM
Additional Product Classification: Communications/TP Monitors
Specific Application: Computer Communication and Terminal Emulator
System Requirements: Osborne: CP/M; Kaypro-II: CP/M; Xerox 820: CP/M
Memory Required: 12.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $95
Date First Installed: February 1982
(See Vendor Profile Page V-6)

GOSEPH-GRANT
CPMCPM
Additional Product Classification: Communications/TP Monitors
Specific Application: File Transfer Between Computers
System Requirements: Osborne: CP/M; Xerox 820: CP/M; Kaypro-II: CP/M
Memory Required: 8.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license) - $95
Date First Installed: March 1982

GOSEPH-STAFF, INC.
BSWP
Additional Product Classification: Communications/TP Monitors
Specific Application: Bank Switch Interface, Processor Interface, IBM Based Machine With NCR Electronic Funds Transfer Switch
Specific Industry: Banking/Financial
System Requirements: IBM 4300: DOS; IBM 3030: OS; IBM 3080: MVS
Memory Required: 512.0K bytes
Source Language: Assembler, Macro
Source Code Available: No
Purchase Terms: Purchase (license) - $40,000

Number Installed to Date: 4
Date First Installed: 1982
(See Vendor Profile Page V-6)

COMPUTAX SYSTEMS, INC.
BETA DATA COMM HANDLER
Additional Product Classification: Communications/TP Monitors
Specific Application: Data Communications Package
System Requirements: Burroughs B90: CMS; Burroughs B900, B1900
Memory Required: 256.0K bytes
Source Language: Cobol
Source Code Available: No
Purchase Terms: Purchase (license) - $1,500
Date First Installed: 1979
(See Vendor Profile Page V-6)

COMPUTER COMMUNICATIONS SPECIALISTS, INC.
ACCA I
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows Communication With Hand-Held Asynchronous Terminals
System Requirements: IBM Series/1: EDX; IBM PC
Memory Required: 128.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license)
Number Installed to Date: 90
Date First Installed: 1979
(See Vendor Profile Page V-6)

COMPUTER COMMUNICATIONS SPECIALISTS, INC.
ACCA II
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows Communication With Hand-Held Asynchronous Terminals, POS Devices and CPUs
System Requirements: IBM Series/1: EDX; IBM PC
Memory Required: 128.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license)
Number Installed to Date: 5
Date First Installed: 1983

COMPUTER COMEN
DCS COMMUNICATIONS CONTROL SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Asynchronous Data Communications, File Transfer, TErminal Simulaton
System Requirements: Osborne 1: CP/M 2.2
Source Language: 8080 Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $79
Date First Installed: July 1983
(See Vendor Profile Page V-6)

COMPUTER INFORMATION ENTERPRISES
C-F-NETWORK
Additional Product Classification: Communications/TP Monitors
Specific Application: Install Series/1 Using Communication Facilities
System Requirements: IBM: EDX
Memory Required: 22.0K bytes
Source Language: EDL
Purchase Terms: Purchase (license)
Date First Installed: 1983
(See Vendor Profile Page V-7)

COMPUTER INFORMATION ENTERPRISES
CREDIT AUTHORIZATION INTERFACE
Additional Product Classification: Communications/TP Monitors
Specific Application: Protocol Conversion to Interface With Non-IBM Sales Control into IBM CICS Credit Host Package
System Requirements: IBM: EDX
Memory Required: 22.0K bytes
Source Language: EDL
Purchase Terms: Purchase (license)
Date First Installed: November 1982

COMPUTER INFORMATION ENTERPRISES
SWITCH NETWORK SUPPORT
Additional Product Classification: Communications/TP Monitors
Specific Application: Central Support for Series/1 and PC Dial-Up Networks
System Requirements: IBM: EDX
Memory Required: 22.0K bytes
Source Language: EDL
Purchase Terms: Purchase (license) - $20,000
Date First Installed: 1981

COMPUTER INFORMATION ENTERPRISES
TELEPHONE PBX SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Directive PBX Department Costing and Usage
System Requirements: IBM, EDX
Memory Required: 22.0K bytes
Source Language: EDL
Purchase Terms: Purchase (license)
Date First Installed: 1982

COMPUTER TOOLBOX, INC.
INTELLICOM
Additional Product Classification: Communications/TP Monitors
Specific Application: Terminal Emulator Communication Program
System Requirements: DEC VT180: CP/M; IBM PC-XT: PC-DOS; Northstar Advantage: CP/M
Memory Required: 56.0K bytes
Source Language: C
Purchase Terms: Purchase (license) - $50 to $250
Date First Installed: September 1982
(See Vendor Profile Page V-7)

COMPUTER TOOLBOX, INC.
INTELLICOM VER 1.5
INTELLIGENT COMMUNICATIONS
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications and Terminal Emulation With Data Capture and Transmission Capabilities
System Requirements: DEC VT180: CP/M; Northstar Advantage: CP/M; IBM PC: PC-DOS
Memory Required: 56.0K bytes
Source Language: C
Purchase Terms: Purchase (license) - $49
Number Installed to Date: 200
Date First Installed: September 1982

COMPUTERWARE SOFTWARE UNLIMITED
HAROLD TP MONITOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Generalized TP Monitor
System Requirements: IBM 370 Series: DOS; IBM 4300 Series: DOS/VS, DOS/VSE
Memory Required: 100.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license); Rental; Lease - $3,000
Number Installed to Date: 40
Date First Installed: June 1980
(See Vendor Profile Page V-7)

COMPUTRISE, INC.
POINT OF SALES COMMUNICATIONS MANAGEMENT
Additional Product Classification: Communications/TP Monitors
Specific Application: Performs Two-Way Communications Operations Between POS Devices and IBM Mainframes
Specific Industry: Retail
System Requirements: IBM: DOS
Memory Required: 256.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license) - $30,000
Number Installed to Date: 1
Date First Installed: August 1981
(See Vendor Profile Page V-7)

COMPUTRONICS
AUTOBAND (AUTOMATIC BAND RATE)
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications
System Requirements: Prime, Primos
Memory Required: 8.0K bytes
Source Language: Fortran, PMA
Purchase Terms: Purchase (license) - $600
Number Installed to Date: 40
Date First Installed: August 1977
(See Vendor Profile Page V-7)

COMPUTRONICS
NETWORK
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Utility Allowing the Communication Between Prime Systems With Other Systems
System Requirements: Prime, Primos
Memory Required: 100.0K bytes
Source Language: Fortran
Source Code Available: No
Purchase Terms: Purchase (license) - $1,200
Number Installed to Date: 75
Date First Installed: December 1978

COMPUVIEW PRODUCTS
MODEM-86
TELECOMMUNICATIONS UTILITY
Additional Product Classification: Communications/TP Monitors
Specific Application: Networking OF Microcomputer Mainframe Access
System Requirements: IBM PC, CP/M-86, MS-DOS
Memory Required: 24.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $89
Number Installed to Date: 60
Date First Installed: October 1982
(See Vendor Profile Page V-7)

COMPUVIEW CORP.
CICS-AID
Additional Product Classification: Communications/TP Monitors
Specific Application: Provide English Language Diagnostics for CICS
System Requirements: IBM 370, 4300, 3000: MVS, DOS/VS, DOS, VSI
Memory Required: 40.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license); Lease - $6,000 to $8,000
Number Installed to Date: 10
Date First Installed: May 1983
(See Vendor Profile Page V-7)

CONTEL INFORMATION SYSTEMS
STAR -ELEVEN
Additional Product Classification: Operating Systems, Performance Measurement, Sysytem Resource Management, Communications/TP Monitors
Specific Application: Local-Area Network
System Requirements: DEC PDP-11: RSTS/E, RT-11; DEC VAX: VMS
Source Language: Fortran, Macro 11
Purchase Terms: Purchase (license) — $4,000
Number Installed to Date: 150
Date First Installed: 1980
(See Vendor Profile Page V-7)

CULLINET SOFTWARE, INC.
INTEGRATED DATABASE MANAGEMENT SYSTEM-DATA
Additional Product Classification: Communications/TP Monitors
Specific Application: Integrated System of Teleprocessing Functions
System Requirements: IBM 360, 370, 30XX
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license); Rental - $50,000
Number Installed to Date: 325
Date First Installed: June 1978
(See Vendor Profile Page V-8)

GULLIVET SOFTWARE, INC.
UNIVERSAL COMMUNICATIONS FACILITY
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications
System Requirements: IBM 360, 370, 30XX
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license); Rental - $40,000
Number Installed to Date: 301
Date First Installed: January 1981

G & W SIGGITEL LTD.
MX 200
Additional Product Classification: Communications/TP Monitors
Specific Application: Store and Forward Message Switching (Conversion)
System Requirements: DEC PDP-11/23; Scams
Memory Required: 128.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license) - $35,000
Number Installed to Date: 12
(See Vendor Profile Page V-4)

G & W SIGGITEL LTD.
MX 300
Additional Product Classification: Communications/TP Monitors
Specific Application: Store & Forward Message Switching (Conversion)
System Requirements: DEC PDP-11/34, Scams
Memory Required: 128.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license) - $50,000
Number Installed to Date: 48

G & W SIGGITEL LTD.
MX 700
Additional Product Classification: Communications/TP Monitors
Specific Application: Store & Forward Message Switching (Conversion)
System Requirements: DEC VAX Series, VMS
Memory Required: 128.0K bytes
Source Language: Assembler, Bliss
Purchase Terms: Purchase (license) - $150,000
Number Installed to Date: 10
Date First Installed: 1980

GYTROL, INC.
CYX-DC DATA COMMUNICATIONS MONITOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Data Communications Management
System Requirements: DEC PDP-11/24: RSX-11M; DEC VAX: VMS
Source Language: Assembler, Cobol
Purchase Terms: Purchase (license); Lease - $20,000 to $30,000
Number Installed to Date: 30
Date First Installed: August 1976
(See Vendor Profile Page V-4)

GYTROL, INC.
CYX-RT/DECNET REACH THROUGH
Additional Product Classification: Communications/TP Monitors
Specific Application: Connect DEC-CYX Systems Via Decnet
System Requirements: DEC VAX, VMS
Source Language: Cobol
Source Code Available: No
Purchase Terms: Purchase (license) - $5,000
Number Installed to Date: 10
Date First Installed: May 1983

GYTROL, INC.
CYX-RT/IBM REACH THROUGH
Additional Product Classification: Communications/TP Monitors
Specific Application: Connect DEC/CYX Systems and IBM Systems
System Requirements: DEC PDP: RSX-11M; DEC VAX: VMS
Source Language: Cobol
Source Code Available: No
Purchase Terms: Purchase (license) - $4,600 to $7,000
Number Installed to Date: 20

GYTROL, INC.
CYX-RT/IBM REACH THROUGH
Additional Product Classification: Communications/TP Monitors
Specific Application: Connect DEC/CYX Systems and IBM Systems
System Requirements: DEC PDP: RSX-11M; DEC VAX: VMS
Source Language: Cobol
Source Code Available: No
Purchase Terms: Purchase (license) - $4,600 to $7,000
Number Installed to Date: 20

GYTROL, INC.
CYX-TRANSACTION PROCESSING SYSTEM
Additional Product Classification: DBMS, Communications/TP Monitors
Specific Application: Provides Data Communications Management and Data Base Management for DEC PDP-11 and VAX-Based Systems
System Requirements: DEC PDP-11: RSX-11M; DEC VAX: VMS
Memory Required: 144.0K bytes
Source Language: Assembler, Cobol
Source Code Available: No
Purchase Terms: Purchase (license); Lease - $30,000 to $45,000
Number Installed to Date: 30
Date First Installed: August 1976

RAMFORD CORP.
TECTRONICS TERMINAL EMULATOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Terminal Emulator
Specific Industry: Engineering
System Requirements: Apollo, Aegis
Memory Required: 512.0K bytes
Source Language: Fortran
Source Code Available: No
Purchase Terms: Purchase (license) - $1,500
Number Installed to Date: 2
Date First Installed: 1983
(See Vendor Profile Page V-6)

SATA WEEK, INC.
ZIX - TERMINAL CONTROL SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Managed Terminal and Memory Space
System Requirements: IBM Series/1: EDX
Memory Required: 128.0K bytes
Source Language: EDL, Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $5,000
Number Installed to Date: 3
Date First Installed: April 1983
(See Vendor Profile Page V-6)

DATALEX CO.
PASSPORT-MICRO-TO HOST COMPUTER
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Package Micro to Host
System Requirements: IBM; HP 200, UCSD-p System; TI Professional: PC-DOS, CP/M 86
Memory Required: 128.0K bytes
Source Language: Pascal
Purchase Terms: Purchase (license)
Number Installed to Date: 100
Date First Installed: May 1983
(See Vendor Profile Page V-6)

DATAMARK SYSTEMS, INC.
IBM CHANNEL CONTROL UNIT EMULATOR
Additional Product Classification: Data/File Management, Program Generators/Aids/Application Development Tools, Communications/TP Monitors
Specific Application: Front End, Networking, Satellite Communications
Memory Required: 64.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license); Rental; Lease - $5,000
Number Installed to Date: 50
Date First Installed: 1977
(See Vendor Profile Page V-6)

DATAMARK SYSTEMS, INC.
LOCAL HIGH-SPEED DATA LINK
Additional Product Classification: Communications/TP Monitors
Specific Application: Local-Area Network High-Speed Data Link
Memory Required: 64.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license); Rental; Lease - $2,000 to $5,000
Number Installed to Date: 28
Date First Installed: February 1981

DATAPOINT CORP.
ARC
Additional Product Classification: Communications/TP Monitors
Specific Application: Local-Area Network Sector Server Software
System Requirements: Datapoint 5500, 6600, 3600: DOS
Memory Required: 128.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license) - $1,500
Number Installed to Date: 5,000
(See Vendor Profile Page V-6)

DATAPOINT CORP.
CHANNEL PRODUCTS BC10, CHOUR, MLCI
Additional Product Classification: Communications/TP Monitors
Specific Application: Direct Attachment to IBM Compatible-Byte Multiplexer Channel for Information Transfer to and from IBM to PCM Host
System Requirements: Datapoint 6600: DOS
Memory Required: 128.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) —$1,500

DATASOFT, INC.
TELE-TALK
Additional Product Classification: Communications/TP Monitors
Specific Application: Home Communications
Specific Industry: Home
System Requirements: Atari
Source Code Available: No
Purchase Terms: Purchase (license) - $49
Number Installed to Date: 9,000
Date First Installed: 1982
(See Vendor Profile Page V-6)

DATA SYSTEMS OF BATON ROUGE
BLAST
Additional Product Classification: Communications/TP Monitors
Specific Application: Computer to Computer Communication Software Package
System Requirements: DG; Apple II, CP/M; IBM PC, MS-DOS; DEC VAX, VMS
Memory Required: 48.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $250 to $1,395
Number Installed to Date: 200
Date First Installed: 1980
(See Vendor Profile Page V-6)

DATA TECHNOLOGY INDUSTRIES
CDNTE
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications
Purchase Terms: Purchase (license); Lease - $175
(See Vendor Profile Page V-6)

THE DATELEX CO., INC.
PASSPORTS SYSTEM
Additional Product Classification: Communications/TP Monitors

Specific Application:
Communication System Between Micros and Mainframes
Specific Industry: Fortune 1000
System Requirements: IBM PC, UCSD; HP 125; DEC Rainbow
Memory Required: 128.0K bytes
Source Language: Pascal
Purchase Terms: Purchase (license) - $500
Number Installed to Date: 1,000
Date First Installed: 1981
(See Vendor Profile Page V-9)

BGA/TAC
E-78
Additional Product Classification:
Communications/TP Monitors
Specific Application: File Transfer Package
System Requirements: IBM PC: DOS 1.1/2.0, MDS TSO; IBM: VM
Memory Required: 128.0K bytes
Source Language: Assembler, C
Source Code Available: Yes
Purchase Terms: Purchase (license)
Number Installed to Date: 20,000
Date First Installed: December 1982
(See Vendor Profile Page V-10)

BGA/TAC
FT78
Additional Product Classification:
Communications/TP Monitors
Specific Application: Allows Text File Transfer
System Requirements: IBM PC, MS-DOS; IBM 4300, VM, MVS
Memory Required: 128.0K bytes
Source Language: C
Purchase Terms: Purchase (license) - $1,195
Number Installed to Date: 10,000
Date First Installed: September 1983

BGA/TAC
IRMA INTERFACE SOFTWARE
Additional Product Classification:
Communications/TP Monitors
Specific Application: Allows You to Talk from One Host Through IBM 3274/76 Control to IBM PC
System Requirements: IBM PC: PC-DOS
Memory Required: 64.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license) - $1,195
Number Installed to Date: 1,000
Date First Installed: 1982

BIFARO SOFTWARE SYSTEMS, INC.
AUTOMATIC NETWORKING OPTION
Additional Product Classification:
Communications/TP Monitors
Specific Application: Automatic Networking
Specific Industry: Retail
System Requirements: IBM System/34, System/36
Memory Required: 96.0K bytes
Source Language: RPG-II
Purchase Terms: Purchase (license) - $5,000
Date First Installed: August 1982
(See Vendor Profile Page V-10)

DELTA SYSTEMS, INC.
WHITE BOX DOWNLOADER
Additional Product Classification:
Communications/TP Monitors
Specific Application: Allows 2 Computers to Send/Receive Data from Disk to Disk
System Requirements: ICL System 10: DMS 2; ICL System 25: DMS 3
Source Language: Assembler
Source Code Available: No
Purchase Terms: Lease
Number Installed to Date: 100
Date First Installed: March 1983
(See Vendor Profile Page V-10)

THE DESTEK GROUP
CENTRAL RESOURCE SERVER CRS VERSION 1
Additional Product Classification:
Communications/TP Monitors
Specific Application: Resource Sharing Software for,Unix Local-Area Network Applications
System Requirements: CP/M, PC-DOS, MS-DOS, Unix
Memory Required: 25.0K bytes
Source Language: C
Purchase Terms: Purchase (license) - $500
Number Installed to Date: 15
Date First Installed: May 1983
(See Vendor Profile Page V-10)

THE DESTEK GROUP
LOCAL-AREA NETWORK OPERATING SERVER
Additional Product Classification:
Communications/TP Monitors
Specific Application: Local-Area Network Software for CP/M, PC-DOS, MS-DOS, Unix
System Requirements: CP/M, PC-DOS, MS-DOS, Unix
Memory Required: 8.0K bytes
Source Language: C, Assembler
Purchase Terms: Purchase (license) - $100
Number Installed to Date: 30
Date First Installed: May 1983

E.S.M.
SOFTWARE HANDLER
Additional Product Classification:
Communications/TP Monitors
Specific Application: Reads Data Out Of Cash Register, Creates File on IBM
Specific Industry: Retail
System Requirements: IBM PC, PC-DOS
Memory Required: 64.0K bytes
Source Language: Basic
Purchase Terms: Purchase (license) - $99
Number Installed to Date: 50
Date First Installed: March 1983
(See Vendor Profile Page V-9)

GILES CO., INC.
DEC DV11 SYNCHRONOUS COMMUNICATIONS HANDLER
Additional Product Classification:
Communications/TP Monitors
Specific Application: Full Polling Capability With A Priority Output Schema
System Requirements: DEC PDP-11: DEC VAX, VMS
Memory Required: 12.0K bytes
Source Language: Fortran 77, Assembly
Purchase Terms: Purchase (license); Rental; Lease
Number Installed to Date: 1
Date First Installed: September 1982
(See Vendor Profile Page V-10)

INVERNESS CORP.
SINGLE BIT HEXADECIMAL SYSTEM
Additional Product Classification:
Communications/TP Monitors
Specific Application: Programmable Controller System Software
System Requirements: Diversitec
Memory Required: 2.0K bytes
Source Code Available: No
Purchase Terms: Purchase (license); Rental - $250
Number Installed to Date: 1,000
Date First Installed: June 1982
(See Vendor Profile Page V-10)

D. L. MACHIEL [illegible]
REMOTT
Additional Product Classification:
Communications/TP Monitors
Specific Application: Send Or Receive Source Or Save File from One Computer to Another
System Requirements: DEC, RT-11; DEC, RSX-11
Memory Required: 16.0K bytes
Source Language: Macro
Source Code Available: No
Purchase Terms: Purchase (license) - $450
Number Installed to Date: 20
Date First Installed: 1976
(See Vendor Profile Page V-08)

MRM GROUP
AMDMS ADVANCED NETWORK DESIGN
Additional Product Classification:
Communications/TP Monitors
Specific Application: Design of Banking (ATM) and Retail (POS) Networks
Specific Industry: Retail, Banking/Financial
System Requirements: IBM 370, 30XX, 43XX, MVS, TSO, CMS; DEC VAX; Amdahl 470, 5880
Memory Required: 400.0K bytes
Source Language: Fortran
Purchase Terms: Lease; Time-Sharing - $12,000
Number Installed to Date: 2
Date First Installed: January 1978
(See Vendor Profile Page V-11)

MRM GROUP
NDMS NETWORK DESIGN AND MANAGEMENT SYSTEM
Additional Product Classification:
Communications/TP Monitors
Specific Application: Design Management Reporting and Optimization OF Multistage, Multipoint Data Communications Networks
System Requirements: IBM 360, 370, 30XX, MVS, TSO, CMS; DEC VAX, VMS; Amdahl 470, 5880
Memory Required: 160.0K bytes
Source Language: Fortran
Purchase Terms: Lease; Time-sharing - $6,500
Date First Installed: January 1977

MRM GROUP
RETWORKER
Additional Product Classification:
Communications/TP Monitors
Specific Application: Design of Data Communications Networks
System Requirements: IBM 370, 30XX, 43XX, MVS, TSO, CMS; DEC VAX, VMS; Amdahl
Memory Required: 300.0K bytes
Source Language: Fortran, Cobol
Source Code Available: No
Purchase Terms: Lease; Time-sharing - $10,000 to $50,000
Number Installed to Date: 3
Date First Installed: November 1983

MRM GROUP
TELECOST
Additional Product Classification:
Communications/TP Monitors
Specific Application: Telecommunications Chargebkk and Allocation
System Requirements: IBM 360, 370, 30XX, 43X; TSO, CMS, MVS; DEC VAX: VMS; Amdahl 470, 5880
Memory Required: 200.0K bytes
Source Language: Cobol
Purchase Terms: Lease; Time-sharing - $22,000
Number Installed to Date: 25
Date First Installed: January 1980

MRM GROUP
TOP TELETRAFFIC OPTIMIZER PROGRAM
Additional Product Classification:
Communications/TP Monitors
Specific Application: Reduces Long Distance Usage Costs by Reconfiguration of The Facilities and Services
System Requirements: IBM 360, 370, 30XX, 43X; MVS, TSO, CMS; DEC VAX: VMS; Amdahl 470, 5880
Memory Required: 300.0K bytes
Source Language: Cobol, Fortran
Purchase Terms: Lease; Time-sharing - $20,000 to $40,000
Number Installed to Date: 18
Date First Installed: January 1979

MSM MICRO PRODUCTS, INC.
DISK TRANSFER
Additional Product Classification:
Communications/TP Monitors
Specific Application: Utility Program to Transfer OSI CP/M Format Disk to Standard CP/M IBM 3740 Format
System Requirements: Ohio Scientific: CP/M 2.2
Memory Required: 48.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $100
Date First Installed: January 1983

SOFT ASK COMPUTER SOFTWARE
TELETAM
Additional Product Classification:
Communications/TP Monitors

Specific Application:
Telecommunications Package
System Requirements: Atari: DOS
Memory Required: 32.0K bytes
Source Language: Machine
Source Code Available: No
Purchase Terms: Purchase (license) - $40
Date First Installed: January 1983
(See Vendor Profile Page V-11)

DUXBURY SYSTEMS, INC.
METERED UTILITY MONITORING SYSTEM
Additional Product Classification:
Communications/TP Monitors
Specific Application:
Communications
System Requirements: Northstar Horizon: DOS; Northstar Advantage: DOS
Memory Required: 36.0K bytes
Source Language: Northstar Basic
Source Code Available: No
Purchase Terms: Purchase (license) - $175
Number Installed to Date: 5
Date First Installed: January 1982
(See Vendor Profile Page V-11)

DYNAMIC MICROPROCESSOR ASSOCIATES
ASCOM
Additional Product Classification:
Communications/TP Monitors
Specific Application: Asynchronous Communication Package
System Requirements: CP/M, CP/M 86, MS-DOS, PC-DOS
Memory Required: 32.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $175
Number Installed to Date: 5,000
Date First Installed: January 1979
(See Vendor Profile Page V-11)

DYNAMIC SCIENCES
COSMO
Additional Product Classification:
Communications/TP Monitors
Specific Application: Complete Monitoring and Control System
System Requirements: DEC PDP-11, RSX-11M; HP, RTE; DEC PDP-11, RSTS/E
Memory Required: 32.0K bytes
Source Language: Fortran
Purchase Terms: Purchase (license)
Number Installed to Date: 5
Date First Installed: 1979
(See Vendor Profile Page V-11)

EFT COMPUTER SYSTEMS, INC.
MESSAGE-SWITCHING AND CONTROL SYSTEM
Additional Product Classification:
Communications/TP Monitors
Specific Application: Message Switching and Control System
Specific Industry: Banking/Financial
System Requirements: NCR 9040, 9050, 9300; IBM System/34; IBM System/36; IBM System/38
Memory Required: 128.0K bytes
Source Language: Cobol
Purchase Terms: Purchase (license)
Date First Installed: 1983
(See Vendor Profile Page V-11)

EFT COMPUTER SYSTEMS, INC.
PAYMENT AND CONTROL SYSTEM PACS
Additional Product Classification:
Banking, Data/File Management, Communications/TP Monitors
Specific Application: Paying and Receiving Money Transfers
Specific Industry: Banking/Financial
System Requirements: NCR 9040, 9050, 9300; IBM System/36
Memory Required: 256.0K bytes
Source Language: Cobol
Purchase Terms: Purchase (license) - $60,000
Number Installed to Date: 4
Date First Installed: 1977

EDGA CORP.
FAIL OVER PACKAGE
Additional Product Classification:
Communications/TP Monitors, Redundant CPUs
Specific Application: Redundant CPUs Networking Package
Specific Industry: Engineering, Scientific
System Requirements: DEC VAX-11/780, VMS; DEC VAX-11/750, VMS; DEC VAX-11/782, VMS
Source Language: Fortran, Macro
Purchase Terms: Purchase (license) - $50,000
Number Installed to Date: 5
Date First Installed: 1983
(See Vendor Profile Page V-11)

EVANS GRIFFITHS AND HART, INC.
BSC/DV
Additional Product Classification:
Communications/TP Monitors
Specific Application: Driver for DEC PDP-11 Handles Most BSC-Based Protocols
System Requirements: DEC PDP, RSTS/E
Memory Required: 96.0K bytes
Source Language: Macro-11
Purchase Terms: Purchase (license) - $5,000
Number Installed to Date: 9
Date First Installed: 1978
(See Vendor Profile Page V-11)

EVANS GRIFFITHS AND HART, INC.
COLINK
Additional Product Classification:
Communications/TP Monitors
Specific Application: Links Two RSTS/E Systems
System Requirements: DEC PDP-11, RSTS/E
Memory Required: 96.0K bytes
Source Language: Basic
Purchase Terms: Purchase (license) - $1,250
Date First Installed: 1979

EVANS GRIFFITHS AND HART, INC.
DIALUP
Additional Product Classification:
Communications/TP Monitors
Specific Application: Link for RSTS/E System to A Remote Computer Using Asynchronous Terminal Line
System Requirements: DEC PDP, RSTS/E
Memory Required: 96.0K bytes
Source Language: Basic
Number Installed to Date: 59
Date First Installed: 1979

EVANS GRIFFITHS AND HART, INC.
TAM
Additional Product Classification:
Communications/TP Monitors
Specific Application: Transaction-Processing Front End for the PDP-11
System Requirements: DEC PDP-11: RSTS/E, RSX-11M; DEC VAX, VMS
Memory Required: 96.0K bytes
Source Language: Basic, Macro-11
Purchase Terms: Purchase (license) - $6,000
Number Installed to Date: 88
Date First Installed: 1975

EVERGREEN CONSULTING, INC.
QUICK-TUBE
Additional Product Classification:
Communications/TP Monitors
Specific Application: TSO
System Requirements: IBM: OS/MVS
Source Language: Assembler
Purchase Terms: Rental; Lease - $650
Number Installed to Date: 120
Date First Installed: May 1978
(See Vendor Profile Page V-12)

EXEC SOFTWARE, INC.
TERMEXEC
Additional Product Classification:
Communications/TP Monitors
Specific Application: Allows An Apple II+ or Apple IIe to Operate As An Intelligent Terminal on A Variety Of Host Systems
System Requirements: Apple II+: Apple-DOS; Apple IIE: Pro-DOS, DOS 3.3
Memory Required: 48.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license) - $80
Number Installed to Date: 200
Date First Installed: January 1983
(See Vendor Profile Page V-12)

FALLON & ASSOCIATES, INC.
STANDARD & CUSTOM MICROBASED COMPUTER SUPPLY
Additional Product Classification:
Communications/TP Monitors
Specific Application: SNA, X.25 DCE, X.25 DTE, IBM 3270, 3780 BSC, Asynchronous, X-3, Asynchronous VIP 7700, IBM 3270 Emulation Protocols
Specific Industry:
Telecommunications
Source Language: Pascal, Assembler
Purchase Terms: Purchase (license)
Number Installed to Date: 200
Date First Installed: May 1981
(See Vendor Profile Page V-12)

FERROX MICROSYSTEMS, INC.
LOGON
Additional Product Classification:
Communications/TP Monitors
Specific Application:
Communication Package Allows Storage Of Configurations and Phone Numbers
Specific Industry: Banking/Financial
System Requirements: IBM PC, UCSD-P System: MS-DOS; Apple II: Apple-DOS
Memory Required: 128.0K bytes
Source Language: Pascal
Source Code Available: No
Purchase Terms: Purchase (license) - $150
Number Installed to Date: 500
(See Vendor Profile Page V-12)

FERRANTI COMPUTER CO.
COM/1
Additional Product Classification:
Communications/TP Monitors
Specific Application: File Transfer With IBM 2780 OR 3780 Compatible Devices
System Requirements: IBM Series/1, EDX
Memory Required: 22.0K bytes
Source Language: EDL
Purchase Terms: Purchase (license) - $2,395
Number Installed to Date: 12
Date First Installed: 1976
(See Vendor Profile Page V-12)

FORMULA CONSULTANTS, INC.
MESSAGE MANAGEMENT SYSTEM MMS-110
Additional Product Classification:
Communications/TP Monitors
Specific Application: Sends Messages from Terminal to Terminal
System Requirements: Sperry 1100, S 1100
Source Language: Cobol, Assembler
Purchase Terms: Purchase (license); Rental; Lease - $30,000
Date First Installed: July 1980
(See Vendor Profile Page V-12)

FORMULA CONSULTANTS, INC.
SUPER-SYNCHRONOUS UTS PROTOCOL
Additional Product Classification:
Communications/TP Monitors
Specific Application: Sperry Terminal Emulation
System Requirements: Xerox 560: CP/M
Memory Required: 48.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license) - $900
Number Installed to Date: 10
Date First Installed: June 1982

GAMMA TECHNOLOGY, INC.
GAMMA TECHNOLOGY WORKSTATIONS
Additional Product Classification:
Communications/TP Monitors

Specific Application: Protocol Emulation
System Requirements: DG: AOS/VS; DG MV Series: RTOS; DG Nova: RDOS
Memory Required: 32.0K bytes
Source Language: Assembly for TV
Source Code Available: Yes
Purchase Terms: Purchase (license) - $3,000 to $4,000
Number Installed to Date: 428
Date First Installed: 1976
(See Vendor Profile Page V-12)

GAMMA TECHNOLOGY, INC.
GT770 CENTRAL SITE GT770
Additional Product Classification: Communications/TP Monitors
Specific Application: 3270 Communication
System Requirements: DG Eclipse: AOS; DG Nova, R-DOS; RTOS
Memory Required: 32.0K bytes
Source Language: Assembly for TV
Purchase Terms: Purchase (license) - $4,000 to $8,500
Number Installed to Date: 5
Date First Installed: 1976

GAYLORD BROS., INC.
DIAL-UP INQUIRY
Additional Product Classification: Communications/TP Monitors
Specific Application: One or More Dial-up Ports to Exist On the GS-1000, 2000
Specific Industry: Library
System Requirements: Apple II+
Memory Required: 48.0K bytes
Source Language: Basic
Purchase Terms: Purchase (license) - $5,000
(See Vendor Profile Page V-12)

GAYLORD BROS., INC.
GS-500 MICRO COMPUTER NETWORK SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Has All Features OF GS-1000, Combines On-Line and Stand-Alone Processing
System Requirements: Apple II+
Memory Required: 48.0K bytes
Source Language: Basic
Purchase Terms: Purchase (license)

GAYLORD BROS., INC.
OCLC INTERFACE
Additional Product Classification: Communications/TP Monitors
Specific Application: Direct Transfer of an Edited Marc II Record On The OCLC
Specific Industry: Library
System Requirements: Apple II+
Memory Required: 48.0K bytes
Source Language: Basic
Purchase Terms: Purchase (license) - $6,000

GAYLORD BROS., INC.
VIM TERM
Additional Product Classification: Communications/TP Monitors
Specific Application: Enables Apple II to Communicate With Larger Computers or Other PCs
System Requirements: Apple II+
Memory Required: 48.0K bytes
Source Language: Basic
Purchase Terms: Purchase (license) - $100
Date First Installed: 1980

GEJAC, INC.
HASP VERSION 3
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications
System Requirements: DEC VAX-11: VMS; DEC PDP-11: RSX, IAS, RT-11
Memory Required: 16.0K bytes
Source Language: Assembler, Fortran
Source Code Available: Yes
Purchase Terms: Purchase (license); Rental; Lease - $3,500 to $5,500
Number Installed to Date: 500
Date First Installed: January 1978
(See Vendor Profile Page V-12)

GENASYS CORP.
TELIOS
Additional Product Classification: Communications/TP Monitors
Specific Application: Asynchronous Telecommunications Handler for IBM PC
System Requirements: IBM PC: DOS 2.0
Memory Required: 96.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license)
Number Installed to Date: 50
Date First Installed: January 1985
(See Vendor Profile Page V-12)

GENERAL DIGITAL INDUSTRIES, INC.
COMPAT/200
Additional Product Classification: Communications/TP Monitors
Specific Application: User 200 Workstation Emulator for Communication With CDC Cyber Systems
System Requirements: DEC: Unix
Memory Required: 256.0K bytes
Source Language: C
Purchase Terms: Purchase (license) - $3,000
Number Installed to Date: 10
Date First Installed: January 1982
(See Vendor Profile Page V-13)

GENERAL ELECTRIC INFORMATION
TS2.0
Additional Product Classification: Communications/TP Monitors
Specific Application: Communication Software
System Requirements: IBM PC: MS-DOS
Memory Required: 100.0K bytes
Source Language: Fortran
Purchase Terms: Purchase (license) - $250
Date First Installed: October 1982
(See Vendor Profile Page V-13)

GEORGE W. HALLAHAN & CO., INC.
XCHANGE-11
Additional Product Classification: Communications/TP Monitors
Specific Application: Micro Computer Communication and Networking
System Requirements: DEC PDP-11: RSTS/E; DEC VAX: RSX-11M
Source Language: Basic
Source Code Available: Yes
Purchase Terms: Purchase (license) - $99,500
Number Installed to Date: 28
Date First Installed: May 1982
(See Vendor Profile Page V-13)

G & G ENGINEERING
MODEM 9-16
Additional Product Classification: Communications/TP Monitors
Specific Application: Telecommunication Language for MP/M 86 System and for Concurrent CP/M 86
System Requirements: Compupro S100: CP/M, MP/M
Memory Required: 128.0K bytes
Source Language: C
Source Code Available: No
Purchase Terms: Purchase (license) - $295
Number Installed to Date: 85
Date First Installed: January 1983
(See Vendor Profile Page V-12)

GLENN A. BARBER AND ASSOCIATES
TSX-NET
Additional Product Classification: Communications/TP Monitors
Specific Application: Networking Package
System Requirements: DEC: RT11, TSX Plus, RSX 11; DEC VAX: VMS
Memory Required: 64.0K bytes
Purchase Terms: Purchase (license)
(See Vendor Profile Page V-13)

GOULD, INC.
HASP REMOTE WORKSTATION
Additional Product Classification: Communications/TP Monitors
Specific Application: Remote Job-Entry
System Requirements: Concept/32, MPX-32
Memory Required: 400.0K bytes
Purchase Terms: Purchase (license) - $3,000
(See Vendor Profile Page V-13)

GRANADA SYSTEMS DESIGN, INC.
INTERFACE
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows Host to Communicate With Multiple Hosts
Specific Industry: Banking/Financial
System Requirements: IBM Series/1, EDX
Memory Required: 96.0K bytes
Source Language: EDL
Number Installed to Date: 6
Date First Installed: July 1982
(See Vendor Profile Page V-13)

GRANADA SYSTEMS DESIGN, INC.
TELDEAR
Additional Product Classification: Communications/TP Monitors
Specific Application: Telephone Data Entry and Audio Response, Touch-Tone, Order Entry, Pay-By-Phone Sales Order Entry
Specific Industry: Wholesale/Distribution, Banking/Financial
System Requirements: IBM Series/1: EDX; IBM System/36, System/38: SSP
Memory Required: 96.0K bytes
Source Language: EDL
Purchase Terms: Purchase (license) - $12,500
Number Installed to Date: 6
Date First Installed: June 1981

GRAPHIC SOFTWARE SYSTEMS
GSS-TERMINAL
Additional Product Classification: Communications/TP Monitors
Specific Application: Terminal Emulation (Graphics Terminal from Micro)
System Requirements: IBM PC: MS-DOS, Unix
Memory Required: 128.0K bytes
Source Language: C
Purchase Terms: Purchase (license)
Number Installed to Date: 2,500
Date First Installed: August 1983
(See Vendor Profile Page V-13)

GUILD, INC.
THE GUILD CATALYST
Additional Product Classification: Communications/TP Monitors
Specific Application: Totally Portable Across Hardware, Enables Networking Between Micros, Minis and Mainframes
System Requirements: Motorola 68000: Catalyst; Zilog 8000: Catalyst; DEC: Catalyst; Sperry 1100: Catalyst
Memory Required: 64.0K bytes
Source Language: Extended Pascal
Purchase Terms: Purchase (license) - $250,000
Number Installed to Date: 5
Date First Installed: March 1982
(See Vendor Profile Page V-13)

GUNN ENTERPRISES, INC.
CUSTOM CDOS I/O DRIVERS
Additional Product Classification: Communications/TP Monitors
Specific Application: Terminal Interface
System Requirements: Cromemco: C-DOS
Memory Required: 64.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license) - $195
Number Installed to Date: 300
Date First Installed: 1977
(See Vendor Profile Page V-13)

GUNN ENTERPRISES, INC.
MODEM COMMUNICATIONS FOR CROMEMCO
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows Transfer of Programs to and from Cromix

System Requirements: Cromemco Cromix
Memory Required: 128.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $595
Number Installed to Date: 40
Date First Installed: 1982

M & A COMPUTER SYSTEMS
RBS-REMOTE SERIES 1 SERVICES
Additional Product Classification: Communications/TP Monitors
Specific Application: Remote Operation and Service
System Requirements: IBM Series/1, EDX
Memory Required: 8.0K bytes
Source Language: EDL
Source Code Available: No
Purchase Terms: Purchase (license) - $3,500
Number Installed to Date: 10
Date First Installed: 1982
(See Vendor Profile Page V-13)

HARRIS CORP.
RJE HOST
Additional Product Classification: Communications/TP Monitors
Specific Application: Remote Job Entry
System Requirements: Harris 600, 700, 800: VOS
Purchase Terms: Purchase (license) - $2,600
(See Vendor Profile Page V-14)

HARRIS CORP.
RJE TERMINAL EMULATION
Additional Product Classification: Communications/TP Monitors
Specific Application: Terminal Emulation
System Requirements: Harris 600, 700, 800: VOS

HERCOM SYSTEMS, INC.
CRTX
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications
System Requirements: IBM PC: MS-DOS; Columbia: MPC
Memory Required: 42.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $100
Number Installed to Date: 400
Date First Installed: 1981
(See Vendor Profile Page V-14)

HERCOM SYSTEMS, INC.
CRTXE
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications With Terminal Emulation
System Requirements: IBM PC: MS-DOS; Columbia: MPC
Memory Required: 42.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $250
Number Installed to Date: 200
Date First Installed: 1981

HERCOM SYSTEMS, INC.
REMOTE
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows the User to Remotely Execute A CP/M System
System Requirements: CP/M
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $60
Number Installed to Date: 80
Date First Installed: 1981

HORNE COMPUTER SERVICES
RPSS-REMOTE PRINTER SPOOLING
Additional Product Classification: Communications/TP Monitors
Specific Application: Remote Printer Spooling System
System Requirements: IBM 4300: DOS; IBM 370: CICS
Source Language: Assembler
Source Code Available: No
Purchase Terms: Lease
Number Installed to Date: 12
Date First Installed: 1981
(See Vendor Profile Page V-14)

HOUSTON COMPUTER SERVICES, INC.
OCTACOMM/940
Additional Product Classification: Communications/TP Monitors
Specific Application: Intelligent I/O Processor Interfaces with RS-232 Terminals Asyncronously
System Requirements: TI 990: DX-10, D-NOS; TI Professional: MS-DOS
Source Language: Assembler, Pascal
Purchase Terms: Purchase (license) - $2,750
Number Installed to Date: 180
Date First Installed: October 1982
(See Vendor Profile Page V-14)

HOUSTON INSTRUMENTS RESEARCH CORP.
TDC 2000 DRIVER
Additional Product Classification: Communications/TP Monitors
Specific Application: Communication Driver Between PDP-11 and Honeywell 2000
System Requirements: DEC PDP-11: RSX
Memory Required: 128.0K bytes
Source Language: Fortran
Purchase Terms: Purchase (license) - $4,500
Number Installed to Date: 3
Date First Installed: 1978
(See Vendor Profile Page V-14)

HOWARD W. SAMS & CO., INC.
HELLO CENTRAL!
Additional Product Classification: Communications/TP Monitors
Specific Application: A Terminal Control Program That Allows the User Computer to Talk to Other Computers Over Telephone Lines
System Requirements: Apple IIE; Apple II+; Apple II: DOS
Memory Required: 48.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license) - $99
(See Vendor Profile Page V-14)

HOWE SOFTWARE
SMART TERMINAL
Additional Product Classification: Communications/TP Monitors
Specific Application: Data Communications VIA RS-231C
System Requirements: TRS-80: TRS-DOS, CP/M
Source Language: Assembler, Delivered Machine
Purchase Terms: Purchase (license) - $75
Number Installed to Date: 400
Date First Installed: January 1980
(See Vendor Profile Page V-14)

HUNTER & READY, INC.
C INTERFACE LIBRARY (HEWLETT PACKARD)
Additional Product Classification: Communications/TP Monitors
Specific Application: Interfaces Programs Written in HPC to VRTX/68000
System Requirements: Motorola 68000
Source Language: Assembly
Purchase Terms: Purchase (license) - $450
Number Installed to Date: 100
Date First Installed: 1982
(See Vendor Profile Page V-14)

HUNTER & READY, INC.
C INTERFACE LIBRARY (HEWLETT PACKARD)
Additional Product Classification: Communications/TP Monitors
Specific Application: Interfaces Programs Written in HPC to VRTX/86
System Requirements: Intel 8086
Source Language: Assembly
Purchase Terms: Purchase (license) - $450
Number Installed to Date: 100
Date First Installed: 1982

HUNTER & READY, INC.
C INTERFACE LIBRARY (HEWLETT PACKARD)
Additional Product Classification: Communications/TP Monitors
Specific Application: Interfaces Programs Written IN HPC to VRTX/6002
System Requirements: Zilog Z8002
Source Language: Assembly
Purchase Terms: Purchase (license) - $450
Number Installed to Date: 100
Date First Installed: 1982

HUNTER & READY, INC.
C INTERFACE LIBRARY (IMT)
Additional Product Classification: Communications/TP Monitors
Specific Application: Interfaces Programs Written IN IMTC to VRTX/68000
System Requirements: Motorola 68000
Source Language: Assembly
Purchase Terms: Purchase (license) - $450
Number Installed to Date: 100
Date First Installed: 1982

HUNTER & READY, INC.
C INTERFACE LIBRARY (WHITE SMITHS)
Additional Product Classification: Communications/TP Monitors
Specific Application: Interfaces Programs Written IN White Smiths C to VRTX/68000
System Requirements: Motorola 68000
Source Language: Assembly
Purchase Terms: Purchase (license) - $450
Number Installed to Date: 100
Date First Installed: 1982

HUNTER & READY, INC.
C INTERFACE LIBRARY (WHITE SMITHS)
Additional Product Classification: Communications/TP Monitors
Specific Application: Interfaces Programs Written In White Smiths C to VRTX/6002
System Requirements: Zilog Z8002
Source Language: Assembly
Purchase Terms: Purchase (license) - $450
Number Installed to Date: 100
Date First Installed: 1982

HUNTER & READY, INC.
PASCAL INTERFACE LIBRARY (HEWLETT PACKARD)
Additional Product Classification: Communications/TP Monitors
Specific Application: Interfaces Programs Written in HP Pascal to VRTX/68000
System Requirements: Motorola 68000
Source Language: Assembly
Purchase Terms: Purchase (license) - $450
Number Installed to Date: 100
Date First Installed: 1982

HUNTER & READY, INC.
PASCAL INTERFACE LIBRARY (HEWLETT PACKARD)
Additional Product Classification: Communications/TP Monitors
Specific Application: Interfaces Programs Written IN HP Pascal to VRTX/86
System Requirements: Intel 8086
Source Language: Assembly
Purchase Terms: Purchase (license) - $450

Number Installed to Date: 100
Date First Installed: 1982

HUNTER & READY, INC.
PASCAL INTERFACE LIBRARY (HEWLETT PACKARD)
Additional Product Classification: Communications/TP Monitors
Specific Application: Interfaces Programs Written In HP Pascal to VRTX/8002
System Requirements: Zilog Z8002
Source Language: Assembly
Purchase Terms: Purchase (license) - $450
Number Installed to Date: 100
Date First Installed: 1982

HUNTER & READY, INC.
PL/M INTERFACE LIBRARY
Additional Product Classification: Communications/TP Monitors
Specific Application: Interfaces Programs Written In PL/M to VRTX/86
System Requirements: Intel 8086
Source Language: Assembly
Purchase Terms: Purchase (license) - $450
Number Installed to Date: 100
Date First Installed: 1982

MS CORP.
GENTEN8
Additional Product Classification: Communications/TP Monitors
Specific Application: Comprehensive Asynchronous Communications Package
System Requirements: Apple II: Apple-DOS, CP/M; IBM PC, MS-DOS
Memory Required: 64.0K bytes
Source Language: CP/M Fortran, MS-DOS Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $79
Number Installed to Date: 1,000
Date First Installed: June 1983
(See Vendor Profile Page V-14)

IDE ASSOCIATES, INC.
IDEACOMM 1200
Additional Product Classification: Communications/TP Monitors
Specific Application: Asynchronous Communications Package
System Requirements: IBM PC, PC-DOS 2.0
Memory Required: 128.0K bytes
Source Language: Assembly, C
Number Installed to Date: 250
Date First Installed: October 1983
(See Vendor Profile Page V-15)

IDE ASSOCIATES, INC.
IDEACOMM 3278
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows An IBM PC to Emulate A 3278
System Requirements: IBM PC, PC-DOS 2.0
Memory Required: 128.0K bytes
Source Language: Assembly, C
Purchase Terms: Purchase (license) - $1,195
Number Installed to Date: 2
Date First Installed: 1983

IDE ASSOCIATES, INC.
IDEANET
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows An IBM PC to Communicate Over Coaxial Cable
System Requirements: IBM PC, PC-DOS 2.0
Memory Required: 128.0K bytes
Source Language: Assembly, C
Purchase Terms: Purchase (license) - $795
Date First Installed: January 1984

IDE ASSOCIATES, INC.
IDEASHARE
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows An IBM PC to Communicate Via An Asynchronous RS-232 Cable
System Requirements: IBM PC, PC-DOS 2.0
Memory Required: 128.0K bytes
Source Language: Assembly, C
Purchase Terms: Purchase (license) - $595
Number Installed to Date: 1
Date First Installed: December 1983

IE SYSTEMS, INC.
ACCULINK
Additional Product Classification: Communications/TP Monitors
Specific Application: Protocol Emulation
System Requirements: IBM: CP/M; Zorox 820: MS-DOS; NEC: PC-DOS; Tandy
Memory Required: 128.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $245
Number Installed to Date: 1,000
Date First Installed: August 1979
(See Vendor Profile Page V-15)

IE SYSTEMS, INC.
IBS - 3270
Additional Product Classification: Communications/TP Monitors
Specific Application: Protocol Emulation
System Requirements: IBM: CP/M; Zorox 820: MS-DOS; NEC: PC-DOS; Tandy
Memory Required: 128.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $695
Number Installed to Date: 1,000
Date First Installed: November 1980

IE SYSTEMS, INC.
IBS - 3780
Additional Product Classification: Communications/TP Monitors
Specific Application: Protocol Emulation
System Requirements: IBM: CP/M; Zorox: MS-DOS; NEC: PC-DOS; Tandy
Memory Required: 128.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $695
Number Installed to Date: 1,000
Date First Installed: January 1979

IE SYSTEMS, INC.
IMS-HASP
Additional Product Classification: Communications/TP Monitors
Specific Application: Protocol Emulation
System Requirements: IBM: CP/M; Zorox 820: MS-DOS; NEC: PC-DOS; Tandy
Memory Required: 128.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $695
Number Installed to Date: 1,000
Date First Installed: May 1982

IE SYSTEMS, INC.
IBS-3270 VERSION 4.0
Additional Product Classification: Communications/TP Monitors
Specific Application: 3270 Emulation Software for Microcomputers
System Requirements: CP/M, CP/M 86, MS-DOS
Memory Required: 64.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $695
Number Installed to Date: 600
Date First Installed: November 1980

INDUSTRIAL COMPUTER CORP.
DDCMP 1000
Additional Product Classification: Communications/TP Monitors
Specific Application: Provides DEC to HP 1000 Communication
System Requirements: HP 1000
Memory Required: 64.0K bytes
Source Language: Fortran, Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $2,500
Number Installed to Date: 5
Date First Installed: January 1983
(See Vendor Profile Page V-15)

INFOMEDIA CORP.
JENNY
Additional Product Classification: Communications/TP Monitors
Specific Application: Electronic Mail Package
System Requirements: HP 3000: MPE
Source Language: SPL
Source Code Available: No
Purchase Terms: Lease
Number Installed to Date: 10
Date First Installed: 1981
(See Vendor Profile Page V-15)

INFORMATION CONCEPTS, INC.
CICS APPLICATION FILE CONTROL
Additional Product Classification: Communications/TP Monitors
Specific Application: Batch-TO-CICS Communications, Streamlines Restart Activity
System Requirements: IBM 4300; MVS; IBM 30XX; IBM 360; IBM 370
Source Language: Assembler
Purchase Terms: Purchase (license) - $2,500
Number Installed to Date: 75
Date First Installed: 1980
(See Vendor Profile Page V-15)

INFORMATION MANAGEMENT TECHNOLOGIES
DEDICOM
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Switching Program
System Requirements: DG: Unix; TI; Perkin Elmer
Memory Required: 256.0K bytes
Source Language: C
Purchase Terms: Purchase (license) - $20,000 to $40,000
Number Installed to Date: 20
Date First Installed: September 1982
(See Vendor Profile Page V-15)

THE INFORMATION ORGANIZATION CORP.
OCR (OPTICAL CHARACTER READER) INTERFACE
Additional Product Classification: WP/Text Editing, Communications/TP Monitors
Specific Application: OCR Interface
Specific Industry: Legal
System Requirements: Wang VS
Memory Required: 256.0K bytes
Source Language: Cobol
Source Code Available: No
Purchase Terms: Purchase (license) - $1,000
Number Installed to Date: 20
Date First Installed: May 1980
(See Vendor Profile Page V-15)

THE INFORMATION ORGANIZATION CORP.
WANG VS TO HIGH SPEED PRINTER
Additional Product Classification: Communications/TP Monitors, Speed Printer
Specific Application: Sends Wang WP to High-Speed Printer
System Requirements: Wang VS
Memory Required: 256.0K bytes
Source Language: Cobol
Source Code Available: No
Purchase Terms: Purchase (license) - $4,000
Number Installed to Date: 2
Date First Installed: August 1982

THE INFORMATION ORGANIZATION CORP.
WANG VS TO IBM DISPLAY WRITER
Additional Product Classification: Communications/TP Monitors, Display Writer
Specific Application: Telecommunications Interface Package Translates Wang WP to IBM Display Writer and IBM to Wang
System Requirements: Wang VS

Memory Required: 256.0K bytes
Source Language: Cobol
Source Code Available: No
Purchase Terms: Purchase (license) - $4,000
Number Installed to Date: 2
Date First Installed: May 1982

THE INFORMATION ORGANIZATION CORP.
WANG VS TO OCR INTERFACE
Additional Product Classification: Communications/TP Monitors
Specific Application: Wang VS to OCR Interface
System Requirements: Wang VS
Memory Required: 256.0K bytes
Source Language: Cobol
Source Code Available: No
Purchase Terms: Purchase (license) - $1,000
Number Installed to Date: 23
Date First Installed: May 1980

INFOSERVICES, INC.
INFOCOMM/INFOHOST ANSWER-DB
Additional Product Classification: Communications/TP Monitors, Library Management, Report Generator
Specific Application: Communications from Micros to Prime and Micro to Micro
System Requirements: CP/M, MS/D
Memory Required: 32.0K bytes
Source Code Available: No
Purchase Terms: Purchase (license) - $3,500
Date First Installed: 1981
(See Vendor Profile Page V-15)

INFOSOFT SYSTEMS, INC.
INFOSOFT NETWORK SYSTEM - MULTI/NET
Additional Product Classification: Communications/TP Monitors, Networking
Specific Application: Networking
Memory Required: 32.0K bytes
Source Language: 8080 Assembler, Infosoft C
Purchase Terms: Purchase (license)
Date First Installed: September 1982
(See Vendor Profile Page V-15)

INFOSOFT SYSTEMS, INC.
INTELLIGENT TERMINAL (COMMUNICATION SYSTEM)
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications
Memory Required: 3.2M bytes
Source Language: 8080 Assembler
Purchase Terms: Purchase (license)
Date First Installed: August 1976

INFOTRON MICROSYSTEMS, INC.
COMMUNICATION LINK
Additional Product Classification: Communications/TP Monitors
Specific Application: High-Speed Communications to Remote Systems
System Requirements: DEC PDP-11: RT-11; DEC LSI-11: RT-11
Memory Required: 12.0K bytes
Source Language: Macro
Purchase Terms: Purchase (license) - $775
Date First Installed: 1978
(See Vendor Profile Page V-16)

INTEGRATED DESIGN ENGINEERING, INC.
NCR COMM
Additional Product Classification: Communications/TP Monitors
Specific Application: Data Communications
System Requirements: NCR Decision Mate V: CP/M, MS-DOS
Memory Required: 64.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $400
Date First Installed: August 1983
(See Vendor Profile Page V-16)

INTELLIGENT TECHNOLOGIES INTERNATIONAL CORP.
CLUSTER NET 3278
Additional Product Classification: Communications/TP Monitors
Specific Application: Multiple 3278 Cluster Emulation - PC to PC
System Requirements: IBM PC, MS-DOS
Memory Required: 256.0K bytes
Source Language: Compiled Basic, C, Assembler
Purchase Terms: Purchase (license) - $8,303
(See Vendor Profile Page V-16)

INTELLIGENT TECHNOLOGIES INTERNATIONAL CORP.
PC EXPRESS 1
Additional Product Classification: Communications/TP Monitors
Specific Application: Electronic Mail, PC to PC Link, DEC VT100/VT52 Emulator
System Requirements: IBM PC, MS-DOS
Memory Required: 256.0K bytes
Source Language: Compiled Basic, C, Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $695
Date First Installed: March 1983

INTELLIGENT TECHNOLOGIES INTERNATIONAL CORP.
PC EXPRESS 2
Additional Product Classification: Communications/TP Monitors
Specific Application: Electronic Mail, PC to PC Link, DEC VT100/VT52 Emulator
System Requirements: IBM PC, MS-DOS
Memory Required: 256.0K bytes
Source Language: Compiled Basic, C, Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $1,295
Date First Installed: March 1983

INTERCOM RESEARCH CORP.
INTERCOM 100A
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Software for Front End Processing
System Requirements: DEC VAX: VMS; DEC PDP-11: CP/M, Unix
Memory Required: 15.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license); Lease - $1,250 to $4,995
Date First Installed: January 1985
(See Vendor Profile Page V-16)

INTERSTAGE
TALK
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Link Between Micro and Mainframes
System Requirements: Intel
Source Language: C
Purchase Terms: Purchase (license) - $500
(See Vendor Profile Page V-16)

INTERNATIONAL DIGITAL ELECTRONICS ASSOCIATES
COMMUNICATION
Additional Product Classification: Communications/TP Monitors
Specific Application: Telex, TWX, Special Protocols
Specific Industry: Communications
System Requirements: Intel: BTX; Bitgix
Source Language: Assembler
Purchase Terms: Purchase (license) - $1,500
Number Installed to Date: 100
Date First Installed: 1982
(See Vendor Profile Page V-17)

KEYBROOK BUSINESS SYSTEMS, INC.
KEYBROOK FILESERVER
Additional Product Classification: Communications/TP Monitors
Specific Application: Networking System for CP/M Micro Computers
System Requirements: Xerox 820; Sanyo: CP/M; Altos
Source Language: Z-80 Assembly
Purchase Terms: Purchase (license) - $2,700
Number Installed to Date: 50
Date First Installed: 1982
(See Vendor Profile Page V-17)

KEYSTONE DATA CONSULTANTS, INC.
FILE TRANSMISSION PACKAGE
Additional Product Classification: Communications/TP Monitors
Specific Application: Transmits Information from One Machine to Another
System Requirements: DEC PDP-11: RSX
Memory Required: 128.0K bytes
Source Language: Macro Jl
Purchase Terms: Purchase (license) - $1,200
Number Installed to Date: 6
Date First Installed: 1982

LEARNED-SMITH
ASTALK
Additional Product Classification: Data/File Management, Communications/TP Monitors
Specific Application: Communications and File Building
System Requirements: IBM PC; GE Time-sharing System
Memory Required: 64.0K bytes
Source Language: Basic
Purchase Terms: Purchase (license) - $295
Number Installed to Date: 100
Date First Installed: August 1982
(See Vendor Profile Page V-17)

LIGHT INFORMATION, INC.
UT 200
Additional Product Classification: Communications/TP Monitors
Specific Application: Terminal Emulator
System Requirements: Four Phase 4: MFE
Source Language: Cobol
Source Code Available: No
Purchase Terms: Purchase (license) - $10,000
Number Installed to Date: 3
Date First Installed: 1982
(See Vendor Profile Page V-16)

LIEBERMAN SYSTEMS
ORBITERM
Additional Product Classification: Communications/TP Monitors
Specific Application: Smart Terminal Software With File Transfer
System Requirements: TRS-80 Models I, II, III, 12
Source Code Available: Yes
Purchase Terms: Purchase (license) - $95 to $175
Number Installed to Date: 1,000
Date First Installed: January 1980
(See Vendor Profile Page V-16)

LINK SYSTEMS
DATALINK
Additional Product Classification: Communications/TP Monitors.
Specific Application: Communicates to Other Data Bases
System Requirements: Apple II, IIE, III: UCSD-P System; IBM PC-XT, UCSD-P System
Memory Required: 64.0K bytes
Source Language: Pascal
Source Code Available: No
Purchase Terms: Purchase (license)
Date First Installed: August 1983
(See Vendor Profile Page V-16)

LOGICA, INC.
FASTRAN
Additional Product Classification: Communications/TP Monitors
Specific Application: Bank Cable Room and Funds Transfer Automation Software
Specific Industry: Banking/Financial, International
System Requirements: DEC PDP-11: RSX; Tandem
Memory Required: 1.0M bytes
Source Language: Macro, C
Purchase Terms: Purchase (license); Rental; Lease - $100,000
Number Installed to Date: 20
Date First Installed: 1979
(See Vendor Profile Page V-16)

Software

LOGICA, INC.
FASTRX
Additional Product Classification: Communications/TP Monitors
Specific Application: Transaction Processing and Message Switching Applications
Specific Industry: Banking/Financial, International
System Requirements: DEC PDP-11: RSX; Tandem
Memory Required: 1.0M bytes
Source Language: Macro, C
Purchase Terms: Purchase (license); Rental; Lease - $75,000
Number Installed to Date: 25
Date First Installed: 1979

LOGICA, INC.
FASTWIRE
Additional Product Classification: Communications/TP Monitors
Specific Application: Bank Cable Room and Funds Transfer Automation Software
Specific Industry: Banking/Financial, International
System Requirements: DEC PDP-11: RSX
Memory Required: 1.0M bytes
Source Language: Macro, C
Purchase Terms: Purchase (license); Rental; Lease - $100,000
Number Installed to Date: 3
Date First Installed: 1982

MACKINNEY SYSTEMS
CICS/SPOOLER
Additional Product Classification: Communications/TP Monitors
Specific Application: Print Spooler System
System Requirements: IBM 370, 4300, 30XX
Memory Required: 32.0K bytes
Source Language: Cobol, Assembler
Purchase Terms: Purchase (license); Lease - $995
Date First Installed: October 1983
(See Vendor Profile Page V-18)

MAGNUM COMMUNICATIONS, LTD.
CREDICHECK
Additional Product Classification: Communications/TP Monitors
Specific Application: System to System Credit Bureau Access System
Specific Industry: Retail, Banking/Financial
System Requirements: IBM Mainframe: CICS
Memory Required: 30.0K bytes
Source Language: Cobol, Assembler, EDL
Purchase Terms: Purchase (license) - $9,500 to $35,500
Number Installed to Date: 7
Date First Installed: 1977
(See Vendor Profile Page V-18)

MATHEMATICA PRODUCTS GROUP
ATLAS
Additional Product Classification: Communications/TP Monitors
Specific Application: Data Communications Monitor
System Requirements: IBM: DOS/VSE
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license); Rental; Lease - $28,000
Number Installed to Date: 40
Date First Installed: 1982
(See Vendor Profile Page V-18)

MCCORMACK & DODGE CORP.
PC:M
Additional Product Classification: Communications/TP Monitors
Specific Application: Personal Computer Link from Micro to Mainframe
System Requirements: IBM: OS, DOS
Memory Required: 100.0K bytes
Source Language: Cobol
Purchase Terms: Purchase (license) - $10,000
Date First Installed: 1983
(See Vendor Profile Page V-18)

MCDONNELL DOUGLAS AUTOMATION CO.
MCAUTO SYSTEM 1
Additional Product Classification: Communications/TP Monitors
Specific Application: Manage A Distributed Environment Between A Local Minicomputer Dedicated to An Engineering Project and A Backup Mainframe
Specific Industry: Manufacturing, Engineering, Construction, Government, Transportation
System Requirements: DEC: VMS
Memory Required: 1.0K bytes
Source Code Available: No
Purchase Terms: Purchase (license); Lease
Date First Installed: February 1983
(See Vendor Profile Page V-18)

MCGS ENTERPRISES
PROCALL
Additional Product Classification: Communications/TP Monitors
Specific Application: Communicates With Bulletin Boards Large Computers Between Cromemco Systems Multi- and Single-User Environments, Christianson Protocol Or Program Transfers
System Requirements: Cromemco C10: C-DOS; Cromemco S100: Cromix
Memory Required: 64.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $360
Number Installed to Date: 150
Date First Installed: December 1982
(See Vendor Profile Page V-18)

MEDAREST SYSTEMS, INC.
MEGA NET
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Package
System Requirements: IBM PC; Mentor: Pick; Micro Data
Memory Required: 64.0K bytes
Source Language: Data Basic
Purchase Terms: Purchase (license) - $2,000
Number Installed to Date: 45
Date First Installed: 1980
(See Vendor Profile Page V-18)

MERIDIAN TECHNICAL ASSOCIATES, INC.
INTELLIGENT MODEM PROGRAM IMP
Additional Product Classification: Communications/TP Monitors
Specific Application: Terminal Emulation
System Requirements: Zenith/Heath H8: H-DOS; Zenith/Heath H/Z89: CP/M; Zenith/Heath H/Z90: CP/M-86; Zenith/Heath H/Z100: Z-DOS
Memory Required: 32.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $30
Number Installed to Date: 12
Date First Installed: November 1983
(See Vendor Profile Page V-18)

MICRO-INTEGRATION, INC.
IMS 3270 VERSION 4.0
Additional Product Classification: Communications/TP Monitors
Specific Application: IBM 3270 Terminal Emulator
System Requirements: CP/M, CP/M 86, MS-DOS, PC-DOS
Memory Required: 64.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $695
Number Installed to Date: 2,000
Date First Installed: November 1980
(See Vendor Profile Page V-18)

MICRO-INTEGRATION, INC.
IMS 3780 VERSION 5.0
Additional Product Classification: Communications/TP Monitors
Specific Application: IBM 2780, 3780 Emulator Communications Remote Job Entry
System Requirements: CP/M, CP/M 86, MS-DOS, PC-DOS
Memory Required: 64.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $695
Number Installed to Date: 2,000
Date First Installed: September 1979

MICRO-INTEGRATION, INC.
IMS HASP VERSION 1.1
Additional Product Classification: Communications/TP Monitors
Specific Application: Hasp Multi-Leaving Workstation Communications; Remote Job Entry
System Requirements: CP/M, CP/M 86, MS-DOS, PC-DOS
Memory Required: 64.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license) - $695
Number Installed to Date: 50
Date First Installed: September 1981

MICRO-INTEGRATION, INC.
COAXSYS TM
Additional Product Classification: Communications/TP Monitors
Specific Application: IBM 3270 Coaxial Interface Hardware and Software
System Requirements: CP/M, CP/M 86, MS-DOS, PC-DOS
Memory Required: 64.0K bytes
Source Language: Pascal, Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $1,195

MICRO-INTEGRATION, INC.
MICRO-SNA/3270 VERSION 1.0
Additional Product Classification: Communications/TP Monitors
Specific Application: IBM 3270 Terminal Emulator, Communications
System Requirements: CP/M, CP/M 86, MS-DOS, PC-DOS
Memory Required: 64.0K bytes
Source Language: Assembler, Pascal
Source Code Available: No
Purchase Terms: Purchase (license) - $695

MICRO-INTEGRATION, INC.
MICRO-SNA3770
Additional Product Classification: Communications/TP Monitors
Specific Application: IBM 3770 Terminal Emulator, Communications, Remote Job Entry
System Requirements: CP/M, CP/M 86, MS-DOS, PC-DOS
Memory Required: 64.0K bytes
Source Language: Assembler, Pascal
Source Code Available: No
Purchase Terms: Purchase (license) - $695

MICRO/MAGIC SYSTEMS, INC.
M-SYNC
Additional Product Classification: Communications/TP Monitors
Specific Application: Remote Job Entry
System Requirements: Victor 9000
Memory Required: 128.0K bytes
Source Code Available: No
Purchase Terms: Purchase (license) - $495
Date First Installed: September 1983
(See Vendor Profile Page V-18)

MICRON, INC.
COMM LINE
Additional Product Classification: Communications/TP Monitors
Specific Application: Monitors Communication Between Computers
System Requirements: TRS-80, TRS-DOS
Memory Required: 64.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license) - $300

Date First Installed: 1983
(See Vendor Profile Page V-19)

MICRON, INC.
SMART TERM I
Additional Product Classification: Communications/TP Monitors
Specific Application: Makes Mini Look Like Intelligent Terminal
System Requirements: TRS-80, TRS-DOS
Memory Required: 32.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license)
Number Installed to Date: 200
Date First Installed: 1979

THE MICROPERIPHERAL CORP.
TSMART
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows Up/Down Loading, Allows Transferable On/Off Selectable Communications Parameters
System Requirements: Atari
Memory Required: 32.0K bytes
Source Language: Basic, Assembly
Purchase Terms: Purchase (license) - $50
Date First Installed: January 1981
(See Vendor Profile Page V-19)

MICROSPARC, INC.
TELETEXT
Additional Product Classification: Communications/TP Monitors
Specific Application: A General Purpose Data Communications Package
System Requirements: Apple II+, IIE, DOS
Memory Required: 48.0K bytes
Source Language: Applesoft, 6502 Machine Language
Purchase Terms: Purchase (license) - $80
Number Installed to Date: 100
Date First Installed: June 1982
(See Vendor Profile Page V-19)

MICROSTUF, INC.
CROSSTALK XVI
Additional Product Classification: Communications/TP Monitors
Specific Application: Integrated Help System Emulates Several Terminals, Supports Most Autodial Modems Capable Of Totally Automated File Transmission
System Requirements: IBM PC; MS-DOS; Victor 9000; Eagle 1600; Corona
Memory Required: 96.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license) - $195
(See Vendor Profile Page V-19)

MICROSTUF, INC.
REMOTE
Additional Product Classification: Communications/TP Monitors
Specific Application: Remote Console Program Allows You to Call Into Your Microcomputer
System Requirements: IBM PC; MS-DOS; Televideo; CP/M; Eagle; North Star
Source Language: Assembly

MICROSTUF, INC.
TRANSPORTER
Additional Product Classification: Communications/TP Monitors
Specific Application: Automated Data Communications Program Designed for Unattended Information Exchange
System Requirements: IBM PC; MS-DOS
Memory Required: 96.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $295

MICRO-SYSTEMS SOFTWARE, INC.
BBS-80
Additional Product Classification: Communications/TP Monitors
Specific Application: Bulletin Board System That Hooks Into Microcomputers via Telephone
System Requirements: TRS-80/I; TRS-80/III
Source Language: Basic
Source Code Available: No
Purchase Terms: Purchase (license) - $80
Date First Installed: 1981
(See Vendor Profile Page V-19)

MICRO-SYSTEMS SOFTWARE, INC.
MICROTERM
Additional Product Classification: Communications/TP Monitors
Specific Application: Turns Microcomputer Into A Terminal to Hook Up Into Mainframes
System Requirements: TRS-80; IBM PC; Apple II, IIE
Source Language: Basic
Source Code Available: No
Purchase Terms: Purchase (license) - $80
Date First Installed: 1982

MICRO-SYSTEMS SOFTWARE, INC.
QUADROBACK
Additional Product Classification: Communications/TP Monitors
Specific Application: Communication System That Ties 4 TRS-80 Model I, III, IV to 1 Hard Disk
System Requirements: TRS-80/I; TRS-80/III; TRS-80/IV
Source Language: Basic
Source Code Available: No
Purchase Terms: Purchase (license) - $900 to $1,000
Date First Installed: August 1983

MODULAR INTEGRATION, INC.
COMPAK
Additional Product Classification: Communications/TP Monitors
Specific Application: Protocol Converter Package, Synchronous to Asynchronous Converter
Specific Industry: Weather Power
System Requirements: IBM PC; CP/M 86, MS-DOS
Memory Required: 256.0K bytes
Purchase Terms: Purchase (license); Lease - $500
Number Installed to Date: 500
Date First Installed: 1978
(See Vendor Profile Page V-20)

MODULAR INTEGRATION, INC.
SDLC/HDLC
Additional Product Classification: Communications/TP Monitors
Specific Application: SDLC/HDLC Communications Package
Specific Industry: Weather Power
System Requirements: CP/M 86, MS-DOS
Memory Required: 256.0K bytes
Purchase Terms: Purchase (license); Lease - $1,000
Number Installed to Date: 500
Date First Installed: 1978

MOHAWK DATA SCIENCES CORP.
IBC 3761
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications
System Requirements: MDS Series 21; OS/2
Source Language: Mobol/Z80
Source Code Available: No
(See Vendor Profile Page V-20)

MOHAWK DATA SCIENCES CORP.
IBM 3275
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications
System Requirements: MDS Series 21, SO/2
Source Language: Mobol/Z80
Source Code Available: No

MOHAWK DATA SCIENCES CORP.
MASP/MS
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications
System Requirements: MDS Series 21, OS/2
Memory Required: 9.6M bytes
Source Language: Mobol/Z80
Source Code Available: No
Purchase Terms: Purchase (license)

MOHAWK DATA SCIENCES CORP.
REMOTE COPY
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications
System Requirements: MSD Series 21, OS/2
Source Language: Mobol/Z80
Source Code Available: No

MONROE SYSTEMS FOR BUSINESS
ASCOM +
Additional Product Classification: Communications/TP Monitors
Specific Application: Asynchronous Communications Utility
System Requirements: Monroe OC 8800: CP/M-80
Memory Required: 128.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license); Lease - $175
Date First Installed: 1981
(See Vendor Profile Page V-20)

MONROE SYSTEMS FOR BUSINESS
MONROE BIS - 3780
Additional Product Classification: Communications/TP Monitors
Specific Application: Synchronous 2780/3780 Emulation
System Requirements: Monroe OC 8800: CP/M 80
Memory Required: 128.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license); Lease - $750
Date First Installed: 1981

MONROE SYSTEMS FOR BUSINESS
MONROE BIS- 3270
Additional Product Classification: Communications/TP Monitors
Specific Application: Synchronous Communications
System Requirements: Monroe OC 8800: CP/M 80
Memory Required: 128.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license); Lease - $750
Date First Installed: 1981

MONROE SYSTEMS FOR BUSINESS
MONROE TTY EMULATOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Asynchronous Communications Utility
System Requirements: Monroe OC 8800: MS-10; Monroe EC 8800: MS-10
Memory Required: 128.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license); Lease - $95
Date First Installed: 1981

MONROE SYSTEMS FOR BUSINESS
MONROE BIS -HASP
Additional Product Classification: Communications/TP Monitors
Specific Application: Multileaving Workstation Emulation
System Requirements: Monroe OC 8800: CP/M 80
Memory Required: 128.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license); Lease - $795
Date First Installed: 1981

MONROE SYSTEMS FOR BUSINESS
MONROE 3270 SNA/SDLC
Additional Product Classification: Communications/TP Monitors

Specific Application: SNA 3270 Display Emulation
System Requirements: Monroe OC 9600: MS-10
Memory Required: 128.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license); Lease - $995
Date First Installed: 1981

MOUNTAIN COMPUTER, INC.
SUPER TALKER
Additional Product Classification: Communications/TP Monitors
Specific Application: Speech Digitizer
System Requirements: Apple; IBM
Purchase Terms: Purchase (license)
(See Vendor Profile Page V-20)

MUSIQUEST MICRO SYSTEMS
DEMON
Additional Product Classification: Communications/TP Monitors
Specific Application: Monitor and Debugger
System Requirements: TRS-80: DOS
Memory Required: 32.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $29
Date First Installed: 1983
(See Vendor Profile Page V-21)

MUSIQUEST MICRO SYSTEMS
TELCOM II
Additional Product Classification: Communications/TP Monitors
Specific Application: Advanced Telecommunications
System Requirements: TRS-80: DOS
Memory Required: 32.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $69
Date First Installed: 1982

MUSIQUEST MICRO SYSTEMS
TELECOM I
Additional Product Classification: Communications/TP Monitors
Specific Application: Telecommunications
System Requirements: TRS-80: DOS
Memory Required: 32.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $39
Date First Installed: 1980

NATIONAL E-P-T, INC.
LINK/1
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Support Package
Specific Industry: Manufacturing, Banking/Financial
System Requirements: IBM Series/1
Memory Required: 64.0K bytes
Source Language: Cobol
Purchase Terms: Purchase (license) - $20,000
Number Installed to Date: 2
Date First Installed: 1982
(See Vendor Profile Page V-21)

NATIONAL MICRO PRODUCTS, INC.
MODEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Order Entry
System Requirements: Intertec Computer: CP/M
Memory Required: 64.0K bytes
Source Language: Basic, Pascal, Assembler
Purchase Terms: Purchase (license) - $40,000
Date First Installed: December 1983
(See Vendor Profile Page V-21)

NATIONAL MICRO PRODUCTS, INC.
SMODEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Order Entry
System Requirements: Intertec Computer, CP/M
Memory Required: 64.0K bytes
Source Language: Basic, Pascal, Assembler
Purchase Terms: Purchase (license) - $40,000
Date First Installed: December 1983

NATIONAL MICRO PRODUCTS, INC.
XMODEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Order Entry
System Requirements: Intertec Computer, CP/M
Memory Required: 64.0K bytes
Source Language: Basic, Pascal, Assembler
Purchase Terms: Purchase (license) - $40,000
Date First Installed: December 1983

NATIONAL SEMICONDUCTOR CORP.
ANS-TRAN
Additional Product Classification: Communications/TP Monitors
Specific Application: Enables POS Systems to Communicate With Host Computers
Specific Industry: Food
System Requirements: DEC PDP-11
Memory Required: 256.0K bytes
Source Language: IMP, Macro-11
(See Vendor Profile Page V-21)

NATIONAL SEMICONDUCTOR CORP.
ENCS
Additional Product Classification: Communications/TP Monitors
Specific Application: Enables POS Systems to Communicate With Host Computers
Specific Industry: Food
System Requirements: DEC PDP-11: RSX-11
Memory Required: 256.0K bytes.
Source Language: IMP, Macro-11
Source Code Available: No

NCR COMTEN, INC.
ACF/NCP 3
Additional Product Classification: Communications/TP Monitors
Specific Application: Compatible With IBM ACF/NCR. Enables Increase of Data Access Within The Network By Supporting Various Systems
System Requirements: NCR: SCS 63/Cross 2
Source Language: Cobol
Purchase Terms: Purchase (license)
Date First Installed: 1982
(See Vendor Profile Page V-21)

NCR COMTEN, INC.
CNS 2-COMMUNICATIONS NETWORKING SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Network Trunking Facility to Interconnect NCR Comten 3600 Systems
System Requirements: NCR
Source Language: Cobol
Purchase Terms: Purchase (license)
Date First Installed: 1981

NCR COMTEN, INC.
EP 4-EMULATION PROCESSING
Additional Product Classification: Communications/TP Monitors
Specific Application: Permits Compatible Comten 3600 Communication Processors to Function As Or Emulate IBM 270X/IBM 370X Program Controllers
System Requirements: NCR Comten 3600: SCS 63/Cross 2
Source Language: Cobol
Purchase Terms: Purchase (license)
Date First Installed: 1981

NCR COMTEN, INC.
MAF 3-3270 MULTIPLE ACCESS FACILITY
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows 3270 Devices to Select Any Emulation Host Application Defined In The Network
System Requirements: NCR
Source Language: Cobol
Purchase Terms: Purchase (license)
Date First Installed: 1981

NCR COMTEN, INC.
NTO-NETWORK TERMINAL OPTION
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows ACF/NCP 3 Product to Select SNA Start/Stop Devices Which Communicate
System Requirements: NCR
Source Language: Cobol
Purchase Terms: Purchase (license)
Date First Installed: 1981

NCR COMTEN, INC.
SRM 1-SUB AREA ROUTING MANAGER
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows Bysynchronous and SNA 3270 Devices to be Dynamically Routed to Emulator or SNA Host Access Methods
System Requirements: NCR
Source Language: Cobol
Purchase Terms: Purchase (license)
Date First Installed: 1981

NCR COMTEN, INC.
X.25 PUBLIC DATA NETWORK
Additional Product Classification: Communications/TP Monitors
Specific Application: Supports The Public Data Network
System Requirements: NCR
Source Language: Cobol
Purchase Terms: Purchase (license)
Date First Installed: 1980

NCR CORP.
NCR-DMS/TRAN-PRO EL
Additional Product Classification: Communications/TP Monitors
Specific Application: Entry Level Transaction Processing Monitor
Specific Industry: Manufacturing, Engineering, Wholesale/Distribution, Retail, Banking/Financial, Medical, Legal, Insurance, Real Estate, Education, Construction, Government, Transportation, Non-Profit Organizations, Scientific
System Requirements: NCR V-8500, VRX; NCR V-8000 Series, VRX
Memory Required: 1.0K bytes
Source Language: Cobol, NEAT/VS
Source Code Available: No
Purchase Terms: Purchase (license); Rental
Number Installed to Date: 6
Date First Installed: October 1982
(See Vendor Profile Page V-21)

NESTAR SYSTEMS, INC.
'MESSENGER' ELECTRONIC MAIL
Additional Product Classification: Communications/TP Monitors, Insurance, Mail System
Specific Application: Memos/Letters Sent Between Users Connected by Same Local Network
System Requirements: Apple II: Pascal; Apple III: SOS; IBM PC: DOS, CP/M
Memory Required: 64.0K bytes
Source Language: Pascal
Purchase Terms: Purchase (license)
Number Installed to Date: 500
Date First Installed: 1981
(See Vendor Profile Page V-21)

NESTAR SYSTEMS, INC.
3270 CLUSTER EMULATOR SERVER
Additional Product Classification: Communications/TP Monitors
Specific Application: 3270 Emulation
System Requirements: Apple II: Pascal; IBM PC: PC-DOS
Memory Required: 64.0K bytes
Source Language: Pascal
Source Code Available: No
Purchase Terms: Purchase (license) - $2,000

Purchase Terms: Purchase (license) - $2,000
Number Installed to Date: 1,000
Date First Installed: 1982

NESTAR SYSTEMS, INC.
3278 EMULATOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Emulates IBM 3278 Model II for PC On the Same Local Network AS IBM 3274 Emulator
System Requirements: Apple II: Pascal; Apple III: SOS; IBM PC: DOS, CP/M
Memory Required: 64.0K bytes
Source Language: Pascal
Source Code Available: No
Purchase Terms: Purchase (license) - $200
Date First Installed: July 1983

NESTAR SYSTEMS, INC.
3770 EMULATOR SERVER
Additional Product Classification: Communications/TP Monitors
Specific Application: 3770 Emulation
System Requirements: IBM PC: PC-DOS; Apple II: Pascal; Apple III: SOS
Memory Required: 64.0K bytes
Source Language: Pascal
Source Code Available: No
Purchase Terms: Purchase (license) - $1,000
Number Installed to Date: 1,000
Date First Installed: 1982

NESTAR SYSTEMS, INC.
FILE TRANSFER SERVER
Additional Product Classification: Communications/TP Monitors
Specific Application: Provides Batch Transfer of Files
System Requirements: Apple II, Pascal; Apple III, SOS; IBM PC, PC-DOS, CP/M
Memory Required: 64.0K bytes
Source Language: Pascal
Source Code Available: No
Purchase Terms: Purchase (license) - $2,000
Number Installed to Date: 1,000
Date First Installed: 1981

NEW GENERATION SYSTEMS, INC.
AMCALL
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Package
System Requirements: Compupro, CP/M
Memory Required: 64.0K bytes
Source Language: C, Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $150
Date First Installed: January 1982
(See Vendor Profile Page V-22)

N. F. SYSTEMS, LTD.
HOST COMM
Additional Product Classification: Communications/TP Monitors
Specific Application: Host Communications Package
System Requirements: IBM PC: MS-DOS; Compaq
Memory Required: 128.0K bytes
Source Language: Basic
Source Code Available: No
Purchase Terms: Purchase (license) - $120
Number Installed to Date: 200
Date First Installed: September 1982
(See Vendor Profile Page V-21)

NIXDORF COMPUTER CORP.
3270 BISYNC EMULATOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Interactive Communication Between 8860 and Host
System Requirements: Nixdorf 8860: Dipos
Memory Required: 512.0K bytes
Source Language: Assembler
Purchase Terms: Rental
Number Installed to Date: 5,000
(See Vendor Profile Page V-22)

NIXDORF COMPUTER CORP.
3270 SNA EMULATOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Interactive Communication Between 8860 and Host
System Requirements: Nixdorf 8860: Dipos
Memory Required: 512.0K bytes
Source Language: Assembler
Purchase Terms: Rental
Number Installed to Date: 5,000

NIXDORF COMPUTER CORP.
3770 SNA EMULATOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Batch Communications Between 8860 and Host
System Requirements: Nixdorf 8860: Dipos
Memory Required: 512.0K bytes
Source Language: Assembler
Purchase Terms: Rental
Number Installed to Date: 2,000

NORTHEAST DATACOM, INC.
TELECOMMUNICATIONS
Additional Product Classification: Communications/TP Monitors
Specific Application: Telecommunications
System Requirements: Wang 2200 MVP: Speed
Memory Required: 28.0K bytes
Source Language: Basic II
Purchase Terms: Purchase (license)
(See Vendor Profile Page V-22)

OFFICE EXPRESS, INC.
INTF 3270
Additional Product Classification: Communications/TP Monitors
Specific Application: Software Interface for Terminal Monitor to CICS Or Other Monitors
System Requirements: OS/VS1, DOS/VS
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license); Rental
Number Installed to Date: 25
Date First Installed: 1982
(See Vendor Profile Page V-22)

ONION SOFTWARE, INC.
NETWORK ONION
Additional Product Classification: Communications/TP Monitors
Specific Application: Connects IBM System/34, 36, 38 With Telex
System Requirements: IBM System/34: SSP; IBM System/36; IBM System/38: CPF
Memory Required: 96.0K bytes
Source Language: RPG-II, Assembler
Source Code Available: No
Purchase Terms: Purchase (license); Rental; Lease - $3,200 to $10,000
Number Installed to Date: 120
Date First Installed: January 1982
(See Vendor Profile Page V-22)

PACER SOFTWARE
GNET
Additional Product Classification: Communications/TP Monitors
Specific Application: Asynchronous (RS-232) Communications Between Local Prime Computer and Remote System
System Requirements: Prime: Primos
Memory Required: 128.0K bytes
Source Language: Fortran, PL/1
Source Code Available: Yes
Purchase Terms: Purchase (license) - $1,000
Date First Installed: September 1981
(See Vendor Profile Page V-22)

PACESETTER SYSTEMS, INC.
PACER/HP8-HOST PROCESSING SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows Bank to Communicate With IBM 370
Specific Industry: Banking/Financial
System Requirements: IBM 370; IBM 4300: OS; IBM 308X: DOS; IBM 308X
Source Language: Cobol, Assembler
Purchase Terms: Purchase (license); Lease
Number Installed to Date: 1
Date First Installed: 1982
(See Vendor Profile Page V-23)

PACIFIC SOFTWARE MANUFACTURING CO.
X.DOT:PAD
Additional Product Classification: Communications/TP Monitors
Specific Application: Interface from Asynchronous Terminals to A Packet- Switching Network
System Requirements: DEC VAX; Motorola 68000; Zilog Z8000
Memory Required: 64.0K bytes
Source Language: C
Purchase Terms: Purchase (license) - $40,000
Date First Installed: 1983
(See Vendor Profile Page V-23)

PACIFIC SOFTWARE MANUFACTURING CO.
X.DOT:X.25
Additional Product Classification: Program Generators/Aids, Application Development Tools, Communications/TP Monitors
Specific Application: C Language Source Code Technology Transfer Product
System Requirements: DEC VAX, VMS; Motorola 68000; Zilog Z8000
Memory Required: 64.0K bytes
Source Language: C
Purchase Terms: Purchase (license) - $30,000
Number Installed to Date: 10
Date First Installed: 1981

PACIFIC SOFTWARE MANUFACTURING CO.
X.DOT FOR UNIX
Additional Product Classification: Program Generators/Aids, Application Development Tools, Communications/TP Monitors
Specific Application: Interface from Unix to Packet Switching, Supports Remote Log-in, Call Out, File Transfer, Mail
System Requirements: DEC VAX; Motorola 68000; Zilog Z8000
Memory Required: 64.0K bytes
Source Language: C
Purchase Terms: Purchase (license) - $40,000
Date First Installed: 1986

PARTICIPATION SYSTEMS, INC.
PARTICIPATE
Additional Product Classification: Communications/TP Monitors, DBMS
Specific Application: Computer Conferencing Package Including Electronic Mail and A Bulletin Board
System Requirements: DEC VAX: VMS; Prime Series 50: Primos; Honeywell DPS8: GCOS; IBM: VM/CMS, MVS/TSO
Memory Required: 160.0K bytes
Source Language: Pascal
Purchase Terms: Purchase (license); Time-sharing - $30,000 to $60,000
Number Installed to Date: 10
Date First Installed: May 1982
(See Vendor Profile Page V-23)

PATHWAY DESIGN, INC.
PATHWAY/SNC
Additional Product Classification: Communications/TP Monitors
Specific Application: Communication 3270/3770 Emulator
System Requirements: IBM PC, MS-DOS, PC-DOS
Memory Required: 128.0K bytes
Source Language: C
Purchase Terms: Purchase (license) - $595
Date First Installed: September 1983
(See Vendor Profile Page V-23)

PATHWAY DESIGN, INC.
PATHWAY/SNA
Additional Product Classification: Communications/TP Monitors

Specific Application: 3770/3270 Emulator
System Requirements: IBM PC, PC-DOS, MS-DOS
Memory Required: 128.0K bytes
Source Language: C
Source Code Available: No
Purchase Terms: Purchase (license) - $595
Date First Installed: September 1983

PEACHTREE SOFTWARE TELECOMMUNICATIONS
Additional Product Classification: Communications/TP Monitors
Specific Application: Program (Data Communication)
Source Language: Assembler
Purchase Terms: Purchase (license) - $150
(See Vendor Profile Page V-23)

PERIPHERAL SYSTEMS, INC. PSMS
Additional Product Classification: Communications/TP Monitors
Specific Application: Network Management
System Requirements: IBM PC: CPM; IBM 3000: Unix, MS-DOS
Memory Required: 64.0K bytes
Source Language: C4, Unix, PL/1
Source Code Available:
Purchase Terms: Purchase (license); Rental; Lease - $250,000
Number Installed to Date: 2
Date First Installed: January 1980
(See Vendor Profile Page V-23)

PICKLES & TROUT LYNC 3.0 COMMUNICATIONS SOFTWARE
Additional Product Classification: Communications/TP Monitors, System Resource Management
Specific Application: Communications Software
System Requirements: CP/M
Memory Required: 32.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $95
Date First Installed: January 1983
(See Vendor Profile Page V-24)

PLAINWIRE DATA SYSTEMS TERM
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Between Micros and Mainframs
System Requirements: Televideo: CP/M; Vector Graphics: CP/M
Memory Required: 48.0K bytes
Source Language: Fortran
Source Code Available: No
Purchase Terms: Purchase (license)
Date First Installed: 1982
(See Vendor Profile Page V-24)

POLYGON SOFTWARE CORP. INTERCOMM
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications
System Requirements: IBM 360/370: OS, VS, MVS
Source Language: Assembler
Purchase Terms: Purchase (license) - $75,000
Number Installed to Date: 500
Date First Installed: September 1969
(See Vendor Profile Page V-24)

PRIME COMPUTER, INC. DPTX - INTERCONNECT FACILITY FOR IBM 3270
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Control and Facilitation
System Requirements: Prime, Primos
Source Code Available: No
Purchase Terms: Purchase (license); Monthly License - $7,500
Number Installed to Date: 1,000
Date First Installed: 1979
(See Vendor Profile Page V-24)

PRIME COMPUTER, INC. EM 200 UT-EMULATION FOR CONTROL DATA UT 200
Additional Product Classification: Communications/TP Monitors
Specific Application: Emulation - Communication
System Requirements: Prime: Primos
Source Code Available: No
Purchase Terms: Purchase (license); Monthly License - $3,750
Date First Installed: 1979

PRIME COMPUTER, INC. EM 1004 - EMULATION FOR UNIVAC 1004
Additional Product Classification: Communications/TP Monitors
Specific Application: Emulation - Communication
System Requirements: Prime: Primos
Source Code Available: No
Purchase Terms: Purchase (license); Monthly License - $3,750
Date First Installed: 1979

PRIME COMPUTER, INC. EM 7020 - EMULATION FOR ICL 7020
Additional Product Classification: Communications/TP Monitors
Specific Application: Emulation - Communication
System Requirements: Prime: Primos
Source Code Available: No
Purchase Terms: Purchase (license); Monthly License - $3,750
Date First Installed: 1980

PRIME COMPUTER, INC. EM GRTS - EMULATION FOR HONEYWELL GRTS
Additional Product Classification: Communications/TP Monitors
Specific Application: Emulation - Communication
System Requirements: Prime: Primos
Source Code Available: No
Purchase Terms: Purchase (license); Monthly License - $4,500
Date First Installed: 1979

PRIME COMPUTER, INC. EMHASP - EMULATION FOR IBM HASP II
Additional Product Classification: Communications/TP Monitors
Specific Application: Emulation - Communication
System Requirements: Prime: Primos
Source Code Available: No
Purchase Terms: Purchase (license); Monthly License - $5,250
Date First Installed: 1979

PRIME COMPUTER, INC. EMX80 - EMULATION FOR IBM 2780/3780
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications - Emulation
System Requirements: Prime: Primos
Source Code Available: No
Purchase Terms: Purchase (license); Monthly License - $4,500
Date First Installed: 1979

PRIME COMPUTER, INC. FILE TRANSFER SERVICE
Additional Product Classification: Communications/TP Monitors, System Resource Management
Specific Application: Network File Transfer Facility
System Requirements: Prime: Primos
Source Code Available: No
Purchase Terms: Purchase (license); Monthly License - $2,000
Date First Installed: 1982

PRIME COMPUTER, INC. PACKET NETWORK INTERFACE
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Control and Facilitation
System Requirements: Prime: Primos
Source Code Available: No
Purchase Terms: Purchase (license); Monthly License - $2,500
Date First Installed: 1979

PRIME COMPUTER, INC. PRIMENET - NETWORKING FACILITY
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Control and Facilitation - DDP Environment
System Requirements: Prime 50 Series: Primos
Source Code Available: No
Purchase Terms: Purchase (license); Monthly License - $7,500
Number Installed to Date: 1,000
Date First Installed: 1979

PROGRAM RESOURCES, INC. WANG DEC LINK
Additional Product Classification: Communications/TP Monitors
Specific Application: VT100 Emulation Package
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $995
Number Installed to Date: 3
Date First Installed: 1983
(See Vendor Profile Page V-24)

PROTOCOL COMPUTER, INC. PCITERM 51 (UPGRADED VERSION OF 5155 PLUS)
Additional Product Classification: Communications/TP Monitors
Specific Application: Terminal Emulation in Conjunction With Protocol Conversion
System Requirements: MS-DOS
Memory Required: 128.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $295
Number Installed to Date: 5,000
Date First Installed: January 1983
(See Vendor Profile Page V-24)

PROTOCOL COMPUTER, INC. PCITERM 78 (UPGRADED VERSION OF 7887 PLUS)
Additional Product Classification: Communications/TP Monitors
Specific Application: Terminal Emulation in Conjunction With Protocol Conversion
System Requirements: MS-DOS
Memory Required: 128.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $295
Number Installed to Date: 5,000
Date First Installed: January 1983

QUADSTAR CORP. AUDIO RESPONSE SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Home Bill Payment, Teller Assist Functions Via Telephone
Specific Industry: Retail, Banking/Financial
System Requirements: IBM Series/1, EDX
Memory Required: 512.0K bytes
Source Language: Cobol
Source Code Available: No
Purchase Terms: Purchase (license) - $75,000
Number Installed to Date: 2
Date First Installed: 1981
(See Vendor Profile Page V-24)

QUADSTAR CORP.
AUTOMATED COLLECTION SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Automated Credit Card System and Installment Loan Collection Activities
Specific Industry: Retail, Banking/Financial
System Requirements: IBM Series/1: EDX
Memory Required: 512.0K bytes
Source Language: Cobol
Purchase Terms: Purchase (license); Rental; Lease - $75,000
Number Installed to Date: 3
Date First Installed: 1981

QUADSTAR CORP.
HOME BANKING SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Personal Home Banking
Specific Industry: Retail, Banking/Financial
System Requirements: IBM Series/1: EDX
Memory Required: 512.0K bytes
Source Language: Cobol
Purchase Terms: Purchase (license); Rental; Lease - $50,000
Number Installed to Date: 1
Date First Installed: 1983

QUADSTAR CORP.
MINIHOST
Additional Product Classification: Communications/TP Monitors
Specific Application: Terminal Network Management System
Specific Industry: Retail, Banking/Financial
System Requirements: IBM Series/1: EDX
Memory Required: 512.0K bytes
Source Language: Cobol
Purchase Terms: Purchase (license); Rental - $200,000
Number Installed to Date: 20
Date First Installed: 1979

QUALITY SOFTWARE, INC.
QS CALL
Additional Product Classification: Communications/TP Monitors
Specific Application: Data Transfer Via Telecommunications
System Requirements: IBM PC-XT: MS-DOS; Altos 8000-2: CP/M; IBM PC: MS-DOS 2.0
Memory Required: 64.0K bytes
Source Language: C
Source Code Available: No
Purchase Terms: Purchase (license) - $195
Date First Installed: January 1982
(See Vendor Profile Page V-24)

QUALITY SOFTWARE, INC.
QS SAM
Additional Product Classification: Communications/TP Monitors
Specific Application: Utility for Transferring Text from Microcomputers to AM Typesetter
System Requirements: IBM PC-XT: MS-DOS 2.0; Altos 8000: CP/M; IBM PC: MS-DOS 2.0
Memory Required: 48.0K bytes
Source Language: C
Source Code Available: No
Purchase Terms: Purchase (license) - $795
Date First Installed: January 1982

RACET COMPUTERS, LTD.
MAGIC MAIL
Additional Product Classification: Communications/TP Monitors
Specific Application: Electronic Mail
System Requirements: MEC PC-8001, 8801: Racet NEC-DOS
Memory Required: 32.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $150
Number Installed to Date: 25
Date First Installed: 1983
(See Vendor Profile Page V-25)

RCG (ROZSA COMPUTER SYSTEMS), INC.
SUPER COM
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Package
System Requirements: IBM PC: CP/M
Memory Required: 48.0K bytes
Source Language: C
Source Code Available: No
Purchase Terms: Purchase (license) - $19,500
Number Installed to Date: 2
Date First Installed: 1982
(See Vendor Profile Page V-25)

REAL-TIME MANAGEMENT, INC.
REMOTE 990
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows TI 990S and Business Systems to Participate in Burroughs Poll Network
System Requirements: TI 308; TI 990
Memory Required: 192.0K bytes
Source Language: TI Assembly, Cobol, Tiform
Purchase Terms: Purchase (license) - $12,500
Date First Installed: 1979
(See Vendor Profile Page V-25)

REDDING GROUP, INC.
ALPACA PLUS
Additional Product Classification: Communications/TP Monitors
Specific Application: Micro to Micro Network Communications System
System Requirements: IBM PC: CP/M
Memory Required: 48.0K bytes
Source Language: Fortran
Purchase Terms: Purchase (license) - $500
(See Vendor Profile Page V-25)

REDDING GROUP, INC.
ALPACA-PLUS - VERSION 2.55
Additional Product Classification: Communications/TP Monitors
Specific Application: Micro-to-Micro Communications Link
System Requirements: CP/M 80
Memory Required: 48.0K bytes
Source Code Available: No
Purchase Terms: Purchase (license) - $500
Date First Installed: 1980

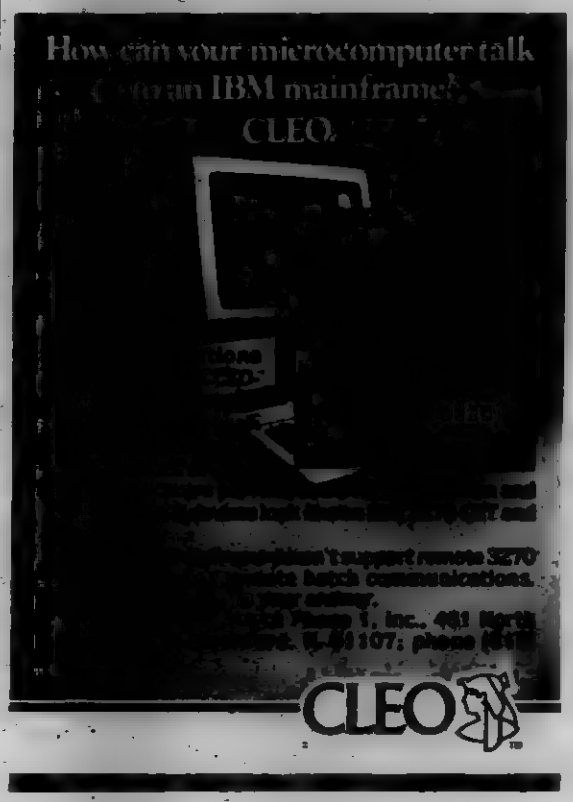
REDDING GROUP, INC.
ASYNCH
Additional Product Classification: Communications/TP Monitors
Specific Application: Asynchronous Communicator
System Requirements: IBM PC: CP/M
Memory Required: 48.0K bytes
Source Language: Fortran
Purchase Terms: Purchase (license) - $100

REDDING GROUP, INC.
ASYNC - VERSION 3.01
Additional Product Classification: Communications/TP Monitors
Specific Application: Asynchronous Communications
System Requirements: CP/M
Memory Required: 48.0K bytes
Purchase Terms: Purchase (license) - $100
Date First Installed: 1979

REDDING GROUP, INC.
LYNX
Additional Product Classification: Communications/TP Monitors
Specific Application: Overlay Linker
System Requirements: IBM PC: CP/M
Memory Required: 48.0K bytes
Source Language: Fortran
Purchase Terms: Purchase (license) - $250 to $150

REDDING GROUP, INC.
MICRO E COM
Additional Product Classification: Communications/TP Monitors
Specific Application: Asynchronous Electronic Mail
System Requirements: IBM PC: CP/M
Memory Required: 48.0K bytes
Source Language: Fortran
Purchase Terms: Purchase (license)

REDDING GROUP, INC.
MICRO X.25
Additional Product Classification: Communications/TP Monitors
Specific Application: Protocol for Communication



System Requirements: IBM PC: CP/M
Memory Required: 48.0K bytes
Source Language: Fortran
Purchase Terms: Purchase (license) - $750

[redacted], INC.
SYNCH 2780/3780
Additional Product Classification: Communications/TP Monitors
Specific Application: Emulates Protocol for IBM Bisynchronous Micro to Mainframe
System Requirements: IBM PC: CP/M
Memory Required: 48.0K bytes
Source Language: Fortran
Purchase Terms: Purchase (license) - $500

[redacted], INC.
SYNCH 2780/3780 - VERSION 2.02
Additional Product Classification: Communications/TP Monitors
Specific Application: Bisynchronous Communications Package
System Requirements: CP/M
Memory Required: 48.0K bytes
Source Code Available: No
Purchase Terms: Purchase (license) - $500
Date First Installed: April 1979

[redacted], Inc.
SYNCH 3270
Additional Product Classification: Communications/TP Monitors
Specific Application: Emulates IBM 3270 Protocol
System Requirements: IBM PC: CP/M
Memory Required: 48.0K bytes
Source Language: Fortran
Purchase Terms: Purchase (license) - $750

[redacted], INC.
SYNCH 3270 - VERSION 1.3
Additional Product Classification: Communications/TP Monitors
Specific Application: Bisynchronous Communications
System Requirements: CP/M
Memory Required: 48.0K bytes
Source Code Available: No
Purchase Terms: Purchase (license) - $750

[redacted], INC.
TELESTAR
Additional Product Classification: Communications/TP Monitors
Specific Application: Asynchronous Telecommunications Software for CP/M 80
System Requirements: CP/M 80
Memory Required: 64.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license) - $195
Number Installed to Date: 30
Date First Installed: April 1982
(See Vendor Profile Page V-25)

[redacted] COMPUTING CORP.
DIAL DATA
Additional Product Classification: Communications/TP Monitors, Interface
Specific Application: Interfaces Micro With Mainframe
Specific Industry: Banking/Financial
System Requirements: IBM PC: PC-DOS; Apple
Memory Required: 64.0K bytes
Source Language: Basic
Purchase Terms: Purchase (license) - $100
Number Installed to Date: 1,000
Date First Installed: 1981
(See Vendor Profile Page V-25)

[redacted] SOFTWARE
3271/DD DEVICE DRIVER
Additional Product Classification: Program Generators/Aids, Application Development Tools, Communications/TP Monitors
Specific Application: IBM/RSX Communications Package
System Requirements: DEC PDP-11, RSX
Source Language: Macro
Purchase Terms: Purchase (license) - $2,700
Number Installed to Date: 2
Date First Installed: 1982
(See Vendor Profile Page V-25)

[redacted] SOFTWARE
RFX-11 VERSION II (FILE TRANSFER UTILITY)
Additional Product Classification: Program Generators/Aids, Application Development Tools, Communications/TP Monitors
Specific Application: File Transfer and Virtual Terminal Utility
System Requirements: DEC PDP-11, RSX; DEC VAX, VMS
Memory Required: 5.0K bytes
Source Language: Macro
Purchase Terms: Purchase (license) - $675
Number Installed to Date: 300
Date First Installed: 1980

[redacted] SOFTWARE
SCREENSHARE-11 TERMINAL MONITOR FACILITY
Additional Product Classification: Communications/TP Monitors
Specific Application: Terminal Monitoring for Remote Support, Troubleshooting, Supervision and Security
System Requirements: DEC PDP-11: RSX; DEC VAX: VMS
Source Language: Macro
Purchase Terms: Purchase (license) - $1,250
Number Installed to Date: 20
Date First Installed: 1981

[redacted], INC.
SATURN-SPECIAL SERVICES AND TRUNK UTILIZATION
Additional Product Classification: Communications/TP Monitors
Specific Application: Tracks Circuits and Trunk Utilization
Specific Industry: Telephone Industry
System Requirements: DEC VAX-11/780, VMS
Memory Required: 2.0M bytes
Source Language: Fortran
Purchase Terms: Purchase (license)
Date First Installed: 1983
(See Vendor Profile Page V-28)

[redacted] COMPUTER SCIENCE CORP.
PC/ENET VERSION 1.0
Additional Product Classification: Communications/TP Monitors
Specific Application: Ethernet Application
System Requirements: IBM PC
Memory Required: 128.0K bytes
Source Language: Object, PL/M
Purchase Terms: Purchase (license) - $1,700
Number Installed to Date: 3
Date First Installed: March 1983
(See Vendor Profile Page V-28)

[redacted] CORP.
INFRS COMMUNICATIONS SOFTWARE
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications
System Requirements: DEC: RSTS/E; DEC: RT-11, RSX-11, VMS, IAS
Memory Required: 28.0K bytes
Source Language: Macro-11
Purchase Terms: Purchase (license) - $2,000
Number Installed to Date: 7
Date First Installed: 1981
(See Vendor Profile Page V-28)

[redacted] SOFTWARE, INC.
TELE-PORTER
Additional Product Classification: Communications/TP Monitors
Specific Application: Communication Package for Transfering Files and Diskettes Between Apples
System Requirements: Apple: Apple-DOS
Memory Required: 48.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $80
Number Installed to Date: 100
Date First Installed: July 1983
(See Vendor Profile Page V-28)

[redacted] SEMICONDUCTORS CORP.
DEC VAX COMMUNICATIONS
Additional Product Classification: Communications/TP Monitors
Specific Application: Electronic Mail for A DEC-VAX Based System
System Requirements: DEC VAX: Unix, Sunix
Memory Required: 512.0K bytes
Source Language: Basic, Cobol, Fortran , C
Purchase Terms: Purchase (license)
Number Installed to Date: 350
Date First Installed: January 1981
(See Vendor Profile Page V-28)

[redacted] SEMICONDUCTORS CORP.
HP 3000 COMMUNICATIONS
Additional Product Classification: Communications/TP Monitors
Specific Application: Electronic Mail for a HP 3000-Based System
System Requirements: HP 3000, Unix, Sunix
Memory Required: 512.0K bytes
Source Language: Basic, Cobol, Fortran , C
Purchase Terms: Purchase (license)
Number Installed to Date: 350
Date First Installed: January 1981

[redacted] SEMICONDUCTORS CORP.
IBM 3780 PROTOCOL
Additional Product Classification: Communications/TP Monitors
Specific Application: Electronic Mail
System Requirements: IBM 3780, Unix, Sunix
Memory Required: 512.0K bytes
Source Language: Assembler, Cobol, Fortran , C
Purchase Terms: Purchase (license)
Number Installed to Date: 350
Date First Installed: January 1981

[redacted] SEMICONDUCTORS CORP.
TELEX PLUX
Additional Product Classification: Communications/TP Monitors
Specific Application: Electronic Mail, Telex, D
System Requirements: Unix, Sunix
Memory Required: 512.0K bytes
Source Language: Cobol, Fortran , C, Assembler
Purchase Terms: Purchase (license)
Number Installed to Date: 350
Date First Installed: March 1983

[redacted] SEMICONDUCTORS CORP.
TELEX PLUX
Additional Product Classification: Communications/TP Monitors
Specific Application: Electronic Mail, Telex
System Requirements: Unix, Sunix
Memory Required: 512.0K bytes
Source Language: Cobol, Fortran, C, Assembler
Purchase Terms: Purchase (license)
Number Installed to Date: 350
Date First Installed: March 1983

[redacted], INC.
TELECOMM
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows Mobile Terminals to Interface With State Or National Computer
System Requirements: DG; HP; Durango
Memory Required: 256.0K bytes
Source Language: Assembler, Fortran
Purchase Terms: Purchase (license)
Number Installed to Date: 1
Date First Installed: 1982
(See Vendor Profile Page V-27)

[redacted], INC.
TELECOMMUNICATIONS INTERFACE
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows Police Departments to Talk to National Data

Base Networks
Specific Industry: Police Departments
System Requirements: HP 3000: MPE; DG CS 100: R-DOS; Burroughs 1800/1900; DEC PDP-11
Memory Required: 256.0K bytes
Source Language: Basic, Cobol
Purchase Terms: Purchase (license); Lease - $14,000 to $20,000
Number Installed to Date: 15
Date First Installed: May 1982

SMART, INC.
SERIES 1 POLLER & CREDIT AUTHORIZATION SYSTEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Communication Between POS and Mainframe, Performs Credit Authorization Functions
Specific Industry: Retail
System Requirements: IBM Series/1
Memory Required: 64.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license) - $20,000 to $80,000
Date First Installed: October 1983
(See Vendor Profile Page V-27)

SMITH EDUCATIONAL ENGINEERING SERVICES, INC.
ICOMM
Additional Product Classification: Communications/TP Monitors
Specific Application: Emulates Over 12 Terminals to Allow Access to Various Mainframes, Minis, and Other PCs
System Requirements: IBM PC: PC-DOS
Memory Required: 48.0K bytes
Source Language: Basic, Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $150
Number Installed to Date: 1,000
Date First Installed: February 1982
(See Vendor Profile Page V-27)

SOFTWARE AG OF NORTH AMERICA, INC.
COM-PLETE
Additional Product Classification: Communications/TP Monitors
Specific Application: Teleprocessing System
System Requirements: IBM System 370, MVS; IBM 43XX Series, OS-VS1; IBM 30XX Series, DOS/VSE
Memory Required: 512.0K bytes
Source Language: Assembler
(See Vendor Profile Page V-27)

SOFTWARE CLEARING HOUSE VMOS
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows I Applications to Run Under V
System Requirements: NCR V-Series, VRX
Memory Required: 41.0K bytes
Source Language: VRX Cobol 74
Source Code Available: No
Purchase Terms: Purchase (license); Rental - $9,500
Number Installed to Date: 147
(See Vendor Profile Page V-27)

SOFTWARE CLEARING HOUSE VIRTEX
Additional Product Classification: Communications/TP Monitors
Specific Application: Utility VRX Teleprocessing Monitor Includes Features Required to Develop New Systems from Scratch Under VRX
System Requirements: NCR V Series, VRX
Source Code Available: No
Purchase Terms: Purchase (license); Rental - $7,000 to $17,000
Number Installed to Date: 147

SOFTWARE & COMMUNICATION CONCEPTS, INC.
SOFTWARE & COMMUNICATIONS CONCEPT
Additional Product Classification: Communications/TP Monitors
Specific Application: Complete Front End Software
System Requirements: CDC, NOS
Source Language: Modcom
Purchase Terms: Purchase (license) - $100,000
Number Installed to Date: 12
Date First Installed: 1976
(See Vendor Profile Page V-27)

SOFTWARE DEVELOPMENT & MAINTENANCE, INC.
SDM/RPO ELECTRONIC REMOTE PURCHASE
Additional Product Classification: Communications/TP Monitors
Specific Application: Provides Electronic Purchase Order Interface Between Manufacturers and Retailers
Specific Industry: Manufacturing
System Requirements: Formation 4000: DOS/OS
Memory Required: 64.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license) - $5,000
Number Installed to Date: 2
Date First Installed: 1980
(See Vendor Profile Page V-27)

SOFTWARE DEVELOPMENT CORP.
DAGAR DTS-9
Additional Product Classification: Communications/TP Monitors
Specific Application: Transfer Files from One CP/M Based System to Another
System Requirements: CP/M
Memory Required: 48.0K bytes
Source Language: Cobol-80
Purchase Terms: Purchase (license) - $250
Date First Installed: February 1982
(See Vendor Profile Page V-27)

SOFTWARE DYNAMICS MODEM
Additional Product Classification: Communications/TP Monitors
Specific Application: Remote Telephone Transmitter Through Telephone Lines
System Requirements: Motorola: S-DOS, CP/M
Memory Required: 32.0K bytes
Source Code Available: No
Purchase Terms: Purchase (license) - $250
Number Installed to Date: 10
Date First Installed: January 1984
(See Vendor Profile Page V-27)

SOFTWARE DYNAMICS SDNET
Additional Product Classification: Communications/TP Monitors
Specific Application: Shared Resources Microcomputer Network Software
System Requirements: Pollech ST Series: S-DOS; TRS-80: CP/M; Motorola
Memory Required: 64.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license) - $200
Number Installed to Date: 150
Date First Installed: March 1983

SOFTWARE MANAGEMENT SYSTEMS, INC.
MICROTALK
Additional Product Classification: Communications/TP Monitors
Specific Application: Interface IBM PC OR Victor 9000 to Prime Computers
System Requirements: IBM PC: MS-DOS, PC-DOS; Victor 9000: MS-DOS, PC-DOS; Prime Computers: Primos
Memory Required: 128.0K bytes
Source Language: Info Basic V
Source Code Available: No
Purchase Terms: Purchase (license) - $300
Number Installed to Date: 2
Date First Installed: July 1983
(See Vendor Profile Page V-27)

THE SOFTWARE STORE
SOFTCOM - TELECOMMUNICATIONS UTILITY
Additional Product Classification: Communications/TP Monitors
Specific Application: Telecommunications Utility for Smart Terminal and File Transfer
System Requirements: CP/M
Memory Required: 32.0K bytes
Source Language: Machine
Source Code Available: No
Purchase Terms: Purchase (license) - $150
Number Installed to Date: 2,000
Date First Installed: 1980
(See Vendor Profile Page V-28)

SOFTWARE SYSTEMS, INC.
5251 MODEL 12 WORK STATION EMULATOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Enables IBM 5280 System to Operate On-Line to IBM System/34, System/36, System/38
System Requirements: IBM 5280: SCP
Memory Required: 64.0K bytes
Source Language: 5280 Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $500
Number Installed to Date: 150
Date First Installed: February 1982
(See Vendor Profile Page V-28)

SOFTWARE SYSTEMS, INC.
SYSTEM 34, 36, 38 EMULATOR TRANSFER
Additional Product Classification: Communications/TP Monitors
Specific Application: File Transfer Station from System/34, System/36, System/38 to IBM 5280
System Requirements: IBM System/34, System/36, System/38
Source Language: Assembler, RPG-II
Purchase Terms: Purchase (license) - $350 to $750
Number Installed to Date: 60
Date First Installed: February 1982

SOFTWORKS, INC.
VIRTUAL TERMINAL FACILITY
Additional Product Classification: Communications/TP Monitors
Specific Application: Accesses Any Local 3270 Terminal Multiple Teleprocessing Programs
System Requirements: IBM: OS
Memory Required: 512.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license); Lease - $7,500
Number Installed to Date: 85
Date First Installed: 1977
(See Vendor Profile Page V-28)

SOUTHERN COMPUTER SYSTEMS, INC.
IBM-CP/M
Additional Product Classification: Communications/TP Monitors
Specific Application: Data Transfer from One Operating System to Another
System Requirements: CP/M
Memory Required: 16.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license) - $250
Number Installed to Date: 1,000
Date First Installed: 1979
(See Vendor Profile Page V-28)

SOUTHWESTERN DATA SYSTEMS, INC.
ASCII EXPRESS II
Additional Product Classification: Communications/TP Monitors
Specific Application: Apple Communications Package
System Requirements: Apple II, II+, IIE, DOS
Memory Required: 48.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license) - $35
(See Vendor Profile Page V-28)

SOUTHWESTERN DATA SYSTEMS, INC.
ASCII EXPRESS THE PROFESSIONAL
Additional Product Classification: Communications/TP Monitors

Specific Application: Apple-DOS Communication Package File Transfer, Supports Modems
System Requirements: Apple II, II+, IIE: DOS
Memory Required: 48.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $130

SOUTHWESTERN DATA SYSTEMS, INC.
ONLINE
Additional Product Classification: Communications/TP Monitors
Specific Application: Private Access Dial-up System - Apples Equipped With a Hayes Micromodem II
System Requirements: Apple II, II+, IIE: DOS
Memory Required: 48.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $90

SOUTHWESTERN DATA SYSTEMS, INC.
P-TERM THE PROFESSIONAL
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Package for Pascal
System Requirements: Apple II, II+, IIE, USCD-P System
Memory Required: 48.0K bytes
Source Language: Assembly, Pascal
Source Code Available: No
Purchase Terms: Purchase (license) - $130

SOUTHWESTERN DATA SYSTEMS, INC.
Z-TERM
Additional Product Classification: Communications/TP Monitors
Specific Application: Economical Terminal Package for CP/M Apple II With Microsoft Z-80 Soft Card
System Requirements: Apple II, II+, IIE: CP/M
Memory Required: 48.0K bytes
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $100

SOUTHWESTERN DATA SYSTEMS, INC.
Z-TERM THE PROFESSIONAL
Additional Product Classification: Communications/TP Monitors
Specific Application: Apple CP/M Communications Package, Apples With Microsoft Z-80 Soft Card
System Requirements: Apple II, IIE: Apple CP/M; Apple II+
Memory Required: 48.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license) - $150

SPARTACUS COMPUTERS, INC.
IDNET
Additional Product Classification: Communications/TP Monitors
Specific Application: Networking System Based on TCP IP ARPA Protocol
System Requirements: IBM 4331: VM
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $15,000
Number Installed to Date: 1
Date First Installed: 1983
(See Vendor Profile Page V-28)

START SYSTEMS
AUTOPASS 3270TM
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Interface Between Wang VS and 3270, Host Processor Interfaces With CMS, TSO, CICS, IMS
System Requirements: Wang VS
Memory Required: 256.0K bytes
Source Language: Object, Procedure
Source Code Available: No
Purchase Terms: Purchase (license) - $15,000 to $80,000
Number Installed to Date: 2
Date First Installed: January 1982
(See Vendor Profile Page V-28)

STRATUS COMPUTER, INC.
3270 EMULATOR FACILITY
Additional Product Classification: Communications/TP Monitors
Specific Application: Facilities to Connect Stratus Computer to IBM Mainframe Using A Bisynchronous Protocol
System Requirements: Stratus/32, Stratus VOS
Source Language: PL/1
Source Code Available: No
Purchase Terms: Purchase (license) - $5,000
Date First Installed: September 1982
(See Vendor Profile Page V-28)

STRATUS COMPUTER, INC.
3270 TERMINAL SUPPORT
Additional Product Classification: Communications/TP Monitors
Specific Application: Connects 3270 Terminal to A Stratus Computer
System Requirements: Stratus/32, Stratus VOS
Source Language: PL/1
Source Code Available: No
Purchase Terms: Purchase (license) - $4,000
Date First Installed: June 1982

STRATUS COMPUTER, INC.
RJE-REMOTE JOB ENTRY
Additional Product Classification: Communications/TP Monitors
Specific Application: 2780/3780 Hasp Communications to Host Computers
System Requirements: Stratus/32, Stratus VOS
Source Language: PL/1
Source Code Available: No
Purchase Terms: Purchase (license) - $3,000
Date First Installed: March 1982

SUPERSOFT, INC.
TERM II
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows CP/M Computer to Communicate With Other Terminal Users and Other Computers
System Requirements: CP/M
Memory Required: 32.0K bytes
Source Language: C
Source Code Available: No
Purchase Terms: Purchase (license) - $200
(See Vendor Profile Page V-28)

SYSTAR CORP.
GATEWAY 34/36
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Front-End Protocol Converter; X.25 Interface
System Requirements: IBM Series/1 - 4955, CMX; IBM 4954; IBM 4956
Memory Required: 256.0K bytes
Source Code Available: No
Purchase Terms: Purchase (license) - $22,000 to $34,000
Number Installed to Date: 15
Date First Installed: 1981
(See Vendor Profile Page V-28)

SYSTAR CORP.
GATEWAY/370
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Front-End Protocol Converter; X.25 Interface
System Requirements: IBM Series/1
Memory Required: 192.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $16,000

SYSTAR CORP.
LODESTAR 34/36
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Front End System
System Requirements: IBM Series/1
Memory Required: 384.0K bytes
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $40,000
Date First Installed: June 1982

THE SYSTEMS CENTER
NETWORK ACCESS SERVICES CORVUS
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows Microprocessor Program to Attach to Corvus, Omninet to Communicate to SNA Processors
System Requirements: Corvus Concept, CCOS; IBM PC, MS-DOS; Apple Lisa: Lisa
Memory Required: 512.0K bytes
Source Language: Pascal
Source Code Available: No
Purchase Terms: Purchase (license)
Date First Installed: October 1983
(See Vendor Profile Page V-28)

THE SYSTEMS CENTER
NETWORK ACCESS SERVICES-SERIES/1
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows Series/1 EDX Programs to Communicate Upstream With SNA Host Processor
System Requirements: IBM Series/1: EDX
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license)
Date First Installed: October 1983

THE SYSTEMS CENTER, INC.
NETWORK DATAMOVER
Additional Product Classification: Communications/TP Monitors
Specific Application: Manages The Transfer Of Information Between Controllers, Mainframe to Mainframe, Mainframe to Series/1; Mainframe to Micro
System Requirements: IBM PC, MS-DOS; Apple Lisa, Apple-DOS; IBM System 370: MVS; IBM Series/1
Source Language: Assembly
Purchase Terms: Purchase (license)
Number Installed to Date: 10
Date First Installed: August 1983
(See Vendor Profile Page V-28)

THE SYSTEMS CENTER, INC.
SNA ON MICRO COMPUTERS
Additional Product Classification: Communications/TP Monitors
Specific Application: Supports Full IBM SNA Data Communications
Memory Required: 100.0K bytes
Source Language: Pascal
Purchase Terms: Purchase (license)
Date First Installed: May 1983

SYSTEMS & SOFTWARE, INC.
NEXUS
Additional Product Classification: Communications/TP Monitors
Specific Application: Ties DEC PDP-11 or DEC VAX Together With Either an Intel MDS or MDS Under CP/M
System Requirements: DEC PDP-11, Iois II; DEC VAX: VMS, CP/M
Source Language: Assembler
Purchase Terms: Purchase (license) - $420
Number Installed to Date: 100
Date First Installed: September 1979
(See Vendor Profile Page V-28)

SYSTEMS RESOURCES CORP.
SRI 3278
Additional Product Classification: Communications/TP Monitors
Specific Application: Protocol Converter for The IBM 3278
System Requirements: IBM 4300: VM MVS; IBM 308X; IBM 370
Source Language: Assembler
Source Code Available: No
Purchase Terms: Purchase (license) - $6,500

Date First Installed: 1982
(See Vendor Profile Page V-28)

SYSTEMS STRATEGIES, INC.
2780/3780 EMULATOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Provides 2780/3780 Batch to IBM Mainframe
Source Language: C Code
Purchase Terms: Purchase (license) - $47,000
Number Installed to Date: 5
(See Vendor Profile Page V-28)

SYSTEMS STRATEGIES, INC.
3270 BSC EMULATOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Emulator 3270 BSC Device to IBM Mainframe
Source Language: C Code
Purchase Terms: Purchase (license) - $85,000
Number Installed to Date: 1

SYSTEMS STRATEGIES, INC.
3270 SNA EMULATOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Emulator 3270 Cluster Controller to IBM Mainframe
Source Language: C Code
Purchase Terms: Purchase (license) - $13,000
Number Installed to Date: 5
Date First Installed: 1978

SYSTEMS STRATEGIES, INC.
X.25 INTERFACE
Additional Product Classification: Communications/TP Monitors
Specific Application: CCITT X.25 Standard Communications Interface
Source Language: C Code
Purchase Terms: Purchase (license) - $90,000
Number Installed to Date: 2

TAFT CONSULTING, INC.
TERRALINK
Additional Product Classification: Communications/TP Monitors
Specific Application: Interface Between Tandem and The Western Unich Easy Link
System Requirements: Tandem Guardian
Source Language: TAL
Source Code Available: No
Purchase Terms: Purchase (license) - $5,000
Date First Installed: 1983
(See Vendor Profile Page V-29)

TECHNICO, INC.
SERIAL FILE TRANSFER PROGRAM
Additional Product Classification: Communications/TP Monitors
Specific Application: Allows the User to Upload and Download from A Host Computer
Specific Industry: Education, Scientific, Industrial Control
System Requirements: TI 9900
Memory Required: 4.0K bytes
Source Language: 9900 Assembler
Source Code Available: Yes
Purchase Terms: Purchase (license) - $100
Number Installed to Date: 30
Date First Installed: 1982
(See Vendor Profile Page V-29)

TEKELEC, INC.
CHAMELEON ASYNC
Additional Product Classification: Communications/TP Monitors
Specific Application: Stop-Start Protocol Simulator
System Requirements: Chameleon Data Communication
Memory Required: 64.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license) - $1,000
Number Installed to Date: 30
Date First Installed: 1983
(See Vendor Profile Page V-30)

TEKELEC, INC.
CHAMELEON BASIC
Additional Product Classification: Communications/TP Monitors
Specific Application: Simulator of Byte Protocol
System Requirements: Chameleon Data Communication
Memory Required: 64.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license) - $1,000
Number Installed to Date: 30
Date First Installed: 1983

TEKELEC, INC.
CHAMELEON SYNC
Additional Product Classification: Communications/TP Monitors, Performance Measurement
Specific Application: Protocol Modeling
Specific Industry: Manufacturing, Engineering, Banking/Financial, Government
System Requirements: Chameleon
Source Language: Proprietary
Source Code Available: No
Purchase Terms: Purchase (license) - $1,000
Number Installed to Date: 55
Date First Installed: December 1982

TEKELEC, INC.
FRAMEM (FRAME LEVEL EMULATOR)
Additional Product Classification: Communications/TP Monitors, Performance Measurement
Specific Application: Protocol Modeling for Development and Test Purposes
Specific Industry: Manufacturing, Engineering, Banking/Financial, Government, Network Support
System Requirements: Chameleon
Source Language: Proprietary
Source Code Available: No
Purchase Terms: Purchase (license); Rental; Lease - $1,000
Number Installed to Date: 55
Date First Installed: April 1982

TEKELEC, INC.
FRANEM
Additional Product Classification: Communications/TP Monitors
Specific Application: HDLC/SDLC Protocol Simulator
Memory Required: 64.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license) - $1,000
Number Installed to Date: 42
Date First Installed: 1982

TEKELEC, INC.
SNP/L
Additional Product Classification: Communications/TP Monitors
Specific Application: SNA Protocol Simulator
Memory Required: 64.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license) - $1,000
Number Installed to Date: 35
Date First Installed: 1983

TEKELEC, INC.
SNP/L (SIMULATOR INTERACTIVE MULTI-PROTOCOL
Additional Product Classification: Communications/TP Monitors
Specific Application: Protocol Modeling for Development and List
Specific Industry: Manufacturing, Engineering, Banking/Financial, Government, Network Support/Development
Source Language: Proprietary
Source Code Available: No
Purchase Terms: Purchase (license) - $1,000
Number Installed to Date: 55
Date First Installed: December 1982

TEKELEC, INC.
SITREX
Additional Product Classification: Communications/TP Monitors
Specific Application: X.25 Network and Subscriber Simulator
Memory Required: 64.0K bytes
Source Language: Assembler
Purchase Terms: Purchase (license) - $2,000
Number Installed to Date: 225
Date First Installed: 1981

TEKELEC, INC.
SITREX-PLUS
Additional Product Classification: Communications/TP Monitors
Specific Application: X.25 Protocol Modeling
Specific Industry: Manufacturing, Engineering, Banking/Financial, Government, X.25 Network Support
Source Language: Proprietary
Purchase Terms: Purchase (license) - $1,000
Number Installed to Date: 300
Date First Installed: March 1988

TELCO RESEARCH CORP.
GENERAL COST ALLOCATION (GCA)
Additional Product Classification: System Resource Management, Communications/TP Monitors
Specific Application: Allocates Telecommunications Costs to Users
Specific Industry: Manufacturing, Engineering, Wholesale/Distribution, Retail, Banking/Financial, Medical, Legal, Insurance, Real Estate, Education, Construction, Government, Transportation
System Requirements: IBM; Honeywell; DEC PDP: RSX-11M
Memory Required: 100.0K bytes
Source Language: Cobol
Purchase Terms: Purchase (license) - $28,500
Date First Installed: April 1981
(See Vendor Profile Page V-30)

TELCO RESEARCH CORP.
MULTI-NODE TANDEM OPTYMIZER (MTO)
Additional Product Classification: Communications/TP Monitors
Specific Application: Design and Optimize Multiple Location Switched Networks
Specific Industry: Manufacturing, Engineering, Wholesale/Distribution, Retail, Banking/Financial, Medical, Legal, Insurance, Real Estate, Education, Construction, Government, Transportation
System Requirements: IBM; DEC 10, DEC 20; DEC VAX: VMS; DG MV8000
Memory Required: 100.0K bytes
Source Language: Fortran
Purchase Terms: Purchase (license)
Number Installed to Date: 35
Date First Installed: 1978

TELCO RESEARCH CORP.
THE ACD OPTYMIZER
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Package
Specific Industry: Manufacturing, Engineering, Wholesale/Distribution, Retail, Banking/Financial, Medical, Legal, Insurance, Real Estate, Education, Construction, Government, Transportation
System Requirements: IBM: OS/MVS; DEC 10: VM/CMS; DEC PDP-11
Source Language: Fortran, Assembly
Purchase Terms: Purchase (license) - $27,500
Date First Installed: 1979

TELCO RESEARCH CORP.
THE OPTYMIZER PLUS
Additional Product Classification: Communications/TP Monitors
Specific Application: Network Optimization
Specific Industry: Manufacturing, Engineering, Wholesale/Distribution, Retail, Banking/Financial, Medical, Legal, Insurance, Real Estate, Education, Construction, Government, Transportation
System Requirements: IBM; DEC VAX: VMS; Honeywell; Amdahl
Source Language: Fortran
Purchase Terms: Purchase (license) - $28,600
Date First Installed: 1979

TELCO RESEARCH CORP.
THE OPTYMIZER PLUS
Additional Product Classification: Communications/TP Monitors

Specific Application: Network Optimization
Specific Industry: Manufacturing, Engineering, Wholesale/Distribution, Retail, Banking/Financial, Medical, Legal, Insurance, Real Estate, Education, Construction, Government, Transportation
System Requirements: IBM; DEC VAX: VMS; Honeywell; Amdahl
Source Language: Fortran
Purchase Terms: Purchase (license) - $28,800
Date First Installed: 1978

TELOS RESEARCH CORP.
TRU DATA RECORDER/POLLER
Additional Product Classification: Communications/TP Monitors
Specific Application: Data Capture for Call Detail
Specific Industry: Manufacturing, Engineering, Wholesale/Distribution, Retail, Banking/Financial, Medical, Legal, Insurance, Education, Construction, Government, Transportation
System Requirements: IBM PC; IBM PC-XT
Memory Required: 256.0K bytes
Purchase Terms: Purchase (license) - $12,500 to $14,500

TELEPHONE SOFTWARE CONNECTION, INC.
ANSWERING MACHINE
Additional Product Classification: Communications/TP Monitors
Specific Application: Answers Modem Calls, Handles Incoming Outgoing Messages
System Requirements: Apple II, II+, IIE: DOS 3.3
Memory Required: 48.0K bytes
Source Language: Applesoft
Source Code Available: No
Purchase Terms: Purchase (license) - $40
(See Vendor Profile Page V-30)

TELEPHONE SOFTWARE CONNECTION, INC.
PHONE SECRETARY II
Additional Product Classification: Communications/TP Monitors
Specific Application: Places Calls and Keeps A Log of Activity
System Requirements: Apple II, II+, IIE: DOS 3.3
Memory Required: 48.0K bytes
Source Language: Applesoft W6502
Source Code Available: No
Purchase Terms: Purchase (license) - $45

TELEPHONE SOFTWARE CONNECTION, INC.
PICTURE TRANSFER PROGRAM
Additional Product Classification: Communications/TP Monitors
Specific Application: Sends Graphics Picture Over Phone
System Requirements: Apple II, II+, IIE: DOS 3.3
Memory Required: 48.0K bytes
Source Language: Applesoft
Purchase Terms: Purchase (license) - $40

TELEPHONE SOFTWARE CONNECTION, INC.
TELEPHONE TRANSFER II
Additional Product Classification: Communications/TP Monitors
Specific Application: Sends All DOS 3.3 File Types Over the Phone to Another Apple
System Requirements: Apple II, II+, IIE: DOS 3.3
Memory Required: 48.0K bytes
Source Language: Applesoft W6502
Source Code Available: No
Purchase Terms: Purchase (license) - $60

TELEPHONE SOFTWARE CONNECTION, INC.
TERMINAL PROGRAM
Additional Product Classification: Communications/TP Monitors
Specific Application: Intelligent Terminal Program With Automatic Log On and 16K Capture Buffer
System Requirements: Apple II, II+,IIE: DOS 3.3
Memory Required: 48.0K bytes
Source Language: Applesoft W6502
Source Code Available: No
Purchase Terms: Purchase (license) - $40

TEXAS INSTRUMENTS, INC.
TERMINAL EMULATOR II
Additional Product Classification: Communications/TP Monitors
Specific Application: Terminal Emulation
System Requirements: TI 99/4
Source Code Available: No
Purchase Terms: Purchase (license) - $50
(See Vendor Profile Page V-30)

TICOM SYSTEMS, INC.
REMCOM
Additional Product Classification: Communications/TP Monitors
Specific Application: Comprehensive Asynchronous Communications Package
System Requirements: IBM PC; DEC Rainbow: UCSD-P; NEC APC; TI
Memory Required: 64.0K bytes
Source Language: Pascal
Source Code Available: No
Purchase Terms: Purchase (license) - $95
Date First Installed: 1981
(See Vendor Profile Page V-31)

TITN
TITN X.25 VERSION 1.0
Additional Product Classification: Communications/TP Monitors
Specific Application: Provides Minicomputer Access for Long-Haul Data Network
System Requirements: Intel; Fortune; Alice; Apollo
Memory Required: 64.0K bytes
Source Language: C
Purchase Terms: Purchase (license)
Number Installed to Date: 30,000
Date First Installed: August 1983
(See Vendor Profile Page V-31)

TMW CORP.
PTWX
Additional Product Classification: Communications/TP Monitors
Specific Application: Telex II (TWX) Terminal Software
System Requirements: Commodore Pet
Memory Required: 8.0K bytes
Source Language: Basic
Purchase Terms: Purchase (license) - $69
Date First Installed: 1980
(See Vendor Profile Page V-31)

TMW CORP.
XPTERM
Additional Product Classification: Communications/TP Monitors
Specific Application: Smart Terminal Software
System Requirements: Commodore Pet
Memory Required: 32.0K bytes
Source Language: Basic
Purchase Terms: Purchase (license) - $49 to $59
Date First Installed: 1980

TOP DOWN SYSTEMS
INTF 3270
Additional Product Classification: Communications/TP Monitors
Specific Application: Software Interface for Terminal Monitor to Another Systems Monitor
System Requirements: IBM: CP/M, DOS, VS, MVS
Memory Required: 256.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license); Rental; Lease - $8,125
Number Installed to Date: 25
Date First Installed: 1982
(See Vendor Profile Page V-31)

TOP DOWN SYSTEMS
TERMINAL MONITOR
Additional Product Classification: Communications/TP Monitors
Specific Application: Management Facility for Application Programs
System Requirements: IBM: CP/M, DOS, VS, MVS
Memory Required: 256.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license); Rental; Lease - $39,375
Date First Installed: 1972

TOP DOWN SYSTEMS
VTAM 3270
Additional Product Classification: Communications/TP Monitors
Specific Application: Interface for Terminal Monitor to VTAM
System Requirements: IBM Mainframes: CP/M, DOS, VS, MVS
Memory Required: 256.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license); Rental; Lease - $8,125
Number Installed to Date: 25
Date First Installed: 1980

TRANSACTION DATA SYSTEMS, INC.
PACKET NETWORK FACILITY
Additional Product Classification: Communications/TP Monitors
Specific Application: Provides Interface Between Multiple Processors
System Requirements: PE 3200, Ohio Scientific 32
Memory Required: 500.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license) - $5,000
Number Installed to Date: 3
Date First Installed: 1979
(See Vendor Profile Page V-31)

TRANSACTION DATA SYSTEMS, INC.
STAT-MUX SUPPORT FACILITY
Additional Product Classification: Communications/TP Monitors
Specific Application: Provides A Software Statistical Interface to Remote Multiplexers
System Requirements: PE 3200, Ohio Scientific 32
Memory Required: 500.0K bytes
Source Language: Assembly
Purchase Terms: Purchase (license) - $5,000
Number Installed to Date: 2
Date First Installed: 1981

TRANSEND CORP.
TRANSEND I
Additional Product Classification: Communications/TP Monitors
Specific Application: Communication, Send and Receive Messages
System Requirements: Apple II: DOS; Apple IIE: DOS
Source Language: Assembly, Basic
Purchase Terms: Purchase (license) - $89
Number Installed to Date: 1,000
Date First Installed: 1981
(See Vendor Profile Page V-31)

TRANSEND CORP.
TRANSEND II
Additional Product Classification: Communications/TP Monitors
Specific Application: Send and Receive Messages, Verify File Transfer
System Requirements: Apple II: DOS; Apple IIE: DOS
Source Language: Assembly, Basic
Purchase Terms: Purchase (license) - $149
Number Installed to Date: 1,000
Date First Installed: 1981

TRANSEND CORP.
TRANSEND III
Additional Product Classification: Communications/TP Monitors
Specific Application: Electronic Mail
System Requirements: Apple II: DOS; Apple IIE: DOS
Source Language: Assembly, Basic
Purchase Terms: Purchase (license) - $149
Number Installed to Date: 1,000
Date First Installed: 1981

TRANSEND CORP.
TRANSEND III
Additional Product Classification: Communications/TP Monitors

Specific Application: Electronic Mail
System Requirements: Apple II: DOS; Apple IIE: DOS
Source Language: Assembly, Basic
Source Code Available: No
Purchase Terms: Purchase (license) - $275
Number Installed to Date: 1,000
Date First Installed: 1983

TRANSEND CORP.
TRANSEND PC
Additional Product Classification: Communications/TP Monitors
Specific Application: Electronic Mail
System Requirements: IBM PC; MS-DOS
Source Language: Assembly
Source Code Available: No
Purchase Terms: Purchase (license) - $150
Date First Installed: August 1983

UNISOURCE AUTOMATION PRODUCTS
RJE REMOTE JOB ENTRY SOFTWARE
Additional Product Classification: Communications/TP Monitors
Specific Application: Telecommunications
System Requirements: DEC PDP-11, RSX, RT-11
Source Code Available: No
Purchase Terms: Purchase (license) - $1,850 to $2,250
Number Installed to Date: 100
Date First Installed: January 1978
(See Vendor Profile Page V-32)

UNISOURCE AUTOMATION PRODUCTS
UAP-LINK
Additional Product Classification: Communications/TP Monitors
Specific Application: Telecommunications File Transfer
System Requirements: DEC PDP-11; IBM PC: PC-DOS; IBM 370, TSO
Source Code Available: No
Purchase Terms: Purchase (license) - $250 to $1,500
Number Installed to Date: 50
Date First Installed: July 1982

UNISOURCE AUTOMATION PRODUCTS
UAP-LINK FILE TRANSFER SOFTWARE
Additional Product Classification: Communications/TP Monitors
Specific Application: Telecommunications File Transfer
System Requirements: DEC PDP-11: RT-11; DEC VAX: VMS; IBM PC, MS-DOS; IBM Mainframes: TSO
Source Code Available: No
Purchase Terms: Purchase (license) - $250
Number Installed to Date: 40
Date First Installed: June 1982

UNISOFT SYSTEM CORP.
B-NET
Additional Product Classification: Communications/TP Monitors
Specific Application: Networking
System Requirements: Unix
Memory Required: 156.0K bytes
Source Language: C
Purchase Terms: Purchase (license) - $400
Number Installed to Date: 10
Date First Installed: March 1983
(See Vendor Profile Page V-32)

UNIVERSITY COMPUTING CO.
UCC MBA-MICROCOMPUTER SOFTWARE
Additional Product Classification: Financial Modeling Languages/DSS, WP/Text Editing, DBMS, Graphics, Communications/TP Monitors
Specific Application: Spreadsheet Modeling, Graphics, WP, Data Base Forms Generation
Specific Industry: Manufacturing
System Requirements: IBM PC; MP 9816
Memory Required: 256.0K bytes
Source Code Available: No
Purchase Terms: Purchase (license)
Number Installed to Date: 2,000
(See Vendor Profile Page V-32)

USMA COMPUTER CO.
COMMUNICATIONS PACKAGE
Additional Product Classification: Communications/TP Monitors
Specific Application: Asynchronous Communications With an IBM PC and Hayes Smart Modem, Supports 132 Column Reports
System Requirements: IBM PC, PC-DOS
Memory Required: 64.0K bytes
Source Language: Basic
Purchase Terms: Purchase (license) - $200
Number Installed to Date: 3
Date First Installed: January 1983
(See Vendor Profile Page V-32)

USMA COMPUTER CO.
IBM PC COM
Additional Product Classification: Communications/TP Monitors
Specific Application: Communication With Time-sharing Firms and Data Bases
System Requirements: IBM PC; PC-DOS
Memory Required: 64.0K bytes
Source Language: Basic
Source Code Available: Yes
Purchase Terms: Purchase (license) - $200
Number Installed to Date: 5
Date First Installed: January 1983

VAN ARSDALE & ASSOCIATES, INC.
TAC SOFT
Additional Product Classification: Communications/TP Monitors
Specific Application: User-Defined Technical Assistance Center Support Package Supports Maintenance of Company and PBX Switching Equipment
Specific Industry: Telephone
System Requirements: DG Eclipse: AOS
Memory Required: 760.0K bytes
Source Language: SP/Pascal, Assembler
Purchase Terms: Purchase (license)
Number Installed to Date: 1
Date First Installed: 1983
(See Vendor Profile Page V-32)

VISICORP
VISIANSWER
Additional Product Classification: Communications/TP Monitors
Specific Application: Communications Package
System Requirements: IBM PC; PC-DOS
Purchase Terms: Purchase (license)
(See Vendor Profile Page V-32)

VISICORP
VISITERM
Additional Product Classification: System Resource Management, Communications/TP Monitors
Specific Application: Terminal Emulation, Product Turns PC Into Dumb Terminal
System Requirements: Apple II; III: Apple-DOS; IBM PC: PC-DOS; Commodore; Atari 800
Purchase Terms: Purchase (license) - $100

WILD HARE COMPUTER SYSTEMS, INC.
HARE/NET
Additional Product Classification: Communications/TP Monitors
Specific Application: Local-Area Network Software
System Requirements: Hare Brain Work Station: MCS
Source Code Available: No
Purchase Terms: Purchase (license) - $2,000
Number Installed to Date: 4
Date First Installed: June 1983
(See Vendor Profile Page V-33)

WINTERHALTER, INC.
NS3270 AND NS3780
Additional Product Classification: Communications/TP Monitors
Specific Application: Micro to Mainframe Communications Programs (Emulation)
System Requirements: CP/M
Memory Required: 56.0K bytes
Source Language: C
Source Code Available: $8,000
Purchase Terms: Purchase (license)
(See Vendor Profile Page V-33)

ZAIAZ COMMUNICATIONS, INC.
TRANSLATION EXPRESS
Additional Product Classification: Communications/TP Monitors
Specific Application: Intercomputer File Transfer
System Requirements: Televideo: CP/M; DEC VAX: VMS; DEC PDP-11/23: Unix; TI 990: DSX
Source Language: C
Purchase Terms: Purchase (license) - $500
Number Installed to Date: 23
Date First Installed: March 1982
(See Vendor Profile Page V-33)

ZEIGER ASSOCIATES, INC.
TAP
Additional Product Classification: Communications/TP Monitors
Specific Application: Traffic Analysis Program, Communication Network Design
Specific Industry: Telecommunications
System Requirements: CP/M
Memory Required: 56.0K bytes
Source Language: Cobol, Basic, Assembler
Purchase Terms: Purchase (license); Rental; Lease - $1,000
Number Installed to Date: 12
Date First Installed: 1979
(See Vendor Profile Page V-33)

FACSIMILE DEVICES

Index to Facsimile Devices

Facsimile devices are systems which are used for the transmission of images. There are three basic types of facsimile devices — transmitters, receivers and transceivers, which can both send and receive images. The index listings are arranged alphabetically by vendor and include the price, device type and the page number on which the complete product listing can be found.

VENDOR	MODEL	TRANSMISSION TECHNIQUE	PRICE	PAGE
Alden Electronics, Inc.	18 X 22 FACSIMILE SYSTEM	Stand-alone Transmitter	$11,750	C-46
	SIGMA FAX	Stand-alone Transmitter	$5,600	C-46
Burroughs Corp.	DEX 1103	Transceiver	$1,500	C-46
	DEX 1402	Transceiver	$2,000	C-46
	DEX 2100	Transceiver	$2,995	C-46
	DEX 3200	Transceiver	$3,995	C-46
	DEX 3500	Transceiver	$3,500	C-46
	DEX 3600	Transceiver	$3,995	C-46
Canon U.S.A., Inc.	FAX 31	Transceiver	$1,995	C-46
	FAX 320E	Transceiver	$5,995	C-46
	FAX 330	Transceiver	$4,495	C-46
	FAX 401	Transceiver	$3,795	C-46
Exxon Enterprises	1200	Transceiver	$1,495	C-46
	1300 QWIP	Transceiver	$1,495	C-46
	2000/2150	Transceiver	$2,375 to $3,375	C-46

Facsimile Devices

ALDEN ELECTRONICS, INC.
18 X 22 FACSIMILE SYSTEM
Device Type: Stand-alone Transmitter, Receiver
Transmission Signal: Analog
Graphics Capability: Yes
Price: $11,750
Date First Installed: September 1978
(See Vendor Profile Page V-1)

ALDEN ELECTRONICS, INC.
SIGMA FAX
Device Type: Stand-alone Transmitter, Receiver
Transmission Signal: Analog
Graphics Capability: No
Price: $5,600

BURROUGHS CORP.
DEX 1103
Device Type: Transceiver
Transmission Signal: Analog
Graphics Capability: Yes
Price: $1,500
Date First Installed: June 1978
(See Vendor Profile Page V-4)

BURROUGHS CORP.
DEX 1402
Device Type: Transceiver
Transmission Signal: Analog
Graphics Capability: Yes
Price: $2,000
Date First Installed: June 1979

BURROUGHS CORP.
DEX 2100
Device Type: Transceiver
Transmission Signal: Analog
Graphics Capability: Yes
Price: $2,995
Date First Installed: September 1981

BURROUGHS CORP.
DEX 3200
Device Type: Transceiver
Transmission Signal: Digital
Graphics Capability: Yes
Price: $3,995
Date First Installed: November 1983

BURROUGHS CORP.
DEX 3600
Device Type: Transceiver
Transmission Signal: Digital
Graphics Capability: Yes
Price: $3,500
Date First Installed: September 1982

BURROUGHS CORP.
DEX 3800
Device Type: Transceiver
Transmission Signal: Digital
Graphics Capability: Yes
Price: $3,995
Date First Installed: September 1981

CANON U.S.A., INC.
FAX 31
Device Type: Transceiver
Transmission Signal: Analog
Graphics Capability: No
Price: $1,995
Date First Installed: June 1983
(See Vendor Profile Page V-5)

FAX 330
Device Type: Transceiver
Transmission Signal: Analog, Digital
Graphics Capability: Yes
Price: $4,495
Date First Installed: September 1983

CANON U.S.A., INC.
FAX 401
Device Type: Transceiver
Transmission Signal: Analog, Digital
Graphics Capability: Yes
Price: $3,795
Date First Installed: January 1981

EXXON ENTERPRISES
1200
Device Type: Transceiver
Transmission Signal: Analog
Graphics Capability: Yes
Price: $1,495
Date First Installed: December 1978
(See Vendor Profile Page V-12)

EXXON ENTERPRISES
1300 QWP
Device Type: Transceiver
Transmission Signal: Analog
Graphics Capability: Yes
Price: $1,495
Date First Installed: July 1978

EXXON ENTERPRISES
2000/2150
Device Type: Transceiver
Transmission Signal: Analog
Graphics Capability: Yes
Price: $2,375 to $3,375
Date First Installed: February 1980

EXXON ENTERPRISES
2210 QWP
Device Type: Transceiver
Transmission Signal: Digital
Graphics Capability: Yes
Price: $2,995
Date First Installed: 1983

EXXON ENTERPRISES
2310 QWP
Device Type: Transceiver
Transmission Signal: Digital
Graphics Capability: Yes
Price: $5,845 to $6,745
Date First Installed: June 1982

INFOLINK
DIAL ACCESS RECEIVER
Device Type: Receiver
Transmission Signal: Analog, Digital
Graphics Capability: Yes
Price: $500
Date First Installed: January 1970
(See Vendor Profile Page V-15)

INFOLINK
DIAL ACCESS TRANSMITTER
Device Type: Stand-alone Transmitter
Transmission Signal: Analog, Digital
Graphics Capability: Yes
Price: $500
Date First Installed: January 1970

INFOLINK
PRIVATE LINE RECEIVER
Device Type: Receiver
Transmission Signal: Analog, Digital
Graphics Capability: Yes
Price: $500
Date First Installed: January 1970

INFOLINK
PRIVATE LINE TRANSMITTER
Device Type: Transceiver
Transmission Signal: Analog, Digital
Graphics Capability: Yes
Price: $500
Date First Installed: January 1970

MITSUBISHI ELECTRONICS AMERICA, INC.
FA-85SG
Device Type: Transceiver
Transmission Signal: Digital
Graphics Capability: Yes
Price: $8,500
Date First Installed: January 1982
(See Vendor Profile Page V-20)

NEC TELEPHONE, INC.
NEFAX 3C
Device Type: Transceiver
Transmission Signal: Digital
Graphics Capability: Yes
Price: $11,500
Date First Installed: January 1981
(See Vendor Profile Page V-21)

NEC TELEPHONE, INC.
NEFAX 3S
Device Type: Transceiver
Transmission Signal: Digital
Graphics Capability: Yes
Price: $4,400
Date First Installed: June 1983

NEC TELEPHONE, INC.
NEFAX 3SE
Device Type: Transceiver
Transmission Signal: Digital
Graphics Capability: Yes
Price: $4,600
Date First Installed: June 1983

NEC TELEPHONE, INC.
NEFAX 3SH
Device Type: Transceiver
Transmission Signal: Digital
Graphics Capability: Yes
Price: $4,600
Date First Installed: June 1983

NEC TELEPHONE, INC.
NEFAX 3T
Device Type: Transceiver
Transmission Signal: Digital
Graphics Capability: Yes
Price: $8,200
Date First Installed: June 1981

NEC TELEPHONE, INC.
NEFAX 8
Device Type: Transceiver
Transmission Signal: Digital
Graphics Capability: Yes
Price: $2,100
Date First Installed: October 1983

PANAFAX CORP.
MV-60
Device Type: Transceiver
Transmission Signal: Analog
Graphics Capability: Yes
Price: $1,975
Date First Installed: September 1978
(See Vendor Profile Page V-22)

PANAFAX CORP.
MV-3000
Device Type: Transceiver
Transmission Signal: Digital
Graphics Capability: Yes
Price: $6,250
Date First Installed: May 1982

PANAFAX CORP.
MV-3000WL
Device Type: Transceiver
Transmission Signal: Digital
Graphics Capability: Yes
Price: $7,000
Date First Installed: May 1982

PANAFAX CORP.
FX-100
Device Type: Transceiver
Transmission Signal: Digital
Graphics Capability: Yes
Price: $4,495
Date First Installed: June 1983

PITNEY BOWES
8300
Device Type: Transceiver
Transmission Signal: Analog
Graphics Capability: Yes
Price: $2,995
Date First Installed: September 1982
(See Vendor Profile Page V-24)

PITNEY BOWES
8400
Device Type: Transceiver
Transmission Signal: Analog
Graphics Capability: Yes
Price: $4,995
Date First Installed: September 1982

PITNEY BOWES
8600
Device Type: Transceiver
Transmission Signal: Analog, Digital
Graphics Capability: Yes
Price: $4,695
Date First Installed: September 1983

PITNEY BOWES
8800
Device Type: Transceiver
Transmission Signal: Analog, Digital
Graphics Capability: Yes
Price: $6,995
Date First Installed: September 1982

PITNEY BOWES
8900
Device Type: Transceiver
Transmission Signal: Analog, Digital
Price: $8,995
Date First Installed: September 1982

Learn more about Personal Computing, Office Automation or Communications in these video journals from CW Communications and Deltak.

Personal Computing:
A Business Perspective
Taped on location during CW Communications' COMPUTERWEEK conference, these six video sessions feature many of the biggest names in the microcomputer industry as they share their insights into the application of personal computers in the business environment. Each of the six tapes is 20-30 minutes long, and focuses on a specific issue. Available through Deltak singly or as a group.

- *Thinking Small for Big Business*
- *The Purchase Decision*
- *Finding a Vendor*
- *Sales Trends and IBM*
- *New Languages and Networking*
- *A Look Toward the Future*

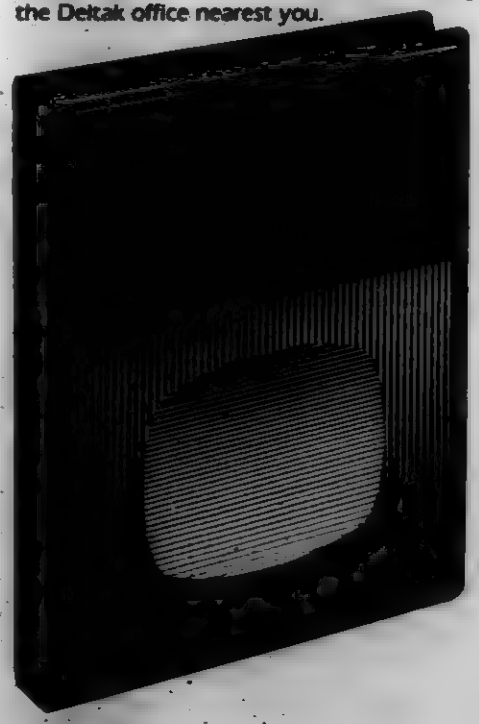
Office Automation: The Essential Issues
Last Fall, executives from around the country attended the OA Forum, a national conference conducted by CW Communications on the introduction, integration and implementation of office automation in today's business environment. Leading industry experts and top corporate managers discussed key office automation planning issues. These discussions are now available to you in seven carefully edited conference journals. Each journal is in full color, and 20-30 minutes long. They are available from Deltak singly or in a group.

- *The DP Role in Office Automation*
- *Planning for Office Automation*
- *The Fundamentals of Integration*
- *Some Specifics of Integration*
- *The Executive Workstation*
- *One Company's Experience*
- *Introducing Office Automation to Your Organization*

Communications
Leading experts in all areas of communications were taped at the 1983 Communication Networks Conference in New Orleans. The result was two brand new video conference journals of key interest to all levels of corporate and technical understanding:

- Communication Networks: Alternatives for the 80's
- Local Area Networks: The major considerations

All of these useful journals are available through Deltak, inc., 1751 Diehl Road, Naperville, IL 60566. To get more information, or to find out about rentals, just call Deltak Order-Entry at (312) 369-3000 (in Canada, (416) 678-9222), or check the white pages of your telephone directory for the Deltak office nearest you.



CW COMMUNICATIONS/INC.
Publishes of Computerworld, InfoWorld, PC World, MICRO MARKETWORLD, and other leading computer publications around the world.

New CPUs replace IBM 3080 series

By Tom Henkel
CW Staff

RYE BROOK, N.Y. — IBM last week replaced its 3080 line of mainframes with six new CPUs that incorporate design and circuit-packaging enhancements said to increase internal performance 5% to 14% over current models. The new models are being offered at the same price as the older systems, but current users cannot field-upgrade to the new machines.

The new mainframes — the 3083 Models EX, BX and JX, the 3081 Models GX and KX and the 3084 Model QX — are direct replacements for the 3083 Model E, Model B and Model J, the 3081 Models G and K and the 3084 Model Q, respectively, which have been taken out of new production. Shipments of the X models will begin immediately; users with 3080 series systems on order will automatically receive the new models, IBM said.

Aside from the performance enhancements to the CPUs, the X model systems offer virtually the same memory and channel characteristics as the older 3080 series machines, an IBM spokesman said. The exceptions are the 3081 Model KX, on which the maximum main memory was expanded from 48M to 64M bytes, and the 3084 Model QX, whose maximum main memory jumped from 64M to 128M bytes.

According to IBM, the X models incorporate improved circuit packaging, which has resulted in a consolidation of some internal components. The consolidation allows the elimination of one Thermal Conduction Module. It is this consolidation of internal components that makes it impossible for current users of 3080 series machines to field-upgrade to the X models, the spokesman explained.

The X models of the 3083 line reportedly deliver 5% to 8% greater internal throughput than the older models when used in IBM MVS/XA, MVS/370 or VM/SP High-Performance Option operating environments.

The 3081 X models offer 8% to 10% greater internal performance under MVS/XA and MVS/370 and up to 14% greater throughput when operating under VM/SP HPO. The 3084 Model QX offers 8% greater throughput running under MVS/XA, IBM said.

Maintenance fees cut

At the same time that it introduced the X processor models, IBM cut the monthly maintenance fee on old versions of the 3080 series by up to 15% to equal the monthly maintenance fees on the X models. It also announced 7% to 10% price reductions on processor upgrades for users of the older 3080 system configurations. Both changes are effective immediately.

As examples of the lower monthly maintenance fees on older 3080 series processors, IBM said the former $5,150 monthly maintenance fee for a 3081 Model G system with 32M bytes of main memory has been cut to $4,475. A 3081 Model K with 48M bytes of main memory now carries a monthly maintenance fee of $5,995 instead of $6,435.

As examples of the price reductions on model-to-model upgrade charges on older

Security getting lip service only

By John Gallant
CW Staff

PARK RIDGE, Ill. — Upper level management is aware of the importance of data security, a recent survey indicated, but that awareness does not always translate into money and support for DP managers who must provide the security.

In a survey conducted by the Data Processing Management Association, 70% of the 200 DPMA members responding said they believe upper management in their organizations is "aware of the importance of data security." But only 65% of those companies allocate a portion of their annual budgets to data security programs.

The survey found that among the firms that provide such funding, only 2.7% of the corporate budget is slated for data security purposes. Also, fewer than half the DPMA members within those organizations said their data security budgets are scheduled for increases in the upcoming year.

The budget findings were highlighted by the fact that DPMA members said their companies would lose an average of more than $142,000 per day in the event of a systems failure brought on by a computer break-in or some other security breach. Further, 82% of the DP and MIS professionals responding said they want to win "solid commitment and support" from upper level management in addressing security issues.

FYI

Tomorrow's primary may go slowly

By James Connolly
CW Staff

CONCORD, N.H. — New Hampshire voters will participate tomorrow in their first-in-the-nation presidential primary, becoming, as they have for three decades, the first Americans to vote for candidates who have wooed them for a year.

CAMPAIGN '84

Technologies such as computers and television have brought states scientifically tailored candidates, continuous polling and instant declarations of winners — as Iowa discovered when TV network news anchors awarded Walter Mondale a win before the Democratic caucuses were fully under way last week.

But most of the Granite State's 451,000 voters will not see evidence of those technologies at the two crucial times: when they cast their votes and when they count their votes. Most of the state still relies on manually counted paper ballots. Only seven of the 259 New Hampshire cities, towns and unincorporated communities use either mechanical voting machines or punched-card computer voting, according to Deputy Secretary of State Robert Ambrose. When polls close at 8 p.m. EST tomorrow, the networks are likely to project a winner within an hour, based on key precincts and past voter trends.

But the official vote count will take about two days, as town officials tabulate paper ballots and hand the ballots to state troopers for transport to the state capitol here.

Zenith offers IBM compatibles

By David Myers
CW New York Bureau

NEW YORK — Zenith Data Systems Corp. last week elbowed its way into the crowded bazaar for IBM-compatible personal computers with the announcement here of two machines, a desktop unit and a portable.

In all, the Glenview, Ill.-based subsidiary of Zenith Radio Corp. announced five configurations — three desktop systems and two portables. Based on Intel Corp.'s 8088 microprocessors, all five are essentially the same, offering from 128K to 640K bytes of random-access memory; two RS-232C serial ports; one Centronics Data Computer Corp.-compatible parallel port; red, green and blue color output; an IBM expansion bus; and a detached keyboard. The models differ in the number and type of disk drives used.

The desktop unit, the Z-150, is available with single or dual, 5¼-in., soft-sector floppy disk drives. It is also available in a dual-drive configuration employing one floppy and one 10.6M-byte Winchester disk drive.

Available in volume

The Z-150 has a base price of $2,699, which is $430 more than IBM's 128K-byte Personal Computer. Zenith said at the time of its introduction last week that the Z-150 is available in volume.

The portable unit, the Z-160, comes with either single or dual floppy disk drives. Weighing 30 lb, it incorporates a built-in, 9-in., brown-tone monitor and retails for $2,799, $4 more than the recently announced IBM Portable Personal Computer (see story page 83) and about $200 less than a rival machine from Compaq Computer Corp., the Houston-based leader of the portable sweepstakes.

The Zenith portable is scheduled to appear May 1, two months after initial shipments of the IBM Portable Personal Computer. A Winchester version is slated for the future.

"We agree with those who say that by the end of the decade, 74% of the [personal] computers in business offices will be IBM or IBM-compatible machines," Donald P. Moffat, president of Zenith Data Systems, told the press conference here last week at which the Zenith micros were unveiled.

The new computers join two Digital Research, Inc. CP/M-based systems in Zenith's product line. Both desktop and portable are equipped with a detachable keyboard manufactured for Zenith by Alps Electric, a Tokyo-based components maker.

IBM compatibility

John Frank, Zenith's vice-president of marketing, said the two new computers will run virtually any software program developed for the IBM Personal Computer and accept virtually any plug-in expansion board for the Big Blue machine.

Zenith marketers claimed the company has tested 175 programs and dozens of plug-in boards. The company promised to publish a bimonthly list of successfully tested IBM-compatible software products.

The Zenith personal computers will support Basic, assembler, Fortran and Pascal, as well as Microsoft, Inc.'s Word and Multi-Plan 1.1 and Lotus Development Corp.'s Lotus 1-2-3 financial spreadsheet, according to company spokesmen. In July, Microsoft's Windows and the Lotus Symphony products will also be available on the Zenith machines.

Tom Dornback, vice-president of software development for Zenith, said the new computers run under a "standard implementation" of Microsoft's MS-DOS 2.0 operating system. Most makers of IBM-compatible equipment opt for an operating system modeled upon PC-DOS, the altered version of MS-DOS developed by IBM for its machines. By contrast, the Zenith systems' compatibility resides in a proprietary I/O statement lodged in read-only memory code, according to Dornback.

Vulnerable to change?

A consultant here who asked not to be named said that chip-level compatibility was "easier for [Zenith]. They didn't have to meddle with the software. But it leaves them vulnerable to changes in the IBM architecture. If IBM ever decides to change its chips, Zenith will be in the position of having to copy [those changes] to remain compatible."

With IBM now quoting a delivery time of four months on large-volume orders of its Personal Computer, the initial success of the Zenith boxes appears to depend on the company's ability to keep its delivery schedule ahead of Big Blue's. But as IBM's lead times shrink, Zenith will have to sell its personal computers on less dependable factors, such as ease of use, a consultant here told *Computerworld*.

Zenith Data Systems is located at 1000 Milwaukee Ave., Glenview, Ill. 60025.

B920 user sues Burroughs for $1 million

By Patricia Keefe
CW Staff

BLOOMINGTON, Ill. — Burroughs Corp. is the target of a $1 million lawsuit brought this month by the user of a B920 turnkey system.

Filed in U.S. District Court in Springfield, Ill., by Care Management, Inc. (CMI), a nursing home management firm, the suit alleges that Burroughs' sales personnel "engaged in deception, fraud, false promises and misrepresentations" and that the vendor was aware that other buyers had experienced problems with the B920 system. CMI's attorney, Gerri Papushkewych, declined to identify the other buyers.

Story of lawsuits

It has been estimated that at least 150 lawsuits have been filed against Burroughs over the last three or four years, typically charging the vendor with fraud or misrepresentation or breach of contract or some combination of the three. Marvin Benn, an attorney for Chicago law firm Hamman, Benn and Miller, handling over 60 of these cases, said his firm has not "lost" a case to date, settling all "to the mutual satisfaction of the parties involved." Hamman, Benn and Miller has represented users of Burroughs' B700, B80, B900, B1700 and B1800 machines.

The suit filed by CMI accuses Burroughs of having caused that user to suffer "severe financial losses" after it bought the B920 which, it claimed, never operated as promised. The financial losses include damage to business services and reputation and loss of internal control of cost and customers, according to Papushkewych.

CMI paid $100,000 for the system in December 1980. The suit alleges the system could not perform functions the company needed, in particular, multicompany processing; was not completely compatible with CMI's Burroughs B700 minicomputer; and was not fully operable by the end of August 1981 as promised. When the hardware was installed, Papushkewych said, the software "was not there."

The B920 "is alleged to be deceptive in that significant parts of the computer system were not operable and could not be made operable," she said. Also, "some components of the system do not work together."

Attempts to reach a Burroughs spokesman for comment were unsuccessful.

However, John Felzan, an attorney for the Chicago-based law firm of Kirkland and Ellis, which has represented the vendor in the past, said he is unaware of any other suits involving the B900 series. Stressing that he has not seen the complaint and does not know whether his firm will be retained in this case, Felzan said, "It is my understanding that the general industry perception and studies of the B900 series have been and are quite favorable."

CORRECTIONS

The announcement of the Fiber Optic Net/One local-area network [CW, Feb. 6] incorrectly referred to Siecor Fiberian as a fiber-optic transmission subsystem. Siecor Fiberian is a division of Siecor Corp. It sells the Net 10 transmission subsystem to Ungermann-Bass, Inc. under an OEM agreement. When Net 10 is combined with Ungermann-Bass equipment and software, the result is Fiber Optic Net/One.

"High-tech Robin Hood pays piper" [CW, Feb. 6] incorrectly stated that Washington state's Cedar Creek Corrections Center is in Little Rock, Ark. It is actually located near Littlerock, Wash.

How new SyncSort outperformed IBM's Release 6 by 36% in their very first meeting!

Call (201) 568-9700.

Try our hot new OS Sort.

Ironically, some of SyncSort's most glowing recommendations come from the mouths of IBM systems engineers. Here's the latest example.

One of our systems engineers recently visited the computer center of a well-known worldwide manufacturer. His mission was to install and demonstrate SyncSort 2.5, the latest and most advanced release of our OS sort program.

As our man sat down at the console, an IBM "MVS Specialist" joined the group. "Can I help with the installation?" he asked. Of course, Our Man replied, thanks for the offer.

After SyncSort 2.5 had been installed, the IBMer came up with another helpful suggestion. "Would you mind if we benchmarked your sort against our 5740-SM1, Release 6? I just happen to have a copy here."

Not in the least, Our Man replied. It was the first duel between SyncSort 2.5 and Release 6 (also known as DFSORT). But our systems engineer was confident that 2.5 could outperform Release 6 anywhere, anytime.

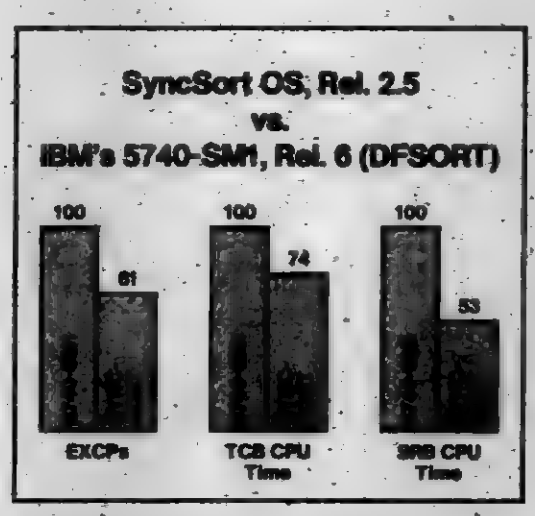
The benchmark was run, and the results bore out Our Man's confidence. SyncSort 2.5 had outperformed Release 6 by a wide margin.

The IBMer was clearly disappointed. But he wasn't ready to concede yet. "Let's take a look at the results on the monitor I've installed," he said.

He explained that the monitor had an "awesome capability" for measuring total resource consumption. It produced an overall "resource utilization" index that reflected the aggregate impact of such vital items as SRB CPU Time, TCB CPU Time, and EXCPs.

Suppressing a grin, Our Man agreed. And this time the IBMer shot himself in the foot with his own monitor.

SyncSort 2.5 had outperformed Release 6 by a whopping 36%—as the charts below indicate:



Resource Utilization Index

How did the IBMer react? Like a gentleman and a scientist. "Well," he said affably, "I've always known a lot of specialized software houses can produce better products than we can in certain areas. Obviously, you've got the best sort."

Then he deleted his sort program from the system and went on to other duties.

Who said chivalry is dead?

syncsort INC.

Syncsort Incorporated 560 Sylvan Ave., Englewood Cliffs, N.J. 07632

Behind the looking glass, users test IBM software

CW Illustration by H. Fling

By John Gallant
CW Staff

ATLANTA — A young woman sits working at a computer terminal in a smartly furnished office. Though she is alone, she is speaking aloud.

In the next room, a middle-aged businessman also talks to himself as he operates a microcomputer on his desk. Similarly, workers in adjacent offices chatter away to no one in particular while they tap the keyboards of other terminals or micros.

Has office automation come to Bedlam? Hardly. The talkative workers are actually product evaluators in a high-technology IBM software "usability laboratory" where their facial expressions, body movements and keystrokes are recorded on videotape along with the continuous stream of their comments.

Monitoring responses

In addition to the cameras mounted throughout the four simulated offices — or testing modules, as they are called here — panes of one-way glass allow designers and usability experts to monitor the responses of the test subjects as they attempt to use newly developed software products.

The evaluators are selected according to their ages, backgrounds and experience levels from temporary employment agencies in the city.

They are placed alone in the modules to read the product manuals and operate the software on the equipment for which it was designed — anything from the IBM Personal Computer to a mainframe terminal. Their physical responses and verbal feedback help designers pinpoint and resolve usability problems before a software package ever hits the marketplace.

The Atlanta Usability Lab is the first of three such evaluation centers developed by IBM since 1980, according to Mike Mehal, manager of product usability for IBM's Information Programming Services Group. IBM also maintains similar, though less sophisticated, usability labs in Dallas and Poughkeepsie, N.Y. Research here focuses primarily on application packages, while the other labs deal with system software.

Developed for usability

The idea for the labs grew from concepts developed at IBM's hardware-oriented human factors research centers across the country. "We recognized that the software environment is changing," according to Mehal.

"There is more emphasis today on the end user and the ease of use of each product. These centers were developed as an approach to making our software easier to use, building in usability, so to speak."

The usability labs were designed to make software developers aware of problems that would otherwise surface only when the package was used in a production environment. Mehal's staff of usability specialists aids developers in preparing and implementing the test situations and in collecting and analyzing the evaluation results.

The usability lab is laid out in a semicircle that permits developers and test experts to monitor all evaluators simultaneously. In the first phase of testing, subjects are encouraged to "think out loud" so their comments can be recorded and analyzed.

Second phase

In a second phase, a usability expert plays the role of the evaluator's supervisor whom the evaluator is prompted to telephone when he encounters difficulties with the package that he can't resolve on his own.

Each of the test modules is equipped as a working office environment complete with plants, paintings, desks and telephones. When the tests involve minicomputer or mainframe software, the processing equipment is located outside the module.

Videotape cameras are situated so that developers behind the glass can mix images of the evaluator, the keyboard and the terminal screen.

Common information base

The audiovisual test results and written evaluations are later made available to other development teams to promote what Mehal termed a "common base of usability information."

Mehal would not say whether all new IBM software is required to undergo usability evaluation, but he did point out that testing on one application may produce results that apply to a variety of other packages. In addition to testing a fully coded package and its documentation, evaluators are often asked simply to choose between several different screens or menus that a designer hopes to use in a future system.

The goal, according to Mehal, is to capture problems early, before any major coding changes are necessary. But that task isn't always easy. "If you fix one problem, chances are that three smaller ones will arise. If you go beyond those, you encounter five or six others," he said. "We have to determine just how far to keep fixing. You reach a point where the usability of a product adversely affects its performance. It's a real trade-off."

What it takes to become an IBM software evaluator

Some people are just too competitive to be good candidates for software evaluation.

"We sometimes have to coach the evaluators. We really have to work to convince some people that it's not a test of their knowledge or their computer literacy," said Mike Mehal, manager of product usability at IBM's Atlanta software evaluation laboratory.

Experts at the Atlanta usability lab try to overcome individual personality problems among evaluators by testing each package with as many as 15 subjects. Shorter tests, involving, for example, screen or menu preference, are conducted with as many as 25 evaluators.

Different age groups

Evaluators are employed for software product tests that can last as little as an hour or as long as two weeks. The evaluators are selected from different age groups and on the basis of their education, employment background and computer experience.

To evaluate a financial application properly, Mehal explained, subjects from 20 to 60 years of age with accounting backgrounds would be selected. Their collective computer literacy would vary, depending on the sophistication of the software to be tested.

The evaluators are given the product manuals and some test data and are asked to input the data on their own. During the evaluation, a usability specialist will often interrupt the evaluator with telephone calls to simulate actual work conditions and to analyze how easily a user can resume working with a package after his attention has been diverted.

Checking reactions

On occasion, usability experts will assemble users of existing IBM software to gauge their reactions to new products for the same application. All the subjects are outsiders, with the exception of IBM employees who, Mehal said, undergo "dry runs" to aid designers in developing test situations and data.

While most evaluators enjoy themselves during the testing, Mehal said, some find the process emotionally demanding as they attempt to solve problems they are only supposed to discover.

"We try to make them realize that they are helping us. We're not testing them. If there is something wrong with the software, that's our problem, not theirs. They may not all enjoy it, but they usually give 110%; they're great."

Software developers can also find the evaluation process trying as users candidly highlight flaws and inconsistencies in their creations. Like writers, Mehal pointed out, the developers have an emotional stake in their products, and criticism is not always easy to swallow.

"In the beginning, we encountered some resistance on the part of the developers," according to Mehal.

"Some of them are afraid of the exposure when problems come to light. But that hesitancy is waning over time as the developers become more open to the concept of usability."

Micro-mainframe links debut in New Orleans

By Paul Gillin
CW Staff

NEW ORLEANS — Amid dozens of enhancements, marketing agreements and ports to other hardware announced at the Softcon International Conference and Trade Fair for the Software Industry here last week were two products of particular interest to DP installations looking to tie their microcomputers to mainframes.

CW AT OAC '84

Artificial Intelligence Corp. (AIC) announced the Intellect Micro-to-Mainframe Link, based on its Intellect English-language query product. The package allows IBM Personal Computer users to access, retrieve and display information resident on their IBM mainframes in conversational English. In addition, Intellect now acts as a front-end supervisor to a variety of popular IBM Personal Computer-based software packages.

The link offers access to mainframe data stored in Intellect-supported data base management systems, including IBM's SQL/DS and Vsam files; Cullinet Software, Inc.'s IDMS; Software AG of North America, Inc.'s Adabas; and AIC's Dfam access method and sequential files. Intellect manages data selection, analysis, output and transfer into the micro software.

Expandable dictionary

The product also includes an expandable lexicon dictionary, micro graphics capability, terminal emulation to the IBM host via IBM's VM/CMS or TSO and "visible" support of multitasking through windows and security.

The software requires Intellect under VM/CMS or TSO, the mainframe-to-micro software option and an asynchronous RS-232 connection or coaxial connection to an IBM 3274 controller. The IBM Personal Computer must be equipped with 256K bytes of random-access memory, Digital Research, Inc.'s Concurrent CP/M 86 or IBM's PC-DOS. The link also requires AIC's micro-to-mainframe software option and specific micro software.

Deliveries are scheduled for the third quarter. The host software costs $17,500, including the mainframe communications module and software packages to link 10 Personal Computers to the mainframe. Additional micro packages are priced at $250 per copy.

AIC is located at 100 Fifth Ave., Waltham, Mass. 02254.

CAP Gemini introduction

CAP Gemini Software Products, Inc. announced a product that allows enhanced IBM Personal Computer XTs to be used as dedicated programmer workstations in an IBM VM/CMS or TSO environment. The Multipro Application Development Workstation includes facilities to download mainframe programs to the workstation and provides a variety of tools that automate systems design and programming.

Flow charts, user documentation, design specifications and record layouts are all stored in libraries along with the source code, a spokesman noted. A windowing function allows different components of the application project to be displayed simultaneously and offers data transfer between the windows. Windowing allows the user to execute a CMS job on the mainframe, move to another window to perform local editing and return to CMS to retrieve the results of the job execution.

An editing facility similar to IBM's Structured Programming Facility is provided along with a project library containing interfaces to popular library systems. Also included is a document generating facility, calculator functions and a project management facility.

The product uses a proprietary graphics system to produce graphics symbols that can be stored as ordinary text. Graphics can be interspersed with text to create flowcharts and design documents which reside in the Multipro library.

Emulation capability

Multipro can let the Personal Computer XT emulate an IBM 3270 or Digital Equipment Corp. VT100 terminal in one of the windows and transfer data between the windows. It is also possible to process mainframe-resident files from the workstation without downloading using a buffer.

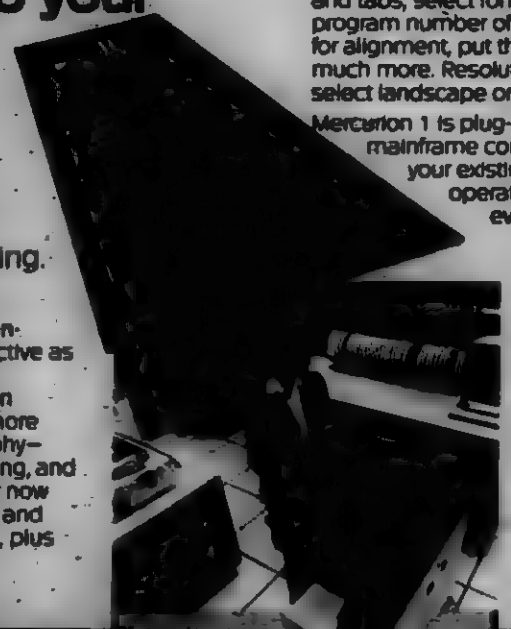
The capability restricts access to mainframe programs that data processing does not want loaded onto floppy disks.

The mainframe package is priced at $24,000, and the software for each workstation costs $1,900. The Personal Computer XT also requires a standard communications interface to the mainframe, which costs about $1,000.

CAP Gemini is headquartered at 2350 Valley View Lane, Dallas, Texas 75234.

Mercurion 1

The page-per-second non-impact printer matched to your computer



...and priced to change all your thinking.

Now Mercurion 1 makes non-impact printing as cost-effective as it is performance-effective. Revolutionary ion deposition imaging—far simpler and more reliable than laser xerography—gives you letter quality printing, and on standard 8½ x 11 paper now demanded by government and most businesses. All of this, plus 5,280 lines-per-minute.

At an initial cost less than 50% that of conventional non-impact printer systems, Mercurion 1 also substantially reduces maintenance costs, downtime, and per-page operating costs. And does it quietly (55dBA).

A simple, user-friendly control panel lets you set margins and tabs, select fonts (up to 8 styles and sizes), program number of copies (1 to 255), feed a single sheet for alignment, put the system through self-test, and much more. Resolution is 240 x 240 pixels, and you can select landscape or portrait orientation.

Mercurion 1 is plug-compatible with all popular mini- and mainframe computers. It's designed to replace your existing impact line printer directly—no operating system software changes. We even supply the cable.

And you can count on SSI quality and service support. Thousands of our printer systems are in use worldwide.

Call us or mail the coupon below for a fully-detailed brochure on this great new printer system.

Turnout low, but show seen worth the effort

By John Gallant and Paul Gillin
CW Staff

NEW ORLEANS — Whether last week's Softcon International Conference and Trade Fair for the Software Industry lived up to expectations depends on how lofty your expectations were. While the show apparently succeeded in getting vendors in touch with a sophisticated audience, the turnout was relatively low. And the notable absence of a large-user audience indicated that the question of whether the software industry can support an end-user trade show is still unresolved.

CW AT SOFTCON

That was the consensus of nearly 20 vendors and attendees interviewed here last week by *Computerworld*. In contrast to what some vendors expected, the Softcon audience was composed almost entirely of dealers and software developers. While this was a sore point with some attendees, most agreed that Softcon had been worth the effort and could develop into a major trade show.

Throughout the interviews, comparisons of Softcon to last year's mammoth Computer Dealers Exposition (Comdex) show were unavoidable. Most vendors agreed that the atmosphere was more productive.

"The crowds are quieter and less frazzled," said Michael Mango, national marketing manager for Accountants Micro Systems, Inc. "The traffic flow is a little lighter than I would have expected, but the type of people who come here are serious buyers."

However, those buyers generally did not include representatives from large corporations. While most vendors shrugged off the absence of Fortune 1,000 accounts, others felt the show's voluminous promotional campaign had been misleading. "We decided to come here at the last minute because we didn't want another Comdex," said Sol Chooljian, vice-president of marketing at Context Management Systems of Torrance, Calif. "We wanted more to deal with the volume buyers from corporations. I haven't seen any of those people."

Although attendees from large corporations were hard to come by, one DP professional called the show "terrific, especially compared to Comdex. In three days at Comdex, I couldn't see it all," said Jack Sprague, a senior systems engineer at Frito-Lay, Inc. in Dallas. "I came here to evaluate Lotus [Development Corp.] and to see a lot of their competitors. It's been a good show."

Attendance totaled over 19,000 after two days, but that figure included exhibitors. Most vendors indicated that totals fell short of their expectations. "It's kind of disappointing once you get used to the chaos of the Consumer Electronics Show," said Jeff Schwamberger, manager of product acquisitions for the Brisbane, Calif.-based Human Engineered Software, Inc. "I'm not saying I'm disappointed in the quality of the people attending, but there is a lot of dead air in here. We're doing a lot of sitting around and waiting between customers."

"It's not as large as I expected," agreed Edward Behn, vice-president of Gregg Corp. in Waltham, Mass.

"Attendance could be better, a lot better," Tim Fuller of Atlanta-based Peachtree Software, Inc. said.

However, Fuller and others added that they were generally impressed with the sophistication of the visitors. "I'm impressed with the quality of the people who have stopped to see us," said Michael Pearce, vice-president of sales for Accountants Micro Systems, Inc. of Bellevue, Wash. "There aren't as many people here as we'd like to see, but they are informed. All in all, it's not bad for a first attempt."

Attendees were divided on the issue of whether Softcon proved that the software industry is capable of supporting its own trade show. Mango pointed out that some of the largest exhibits were still hosted by vendors like IBM, Digital Equipment Corp. and NCR Corp. "It's billed as software only, but if you look around, you see a lot of hardware vendors," he said.

Others pointed out that Softcon had apparently failed to attract a national audience. "We're seeing mostly local dealers and absolutely none from the West Coast," said Phillip Kessler, president of Carlsbad, Calif.-based Allenbach Industries, Inc. "I think that's a real weakness with this show. Perhaps in the future they may want to have smaller, regional shows."

He was seeking software that could take a beating

By Paul Gillin
CW Staff

NEW ORLEANS — Capt. Jim Caudle came to the Softcon International Conference and Trade Fair for the Software Industry here last week looking for software that was fast, dependable and able to take a beating. That last quality is especially important in Caudle's line of work. He was one of two technicians sent to Grenada on short notice to install a network to automate the command and control procedures used on the island during the U.S. invasion last October.

CW AT SOFTCON

Caudle is an automatic data processing systems officer in the 18th Airborne Corps of the U.S. Army at Fort Bragg, N.C. When he is not parachuting out of airplanes, he is responsible for designing and implementing micro-based systems in the controller's office at Fort Bragg.

The call to fly to Grenada came just two days after U.S. troops stormed the island on Oct. 25. Within a week, Caudle and another technician packed Fort Bragg's Apple Computer, Inc. Apple II+-based system into ruggedized containers, obtained and customized a backup system based on Grid Systems, Inc. portable computers, trained the operations staff and transported and installed the computers and communications gear on the occupied island.

The system was designed by Caudle to track supplies and send messages electronically using a modem and satellite telecommunications. It also performs battlefield analysis using a graphics system that superimposes symbols over images generated by an optical disk.

The system is based on a local-area network comprised of two Apple II+ micros with two terminals, a 20Mbyte Corvus Systems, Inc. optical disk and an Apple printer. While Caudle would not specify the communications gear used, he said the data is encrypted during transmission via satellite.

He arrived with the system while sporadic fighting was still going on in Grenada. "There was a lot of destruction and some sniper fire still going on when I got off the transport plane," he said.

The systems were transferred from the airport to a hotel annexed by the Army as temporary headquarters and installed within hours. The installers confronted some problems in reconfiguring the hotel's power supply to run the Apple system and in training the command personnel to use the software. As a result, they worked 12- to 18-hour shifts for most of the 33 days they were on the island.

Caudle said the process of implementing a command system during a battle was particularly exciting. "At least it was doing something that was critical under pressure," he said.

Fortunately, the equipment performed flawlessly. "We didn't even need the backup systems," he noted. The result was a dramatic improvement in communications between military command on the island and Fort Bragg. "Some of the critical information would have taken hours instead of minutes to communicate," he said. "Normally they would use a Teletype terminal and paper tape and transmit at 110 bit/sec. We were able to operate at 1,200 bit/sec."

Info centers gaining

PARK RIDGE, Ill. — Nearly 60% of the Data Processing Management Association (DPMA) members that responded to a recent survey said their companies will have information centers by year-end.

More than 40% of the 200 DPMA members answering the survey said their companies already have information centers; another 19% said their firms will have one in place by the end of 1984.

In addition, according to Austin Weber, assistant publications editor for the DPMA, nearly 80% of the membership responded that upper management in their companies is aware of the information center concept. "The survey shows the growing importance of the information center," Weber said. "They are really beginning to take hold in the corporate world."

The DPMA members split almost down the middle on the question of which department should be responsible for the design and implementation of the information center. Forty-eight percent said the tasks should fall to the data processing and end-user departments, while a slightly higher number — 49% — said those groups should work in conjunction with top management and outside consultants.

A majority of the DP managers surveyed said they wanted upper level management to exhibit support for the information center concept by providing necessary funding and personnel allocations. But a third of the respondents cautioned management to remember that the information center is only another information resource, not a replacement for traditional application development.

The DPMA survey did not include information on the size of the information center budgets or staff.

SECURITY from page 1

"I think it points out quite clearly to top-level people that the data processing manager is very concerned with the issue of security. The DP professional wants to maintain security, but he needs management support in budgeting for security and developing a security policy," Austin Weber, assistant publications editor for the DPMA, said.

When asked what suggestions they would offer to upper management on the issue of data security, the DPMA members' most common responses were:

- Do not overreact to everything you read, but avoid taking computer security for granted.
- Become more aware of the costs involved in data security and budget accordingly.
- Urge computer security as a major goal throughout the project development cycle.
- Take the positive attitude that security is everyone's business.
- Continue to take an active role in the organization's data security on a regular basis.

The leading threat to data security, according to members, is misuse of data by their own DP or MIS staffs, including programmers and systems analysts. Clerical users, outside intruders and management users were also seen as potential threats.

The survey findings are available from the DPMA's newsletter "Compufax," DPMA, 505 Bussey Highway, Park Ridge, Ill. 60068.

Fund forms to combat piracy

By John Gallant
CW Staff

NEW ORLEANS — Calling it a first shot in the war against piracy, the founders of the fledgling Software Protection Fund (SPF) began a quest for membership and funding among the microcomputer software publishers attending the Softcon International Conference and Trade Fair for the Software Industry here last week.

Organized in November by high-level executives from four leading micro software companies, SPF is intended to be a nonprofit, industry-wide organization geared to frustrating illegal copying of microprocessor software. Its initial members — Ashton-Tate, Lotus Development Corp., Sorcim Corp. and Microsoft, Inc. — formally unveiled SPF at a press conference here and began seeking funding for the group's $500,000 first-year budget.

SPF has initially targeted corporate rather than individual abusers of software copyright laws and license agreements, according to David Cole, Ashton-Tate's president and chief executive officer. Cole, who was appointed chairman of the SPF steering committee, said the group will attack these violators on four fronts: increased technical protection of software, attempts to initiate governmental protection, education of users and visible enforcement of license agreements.

"Elegant execution of just one or two of these areas won't produce the results we all desire in this industry," Cole said. "We must have a long-term effort on all four fronts. Only in that way can we protect our creative work."

SPF will work in conjunction with the Microcomputer Software Association (MCSA) arm of the Association of Data Processing Service Organizations, Inc. SPF will be responsible for coordinating the educational and enforcement efforts, while MCSA will focus on the remaining fronts.

SPF plans a joint advertising and direct-mail campaign for the spring and has earmarked at least half the proposed budget for those efforts. On the enforcement front, Cole said the group will promote the investigation of corporate abuse and will urge members to make clear their intent to prosecute abusers. The enforcement effort may also include the filing of joint *amicus curiae* briefs in support of SPF member companies involved in litigation.

"In an industry composed of stubborn entrepreneurs, this collective action is absolutely necessary," according to Lotus Development President Mitchell Kapor. "It will create a climate of opinion that will help resolve the piracy problem."

Cole said the group will present preliminary advertising proposals at its next meeting, the date of which has yet to be announced. SPF's founders also laid out the group's membership fee scale, which ranges from $5,000 to $50,000, depending on the annual net revenues of the member company.

La. unwraps bill to enforce copyrights

By John Gallant
CW Staff

NEW ORLEANS — State officials last week introduced legislation that they said would "strengthen significantly" the ability of software publishers to enforce their rights under existing trade-secret and copyright laws.

Taking advantage of a formidable media presence at the Softcon International Conference and Trade Fair for the Software Industry, the state attorney general's office unveiled the Software License Enforcement Act, which will be introduced into the Louisiana Senate and House of Representatives in April.

Described as the first of its kind in the nation, the proposed legislation would make it clear to consumers that license agreements appearing on software packaging will be enforced by the state. In the past, according to Louisiana Assistant Secretary of State J. Robert Wooley, state and federal courts have split on the issue of whether the packaged license statements constitute a binding contractual agreement with purchasers.

The bill, which deals primarily with microcomputer software, states that a consumer will be bound by the specific terms of the license agreement if the software package is opened or used. According to Wooley, the legislation would make the consumer a licensee of the software firm rather than the owner of the package.

Although it provides no penalties, the proposed legislation would aid software publishers by giving them a civil, contractual claim against users who illegally copy or modify a package.

Both the bill's cosponsors — state Sen. William Atkins and state Rep. Al Alter — and its supporters made it clear that the bill is aimed at attracting high-tech firms to Louisiana. Wooley joked that measures such as this are intended to transform the state into a "Silicon Bayou."

IBM releases enhanced version of MVS/XA

By John Gantz
CW Staff

RYE BROOK, N.Y. — IBM last week unveiled an enhanced version of its MVS/XA operating system. At the same time, the company also unveiled:

■ A Cobol product that allows programmers to write application programs for the 31-bit XA architecture as well as for the previous 24-bit architecture.

■ An option that allows users to purchase either MVS or MVS/XA and up to 70 application programs in a single package.

The latest release of MVS/XA, Data Facility Product Release 1.2, runs on IBM 4381 and larger processors. It provides expanded support for attached devices, including printers and communications devices, along with improved communications to system operators, including additional information on system requests and error tracking, according to an IBM spokesman.

The MVS/XA update also includes enhancements to IBM's Global Resource Serialization, such as facilities for improved handling of system message traffic. It supports IBM's 3290 and 3278 Model 5 terminals as operator counsel terminals, and it is said to provide additional IBM Vsam control block support above the 16M-byte virtual storage line.

IBM said MVS/XA now provides additional support for the operating system's data facility/data set functions, including the integration of Vsam data set catalog facilities. The enhanced version will be available in April.

MVS/XA Data Set Facility Product Release 1.2 has an initial license fee of $1,350 and a monthly license fee of $450. The spokesman said the system's price will increase June 1 to an initial fee of $1,484 and a monthly fee of $495.

In conjunction with the MVS/XA update, IBM unveiled VS Cobol II, described as a Cobol language product that allows programmers to write application programs for the 31-bit XA architecture as well as for the previous Cobol 24-bit architecture.

VS Cobol II provides 31-bit support for generated object programs and includes productivity and usability features that have been structured into the programming language, IBM said. The software also includes interactive debugging facilities, and performance features include reentrant object code, improved object code optimization and execution of most compiler and library functions.

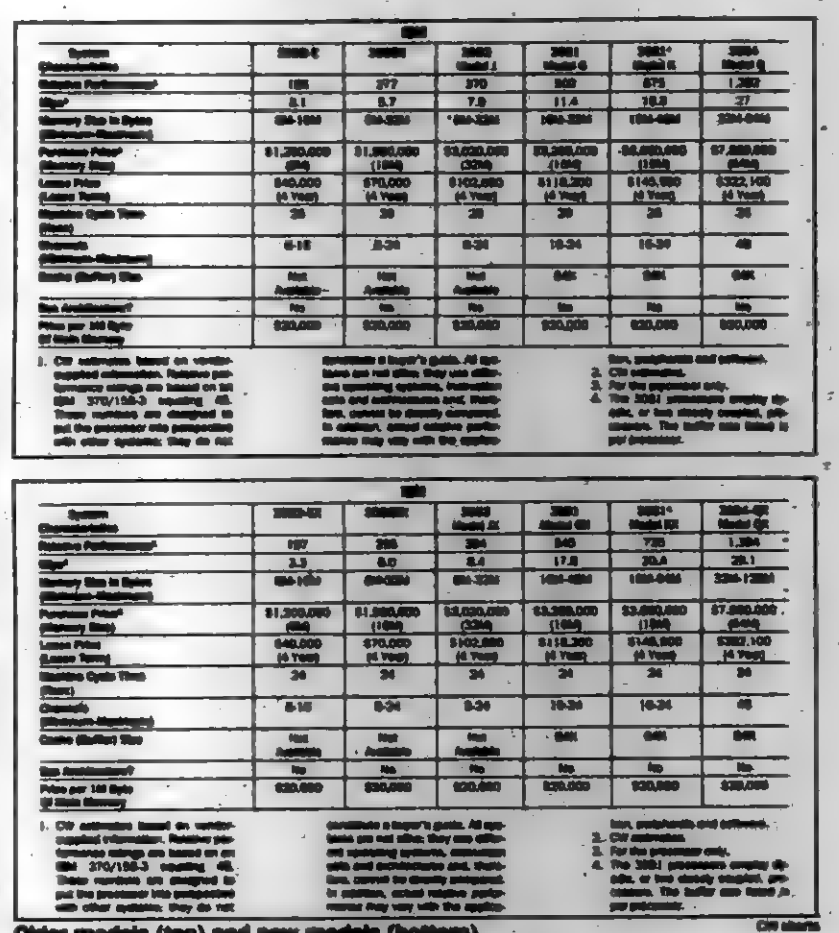
With VS Cobol II, the spokesman said, virtual storage takes place above the 16M-byte virtual storage line. The system was designed for use with IBM's MVS/370 operating system and any version of MVS/XA.

Available in the fourth quarter, VS Cobol II will carry an initial license fee of $6,000 and a monthly license fee of $1,000. The VS Cobol II pricing includes the compiler and the library.

IBM also announced a new packaging arrangement for software called the MVS Custom-Built Installation Productivity Option (Cbipo). Cbipo will allow customers to purchase either MVS or MVS/XA and up to 70 application programs in a single package, reducing the complexity of installing operating systems.

Cbipo's pricing is dependent on the operating system and applications chosen. It will be available to customers in the second quarter.

IBM's Information Systems Group is located at 900 King St., Rye Brook, N.Y. 10573.



Older models (top) and new models (bottom)

CW charts

ANALYSIS

Did IBM anticipate problems with current 3080 line?

Why IBM replaced its well-selling 3080 product line and what will happen to users of those older systems were the issues that industry analysts pondered last week.

Available in volume for slightly more than a year, the 3080 line faced little competition either from manufacturers of IBM-compatible machines or other mainframe vendors. IBM traditionally does not make major changes to a product line until it is absolutely necessary. Why, then, did it make abrupt, sweeping changes to a very successful product line this time?

One theory is that IBM detected major problems with the older versions of the 3080 line which could become evident in the future.

Charles Greco, an analyst with International Data Corp. (IDC) based in Framingham, Mass., said the migration to IBM's MVS/XA operating system is not proving to be as smooth a process as many originally felt it would be. He speculated that IBM may have realized that to run MVS/XA efficiently, users require processors offering more performance than the older 3080 models can muster.

Designed for upgrade?

Another possibility offered by Greco is that the new X models of the 3080 line may have been designed to be field-upgradable to IBM's next level of large processors, which the company is expected to announce later this year.

In either case, current users of 3080 series processors appear to be out of luck, noted William Easterbrook, an analyst with Kidder-Peabody & Co., Inc. in New York.

The resale values of the older 3080 machines will probably suffer from the introduction of the X models, especially if their successors are field-upgradable to a new line of IBM mainframes, he pointed out.

Further, Easterbrook said, users of those system will probably face a processor swap in order to migrate up IBM's product line.

IBM from page 1

3080 systems, a user who wants to upgrade from a 3081 Model K with 32M bytes of main memory to a 3084 Model Q with 64M bytes of main memory will now pay $2,896,000 instead of the previous $3,145,000 price tag.

Upgrading from a 3083 Model B to a 3083 Model J used to cost $525,000; it now costs $475,000, according to IBM.

More information is available from IBM, which announced the new line of mainframe systems through its Information Systems Division, located at 900 King St., Rye Brook, N.Y. 10573.

Agee to head new micro software venture

NEW YORK — William M. Agee, the controversial leader of Bendix Corp. before he lost the company to Allied Corp., has joined the founder of Interactive Systems Corp., developer of a Unix-based operating system for IBM's Personal Computer, in a new software venture.

Dr. Peter G. Weiner, founder of Interactive and the first commercial licensee on Unix in 1973, announced here last week the formation of Uniform Software Systems, Inc., which will be based in Santa Monica, Calif., and sell Unix-based microcomputer programs. Agee was named as chairman and Peter C. Wensberg, former president of Atari, Inc.'s telecommunications unit and longtime Polaroid Corp. marketer, was appointed president and chief executive.

"I'm not window dressing. They don't have me on the board just to raise money," Agee tald reporters here last week after revealing the firm had raised but $750,000 after three initial rounds of financing. "My principal task will be to put together a more sensible financial plan and to provide top management direction."

Agee quit as president of Allied in February 1983 and has been heading Semper Enterprises, a Mass.-based venture capital firm since then.

Weiner, who gave himself the title of chairman of the executive committee, said Uniform Software's first product would be a conversion program allowing all IBM DOS software to run under a Unix-based system. The product will be offered in the third quarter of this year, he added.

"In your development center, ADS/OnLine will increase productivity and reduce your company's applications backlog." —Don Heitzmann*

Using ADS/OnLine Cullinet created the best applications software ever built.

The Application Development System, Cullinet's fourth generation language, became available in 1981. ADS/OnLine was the key element in our database software system needed to address the application software business in a whole new way.

We set out to develop advanced financial and manufacturing applications; applications designed in the 1980's all built using this fourth generation language. Today, Cullinet offers the finest financial and manufacturing applications available, featuring both horizontal and vertical integration. Horizontal integration means that all applications share a common database so redundancies and inconsistencies are eliminated. Vertical integration means all applications are built using ADS/OnLine and advanced database technology so they are easier to install, tailor and maintain.

Using ADS/OnLine, we developed advanced applications much faster than if we used traditional methods. In your development center, ADS/OnLine can increase productivity and reduce your company's backlog.

ADS/OnLine eliminates up to 70% of the lines of code in a typical COBOL program. This can result in a dramatic increase in programmer productivity. In addition, ADS/OnLine is easily learned by COBOL programmers, so your programming staff can become more productive in less time.

Applications can be built more efficiently with ADS/OnLine because it is a non-procedural language. The developer simply paints the screens on a terminal and fills in the blanks to define the applications program. Plus, automatic editing and automatic error handling detect input errors with no code written at all. And the complete integration of ADS/OnLine, with all Cullinet Database facilities, not only ensures control over the application development function, but also guarantees the performance necessary to run these applications in day-to-day operations.

ADS/OnLine has been a key to our success in applications software. It could do the same for you in establishing new information systems and eliminating your applications backlog in the 1980's and 1990's.

Attend a comprehensive seminar explaining this advanced fourth generation language and Cullinet's other database software products. To participate in one of the 700 Cullinet seminars scheduled internationally, send in the coupon or call 1-800-225-9930. In MA, 617-329-7700.

OAC ushers in host of workstations, software

By Robert Holt
CW West Coast Bureau

LOS ANGELES — Professional workstations, enhanced software packages, information retrieval systems and communications interfaces dominated a host of product announcements at last week's Office Automation Conference (OAC '84), held here by the American Federation of Information Processing Societies, Inc.

Taking advantage of an estimated 25,000 visitors to the conference, Exxon Office Systems Co. announced its 750 Professional Workstation for executives and managers. The workstation offers text editing, business graphics and electronic spreadsheets that can be displayed and edited in multiple windows, together with a communications facility that allows the user to access outside data bases and interact with most mainframe computers.

CW AT OAC '84

Pricing for the Exxon 750 begins at $7,750; volume shipments are scheduled for the second quarter. Further information is available from the vendor at 777 Long Ridge Road, Stamford, Conn. 06902.

Also introducing a workstation at OAC '84 was Syntrex, Inc., which showed off Pisces, a stand-alone workstation featuring multiple windows, concurrent tasking and local mass storage.

The user can perform several tasks at the same time, moving information between windows while also communicating to a host mainframe, Syntrex noted. Pisces consists of screen and keyboard, designed with the Intel Corp. 80186 microprocessor and containing 384K bytes of internal memory. The standard storage module is reputed to be a 10M-byte mini Winchester drive that provides the user with on-line access to over 3,000 pages of information and a floppy disk drive with 300 pages of capacity.

Pisces is priced at $7,590 with a removable keyboard and at $9,190 with an electronic typewriter. Deliveries are scheduled for April from Syntrex, 246 Industrial Way W., Eatontown, N.J. 07724.

Datapoint software

Heralding a bunch of new office automation software packages at the conference was Datapoint Corp. Datapoint's Pro-Vista consists of a new hierarchical user interface, Vista-Guide; an electronic mail system, Vista-Mail; and an enhanced word processing package, Vista-Word.

Priced at $1,500 per component, the package is available immediately. More details are available from the vendor at 9725 Datapoint Drive, San Antonio, Texas 78284.

Four-Phase Systems, Inc. went to OAC '84 to announce the second release of its menu-driven office management software package, Coms/IV. The enhanced product reportedly provides administrative support, document filing, sophisticated electronic mail and word processing document exchange in a networked Four-Phase Series 4000/5000 and IBM host environment.

On-line application services allow the user access to other 3270 applications on the IBM system concurrent with Coms/IV, the vendor claimed.

The new product is available immediately and is priced at $32,000 for a permanent license. Coms/IV is also available on 12-, 24-, 36- and 45-month lease terms at $1,200/mo.

Four-Phase Systems can be reached at 10700 N. DeAnza Blvd., Cupertino, Calif. 95014.

With integration a key consideration for OA specialists, Integrated Office Systems, Inc. introduced its Unity System for sales and marketing organizations. The system is said to provide voice mail, electronic text mail, data entry, data inquiry and electronic telephone capabilities in one system.

The Unity package consists of two components, a portable workstation that can reportedly support both voice and data communications and a control message switch and file storage system.

Volume shipments are scheduled to begin in the second quarter. The system is priced at approximately $6,000 to $7,000 per salesman, depending on configuration.

Integrated Office Systems is home-based at 20740 Valley Green Drive, Cupertino, Calif. 95014.

In the area of information access, Northern Telecom, Inc. announced its Datascan information retrieval and reporting system for use with its Models 445, 503, 565 and 585 distributed data processing systems. The package reportedly gives users the ability to produce reports, bar graphs or histograms from information stored in data bases. Data may be retrieved using inverted, indexed-sequential, direct or sequential access methods.

Suggested software licensing fees for the Datascan package vary from

OA efforts lack focus, Xerox chief charges

By Robert Batt
CW West Coast Bureau

LOS ANGELES — There is no clear sense of mission in automating office functions and no clear sense of urgency about the need for it, the president and chief executive officer of Xerox Corp. said in a hard-hitting keynote address to the 1984 Office Automation Conference (OAC '84) here last week.

CW AT OAC '84

David Kearns said the office of the future — "when it finally gets here," — has to be managed with clear-cut goals, operating plans, business strategies and performance plans that can be measured. "All of that has to come before an equipment strategy," he declared. "What we have to do in all our companies is figure out how to tie our white-collar workers to the bottom line."

However, given the lack of good performance measures in the office, it is no wonder that the equipment in it gets short shrift, he told conference attendees.

Pointing to personal computers as an example of this lack of goal orientation, Kearns said that micros have gotten better, cheaper and easier to justify. "But the fact that for the most part they are incompatible, that they are isolated from information stored on other machines, that many of them can't communicate, that buying them probably puts off any intelligent equipment strategy — all that gets forgotten in the compulsion to go out and buy a good little machine at a good price," he told his audience.

The focus in measuring office productivity needs to be on quality, not quantity, Kearns maintained. The role of the information manager is to invest capital in a combination of people, machines, facilities and support services. "A good information manager is constantly fine-tuning that combination. The objective is not to substitute machines for people or to cut out support services. The objective is to come up with the best mix to meet the business objectives," he declared.

Kearns

Kearns recommended a list of priorities in determining such a mix:

- First, information managers should insist on a system plan with equipment specifications and technical objectives that support the needs of the business. For example, if the business is growing, install a system that can grow with it, he said.
- Secondly, remember that communication is the one essential goal of office automation. "Remember how people think. Their ideas come in random, unpredictable patterns. Your system should help people generate those ideas easily and share them with others," he said.
- Finally, make sure the office system chosen allows people to expand the scope of their work. Doing better work should be the goal.

Kearns also warned that management itself needs to be scrutinized. American business, he maintained, tries to solve all its problems by throwing more managers at them.

OAC from page 10

$995 to $2,495 per distributed system. The package is scheduled for availability in the second quarter.

Northern Telecom can be reached through Data Park, P.O. Box 1222, Minneapolis, Minn. 55440.

Also at OAC '84, Data General Corp. announced a series of additions to its Comprehensive Electronic Office (CEO) system. Among the additions is a telex interface, the CEO Document Exchange II system, priced at $2,500 and reportedly allowing users to send messages anywhere in the world from their CEO workstations.

DG also introduced a new word processing document interface, the CEO Document Exchange III, which lets CEO users send and receive word processing documents from other vendors' equipment. It is also priced at $2,500.

Availability for both products is within 90 days. DG is located at 4400 Computer Drive, Westboro, Mass. 01581.

The open systems philosophy was also espoused at the conference by Hewlett-Packard Co., which announced a second-generation communications network. Advancenet will provide links between HP computers and other vendors' equipment, the vendor said.

HP Advancenet includes an IBM 3278 emulator, priced at $1,200, and a network remote job entry product for communication with IBM's Systems Network Architecture costing $12,000. Both products will be available March 1.

Further information is available from HP at 3000 Hanover St., Palo Alto, Calif. 94304.

Survey by 9 to 5 links VDTs, health problems

By Lynn Haber
CW Staff

NEW YORK — A recent study of VDT operators found that stress, eyestrain, muscle pain and other adverse side effects have resulted from working with the terminals.

The survey results, outlined in "Analysis of VDT Operator Questionnaires of VDT Hot Line Callers," a report released here earlier this month by 9 to 5, the National Association of Working Women [CW, Feb. 20], indicated that health-related problems are widespread among VDT operators.

Respondents to the health history/job history questionnaire were individuals who had called a 9 to 5 hot line, part of the organization's campaign on VDT risks. Six thousand questionnaires were distributed to VDT workers from May to December 1983; 873, or 15%, of the surveys were returned and analyzed. The typical respondent was a female, 25 to 30 years of age, who worked six to eight hours daily on a plastic-cased VDT with her eyes 10 to 20 inches from the VDT screen and took the same rest breaks as other workers. Over half the respondents were clerical workers in a variety of industries; a majority had been working on VDTs for three years or less.

Severe health effects

Some of the more severe health effects reported "often or daily" by VDT operators in the survey were eyestrain, 53.5%; exhaustion, 51.6%; muscle pain, 56.2%; tension or anxiety, 43.8%; instability or anger, 25.1%; and depression, 23.6%.

In addition, 48.6% of all respondents reported diagnosis or treatment by a physician for vision problems or changes in eyesight since working with VDTs. Approximately half (49%) reported their health was slightly worse or much worse since working on a VDT.

Among the VDT users who had been pregnant since working on a VDT, 31.6% reported normal full-term delivery; 30.6% reported miscarriage; 11.7% said they had given birth by caesarean section; 7.3% had undergone therapeutic or elective abortions; 6.8% had delivered children with major birth defects (treatment required); 4.4% reported premature delivery; 3.4% reported neonatal death; 2.4% of respondents said their pregnancies ended in stillbirths; and 1.9% reported minor birth defects (no treatment required).

Of those women who were pregnant while working on VDTs, 83.3% rated their health during pregnancy as "excellent or good" and 16.7% rated their health "fair or poor."

In response to the study, Karen Nussbaum, executive director of 9 to 5 and president of District 925, Service Employees International Union, AFL-CIO, announced a second phase of the organization's national campaign on VDT risks, which calls on employers, manufacturers and government agencies to take action to protect the safety and health of VDT workers.

Nussbaum recommended that the National Institute for Occupational Safety and Health (Niosh) investigate a work site where a cluster pregnancy problem was recently discovered; that Niosh follow through on a feasibility study of pregnancies among women workers, including VDT users, as soon as possible; and that Niosh set up a national tracking system to study patterns of VDT-related health problems across the U.S. and suggest solutions.

VOTE from page 1

minicomputer that does the tabulating once we get the ballots from the state police. We'll have a final count about two days after the primary," Ambrose said.

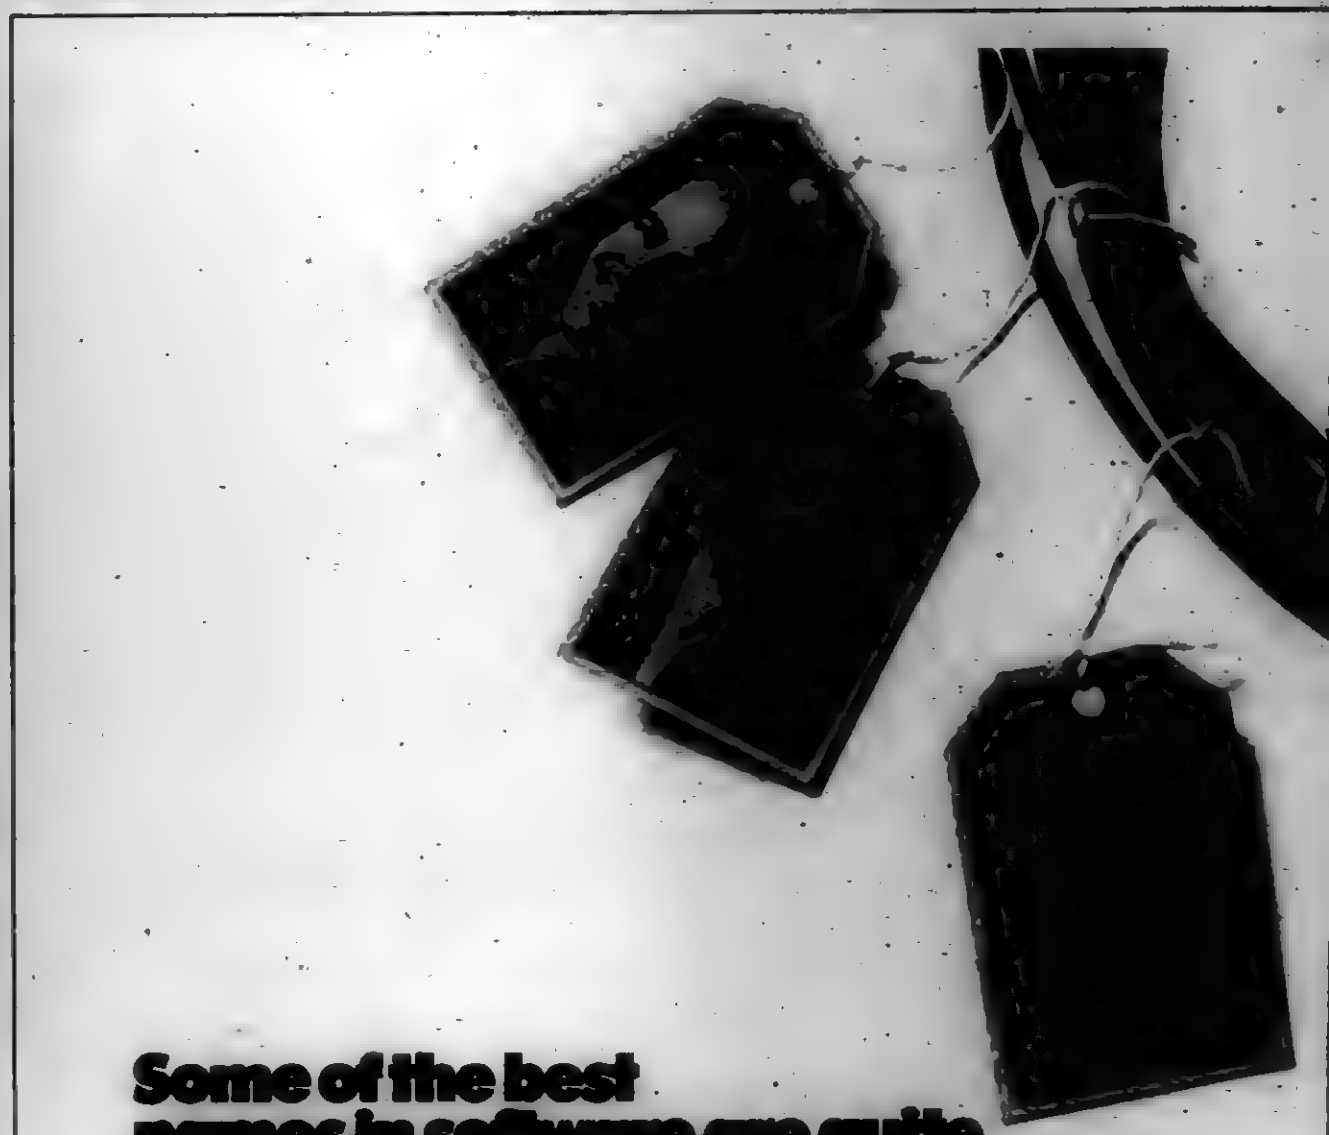
Automated voting is confined to the larger cities and towns, such as Manchester, Concord, Salem and Portsmouth.

These communities rely on equipment that ranges from mechanical lever-action voting machines to punched-card booths and card readers.

It is not scheduled for use tomorrow, but a new system eventually may speed the vote count in Salem. The town plans to try as a pilot a precinct ballot counter produced by Computer Election Systems, Inc. of California.

That counter, scheduled for use in a municipal election next month, would count the votes at the precinct level as voters feed it punch cards throughout the day. When the polls close, workers would then unlock the machines at each of six polling places and read the results in seconds, according to Town Clerk Eleanor Barrett.

Comparing even the current card system, which involves several hours of vote counting, with the paper system she used when she started counting votes in 1955, Barrett noted, "It's sure a lot better than what we used to do, when we would be here until four in the morning."



Some of the best names in software are quite attached to our network.

These people know PCs. They also know a good idea when they see one. That's why they're building future networking software around today's networking standard — Ethernet. And why they chose our PC networking system to help them do it. EtherSeries from 3Com.

What EtherSeries is doing for them.

"3 large, growing, and diverse Ethernets are at the heart of our software development activities. Our 3Com hardware has been very reliable — it has never failed us."
— Bill Gates, Chairman, Microsoft (Bellevue, Washington)

"We want to develop our popular dBase II® to a multiuser networked database environment. To meet the demands of our customers we chose the high-performance 3Com EtherSeries."
— David Clayton Cole, Chairman, Ashton-Tate (Culver City, California)

"The ease of sharing information and printers led our 1-2-3® advanced development team to choose 3Com's EtherSeries® over all of the alternatives."
— Mitch Kapor, President, Lotus Development (Cambridge, Massachusetts)

"We wanted network software transparency. Our PFS:® software runs without ANY change on 3Com's EtherSeries® — it protects our user's software investment."
— Fred Gibbons, President, Software Publishing (Mountain View, California)

"The Ethernet standard and 3Com's EtherSeries® will be an important part of our in-house networking strategy. It provides the connectivity we require for our growing organization."
— Bob Frankston, President, Software Arts (Wellesley, Massachusetts)

"Our mainframe link software and Peachtree software ran perfectly in the 3Com environment. We dropped

Opponents of proposed VDT laws organize

By Lynn Reiser
CW Staff

WASHINGTON, D.C. — As legislative attempts to regulate the use of video display terminals in the work place have grown, opposition to such regulation has also mounted.

Among those opposing the legislation are trade groups and associations such as the Computer Business and Equipment Manufacturers Association (Cbema), the American Banking Association, the American Electronics Association, the Air Transport Association and the American Insurance Association.

"We have opposed all the bills that we've seen so far — other than study bills — not because we don't believe that there aren't any problems connected with the work place or with video display terminals, but [because] the so-called solutions that we've seen mandated in the bills . . . would do more harm than good," said a spokeswoman for Cbema. A national group, Cbema has 40 members, including such computer companies as IBM, Digital Equipment Corp., Honeywell, Inc., Sperry Corp., Texas Instruments, Inc. and Apple Computer, Inc.

At the Air Transport Association, representing the major airlines, which currently use more than 75,000 VDTs nationwide, "Our position is that we don't believe we should be burdened with legislation requirements unless there's a demonstrated need," a spokesman said. "As far as we know, there has been no such demonstrated need for such legislation."

Legislative efforts to regulate VDT use have surfaced in Massachusetts, Connecticut, Illinois, Maine, Oregon, New York, Ohio and Rhode Island. Both Connecticut and Maine have passed legislative study bills, but no state has yet adopted regulatory legislation.

Other attempts to regulate the use of VDTs in the work place have included adding VDT-specific language to union contracts [CW, Sept. 26].

The U.S. trails Europe on the VDT issue. In countries like Sweden, Switzerland and West Germany, federal regulation has mandated the use of adjustable chairs, terminals with detachable keyboards and rest breaks for operators.

Typical bill

The recently drafted Ohio House Bill 552 is typical of many VDT regulation bills.

Its stated purpose is to require minimum occupational and health and safety standards for VDT operation; it would require that VDT operators be provided with adjustable chairs and tables, tilt screens, detachable keyboards, individual brightness and contrast controls, noise-reduction covers and metal shielding on the transformer of the VDT to block radiation.

The bill would also mandate rest breaks for workers, maximum exposure limits and free yearly eye exams provided to users by their employers. A pregnancy consideration clause requires employers to offer work alternatives at the same work site to pregnant VDT operators.

Cbema objects to proposed legislation like the Ohio bill because it "aids the notion that there's something unsafe about these machines, when there isn't," the Cbema spokeswoman said.

"We've looked at the radiation question, and we looked at the radiation literature that deals with pregnancy-related hazards, and as a responsible organization we just can't condone legislation that asks for alternate work for women during their pregnancy.

"It doesn't seem any more valid to us to say that terminals could be a possible cause of birth defects than it does to say light bulbs could be a possible cause of defects," the Cbema spokeswoman said.

Studies on the effects of VDT usage, such as those made by the National Institute for Occupational Safety and Health (Niosh) in 1981 and the Newspaper Guild in 1983, have acknowledged VDT-related health risks such as eye strain and muscle fatigue.

Studies examining radiation emissions and the effects of VDTs on pregnant operators are being done, but presently there is no conclusive scientific evidence linking VDTs to pregnancy problems.

A spokeswoman from the Printing Industry of America (PIA), which is part of a coalition of VDT users groups organized by Cbema to act against regulatory legislation, said PIA is opposed to legislation, not to the recommendations of Niosh, which include better ergonomically designed work areas.

"We're concerned that employees are encouraged to become more fearful of the equipment by the scare stories being told. The unions are using it as an organizing tool, so one has to keep it in mind that there's politics going on and not just a concern for the employees on the part of the promoters of that legislation," the PIA spokeswoman said.

EtherSeries" right into our IBM Information Center and can now share disks and printers."
— Dennis Vohs, Executive Vice President, MSA (Atlanta, Georgia)

"We wanted the expandability of 3Com's Ethernet as a base for our networked products. VisiSeries" for EtherSeries" is the beginning of a family which will include VisiOn.""
— Dan Fylstra, Chairman, VisiCorp (San Jose, California)

What EtherSeries will do for you.

Tying into 3Com EtherSeries was a smart business move for these PC software experts. And it can be for you too. You'll maximize office efficiency, now. Cut operating costs, now. And you'll realize the full potential of your IBM PCs using software that is readily available off-the-shelf, now. All for the low price of $950 per link.

And until January 31, 1984, we'll give you our award-winning EtherMail — a $750 value — with the purchase of EtherSeries and three PC links.

EtherSeries is available at leading computer stores. Call or write Cory Randell at 3Com for more details.

Voice/data problems seen growing

By Phil Hirsch
CW Washington Bureau

WASHINGTON, D.C. — Incompatibility and downtime, familiar problems to computer users, are posing an increasing threat to voice/data telecommunications users, consultant Howard Frank said here last week. And he indicated that the problems arising in the wake of AT&T's recent divestiture are going to get worse, possibly much worse.

Frank, who is president of Contel Information Systems, Inc. and an authority on the design and implementation of communications networks, told a conference sponsored by the Institute of Electrical and Electronics Engineers (IEEE) that the growing difficulty of obtaining reliable telecommunications service is due partly to vendors. Because of the growing integration of data processing and communications, vendors expert in one of these fields are now trying to sell functions from the other, but in many cases haven't yet "built up sufficient skills or reliable product lines.

"Office automation vendors add further uncertainty and instability as they extend their product lines to contain both DP and communications features," he said.

Another reason telecommunication services are becoming less reliable and more expensive, Frank said, is that user companies have underpaid and "under-resourced" their communications departments. This is ironic in a way, he indicated, because of "the competitive opportunities arising from enhanced communications. For example, a recent advertisement by a major bank emphasized its worldwide communications network as its major point of superiority over competitors."

The trend toward common data processing and communications technology will "inevitably" require the merger of the related departments, Frank added. Although this merger is beginning to take place, it is frequently "accompanied by destructive corporate power struggles."

Keeping telecommunications operations from becoming gridlocked will require better-trained systems managers and administrators, Frank said. Universities are not providing such people, he maintained, and the short courses offered by private organizations to those already on the job are —with some exceptions — "abominable."

Better education

Frank's answer to all of these problems starts with better education. Network users and component suppliers must fund university-based courses tailored to the current need, he said.

These are long-term remedies, Frank said, adding that the immediate problem is to "survive the next few years," especially the uncertainties created by AT&T's divestiture and the related tariff changes.

To reduce that problem, Frank advised Congress to adopt a hands-off approach toward "the post-divestiture environment."

ICA seeks deferral of AT&T CPE rate hike

WASHINGTON, D.C. — The pending increases in AT&T lease prices for installed terminals should be deferred, the International Communications Association (ICA) told the Federal Communications Commission last week.

The reason: AT&T has failed to comply with an FCC order issued last December that requires AT&T Information Systems, Inc., AT&T's terminal marketing subsidiary, to lease installed (embedded) terminals known as customer premises equipment (CPE) at specified rates for two years after offering them for sale [CW, Dec. 5]. The ICA, whose members include most of the nation's largest companies, told the FCC that:

■ AT&T has announced that the "lease price predictability program" will begin, with an increase in present rates, on March 1 this year and run until Jan. 1, 1986. The FCC order called for a 24-month program.

■ The FCC order specified that during the 24-month program, AT&T would be allowed to raise its lease rates in three steps spaced eight months apart. AT&T's notice to customers said the "maximum lease price will be achieved on July 1, 1985, a full six months before the end of the two-year transition period," according to ICA.

■ A survey of ICA members showed AT&T Information Systems has failed to give its embedded CPE customers "firm sales quotes in writing." Under the FCC's December order, this information must be available before the 24-month price predictability program can begin.

Commenting on the ICA action, an AT&T spokesman said the FCC ruling allows the price predictability program to begin "when the company has notified all affected customers in writing that we have initiated a sales program." AT&T Information Systems sent out those notifications in December, so it believes that establishing Jan. 1, 1984 as the starting date complies with the FCC order.

FCC rejects tariffs filed by local carriers

By Phil Hirsch
CW Washington Bureau

WASHINGTON, D.C. — The Federal Communications Commission has rejected the charges for accessing long-distance, private-line and dial-up services that were proposed by most of the nation's local telephone companies last October. The FCC action raised the possibility that the current, generally lower rates for all long-distance, inter-Lata (Local Access and Transport Area) communications services will continue beyond April 3, the date they are scheduled to end.

The tariffs rejected by the FCC on Feb. 16 specified the carriers' proposed charges for circuits connecting subscribers to inter-Lata MTS, Wats and private-line circuits.

The rates reflected the FCC's previously adopted access charge plan, under which the costs of local telephone service were redistributed.

Raised prices

As a result of this redistribution, the former Bell operating companies and other local telephone companies, according to the commission, have raised their prices for some services by 800%.

"The magnitude of the increases makes it clear that the telephone companies are proposing to change radically the manner in which local private lines are priced and provided," the FCC said in its rejection order.

The commission added that "the present filing provides virtually no information on these matters."

The carriers must resubmit their tariffs, together with adequate justification, by March 15. However, this deadline may not allow them enough time.

A related problem is that the commission staff will have only about two weeks after March 15 to review the submitted material — which is bound to be voluminous — and make recommendations to the commission.

A further complication involves AT&T, which also submitted a tariff to the commission last October embodying the new access charge plan. Like the local carriers' proposed rates, those filed by AT&T are presently scheduled to become effective April 3.

AT&T's pending tariff includes a "total service" option, under which the company combines its own facilities with connections obtained from local carriers and charges the end user a consolidated price.

Since the price for each total-service option cannot be determined until the local carriers' charges for their facilities are in place, AT&T probably will be unable to submit its final rates to the commission until after March 15.

AT&T's Brown attacks order issued by FCC

The same day the Federal Communications Commission rejected the tariffs filed by local telephone companies, AT&T attacked the changes recently incorporated into the commission's access charge plan.

The FCC order "will drive our interstate earnings to levels which are about half of those authorized for the nationwide interstate long-distance business," AT&T's Chairman Charles L. Brown said.

Brown's statement is believed to presage a substantial cutback of the savings AT&T promised early last month [CW, Jan. 16].

The specific charges probably will be disclosed next month, when AT&T is likely to file revised rates for long-distance, inter-Lata (Local Access and Transport Area) MTS, Wats and private-line services that embody the latest version of the commission's access charge plan.

October filing: 15.3% increase

In its October filing, AT&T proposed a 15.3% increase overall in private-line rates and a 10.5% decrease in MTS and Wats.

Last month, the company said the increase could be less and the decreases greater if the FCC stuck with the original version of its access charge plan, in particular, a $2/mo surcharge on residential users beginning April 3.

However, a short time later, the commission, responding to pressure from the U.S. Congress, deferred that surcharge until next year, along with a similar fee imposed on single-line business users.

In his recent attack on the FCC decision, Brown said that as a result of the residential surcharge deferral, "two billion dollars in additional expenses has been loaded on AT&T Communications. . . . It is important to understand that AT&T is no longer a huge monopoly which can offset such blows as this with earnings from other jurisdictions."

YOUR PHONE BILL.

If you're running 212 modems in a dial-up network, Codex has a new product that can significantly reduce your phone bills.

It's the Codex 224 modem.

At 1200 bits per second, the Codex 224 is fully compatible with Bell's 212 modem. But because the Codex 224 also runs at 2400 bits per second you can transfer more data faster and therein lies the economy.

You can run at 2400 bps full duplex asynchronous or synchronous over public telephone lines, even unattended. And because the Codex 224 incorporates advanced equalizers you're assured of high performance at higher speeds even over marginal lines. In addition, the Codex 224 automatically recognizes 1200 or 2400 bps transmissions and adjusts automatically.

And with faster file transfer and screen fills, people in the network will be able to get more done in the same time.

What all this means is that you can get better productivity and significant savings in your 212 network simply by installing Codex 224 modems.

The Codex 224, which meets the CCITT international standard, can be leased directly from Codex or purchased outright.

In short, you don't have to make a massive investment to run a better, faster, more economical network.

All you have to do is call Codex.

Call 1-800-821-7700 Ext. 895. Or write: Codex Corporation, Dept. 707-95, 20 Cabot Blvd., Mansfield, MA 02048.

NEWS

AT&T to offer shared multitenant services

By Phil Hirsch
CW Washington Bureau

WASHINGTON, D.C. — AT&T's unregulated subsidiary announced plans early this month to offer "intelligent building services" that would provide tenants of office buildings with access to long-distance private-line services and sophisticated private branch exchange services.

Landlords of office buildings in major cities have begun offering such services in recent years at prices considerably below what the tenants could obtain on their own. AT&T Information Systems, Inc., the unregulated AT&T subsidiary, wants to contract with the landlords to provide the supporting facilities.

With communication rates spiraling upward, these "shared, multitenant communication services" are likely to become considerably more popular, since they offer a way of canceling or at least sharply reducing the higher charges.

AT&T Information Systems has agreed in principle with United Technologies Corp. to form a joint-venture company that would provide shared, multitenant services. If the proposed marriage between AT&T and United Technologies is consummated, it will almost certainly make the whole idea of these services more credible to office building landlords and their tenants, besides creating a supplier with the resources needed to launch a major marketing effort.

However, because of the Federal Communications Commission's Second Computer Inquiry decision, AT&T Information Systems cannot offer most private-line services. They are classified as "basic" services and thus have to be provided under tariff by regulated common carriers such as AT&T Communications.

AT&T Information Systems recently asked the FCC to waive this provision of Computer Decision II, indicating that, otherwise, the proposed joint venture would come unstuck, and "several near-term venture projects" would have to be abandoned.

However, the proposal to amend Computer Decision II has evoked opposition from several parties, and they are believed likely to feel the same about the waiver.

One opponent is the Independent Data Communications Manufacturers Association which, in a recent comment that it made to the FCC, said that allowing AT&T Information Systems to resell services would enable AT&T to turn over to its subsidiary "the most advanced and lucrative portions of the transmission business."

Suit accuses MCI of billing unfinished calls

By John Dix
CW Staff

CHICAGO — Users of long-distance telephone services provided by MCI Communications Corp. should be on the lookout for phantom phone charges.

In a class-action suit recently filed here against MCI, Certified Collateral Corp. alleged that MCI sometimes charges its customers for calls which are not completed. This is done "deliberately, knowingly and with the intention to deceitfully and fraudulently obtain moneys" to which it is not entitled, Certified Collateral claims in its suit. According to Certified Collateral, this fact is not disclosed in MCI's filings with the Federal Communications Commission nor in the company's residential and commercial rate schedules.

Additionally, Certified Collateral alleges that "these improper charges were reversed by the defendant only if discovered by the customer and reported to the defendant."

An MCI spokesman said that a booklet for new installations provides a number to call for questions regarding bills and that any inappropriate charges are reversed. While the company agrees that the overbillings can occur, the spokesman said that the regional telephone holding companies do not provide MCI with the "answer supervision" function that AT&T Communications enjoys.

Without this feature, which enables a carrier to know when a call is completed, MCI has had to adopt a billing system whereby its computers monitor the noise on a line to distinguish between ringing sounds, busy signals and conversation. "This system isn't perfect," the MCI spokesman said, and can result in some calls being billed that are not completed.

This system is also at fault, he added, for Certified Collateral's allegation that calls which ring six or more times before they are answered may incur a charge of a "minute or more in addition to any actual communications."

How To Implement The Best New PC Decision Support Software With A Pair Of Scissors.

YES. Tell me more about The New Context MBA and The Corporate MBA.
☐ Have a Context representative call me.

Name _____

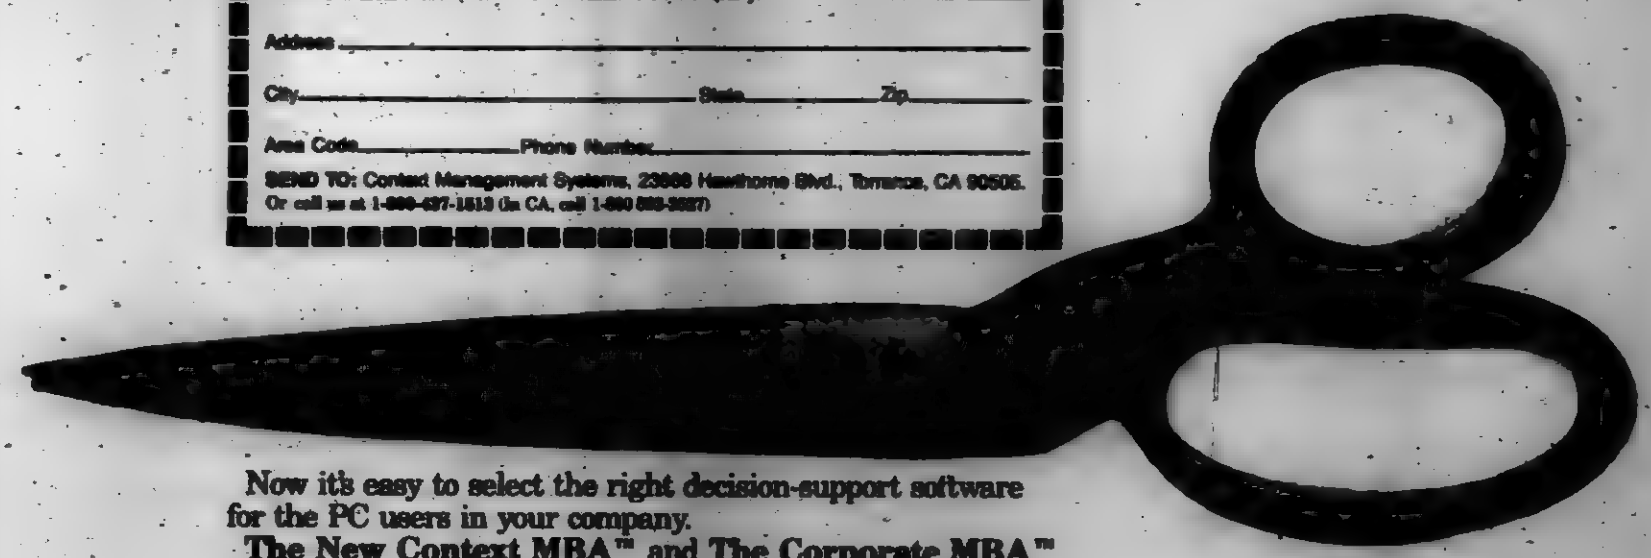
Title _____ Company _____

Address _____

City _____ State _____ Zip _____

Area Code _____ Phone Number _____

SEND TO: Context Management Systems, 23868 Hawthorne Blvd., Torrance, CA 90505.
Or call us at 1-800-637-1512 (In CA, call 1-800 [illegible])



Now it's easy to select the right decision-support software for the PC users in your company.

The New Context MBA™ and **The Corporate MBA™** both have all the functions PC users in your company need: Spreadsheet, Business Graphics, Database, Word Processing, Telecommunications, and Forms Creation.

They're all *integrated* in one software package. With advantages that'll make your life a whole lot easier.

Like full 3270 emulation. So *you* can connect their PCs to your Data Center network. For immediate, yet controlled, access to decision data. No more hand-holding or custom programming.

PC users in your company get the decision-support capability they need from a single, easy-to-learn package. And you get an easy way to plug one PC software package into the entire company.

Our **Context 500™** support team builds a custom training and ongoing support program for your company, so *you* don't have to.

Now *your* job of supporting *our* software is as easy as picking up the phone.

So make it easy on yourself. Cut out, fill in, and send us this coupon. And cut out a lot of heartburn over which of many PC software packages to choose.

Now where did you put those scissors?

HOTSITE, the dedicated IBM 4300 facility, gives you a disaster recovery back-up option that's five ways better.

It doesn't take much to put your computer out of business. But when it's backed up by HOTSITE, you'll be back in business - fast. Dedicated to disaster recovery, HOTSITE provides a far better option than an "empty shell," a reciprocal agreement or a duplicate site. It even has advantages over other dedicated facilities.

HOTSITE

- supports you with an IBM 4341-2 system and total communication equipment.
- insists that you test the system on a regular basis according to your needs.
- protects you with a state-of-the-art security system.
- assists you with comprehensive technical support.
- saves you money with flexible pricing.

You haven't explored your disaster recovery options until you've talked to our representative. Please use the attached coupon to contact us, or call (216) 652-9624.

Bank MIS chiefs talk about merger planning

By Paul Kerstenbaum
CW Staff

When companies merge, "the key to integrating data processing departments is to make the transition transparent to customers and employees," said Arthur Johnson, vice-president of the Automated Systems Development department at the Shawmut Bank of Boston. "Terminal operators and customers should be able to access data without having to stipulate which bank produced it."

Johnson speaks from experience. His bank last year bought Worcester (Mass.) County National Bank. Both Johnson and Truman Hester, another veteran of a bank merger, estimated that it will take two or three years before data processing activities are fully integrated.

Hester is senior vice-president of Sovereign National Bank, created last year by the merger of Virginia National Bank in Norfolk, Va., and First National Bank in Richmond. "The two banks' operations and data processing departments began working together eight months before the merger took place," Hester noted. "We wanted the departments to be familiar with one another, and we had to integrate the two personnel systems.

"On the day the merger was signed, one personnel and human resource system was used at both banks." After the personnel system was implemented, "we prioritized our applications and began integrating the most important applications first."

In both the Massachusetts and Virginia mergers, automated teller machines (ATM) were the first application to be integrated. "At first, each bank's ATM application ran independently," Hester said. "Communication hardware allowed us to tie the two systems together so a customer could complete a transaction at either bank. Today, a central data base holds customer information for the ATM system. We plan to use the data base when we integrate other applications."

Currently, most Sovereign applications run independently at both data processing centers. "We would like to design a system so that one mainframe processes applications and the other could be used for batch and emergency processing," he said.

Shawmut took a different approach. "We are evaluating each bank's version of an application," Johnson said. "When we determine which version meets our needs, we will use that version and continue to run it at its present location. When we have completed this process, both mainframes will probably process the same number of applications."

IBM mainframes

The conversion process in both mergers has been aided by the fact that all the banks use IBM mainframes. "Since both data processing departments used IBM's [Systems Network Architecture], we were able to develop communication capabilities quickly," Hester said.

Data conversion required more effort. "No two data file formats were the same," Johnson said. "We didn't encounter many major conversion problems, but it did require a great deal of work."

While a chief benefit of a merger should be reduced operating costs, "Since the merger, we haven't eliminated any positions," Hester said. "We expect that our staffing level will remain constant throughout the integration process." But, he added, "As we fully integrate applications, staff may be reduced. We don't plan on laying any employees off; any staff cuts will come through attrition."

Software AG slates April users conference

ANAHEIM, Calif. — Software AG of North America, Inc. will hold its 13th Annual International Users Conference here at the Disneyland Hotel and Convention Center April 29-May 3.

John Naisbitt, chairman of the Naisbitt Group, author of *Megatrends: Ten New Directions Transforming Our Lives* and publisher of "The Trend Report," will deliver the keynote address.

The conference will feature guest speakers, user presentations, workshops and education classes for all levels of the company's users.

Some of the classes being planned include "Adabas Physical File Design" and "Natural Security."

Registration is $595. Further information is available from Software AG, 11800 Sunrise Valley Drive, Reston, Va. 22091.

How 3 famous names got together to

SOLVE YOUR PROBLEMS OF INTELLIGENT MICRO TO MAINFRAME CONNECTION.

Get the answers you're looking for—with the VisiAnswer Software System from Informatics, the leader in mainframe to micro integration.

Informatics has teamed the best minds in the business to solve the problems of intelligent mainframe data access for microcomputer users. The VisiAnswer™ Software System is the breakthrough result of a unique team involving Informatics Corporate Micro Systems and VisiCorp™ products working with IBM® Personal Computers.

VisiAnswer solves the timely problems plaguing data processing professionals like you.

Available for use right now, the VisiAnswer Software System is the micro to mainframe system specifically designed to help you:

- Manage *and* control the integration of microcomputers with your current mainframe—right in *your* data processing department.
- Provide your company's micro end-users with access to specific mainframe data—without wading through unrelated information for hours.
- Maintain *security*/control of restricted portions of your corporation's data.
- Supply end-users access to *current "live" information*, instead of information that's historical and obsolete.
- Intelligently access *all* mainframe data, whether it's unique application data or part of a data base management system.

VisiAnswer makes your job easier and more efficient than ever.

With more and more managers and analysts in your company using desk-top computers these days, there's a tendency to improvise the way they obtain the data they need. That leaves the door wide open for mistakes and inaccurate information.

Now you can avoid these problems and maintain a high level of data processing efficiency for everyone who needs access to that data with the VisiAnswer Software System. It delivers intelligent solutions that make current mainframe data available to your end-users in an orderly fashion. That makes their jobs *and yours* easier and more accurate—something upper management will appreciate.

VisiAnswer was designed by the best minds in the business to fit your business.

You get Informatics' expertise in data access technology and mainframe system software...plus VisiCorp's expertise in user-friendly micro software. We chose the IBM Personal Computer for its leadership in delivering business solutions, and IBM chose us as a value-added remarketer.

This system works with *all* data bases on IBM mainframe systems. And your end-users will get data that is immediately usable with all Visi Series™ Products and other products utilizing the VisiCalc® file format.

Find out more about Informatics VisiAnswer system. Mail this coupon or call toll free today. See how VisiAnswer products can fit into your Personal Information Center as an integral part of your unique business strategy.

Get the facts on VisiAnswer—
the intelligent micro to mainframe connection.

'Collector' of DP programs gets probation

AKRON, Ohio — Apparently "just a collector," a DP consultant reportedly accumulated copies of tire company computer programs that cost more than $100,000 to develop.

It was only by chance that officials found the manufacturing and utility programs that Alfred C. Buxton Jr. of Akron had stored in his desk at General Tires, Inc. and in an apartment where he kept a minicomputer, according to a prosecutor.

Buxton was placed on probation after he pleaded guilty to a conversion of trade secrets charge relating to his copying printouts as he translated a program for The Goodyear Tire and Rubber Co., where he worked as a consultant in the late 1970s.

That program, according to Summit County Assistant Prosecutor Richard Dobbins, was a tire curing process program that cost Goodyear more than $30,000 to develop and was worth as much as $1.5 million to Goodyear's competitors.

Buxton allegedly left that program in a loose-leaf binder in his desk at General Tires when he quit a programming job there last year. A coworker found it by accident and reported it to General Tires' legal department. "We never would have known otherwise," Dobbins noted.

A police search uncovered three General Tires programs in one of two Akron apartments that Buxton kept. According to Dobbins, Buxton fed at least one of those programs to his Lobo Drives International small business computer's disks via telephone hookups at General Tires. Two of those reportedly were program development systems, while a third was a program designed to run industrial equipment manufactured by Akron Standard Mold Co., the company where Buxton worked when finally charged with conversion of trade secrets, possession of stolen goods and possessing criminal tools (the computer) last November. The remaining charges were dropped when he pleaded guilty to the conversion of trade secrets charge.

"It originally looked like he was selling them. But we became convinced that he didn't. He was just a collector keeping this stuff around for his own use," Dobbins said.

Buxton, who passed a polygraph examination, maintained he was only a collector and had what turned out to be improper permission from tire company officials to take programs home to work on at night, Dobbins noted.

CONDOR
on-line programming that reaches new heights in productivity

To get the most from your IBM mainframe, you need CONDOR – a reliable, easy-to-use, high-performance system that soars above the rest through improved programmer productivity and low resource consumption. CONDOR's highly efficient processing methods and I/O facility improve system response time and can substantially expand the capacity of your CPU while minimizing personnel requirements.

You can write and edit programs with CONDOR and submit them for compile or execution. You can view and modify data from input and output queues, release or cancel jobs, and spool output to local and remote printers.

CONDOR's built-in library management system automatically reorganizes as you process for optimum conservation of disk space. In addition to offering stringent security against unauthorized access and supporting multiple versions, it provides detailed audit reports and program cross-referencing – both batch and on-line.

Boosting productivity even more, CONDOR's own high-level interactive programming language lets you create programs and JCL in a fraction of the time required with other languages. And a powerful set of interactive utilities makes system maintenance a breeze.

CONDOR operates standalone or as a task under CICS and the other major TP monitors to give you total flexibility, and it supports DOS/VS(E) and MVS operating systems for versatility and upgrading capabilities.

No wonder respondents to a recent Datapro survey rated CONDOR tops in reliability, efficiency, ease of use, ease of installation, support, and realized financial savings.

So for a system that out-performs the others and gives you complete control of all your data processing, choose CONDOR. Call for a free trial. You'll be glad you made the right choice.

For more information contact Phoenix Computer Corporation, 11949 Jefferson Boulevard, Culver City, California 90230. Toll-free (800) 255-5049 or (213) 827-4500 in California.

CONDOR

Data erasure at weapons firm investigated

By Patricia Keefe
CW Staff

OAK RIDGE, Tenn. — A seemingly minor incident in the eyes of DP employees at the Y-12 nuclear weapons parts plant here has come under the spotlight as a result of a federal government investigation into allegations of missing uranium at the facility.

The discovery last June of what plant officials said is the accidental erasure of data — for which backup reportedly exists — from 27 computer tapes was revealed during a hearing held Feb. 6 by the U.S. House of Representatives' Armed Services Committee's Subcommittee on Investigation. Also investigating at the request of Joe LaGronde, the manager of operations at the plant, is the U.S. Department of Energy (DOE), which contracts with Y-12.

The investigations were initiated after a series of stories appeared in the *Knoxville News-Sentinel* of Tennessee, concerning alleged uranium inventory discrepancies at the plant. The stories focused specifically on the whereabouts of 1,710 pounds of uranium.

A reporter for the *News-Sentinel* said plant officials told DOE about the tapes only after his inquiry about them the day before. Since the tapes contained uranium accountability inventories, there was some speculation that the tapes might have been deliberately erased as part of a cover-up concerning the missing uranium.

George Jansy, vice-president of engineering and computer science at Union Carbide Corp., which operates the Y-12 plant, dismissed those allegations, saying that backup in the form of printouts, microfiche and files exists for the data that was erased.

"You have to understand that [the tape erasures] were uncovered last June during a routine housekeeping process, and the people involved considered it a purely internal matter," Jansy said.

A spokesman for the Subcommittee on Investigations said the subcommittee was satisfied with Y-12 officials' responses to the charges.

Introducing APS/IMS

40% Improvement in Productivity Without the "Black Box."

Introducing APS/IMS—the only application productivity system designed specifically to meet the complex needs of the IMS Development Center.

Looking For Productivity Tools?

If you're an IMS user and looking at productivity improving tools, be careful. Most products on the market today have taken a "black box" generator approach to productivity improvement. You may be looking at one right now. While these tools can be fine for putting up simple things fast in a low-volume environment, they fall apart when subjected to the complex application, performance and maintenance issues of the IMS world.

Introducing APS/IMS— The Source-Based, Layered Solution

APS/IMS is the application productivity system that, for the first time, offers a strategic solution for the IMS Development Center. Unlike "black box" productivity tools, APS/IMS offers a source-based, layered solution for IMS users.

Source-based means that APS is engineered to be compatible with your existing source-level interfaces and requires no run-time overhead. With APS, you don't have to adopt a new language or a new design methodology.

The five APS components are housed in a layered architecture. The APS layered approach uniquely addresses the different technical skill levels within your organization as well as the broad range of application development and maintenance requirements you face:

- **Screen Painter**—engineered for end-users, designers and programmers. Using the painter, designers can interactively define screens at their 3270 or PC workstations. After screens are painted, APS will generate MFS, BMS, working storage and hard copy documentation.
- **Command Level Support System**—designed for COBOL programmers and requires no IMS knowledge. Through the use of powerful DB and DC Command Sets in a Structured COBOL programming environment, this facility allows programmers with no IMS experience to write comprehensive batch, DB and online applications.
- **Macro Level Interface**—leverages the skills of senior programmers and analysts who know IMS. This subsystem provides a macro language that enables senior technicians to extend, modify and control the Command Level environment. This additional productivity layer allows senior technicians to control systems performance and integrity without being forced to "exit" to the native IMS level.
- **Data Description Interface**—reads your existing IMS data base descriptions (whether or not you use a dictionary) and automatically provides information about the data base structure to APS/IMS.
- **APS Precompiler**—combines the outputs of the other APS components and generates native COBOL, IMS source. The APS Precompiler traps coding errors, validates IMS calls and adds no run-time overhead.

Increases Productivity By 40%

The productivity gains of these five components benefit every phase of the application life cycle—from initial design through maintenance programming.

Because of the APS layered architecture, you choose the productivity and performance ratios you need based on the specific application requirements at hand. No other product offers you this degree of control.

To date, APS users are reporting design, coding and test savings of 25% to 40% over traditional methods—with savings of 50% during the maintenance phase.

Call Today For More Information

APS/IMS can begin immediately to address your IMS Development Center requirements without forcing you to sacrifice the control and flexibility you need. With APS/IMS, there is no "black box" and there are no traps.

If you think the other productivity systems you've looked at compare to APS/IMS, look again. Before it's too late.

Call now for more information. If timing is critical, ask about the *FAST TRACK* evaluation process. We'll be happy to show you how APS/IMS can address your IMS productivity needs.

YES, I am interested in APS/IMS.
☐ Tell me about the *FAST TRACK* evaluation.
☐ Contact me for a product presentation.
☐ Please send me more information.

French town to try out medical smart card

By Susan Shirmacy
CW Staff

BLOIS, France — Imagine walking around with your entire medical history — records of every doctor visit, prescription and treatment you ever had — in your back pocket.

This is exactly what people here will be doing, thanks to smart card technology. Smart cards resemble credit cards, but in addition to a magnetic signature band, they contain an embedded programmable microprocessor equipped with logic and memory. Originally developed by Honeywell Bull SA for retail and banking applications, they are now breaking new ground with the medical application.

That $3 million government-funded project was devised by Intelmatique, a coalition of 40 independent information companies (including Honeywell Bull) and the French government. According to Roy Bright, managing director and chief executive officer of Intelmatique, it will encompass three separate pilot programs using the chip-on-a-card technology.

Distributed to school children

The first program in the project will be launched early this year with the school children of Blois, a small city southwest of Paris. Minister for Social Affairs Pierre Beregovy said the smart cards will be distributed in the school system to maintain individual vaccination records.

To support the program, card readers will be issued to all schools and physicians in the region. A card reader can display and update a card holder's entire permanent file.

"Ultimately, we hope that an individual health card could be created for every member of the population," Beregovy said. "This would lead to improved health care by reducing delays in treatment, eliminating duplicate medical tests and ensuring correct emergency care."

The two other medical applications slated for implementation later this year involve patients requiring frequent hospital treatment — both the chronically ill and outpatient cases, such as people undergoing dialysis, Beregovy said.

"These applications will greatly facilitate the appointment and treatment process," Beregovy maintained. "At the same time, these patients, if they move, will not have to face repetitious and expensive medical examinations" each time they relocate. The automated procedures will also simplify and streamline the clerical and recording processes in hospital administration routines, Beregovy added.

To ensure that privacy is maintained in the use of the smart cards, all medical applications will be supervised by the National Commission for Computer Technologies and Civil Liberties, Beregovy noted. Furthermore, the cards feature built-in security devices that make them especially well suited to medical applications.

"Individual privacy is assured by the powerful but flexible security mechanism designed in the card," Intelmatique's Bright said. "It has three levels of security for data protection, ranging from 'open' to 'secret,' " he added. (Many retail and banking smart cards operate with identification codes; when a code is entered improperly or used fraudulently, the microprocessor in the card self-destructs.)

Bright predicted that the growing number and scope of applications for smart card implementations in France will create a wide interest and acceptance of the technology in a wide array of industries abroad.

So far, smart cards have been adopted by French university students as portable school records; they're being used to make direct-billing phone calls from special French phone booths; and to make direct-billing purchases at many of France's retail stores. Smart cards are also scheduled to become a part of the French pay-TV network.

NEWS

INTERNATIONAL REPORT

CW INTERNATIONAL NEWS NETWORK

AUSTRALIA

SYDNEY — Less than six months after signing an agreement to distribute its accounting software through Wang Computer Pty. Ltd., Attache Software has struck distribution deals with Wang's parent company in the U.S. and completed negotiations with three other major microcomputer vendors in Australia. The most significant of the local deals is a $1 million pact with IBM Australia Ltd.

■

CANBERRA — Agridata Resources, Inc.'s Agridata Network has been chosen as Australia's national agricultural information network. Slated to be introduced this summer, Agridata Network is said to be the first U.S. on-line electronic information system adopted for widespread use in Australia, where the British Prestel system is dominant.

■

HAWTHORN — IBM Australia Ltd. has donated an IBM 4341 mainframe and associated peripherals, valued at approximately $1 million, to the Swinburne Institute of Technology here. Swinburne will establish a computer-aided design and manufacturing center for teaching and research applications.

BRAZIL

RIO DE JANEIRO — Brazil's Special Department of Informatics has initially qualified eight Brazilian companies to produce superminis. Three of the companies (Cobra, Sid and Labo) will rely on domestically produced technology. The remaining five (Bradesco, Sisco, Itautec, Edisa and ABC-Sistemas) will import technology: Bradesco will buy from Digital Equipment Corp.; Sisco will import from IPL Systems, Inc.; Itautec will purchase Formation, Inc. equipment; Edisa will use Fujitsu Ltd. technology; and ABC-Sistemas, whose proposal for a joint venture with Hewlett-Packard Co. was rejected by the government, will import technology from CII-Honeywell Bull.

CHINA

BEIJING — In conjunction with China's Ministry of Machine Building, IBM sponsored an advanced computer course to familiarize some 30 Chinese government ministers with computer applications and also to establish a friendly IBM image in the People's Republic, a ministry spokesman said.

■

BEIJING — A software development center called the China Software Technical Corp. has been established here by China's Computer Industry Administration under the nation's Ministry of Electronic Industries (MEI). The center, one of several newly formed software groups, will coordinate the developmental efforts of all MEI's subordinate organizations.

■

BEIJING — In an attempt to modernize and increase economic efficiency, China is expected to import $1 billion worth of advanced technology in 1984. Last year, China's computer imports totaled $300 million, said Yuan Baohua, vice-minister of the State Economic Commission.

FRANCE

PARIS — After dissolving its joint-venture agreement with Datapoint Corp., Matra Informatique appears to be re-entering the minicomputer marketplace — this time with the Norwegian vendor Norsk Data A.S., which offers a range of minis for scientific, industrial and transactional applications. In order to establish a joint venture with Norsk, Matra must first get permission from the French Ministry of Industry.

JAPAN

TOKYO — Fujitsu Ltd. has announced plans to build a factory in the U.S. It is rumored that the proposed factory will be built in California to produce computer-related devices such as magnetic disks.

■

TOKYO — NEC Corp. claims to have created the world's first single-chip processor that is not a von Neumann-type system. The system was designed for image processing. First shipments of the NEC processor are slated for June.

WEST GERMANY

MUNICH — Industry watchers here predict IBM Germany GMBH will cut prices by up to 20% on its 3080 processors on March 1. The speculation comes in the wake of IBM's unofficial announcement of a new pricing strategy made to customers interested in buying new data processing equipment.

■

MUNICH — Siemens AG has unveiled its three-model 7.590 series of mid-range computers. The 7.590 processor is based on emitter-coupled logic technology with large-scale integrated circuits. A basic configuration with 300M bytes of disk storage and four display stations (plus the vendor's BS 2000 operating system) starts at approximately $107,000. First shipments are slated for early 1985.

TALK SENSE TO THE IBM PC.

Introducing PC/204, a link that lets PC users turn mainframe data into spreadsheets effortlessly.

PC/204, the newest productivity tool from Computer Corporation of America, is a powerful, efficient, easy-to-use software link between IBM personal computers and mainframes. It effectively answers the pressing problem of how to let corporate managers take full advantage of today's personal computers for making decisions, while also giving them access to the corporate database in a format they can use.

First, PC/204 guides PC users as they browse through the MODEL 204 database. Then it extracts the data they need and converts it into meaningful management information for spreadsheet analysis. Lotus 1-2-3 for example. And PC/204 does all that automatically. Without the PC user having to understand anything about mainframe technology.

If you aren't already using Lotus 1-2-3, we can supply it along with PC/204. Or you can use any current IBM PC business package.

While PC/204 is helping business managers, it's also helping MIS directors.

PC/204 uses the power and intelligence of the personal computer for increasing the overall efficiency of an application.

For one thing, it improves performance of the mainframe by offloading some of the processing to the PC, while reducing PC users' response time. It also makes communication between the PC and the mainframe more efficient.

What about security and control? PC/204 provides individual management views of the corporate database while still allowing PC users access to all the information they need.

PC/204 is the latest reason to get MODEL 204 DBMS which has been so highly rated for performance and programmer productivity.

For more information or to arrange for a demonstration of PC/204's capabilities, simply return the coupon or write to us on your letterhead.

Supermini helps scientists 'read' language of DNA

By Peter Bartells
CW Staff

MADISON, Wis. — In science fiction writer Frank Herbert's latest novel, *White Plague*, an embittered scientist uses a computer to map human deoxyribonucleic acid (DNA) — the molecular building block of genes — and develop an almost unstoppable virus that kills all infected women.

A project at the University of Wisconsin at Madison's University-Industry Research Program here makes no claims to the potential for evil, or good, that could be wrought with the genetic engineering abilities foreseen by Herbert. But it is using a computer to enable scientists to "read" more easily the language of DNA.

"DNA sequences are the coding stuff for the software of life," explained John R. Devereux. With partner Paul Haberli, Devereux developed a program that runs on a Digital Equipment Corp. VAX-11/780 supermini under VMS and enables engineers to compare a DNA sequence against about 3,000 sequences stored in the computer's memory. "We are developing ways to look at that [DNA] so we can know what it is."

Fully understanding the codes contained in DNA and being able to manipulate those codes would open "overwhelming" possibilities, Devereux said in a recent interview with *Computerworld*. Scientists could determine if a DNA sequence in a particular strain of corn contains a particular amino acid that increases corn's feedstock value. Similarly, he said, a clinician trying to treat people with genetic diseases might be able to take a DNA sequence from a person, alter it slightly to conform to a normal pattern and reintroduce it into that person's body where, theoretically, it would "spread and correct the deficiency."

While the medical example is the alter ego of Herbert's doomsday disease, Devereux said the ethical considerations of such power will be determined by society. "Like any powerful technology, it opens up avenues for abuse," he said, adding that it's his belief "the levels of diabolicalness already established are so good" that there is little need for using genetic engineering to create new monsters.

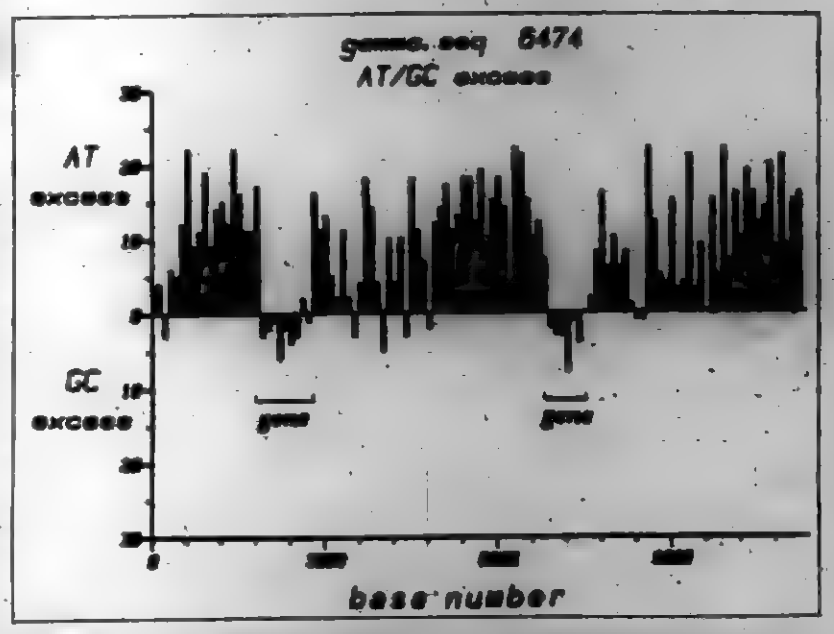
Devereux uses his program to compare new DNA sequences against those already stored in the computer memory. The computer sorts through its base of sequences to determine if the new sequence has any similarities or patterns to existing sequences. That may enable scientists to determine if the new sequence has similar functions to a known sequence or if it is unusual.

There are probably more than three million DNA sequences that have been identified and published, according to Devereux. His project has stored 3,000 sequences ranging from those in bacterial viruses to those of human blood genes.

DNA is found in the form of a helix-shaped staircase containing millions of steps. Each step is a pair of nucleotides, named a base, which may occur in either of two combinations: an adenine-thymine (A-T) pair or a cytosine-guanine (C-G) pair. A grouping of three pairs, called a codon, provides a code for one of 20 amino acids that form proteins. Identifying a sequence is a matter of reading those As, Ts, Gs and Cs.

An actual gene may be tucked away within a long strand of DNA, and Devereux's computer can pinpoint areas that are likely to contain genes. The computer can also indicate what areas on the DNA strand are vulnerable to the cutting action of specialized enzymes used by genetic engineers to pry out genes.

The sequences are read from patterns of dark bands exposed on X-ray film and are then input by keyboard.



On this bar graph of the AT and GC content of a human fetal DNA sequence, the genes for two different blood pigments are indicated by excesses of GC bases. The molecule is the most flexible where there is an excess of AT bases since this region is not transcribed into a protein.

Poll surveys large companies on their OA equipment requirements

By Lynn Haber
CW Staff

WELLESLEY, Mass. — Compatibility of office automation equipment becomes increasingly important to users as company size increases, according to a report recently published here.

Less than 10% of very large companies (those with annual revenues of $250 million or more) would forego compatibility to get the best equipment from the best individual vendors, they recently told Venture Development Corp. (VDC), which mass-mailed a survey to approximately 10,000 companies.

In contrast, 40% of those companies with $5 million to $20 million in annual revenues would be willing to sacrifice compatibility to get the best equipment from the best individual vendors.

Acquisition analysis

The results of the survey were published in a report titled "Office Automation Survey: Analysis of Acquisition and Use of Office and Communications Equipment."

The survey's response rate was approximately 7%; respondents included company presidents, communications managers, managers of systems and data processing, senior systems engineers, vice-presidents in marketing and finance, engineering and system applications engineers and systems analysts.

Large companies are also more concerned than smaller companies that future purchases mesh effectively with currently owned office equipment. According to the researchers, products are evaluated with an eye to compatibility specifications as well as functionality. This contrasts with small firms that often buy equipment to suit an immediate need, with less thought to a systems-oriented approach.

Interest in compatibility

According to Leone Nancy Pease, VDC market research analyst, the stronger interest in compatibility is attributable to the fact that larger companies are usually more automated and have a greater diversity of location and type of equipment that need to communicate with both external locations and international locations.

Cost of equipment and acceptance by users were also cited as vital concerns by more than 20% of the companies questioned. Proper planning of equipment purchases and management cooperation each concerned about one company in eight.

According to the VDC survey report, the overriding theme today among office automation equipment buyers is caution. Many companies are underautomated, yet reluctant to get in over their heads with an expensive automation structure that may become obsolete in the near future.

VDC believes many companies are waiting for communications and software standards to be set and for vendors to sort themselves into product and service categories clearer to the potential buyer of equipment. But, the researchers warn, this "wait-and-see" attitude does not help the user to solve immediate problems.

Concern about shakeouts

According to the study, some buyers even expressed reluctance to buy from anyone but IBM because so many vendors are in financial trouble. Continued concern about shakeouts in such categories as personal computers and electronic typewriters has led purchasers to be wary of parts and service problems with unstable vendors.

VDC noted that the successful office equipment vendor, in addition to providing effective products, will also give some degree of assurance of being in the business for the long term.

The report costs $1,850 and is available from VDC, One Washington St., Wellesley, Mass. 02181.

Teleconferencing net keeps workers home

By Paul Somerson
CW Staff

Like most people, Charles Aronovici wakes up every morning, dresses, eats breakfast and goes to work. But unlike most workers who battle traffic or subway crowds, Aronovici only has to walk from the dining room to a computer terminal to reach the office. He and five co-workers for The Adesse Corp. in Ridgefield, Conn., are tied together by a teleconferencing network that Adesse manufactures.

"We designed the system so we could attract quality personnel without requiring that they move to Connecticut," said Jerry DePass, president of Adesse, which makes software utilities for companies with IBM VM/CMS operating environments. Its employees are located in Pennsylvania, Massachusetts, Connecticut and Canada. Telephone lines, multiplexers and modems connect the company's programming and marketing personnel.

"A message facility allows employees to talk to one another," Aronovici said. "Since we have access to each other's files, employees can electronically discuss any plan. Whenever an employee completes a task, he assigns it a file name. Other employees can look through the file, insert notes and highlight benefits. An electronic mail feature notifies the author of any changes. The author can incorporate or amend them," he added.

The system has its limitations. "Since there is no face-to-face communication, there is the risk of misunderstandings," Aronovici said. "Since our employees have experience with the system, we have few misunderstandings. At first, some people may take notes or corrections personally — even though they are not meant that way. Whenever there is a serious problem, someone can pick up the telephone and talk to the person."

Teleconferencing provides benefits. "Working with this type of system is different from a normal office," DePass said.

"Since there is no body language, employees have to develop skills to utilize the system fully. I think that they concentrate and put more thought into an item before sending it. They do not want to waste words, so when they use the system, their message is usually clear and concise. At a meeting, people often talk just for the sake of talking. A lot of time is wasted."

DePass thinks that the time needed to complete a project is saved. "Since employees do not have to schedule a meeting to discuss an issue, the system increases productivity," DePass said. "If someone has a question at 3 a.m., he asks it then, rather than waiting for a weekly staff meeting."

Adesse does not hold staff meetings or planning conferences. "The workers only meet on social occasions," DePass said. "We have one meeting a year. It is purely social; there really is no need for other meetings."

Since employees work at home rather than at the office, the temptation exists to play rather than work. "Employees work more, rather than less," Aronovici said. "Since the system is always available, if one wants to work at night or during the weekend, one can. The terminal acts as my conscience."

Adesse's small size is tailor-made for teleconferencing. "If a company had more than 50 employees, there may be a problem using this type of system," DePass said. "There is nothing inherent in teleconferencing that prevents larger companies from using it. But larger companies lack the support mechanisms necessary for this type of system."

Rebuilt vote counter saves county $144,000

By James Connolly
CW Staff

CHATTANOOGA, Tenn. — A decision to retrofit its 10-year-old vote counting equipment gave a local election commission a faster and more versatile system for a third the price of new equipment.

When it was time for the Hamilton County Election Commission to upgrade its punch-card vote tabulating system last year, Registrar Rick Wilson looked for ways to speed up not only the vote count, but to computerize voter registration lists. With automated voter lists, the county hoped to save some of the $40,000 per year that service bureaus charged to process them.

The company that installed the county's vote counting system in 1974, Computer Election Systems, Inc. (CES), quoted a price of "roughly $200,000" for a new package that would replace the 4K-byte, 600 card/min ballot tabulator with a 128K-byte, 1,000 card/min system with disk drives and monitors. Instead of paying $200,000 for that new system, however, Wilson found a company that would recondition and retrofit the old equipment to produce a system comparable to the CES system for only $56,000.

"We wanted to increase the card reader speed from 600 up to 1,000 [cards] per minute, but the most interesting things were the disk, the disk-tape backup and the screens. We wanted some type of computer system that could be used to computerize registration. We've always had to send that out to a job shop," he added, noting that voting lists in the county of 300,000 are in constant flux with new voters and address changes. The county, which includes Chattanooga and vicinity, has an average of 150,000 registered voters.

Wilson contacted Don Baumer, a former CES employee and now president of Diverse Integrated Systems, Inc. (DIS) of Concord, Calif. He asked Baumer what could be done to upgrade the county's system.

Retrofit equipment

"We completely rebuilt the card counter. We tore the guts out and brought it up to 1,000 cards a minute," Baumer said of the Documation, Inc. 3008 vote counter.

To the Data General Corp. Nova 1210 processor, Baumer added a board utilizing a chip based on the Fairchild Camera and Instrument Corp. 944516 microprocessor, which increased the CES Ballot Tab's memory from 4K to 128K bytes. He also added five Liberty Electronics Co. USA Freedom 100 terminals and a 160M-byte Priam Corp. 15450 disk drive. In addition, as election night protection, DIS upgraded a backup processor from 4K to 16K bytes.

The system is already handling voter registration tasks as clerks transfer data from paper registration cards into the system via the terminals.

On election days, beginning with the May 1 presidential primary, poll workers at 87 voting sites are expected to have up-to-date registration lists. Voters, as they have for a decade, will use CES Votomatic ballot stands and punch cards to vote. The votes will be stored at the polling places and shipped in steel boxes to election commission headquarters in Chattanooga, where they will be processed on the two card readers.

The system, now undergoing final conversion, will receive its final test in the May 1 primary.

"It's not absolutely new computer technology, but for us it is a dramatic new application. I do think that it has been very much worth pursuing. The fact that it all cost only $56,000 still seems unbelievable," Wilson concluded.

MANAGE USER SERIES

Cincom's new MANAGE USER SERIES™ combines the benefits of personal computing capability, mainframe power and greater data processing control into one comprehensive Decision Support System.

Personal Computing On The Mainframe

Simply explained, the MANAGE USER SERIES is Cincom's family of integrated mainframe software tools that work together as one powerful Decision Support System. No other software vendor offers such a wide range of Decision Support capabilities at the mainframe level.

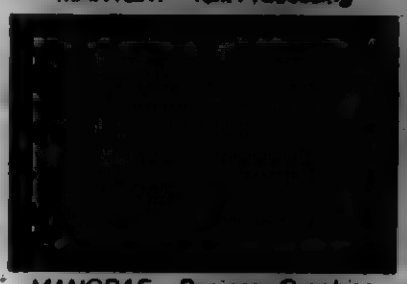
Using the power and accessibility of the mainframe, MANAGE enables data processing to provide a wide range of personal computing capabilities while maintaining control over the corporate data resource. And because MANAGE has a conversational, user-friendly personality, it easily wins friends among end-users.

Powerful Decision Support Tools

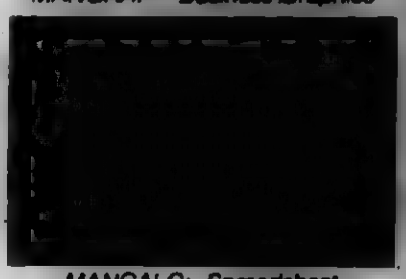
currently integrates four powerful tools that allow end-users to access, store and use production information from the corporate mainframe to aid in key business decision making:

- MANTEXT is a sophisticated free-form text processing system that enables users to access corporate files for the creation of business documents and corporate mailings.
- MANGRAF is an advanced business graphics tool that provides output from on-line applications using centralized production data base information.
- MANCALC is a 3-Dimensional electronic spreadsheet that facilitates "corporate-size" models and can automatically load information stored in corporate files, or build models based on private data as well.
- MANTIS is Cincom's industry acclaimed application development language. As the "integrator" of the MANAGE USER SERIES, MANTIS provides an effective bridge between the Development Center and the Information Center.

MANTEXT – Text Processing



MANGRAF – Business Graphics



MANCALC – Spreadsheet

End-User Productivity Through Integration

The key to the power and versatility of MANAGE is its elegant integration. MANAGE provides the tools needed for preparation of business reports and day-to-day decision making. And because all components of MANAGE can access central or personal data files, users can merge a multitude of data types, display them graphically, simulate "what-if" futures and document the findings in one business report. The power of MANAGE is limited only by one's own creativity.

Another Major Cincom Technology

Like TIS,™ ULTRA Interactive Data Base System,™ MRPS™ and MANTIS™; MANAGE USER SERIES is a member of the integrated family of new Cincom software technologies. From data base to application software to Decision Support, the name Cincom has come to stand for excellence in software technology the world over.

For more information on MANAGE, or any of our new integrated software technologies, simply contact the Cincom Marketing Services Department, 2300 Montana Avenue, Cincinnati, Ohio 45211.

Excellence in Software Technology.

Confused buyers unite against micromania

By Lynn Weber
CW Staff

As the computer evolution moves full speed ahead, some people feel as though they're sinking in its wake — and they have something to say about it.

The Crabapple Anti-Computer Club was founded last month as an outlet for consumers who don't believe that home computers are for everyone, despite the sales pitches. The Society for the Prevention of Cruelty to Users (SPCU) was established for users of IBM Personal Computers who are feeling battered by their software.

Steven M. Stroum, 35, is the founder of the Crabapples. A technical publicist with his own company and claiming over 1,900 accounts, Stroum is familiar with the technology and a believer in the advantages of computers, but vehemently objects to the marketing strategies used by the home computer industry, some of which "hit below the belt on an emotional level."

"I believe that computers aren't a fad, that they are in fact a part of our society and that they have a role and a place; that I have no problem with," Stroum said. "What I'm opposed to is the promotion that implies: 'Average parent, unless you buy your child a computer, you're going to be neglecting that child. You're going to be an inferior parent, and you're going to be responsible for your kid failing.'

"That heavy-handed approach needs to stay with cosmetics and deodorant. I don't think it has a place with high technology and computers."

The Crabapple club, which presently has only about a half-dozen members, will publish six newsletters a year. Its objective will be to provide people with a real idea of what's involved with computers and to help them determine whether they really need a computer.

"If the companies that have been involved in the home computer market could do as fine a job with determining the needs of that market as IBM has done in determining the needs of the small business market," Stroum said, "I think we'd have a different ball game. It's that type of responsibility that I'd like to see."

Annual membership in the Crabapples is $19. Further information is available from Crabapple, P.O. Box 3236, Framingham, Mass. 01701.

SPCU for IBM users

The SPCU was founded to help IBM Personal Computer users better understand available software programs.

"Most people complain that what they learned from advertising was what features a particular software program offered, but rarely did they get a straightforward assessment of how well each of the features worked," said founder Charles J. Speranno, a psychologist. "They found it difficult to assess from all the glowing ads what it was that they needed."

The society, which Speranno said resulted from his own frustrations with his Personal Computer, currently has 200 members. For $36 a year, society members receive a monthly newsletter and four special reports.

Personal Computer users are not discontented with their micros, Speranno noted. Instead, "it seems that the main problem that people have is in shopping." He thinks Personal Computer users are looking for a *Consumer Reports* type of magazine on software.

Further information on the SPCU is available from Speranno at 6716B E. Cedar Ave., Denver, Colo. 80224.

What to look for in a word processing printer.
And what to look out for.

First of all, look for a daisywheel printer. Daisywheels produce crisp, sharp characters that readers can't tell from the finest office typewriter.

They're the best choice for printing letters, proposals, contracts and other important documents that call for a professional look.

We make the DP-55 and DP-35 daisywheels, which print at 55 and 35 characters per second (CPS).

Rule of thumb: Faster is better.

Our DP-55 will print a one-page letter in about a minute. A 12 CPS machine takes five.

You may be happy to wait five minutes for your letter. But remember, while the computer is tied up running the printer, it may not be available for other jobs.

Bad design can make a smart operator look dumb.

People with otherwise normal dexterity sometimes become all thumbs around a computer printer. The fault is usually the machine's.

Our DP-Series printers were designed with the operator in mind. A status display is standard on the DP-55. The printhead mechanism tilts a full 90° to make printwheel changes a snap.

Industry standard ribbons and plastic or metal printwheels are available from Dataproducts or local office supply stores. More than a hundred type styles are available, so you can match most any office typewriter.

A printer's no better than the technology behind it.

Some companies are pushing the limits of their technical knowhow and offer little more than souped up typewriters. Dataproducts has decades of experience in the design and manufacture of sophisticated, high-speed computer printers.

Our daisywheel printers are serious business machines, engineered to perform reliably for years and years. And to provide their users the greatest productivity at the lowest cost of ownership.

Depend on the world leader.

Virtually every major computer manufacturer buys printers from Dataproducts, then resells them with their name on them. For them, Dataproducts is synonymous with quality and reliability.

It's that reputation that made us the largest independent manufacturer of computer printers in the world.

To learn more about Dataproducts DP-55 and DP-35, or for the name of our distributor in your area, call (213) 887-3924. Or send the coupon below.

Look for Dataproducts printers.

Dealer inquiries welcome.

For the first time ever, you can get the most advanced Xerox manufacturing software, plus an IBM mainframe computer, in one complete, affordable system.

It's a new concept in computing. The Xerox Turnkey Manufacturing System includes everything you need for dependable, comprehensive information management. It's the very first system to bundle an IBM mainframe with efficient, industry-tested manufacturing, financial, and distribution software.

And because it's an off-the-shelf system, it can be acquired and fully installed at a price you never thought possible.

But price isn't the only thing that's remarkable. You get everything you need to run the system. You don't have to buy various components from different vendors and then build interfaces yourself. It's all been done for you. So there's no data processing staff to hire.

The Xerox Computer Services turnkey system has an advanced architecture that completely integrates business applications software, personal computing, information center software, decision support systems, a database manager, and fourth-generation languages. Each with user-friendly screens and "help" functions. Your current personnel can develop their own applications and handle their own information needs without assistance.

That means you get fast, economical installation, plus immediate payback in improved productivity and management control. All with minimum overhead.

And what about support? Xerox technical experts understand the manufacturing business and will help you with your system, from initial site planning to telephone hotline support after you're up and running. Of course, full documentation, training, and software maintenance are part of the package.

Best of all, this may be the last software decision you'll ever have to make. As your business expands and it's time to move to a larger computer, you can run the same software on any IBM mainframe, starting with the smallest 4300 series system up through the powerful 3084 model.

Have the best of both worlds in your world. If you need better control over your operations, but are concerned about finding a system that really fits your requirements and budget, let us tell you about our simple solution... the Xerox Turnkey Manufacturing System. Just fill in the coupon and we'll send you complete information and pricing by return mail. Or call Ron Rich at (213) 306-4000.

MANAGERS ON THE MOVE

Harris

LINDA HALL HARRIS has been named director of information services for Honeywell, Inc.'s Residential Division. In her new capacity, she will be responsible for providing business information and communication services to the information services division and for implementing office automation.

Harris joined Honeywell in 1980 as strategic planning manager for the Energy Products Center. Most recently she was manager of international and interdivisional marketing for Energy Products.

Prior to joining Honeywell, Harris had 10 years of experience as a psychologist.

She received a B.S. degree in special education and an M.A. degree in psychology from the University of Michigan. She also holds a doctorate in educational administration from the University of Minnesota.

■

WILLIAM D. STOWBRIDGE has been appointed vice-president of management information systems for Dataproducts Corp. in Woodland Hills, Calif.

Stowbridge most recently was a managing principal with JIA Management Group, Inc., a Los Angeles computer consulting firm. Prior to that, he served four years as corporate director of management information systems at Denny's, Inc. and a similar period at Rockwell International Corp. as director of computing services in the Eastern Region as well as corporate director of systems planning and control.

Earlier in his career, Stowbridge was associated with IBM's Data Processing Division as well as with the Bell system.

He attended Elgin Community College and the University of Illinois at Champaign.

■

DAVID J. HERSH has been appointed manager of engineering systems/management information services for Air Products and Chemicals, Inc. in Allentown, Pa.

In this position, he will be responsible for developing and implementing engineering computing systems for Air Products and Chemicals, an international supplier of industrial gases and equipment, chemicals and engineering services.

Hersh joined Air Products in 1968 as a participant in the company's career development program. He has held positions of increasing responsibility within the company's Process Systems Group and has served as manager of engineering information systems prior to his recent appointment.

He holds a B.S. in chemical engineering from Lehigh University in Bethlehem, Pa.

IEEE society fire called disaster story with happy ending

SILVER SPRING, Md. — An electrician dropped his wrench on a 480V wire during the course of some maintenance work at the Institute of Electrical and Electronics Engineers (IEEE) Computer Society's East Coast office here three weeks ago, starting a fire that DP manager Jim Barrett said caused the disk drives to "flash like pinball machines" as the building's transformers blew up.

But even though electricity went on and off for more than a minute, there was no damage to the Digital Equipment Corp. PDP-11/44 and two DEC Professional 350s or to the back-up data files. "I guess you could call this a disaster story with a happy ending," Barrett said.

When, on Feb. 8, smoke filled the eight-story building housing the IEEE Computer Society's administrative office, book publishing and conference and tutorials division, IEEE employees grabbed disk packs and hurried down six flights of stairs to safety.

Staff members Nancy Heinbaugh and Margaret Brown were hit with polyvinyl dichloride dust when power boxes exploded in their faces. They were treated at a local hospital and released the same day.

IEEE Computer Society staff members worked at home for about a week, waiting for electricity in the building to be turned on again. "We set up five or six cottage offices," said Chip Stockton, director of the IEEE press.

"We were able to do a lot with typewriters as well as take advantage of a networking system we set up in September called Compmail. Through Compmail, we can take advantage of several personal computers we have out in the field," he said.

For the week while the East Coast office was closed, administrative operation of the society was handled by the society's Los Alamitos, Calif. office.

Two to share award from IEEE

SAN FRANCISCO — Two vice-presidents of Valid Logic Systems, Inc. of Mountain View, Calif., have been chosen to share the Institute of Electrical and Electronics Engineers Computer Society's W. Wallace McDowell Award.

Dr. Thomas M. McWilliams and Dr. L. Curtis Widdoes will receive the honor for "creating the Structured Computer-Aided Logic Design [Scald] methodology, which is the basis for many of the successful computer-aided engineering systems used in the industry," according to a society spokesman. The Scald methodology is a three-part approach to the design of computer logic, which uses interactive graphics entry of designs, a high-level language and automatic verification tools.

Widdoes, who is Valid Logic Systems' chief scientist, and McWilliams began work on the Scald methodology while designing supercomputers at the Lawrence Livermore Laboratory in California in 1975. By 1978, they had produced a first-generation methodology.

"I'm quite honored," Widdoes said. "Frankly, the people who've gotten the award in the past — Gene Amdahl, Seymour Cray — are people I've looked up to all my life."

IBM exec to keynote ACM meet

CHICAGO — An IBM marketing support consultant for workstations will deliver the keynote address at the Association for Computing Machinery's (ACM) two-day North Central Regional conference, "Making the Micro-to-Mainframe Connection," to be held here March 22-23.

The conference will investigate solutions to microcomputer integration problems in a mainframe-based data environment. IBM's Morton Sinkoff will examine the emerging trends and future directions of microcomputers, integrated workstations and personal computing in the work place from technological and marketing viewpoints. He will also discuss the implications of these trends for business, scientific and academic users.

A 24-year veteran of IBM, Sinkoff is responsible for establishing the strategic directions of IBM workstations. He previously served as the company's manager of academic and scientific programs for the IBM Personal Computer.

Full conference registration is $95 for ACM members and $105 for nonmembers before March 1. After March 1, registration is $120 for ACM members and $130 for nonmembers.

Further information is available from North Central ACM '84 through P.O. Box 2281, Chicago, Ill. 60690.

BREAKTHROUGH IN VAX/VMS SESSION/IMAGE ACCOUNTING

WITH DATA GENERAL YOU WON'T BE A PRISONER OF YOUR IN-BOX

DATA GENERAL INTEGRATED OFFICE AUTOMATION

Burying information under a ton of mail at the bottom of your in-box is not the best way to get it when it's critical to a decision.

ELECTRONIC MAIL

With Data General's CEO® Comprehensive Electronic Office, information is delivered electronically. Instantly. Unerringly.

But that's only the beginning.

TOTAL OFFICE AUTOMATION

The CEO system automates just about everything in your office. CEO electronic filing files the way you do. Its electronic calendar keeps tabs on trips, appointments, and meetings—even confirming them all.

Of course, CEO includes easy-to-use word processing. And all this is integrated with data processing for total decision support.

DON'T DUMP YOUR EXISTING EQUIPMENT

Best of all, instead of having to dump your existing equipment to automate your office, you can build the CEO system around it.

Because it not only ties in with other Data General computers, but it also ties in with the most widely-used mainframe and word processor.

Instead of just a series of personal computers, each CEO workstation becomes part of a global network, with access to data from IBM mainframes.

AS LITTLE AS $5,000 A WORKSTATION

And with the CEO system, the cost per workstation can be as low as $5,000, depending on application.

CALL NOW

For more information on office automation that's a generation ahead, call: **1-800-554-4343, Operator 05A** or write Data General, M.S. CEO 05A, 4400 Computer Drive, Westboro, MA 01580.

How to get your people on-line. On the double.

One-touch access

The new Scanset 415 HS™ is more than a quick way to get information. It's a quick way to plug computer-shy managers into your information system.

Because Scanset was designed for convenience. Users get single-button dial-up and log-on to your computerized system. You get the ability to program remote Scansets with phone numbers, function keys, even screen brightness and speaker volume. All from your mainframe, without overriding managers' protected entries.

Plus, you can hook Scanset up using normal phone lines.

1200 baud graphics

The Scanset 415 HS will paint an entire screen of line or bar charts almost as fast as you can say, "Personal Information Terminal." And the 300 or 1200 baud rate is selectable right from the keyboard.

Once your people start getting 1200 baud decision-support, you can say goodbye to complaints about slow transfer rates.

Simplicity itself

Scanset has a built-in 36-number autodialer. So instead of the 30 or so keystrokes it takes to reach your data base, users press one button. Scanset does the rest.

And once users are on-line, programmable function keys speed them directly through to frequently-used computer commands. No need to spend time typing—One function key replaces up to 36 keystrokes.

Same goes for international phone calls. Or domestic calls, including connections to lower-cost carriers like SPRINT® or MCI® Multi-number muddles turn into single-button savings.

Answers on tap

If you're planning an information system or looking for a better way to get managers into the system you already have, look into Scanset. The Personal Information Terminal brings a whole new dimension to information management in just under a square foot of space.

Need more information? It's as easy to get as making a phone call. Which gets even easier with the new Scanset 415 HS.

The VDT scare: reason to pause

Warning: Working on a VDT may be hazardous to your unborn child.

Could that warning show up in computer ads and on VDTs before long?

The National Association of Working Women, better known as 9 to 5, has been campaigning against the health risks of VDTs since last May. Earlier this month, the 12,000-member organization of office workers called a press conference in a midtown Manhattan hotel to blazon discovery of a "cluster site" of pregnancy problems.

According to 9 to 5, fully half the women who became pregnant while working on VDTs at an airline telephone reservations office in San Francisco since 1979 suffered miscarriages, stillbirths or premature deliveries or saw their children come into the world with birth defects. The group also released a six-month nationwide survey in which women "who reported becoming pregnant since working with VDTs could claim only a 31.6% rate of normal, full-term delivery."

Harrowing statistics. Karen Nussbaum, executive director of the group and president of a national office workers' union, called the numbers "truly frightening" and "shocking enough to demand immediate action." It would be "irresponsible to dismiss this situation without more study," she declared.

Radio and television reporters in New York responded at once, spreading word of the pregnancy risks caused by VDTs.

But few bothered to quote a Columbia University physician brought to the press conference by 9 to 5. According to Dr. Jeanne M. Stellman, there is "no proven link" between VDTs and pregnancy problems. There is not even any "evidence of widespread pregnancy problems among VDT workers," she said.

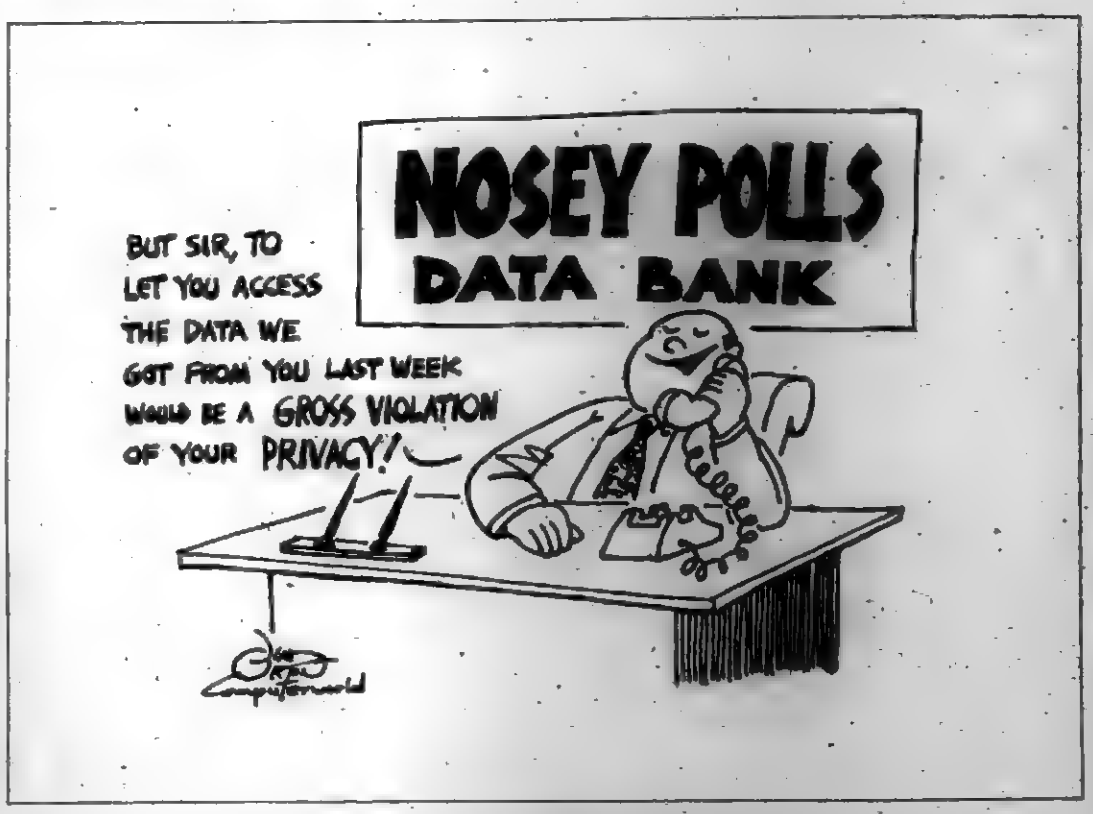
And anyone who has had a few moments to study the 9 to 5 figures might find in them reason to pause. In San Francisco, only 48 pregnancies over a four-year period were tabulated; in the nationwide survey, only 206 pregnancies were counted among the nation's 10 million VDT operators. A mathematician would point out that such an "n" — the statistical sample — was too small in both cases to support sweeping charges.

What is more, the "cluster" of pregnancy problems in San Francisco could be the result of any number of causes ranging from environmental factors — heavy cigarette smoke, exhaust fumes, nearby radioactive wastes — to statistical chance alone.

This is not to shrug off the possibility of a long-range health hazard from VDTs. As Mark A. Pinsky, editor of *VDT News*, cautioned, radiation from display terminals may have graver effects than now suspected. But this must be studied coldly and rationally, not in a manner designed to raise fear.

Nussbaum scoffs and brands as "insane" the suggestion that 9 to 5 might be raising fears among VDT workers. But women we know who heard radio reports of the 9 to 5 accusations were ready to quit their jobs as word processing operators and cancel their orders for home computers.

The effects of VDTs upon their operators' health must be studied coolly, rationally and thoroughly to prevent VDT radiation from becoming, like asbestos, a hazard that is discovered too late. And someone must speak out for the interests of VDT users. But by making charges based, at best, on incomplete data, 9 to 5 has clearly abused — if not abdicated — that role.



LETTERS

Three cheers for Charles P. Lecht: 'A fine addition' to the paper

Three cheers for Charles P. Lecht's article "Pundits and predictions" [CW, Feb. 6]. What better bit of humor to have topped off my afternoon of "getting the 'right stuff.'"

I look forward to his next round of intellectual humor — perhaps a go at terminology.

Lecht's column is a fine addition to *Computerworld*.

Expected analysis of findings, got rehash of Naisbitt's ideas

Having enjoyed and been provoked by John Naisbitt's *Megatrends*, I was excited to see J. Daniel Cougar's In Depth article "DP megatrends" [CW, Feb. 6]. I expected from the article a thoughtful analysis of Naisbitt's findings with respect to MIS.

What a disappointment. Cougar only rehashed Naisbitt's ideas and in a much less interesting fashion.

Any of your readers who skips the book due to reading the article will be missing out.

VIEWPOINT

Develop your information center in phases

THE DATA CENTER

JOHN P. MURRAY

You have your information center in operation. Through a diligent effort, combined with a well-thought-out and carefully executed internal sales and marketing campaign, much has been accomplished. A great deal of the routine clerical effort has become a standard function of the information center. Automated spreadsheets, the computerized production of charts and graphs and the ability of MIS clients to produce many of their own reports are examples of the progress that has been made. The goal of the information center has been reached. Or has it?

It is interesting that when the information center effort begins, the usual goals revolve around the issues of the reduction of clerical effort in order to speed up reporting processes and, perhaps, to help hold down increases in the clerical staff. In addition, from the MIS perspective, another goal of the information center process may be to help stem the growth of the use of microprocessors.

While some organizations have had more difficulty than they should in reaching this goal (many have not yet reached this goal, some probably never will), the development of this environment should be viewed not as the end, but only as the completion of the primary phase in the building of the information center environment.

The attainment of this primary level of information center service may create a feeling of complacency within both MIS and the client departments. At this point, MIS attention may begin to focus on other areas, and the further development of the information center and progress toward areas in which real growth can be realized may begin to stagnate. Such a situation must not be allowed to develop; once the information center has been accepted, when the MIS clients begin to use it and identifiable results are forthcoming, MIS should begin to step up the effort to push for its use in areas in which dramatic results can be realized.

The introduction of the information center as an approach to reduce clerical effort and to speed the development of basic information outside the MIS department is a valid approach, but it should not be viewed as the ultimate goal of the information center effort.

It may not be a common occurrence that every organization that plans for the development of the information center environment will understand right from the start that once the basic clerical processes are computerized, the state will then be set for much more effective methods to help move the organization ahead, but that is indeed the case.

The introduction of the information center as an approach to reduce clerical effort and to speed the development of basic information outside the MIS department is a valid approach, but it should not be viewed as the ultimate goal of the information center effort. . . . The ability to use the organization's data, to build information center data bases that can then be manipulated to help middle- and senior-level management to obtain a clear understanding of the effect of different situations, moves the MIS contribution to the organization into areas in which its real value can begin to be understood.

Given that the organization has a reasonable record of success with its information center effort, that clients are using the computer to do much of the work they formally did by hand and that, as a consequence of those circumstances, they are willing to consider doing more, MIS management should continue its effort to expand and refine the information center function. The same principle applies here as it does to the overall issue of the MIS function: If a solid information center function is not in place, it must be developed prior to attempting to explore new horizons.

A point of movement to the next phase of the information center should be the process in which, with the help and encouragement of MIS, the clients who are now comfortable with the information center function begin to move from the processing of basic information to the area in which using that information as a base, the power of the information center can be used to address such areas as forecasting and modeling.

The ability to use the organization's data, to build information center data bases that can then be manipulated to help middle- and senior-level management to obtain a clear understanding of the effect of different situations, moves the MIS contribution to the organization into areas in which its real value can begin to be understood. Such a situation can only be of benefit to all concerned.

As an example, the organization's inventory information is available through the information center.

Using that data as the base, the client can build a model that will address questions such as, "What is the effect on cash flow of a 10% reduction in inventory?" "How would such a reduction affect the 'safety stock' requirements?" and "Is the increased cash flow worth the potential exposure to the manufacturing process that would occur as a result of the safety stock reductions?"

These are rather basic questions. Any organization should be able to answer them without an information center, right? Well, perhaps, but it is not now being done in many organizations, with or without an information center.

Simple experiment

In fact, if you have a sound information center in operation, why not try a simple experiment. Ask appropriate managers several "what-if" questions about their areas of business. Once you have their answers, build a model in the information center, using the department's data, and see if the answer is the same. If nothing else, the result may open up areas of discussion about the movement to the next phase of the information center.

It would be my guess, if the model is right, that your answer will be different from the manager's. If the manager does not have a closed mind, and if you are able to verify the correctness of your answer, your effort to move to the second phase of the information center should be much easier.

The development of the information center process is an evolutionary process that, in order to be most effective, should be done in phases. ‡

Murray is director of management information services for Rayovac Corp., Madison, Wis., and author of Management Information Systems as a Corporate Resource, *published by Dow Jones-Irwin.*

Another approach to building DP-user relationship

HUMAN CONNECTION

JACK STONE

It takes only a few triumphs on a personal computer, for example, generating statistical reports and five-year forecasts for the boss in hours rather than days, to turn a 97-lb DP user weakling into a fire-breathing computer person.

But from a DPer's point of view, the latter is a far better person to work with than a user steeped in ignorance and clouded with confusion.

With the proper communications environment — a series of letters, briefings, meetings or training sessions, depending on the style of the organization — the data processing department can help to bring the "experienced" user out of the clouds and back down to the earthly reality of production computer systems.

Work that must be accomplished

A large part of this reorientation involves explicit explanations about the tough, unsung, dirty work that must be accomplished — tasks that so many DPers are typically all mired up in — to get operational systems on-line and to keep these systems there.

In short, new users have little appreciation for what it takes in the way of systems support and how it has taken years and years for many first-rate data processing organizations to develop and maintain dependable information systems.

But what is really significant here is that the timing is right for another new approach to building relationships with users, namely, training in "systems realities," subjects that DPers have taken for granted for years, but rarely have conveyed to the user population because the needs were not there.

Up-and-coming user

The up-and-coming user is the one with an experience base of personal computers and an elementary appreciation of the complexity of systems problems.

I believe that this type of user would welcome communication and training from the DP establishment on systems matters and would develop a better understanding of the contribution of DPers to the firm.

Users want to, and should, know about such topics as:

■ *Backup.* Most users have no idea of what is entailed in backup procedures beyond the duplicate disk and file copy utilities. As hard disks continue to enter the marketplace — a technology that still raises questions of reliability — and more critical files find their ways into their storage, users are courting file-loss disasters until they install proper methodologies for backing up the files.

■ *File sharing.* In spite of the rapid developments in office automation, capabilities whereby two users can access the same file at the same time continue to be limited. The result is that large files must be reorganized into smaller ones and periodically recombined for global report generation. Getting this all together on a routine, timely basis — and correctly so — is a hairy job for the best of the DPers.

■ *Vendor relations.* Dealing with the vendors requires varying blends of political savvy, in-depth knowledge of technology, human relations in times of intense stress, the wisdom of Solomon and the patience of a saint. Those DPers who have survived the ordeal represent a source of critical strategies and tactics that should be transferred to the user population posthaste.

I can't guarantee what such information exchanges will achieve, but I suspect that the users will express their undying gratitude. ‡

Letters to Stone should be addressed to him at P.O. Box 23689, Washington, D.C. 20032.

VIEWPOINT

Getting straight about the use of FBI's NCIC

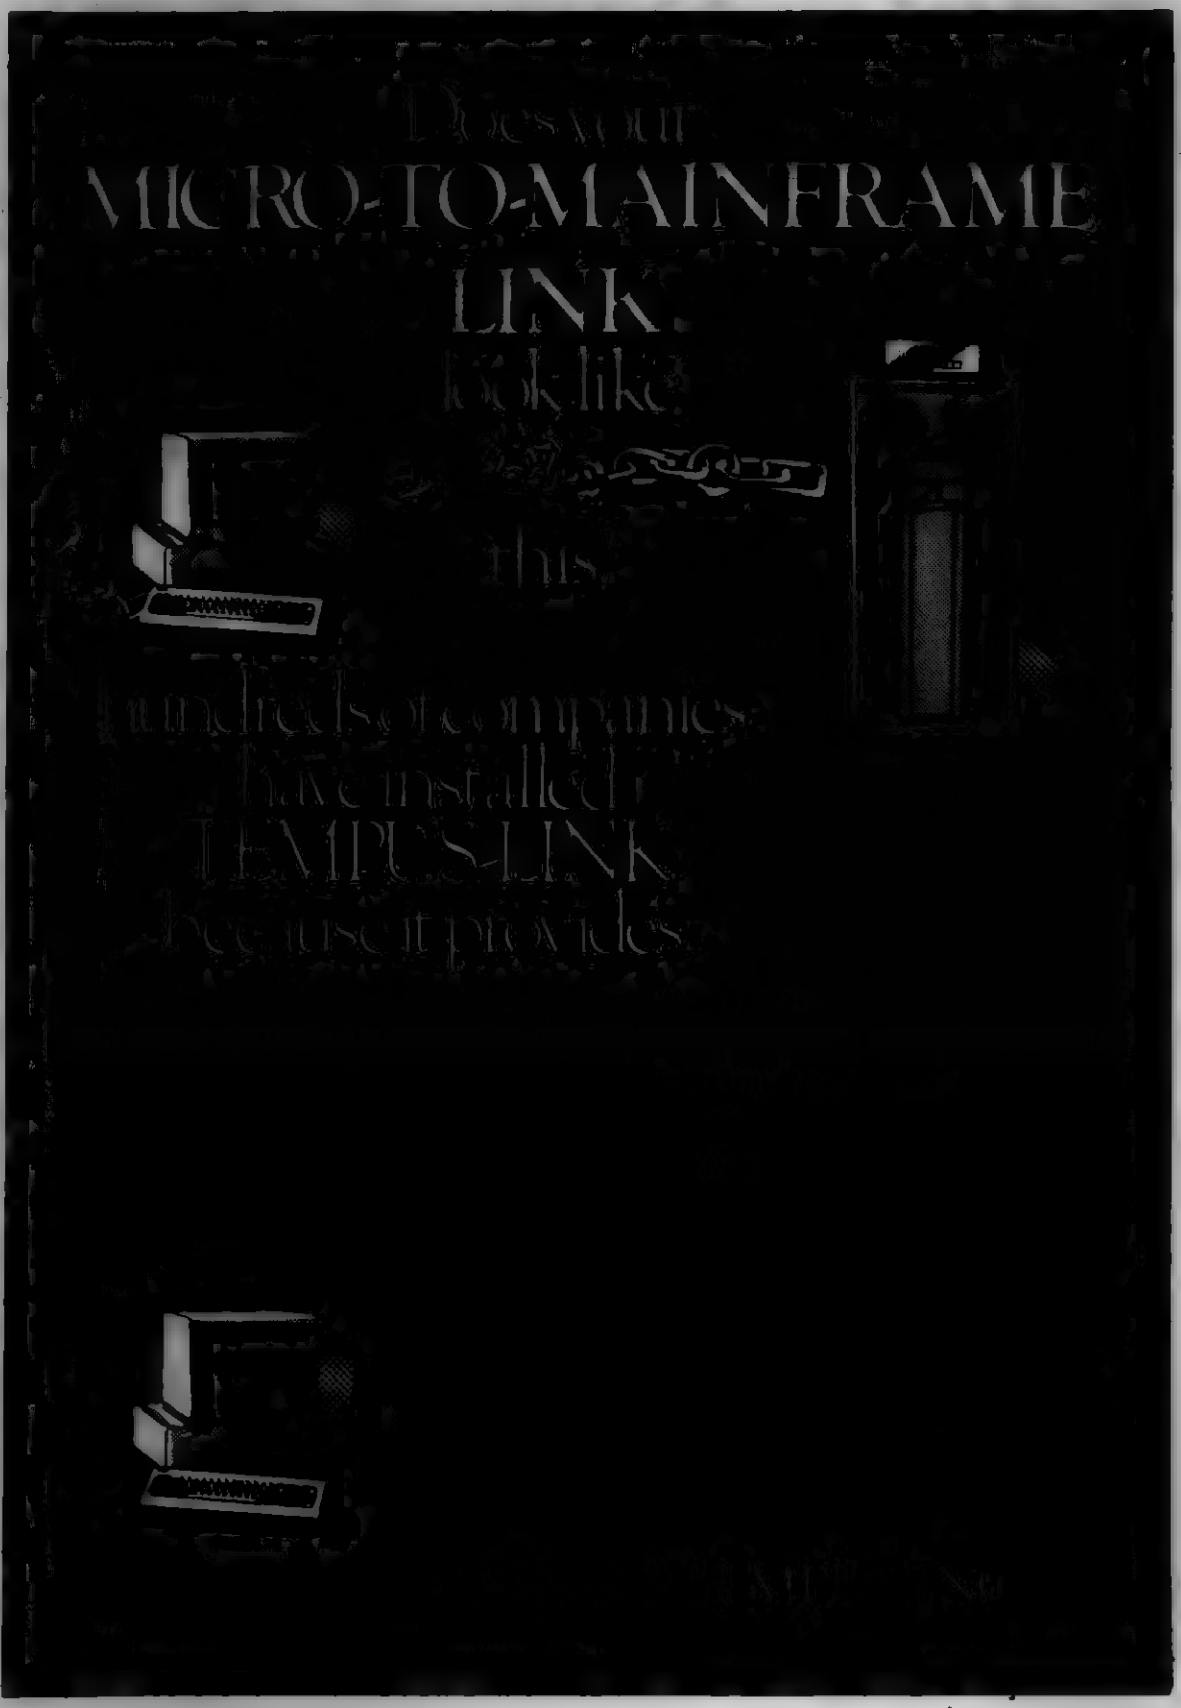
READER'S PLATFORM

KIER T. BOYD

After reading the editorial "And now, 1984" [CW, Jan. 9], I was concerned that *Computerworld* misled its readers about the use of the Federal Bureau of Investigation's National Crime Information Center (NCIC) and some of the proposed changes to enhance the NCIC system.

Since 1967, NCIC has been a valuable asset to the criminal justice community, which accesses it more than 400,000 times a day. For the past several years, the NCIC Advisory Policy Board (APB) has been planning changes to increase the system's effectiveness by various means, including the creation of new files. Suggested new applications come from both the APB and outside entities, such as local police departments, probation and parole officers, the President's Commission on Violent Crime and so on.

Since 1967, NCIC has been a valuable asset to the criminal justice community, which accesses it more than 400,000 times a day. For the past several years, the NCIC Advisory Policy Board has been planning changes to increase the system's effectiveness by various means, including the creation of new files.



The editorial mentions two suggested changes:

- A proposal to list known associates of wanted felons against whom an arrest warrant was outstanding.
- The NCIC Secret Service file.

The depiction of the reader's cousin being listed in NCIC because she baby-sat "for a mobster's sister-in-law" alludes to the proposed known associates file. This hypothetical situation was never envisioned for such a file. Obviously, the baby-sitting cousin is not an associate of a wanted felon. In any case, the proposal for a known associates file was rejected by the APB last October and will not be reconsidered.

The Secret Service file was created at the request of that agency. The U.S. Department of Justice's Office of Legal Counsel has determined that its existence is lawful. The U.S. Congress has apparently agreed, for although some members of a congressional oversight subcommittee attempted to cut off funding for the NCIC Secret Service file, the full committee rejected this attempt.

The Secret Service file, incidentally, contains information on 85 to 100 people who are serious threats to one or more of the service's protectees. That's a small fraction of the more than 9,000 cases the Secret Service investigates yearly.

Proposed new files

There are a number of proposed new files in the preliminary stages of consideration. Before there can be informed debate on their merits, specific criteria must be developed concerning the nature and quality of information that must exist before a file entry can be made, the specific uses that can be made of the information, to whom the information will be given and in what form and the standards for data quality and retention.

These matters will be considered by the APB at its public meeting and by the director of the FBI. Of course, Congress will be consulted, and Justice's opinion concerning the legality of the proposed files will be obtained. Before any implementation, the new uses will be published in the *Federal Register*.

All of this is done to ensure that the need for these files is substantiated and that all issues of personal privacy are thoroughly considered and discussed and problems resolved before any changes in NCIC occur.

'Network is open to anyone'

Finally, one other statement in the editorial concerns me. It states, "In some states the network is open to anyone and is used by many firms to see if job applicants have criminal records."

That statement is not accurate.

The data on wanted persons and stolen property is public source information and readily available through NCIC; the criminal history data to which the editorial refers is also public source information, but is not readily available. It may only be accessed pursuant to federal statute and executive order for certain limited licensing and sensitive employment purposes. ‡

Boyd is acting assistant director, Technical Services Division, FBI, Washington, D.C.

IN DEPTH

The One-Minute DP Manager

Lessons from the best-sellers

A three-part series

The message to DP management is that effective feedback need not take a lot of time. Shortcutting can be carried to the extreme, however. Imagine a "One-Second DP Manager" shaking his finger in a "one-second reprimand" or giving the thumbs up "one-second praising." With equal efficiency, the subordinate responds, "Acknowledged!"

By J. Daniel Couger

The phenomenal success of *The One Minute Manager* (William Morrow and Co.) has been an enigma to academicians in the management field. The chairman of a regional academic meeting on management concluded: "The book contains not *one* idea new to the field, nor *one* idea that has not been previously described in other management books — in much greater depth."

Admittedly, the scope of *The One Minute Manager* is limited. Just 106 pages and replete with white space, the book contains fewer than 15,000 words. It is only 15% the size of *Megatrends* and 10% the size of *In Search of Excellence*, the other two management books high on the best-seller list the past six months [discussed in this series, Jan. 16 and Feb. 6].

Sales of more than one-half million copies in the $15 hardcover edition indicate that purchasers saw a value far in excess of cost per word. The book is now also available in paperback for $6.95.

The combined background of the authors (Kenneth Blanchard, a management consultant, and Spencer Johnson, a psychologist) results in a humanistic counterbalance to managerial efficiency that makes the book unique in the field.

The book is highly readable because its message is presented allegorically, as a fable about a legendary person — the "One-Minute Manager."

The story concerns a "bright young man who was looking for an effective manager. He wanted to work for one. He wanted to become one."

The book begins at the end of his search. The young man (whom I'll refer to as the interviewer) discusses with the manager and his subordinates the reasons for his effectiveness. The authors define effective managers as those who "manage themselves and the people they work with so that both the organization and the people profit from their presence."

The effective manager says that he is neither an autocratic nor a participative manager. "I care about people *and* results," he says. "They go hand in hand."

Why is he called the One-Minute Manager? "I call myself that because it takes very little time for me to get very big results from people," he

Part three

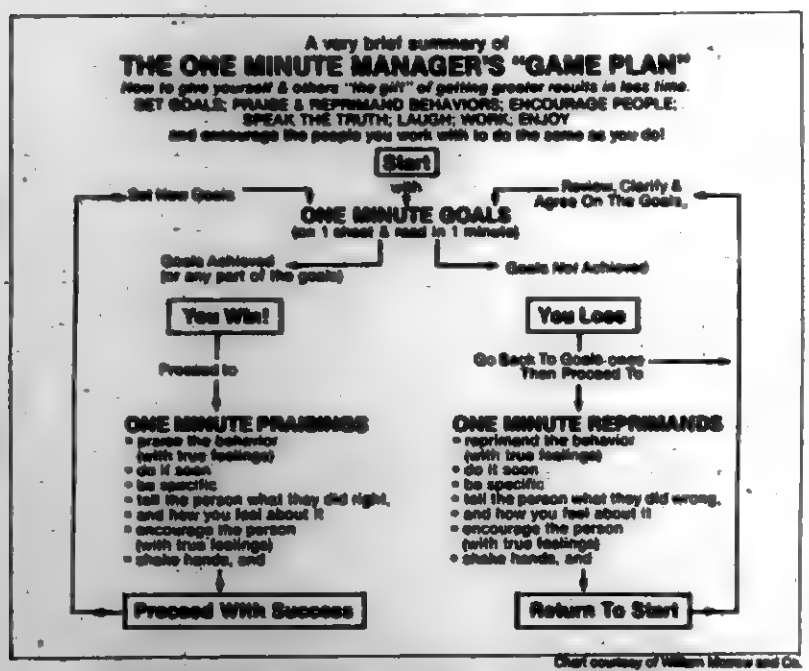


Chart courtesy of William Morrow and Co.

Figure 1. Blanchard and Johnson's summary of their book

tells the interviewer.

Why translate the book's lessons to the DP environment? Should not the general management principles presented apply equally well to DP management?

Couger, Zawacki and Associates developed a data base on more than 6,000 people from which we derived motivation norms for 18 jobs within the computer field. That data base shows the special characteristics of DP employees and their managers. General management concepts apply to this particular environment, but require translation to be most useful.

Blanchard and Johnson do not have the logical orientation of the DP manager. The concluding section of the book, for example, provides "The One-Minute Manager's Game Plan," a chart summarizing the key points. Surprisingly, this chart omits several factors stressed in the book.

Discrepancies in the book's graphics will be obvious to most people in our field, where logical analysis and graphics go hand in hand. The "game plan" is confusing because it does not distinguish activities of the supervisor from those of subordinates. The items listed under "praisings" and "reprimands" are clearly actions recommended for supervisors. The boxes "you win" and "you lose" imply that the manager wins or loses. The book never mentions either. Instead, it stresses that managers should let their people operate as independently as possible, once goals have been mutually established.

Implicit is the idea that "the organization" wins or loses depending on how well people perform. The book does not explicitly state that the supervisor/subordinate collectively win or lose, although the chart should be interpreted that way.

Figure 2 converts the Blanchard/Johnson chart (Figure 1) to correct the deficiencies. The revised version explodes the goal-setting portion of the chart, emphasizing the book's content most appropriate for DP management.

The Blanchard/Johnson chart makes it difficult to determine who originates the goals — managers or subordinates. The text, however, clearly indicates that only in the case of inexperienced subordinates are the goals originated by management. That fact is reflected in Figure 2, which also clarifies actions to be performed by subordinate or supervisor and those performed in concert.

Also missing from the Blanchard/Johnson chart is the relationship of individual goals to organizational goals. Unfortunately, this important factor is also missing from the text.

Another problem with the chart is the implication that goal statements are prepared and negotiated for all goals. The text states that "one-minute goal setting" occurs for only 20% of the goals — the three to six goals most important for that subordinate's area of responsibility. The chart also implies that the manager is not involved in selecting the top 20%, that the subordinate brings those goals into the discussion. While the book's strength is its conciseness, the section on goal setting is brief to the point of being not only incomplete, but misleading.

"With true feelings," the parenthetical statement at the bottom of Figure 1, may look strange to those who have not read the book. The authors are trying to emphasize that managers should express their dissatisfaction with an employee's poor performance. A subordinate tells the interviewer that the One-Minute Manager "shares with me how he feels about it — he's angry, annoyed, frustrated or whatever he is feeling."

The Blanchard/Johnson chart accurately conveys the book's strengths vs. its weaknesses. The one line devoted to goals in the chart reflects the book's sparse coverage of the subject. Three-fourths of the chart is devoted to praising and reprimands, consistent with the amount of discussion in the book.

The seven-step procedure for one-minute praisings is provided in Figure 1. The philosophy behind the procedure is, "The most important

thing is training somebody to become a winner is to catch them doing something right — in the beginning, approximately right — and gradually moving them toward the desired behavior."

According to the book, "Most managers wait until their people do something exactly right before praising them. As a result, many people never get to become high performers because their managers concentrate on catching them doing things wrong. . . . [They] periodically zap them just to keep them moving. This is the most popular leadership style of all."

A key attribute of the effective manager is praising subordinates, even if things are not going well for him elsewhere. According to one employee, "He responds to where I am, not just where he is at the time."

"Remember," The One-Minute Manager says, "you don't have to praise someone for very long for them to know you noticed and you care. It usually takes less than a minute."

The effect is cumulative. A subordinate says, "After a while you begin to catch yourself doing things right and you start praising yourself." He concludes with a comment that sounds more like a statement for a bumper sticker than a management book: "If you don't blow your own horn, someone else will use it as a spittoon."

One-minute reprimands

Surprisingly, only half of the nine-step procedure for the one-minute reprimand is listed in the Blanchard/Johnson chart. In addition, the chart omits the evaluation procedure; hence the elaboration in Figure 2. The Blanchard/Johnson chart shows that if goals are not achieved, they are rediscussed once; a recurrence precipitates the one-minute reprimand.

Compared with the text, the Blanchard/Johnson chart is misleading. As soon as the manager is aware of a problem, he goes to the subordinate. "First, he confirms the facts." Then he "looks me straight in the eye and tells me precisely what I did wrong. Then he shares with me how he feels about it."

Moreover, he does not attack the subordinate as a person. A subordinate tells the interviewer, "The manager reprimands only my behavior — it's easier for me not to become defensive."

The Blanchard/Johnson chart's omission of the last four steps in the reprimand procedure is especially inexplicable because these steps relate to a principle the authors heavily stress throughout the book. As shown below in the full procedure, the second half of the reprimand is designed to conclude the session on a very positive note:

1. Tell people beforehand that you are going to let them know how they are doing and in no uncertain terms.

The first half of the reprimand:

2. Reprimand people immediately.

3. Tell people specifically what they did wrong.

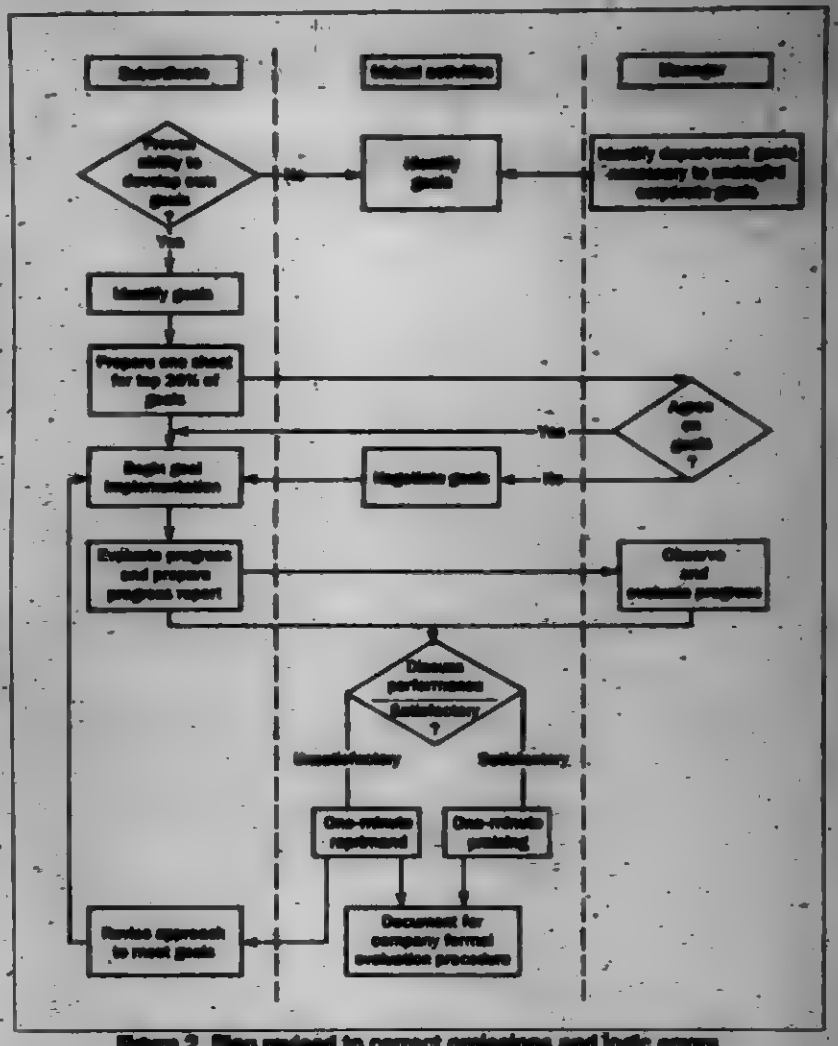

Figure 2. Plan revised to correct omissions and logic errors

4. Tell people how you feel about what they did wrong — and in no uncertain terms.

5. Stop for a few seconds of uncomfortable silence to let them feel how you feel.

The second half of the reprimand:

6. Shake hands, or touch them in a way that lets them know you are honestly on their side.

7. Remind them how much you value them.

8. Reaffirm that you think well of them, but not of their performance in this situation.

9. Realize that when the reprimand is over, it's over.

Why begin with the reprimand? The more common practice is to begin with something positive. "For some reason, it just doesn't work," says the One-Minute Manager. "If you are first tough on behavior and then supportive of the person, it works.

"Sometimes, you have to care enough to be rough. And I am. I am very tough on the poor performance — but only the performance. I am never tough on the person."

One-minute goal setting

I have held off repeating Blanchard and Johnson's procedure for one-minute goal setting because of its weaknesses. The process is as follows:

1. Agree on your goals.

2. See what good behavior looks like.

Managing a Constant Wave of Facts & Figures

Requires a Special Touch.

SOFTWARE INTERNATIONAL

Run With Us

3. Write out each of your goals on a single sheet of paper using less than 250 words.

4. Read and reread each goal, which requires only a minute or so each time you do it.

5. Take a minute every once in a while out of your day to look at your performance.

6. See whether your behavior matches your goal.

Figure 2 presents a much more realistic procedure for setting goals. However, I repeated the Blanchard/Johnson procedure because it provides their rationale for the expression "one-minute goal setting." The rationale is mighty weak! Reading and rereading goals for one-minute intervals — daily — would be a simplistic and unproductive activity for most managers. Much more beneficial is the approach of having each key goal so precisely and concisely stated that it can be read in one minute. Equally valuable is the reminder of the need for formal review of performance against goals — done by the individual frequently.

Relevance to DP managers

Few would dispute the applicability of the foregoing discussion to the DP manager. However, the degree of relevance takes on more meaning when viewed in the context of the Couger-Zawacki research on DP managers (*Motivational Management of Computer Personnel*, Wiley Interscience). One finding was that subordinates believe their managers provide insufficient feedback — at all levels. Feedback is rated significantly higher in other fields, based on a comparison with the Hackman/Oldman data base on managers in other fields (collected using the same survey instrument as in our research).

DP managers also believe that feedback from their superiors is inadequate. Apparently, in their efforts to stay current in a dynamic field, managers at all levels neglect feedback. The Blanchard/Johnson concept of timely but brief feedback is not only compatible with the DP environment, it is perfectly attuned to it.

According to Blanchard/Johnson, most managers are "gunnysack discipliners." That is, "They store up observations of poor behavior . . . and dump everything on the table" at performance review time.

"In order to look good as a manager in most organizations, you have to catch some of your people doing things wrong. You have to have a few winners, a few losers and everyone else somewhere in the middle. You see, in this country, we have a normal distribution-curve mentality."

Frequent evaluations are much more effective and take a small amount of managerial time. The goal, according to one of the One-Minute Manager's subordinates, is "crystal-clear feedback."

Management training

Also apropos to DP management is the material on training of managers. The One-Minute Manager has a lot of turnover in his area, which might appear to be symptomatic of a managerial problem. However, the reason is his ability to prepare subordinates for management. "Whenever we have an opening and need a good manager," the personnel manager says, "we call him. He always has somebody who is ready."

When asked about this situation, the manager says, "It's ironic. Most companies spend 50% to 70% of their money on people's salaries. And yet they spend less than 1% of their budget to train their people. Most companies, in fact, spend more time and money on maintaining their buildings and equipment than they do on maintaining and developing people."

He observes, "You really have three choices as a manager. First, you can hire winners. They are hard to find, and they cost money. Or second, if you can't find a winner, you can hire someone with the potential to be a winner. Then you systematically train that person to become a winner. If you are not willing to do either of the first two, then there is only the third choice left — prayer."

Although it devotes just a few paragraphs to the subject, the book also discusses goal congruence/goal ambiguity. Its relevance to the DP community was confirmed by a nationwide study recently completed by Dr. Mel Colter and me, to be reported in a forthcoming book (*Handbook of Managerial Techniques for the Computer Field*, Couger and Zawacki, 1985).

The One-Minute Manager tells his interviewer, "In most organizations, when you ask people what they do and then ask their boss, all too often you get two different lists."

How do you avoid such a situation? Unfortunately, the answer is omitted from the game plan. It is explained in the text, however, and is shown in Figure 2. After goals are accepted, performance criteria are carefully identified — not only "attitudes or feelings" but also "what is happening in observable, measurable terms."

According to the One-Minute Manager, when inexperienced people don't perform, "rather than punish them, we need to go back to the one-minute goal setting and make sure they understand what is expected of them."

A good summary appears, strangely enough, midway through the book, on Page 62. The interviewer tells the One-Minute Manager, "I found out why you call yourself a One-Minute Manager. You set one-minute goals with your people to make sure they know what they are being held accountable for and what good performance looks like. You then try to catch them doing something right so you can give them a one-minute praising. And then, finally, if they have all the skills to do something right and they don't, you give them a one-minute reprimand."

The appeal and importance of the book to DP management is its message that effective feedback does not have to take a lot of time.

DP personnel have a proven ability to shortcut lengthy, technical processes to get to the heart of a matter. Shortcutting can be carried to the extreme, however. Such would be the case of the harried One-Second DP Manager who shakes a finger at a busy subordinate and says, "One-second reprimand" or gives the thumbs up sign and says, "One-second praising" — to which the subordinate responds with equal efficiency, "Acknowledged!"

About the author

J. Daniel Couger holds the title Distinguished Professor of Computer and Management Science at the University of Colorado, Colorado Springs. He has lectured in more than 50 countries and written 15 books and more than 60 papers.

Prior to his academic appointment, Couger served as a manager in the computer field. In 1977, he was named U.S. Computer Science Man of the Year.

How Dave Vipler "dumped the dumb"

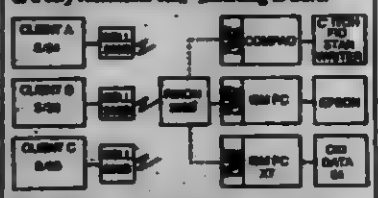
Experienced and committed consultants know that customer support is the name of the game. Dave Vipler, new managing director of the New York based *Computer Consulting Center*, in his 14 years with I.B.M. saw too many clients get burned by here today-gone tomorrow consultants. What seemed like a finished program package invariably needed additional work once the consultant left.

Dave recognized that a quality consulting service must provide continuing client support. In 1981 he founded the Center to assist business with their I.B.M. S/34, S/36, S/38, 5Mxx, 4300 series systems and PCs.

"The Center was organized to provide quality computer consulting to clients that are integrating distributed processing systems into their computer networks," said Dave.

With a staff of 22 professionals, Dave felt that the Center could adequately support its New York City users. Plans to significantly expand their New Jersey operations prompted Dave to find a more convenient method of maintenance, particularly for those programming bugs that only surface after office hours. It was one thing to have a programmer drive an hour each way to spend a full day on site, Dave reasoned, but to make the trip for a half hour of "firefighting" was too costly.

"One client said, 'How do we get you back if we have problems?' BLUE LYNX was the answer for us at a very reasonable cost," according to Dave.



The Center now has 2 PCs, 2 XTs, and 2 Compaqs, each equipped with BLUE LYNX. Their programmers can now sit at their desks and readily program an I.B.M. host systems downtown, in New Jersey or wherever the accounts are located. Dave's clients were so impressed with BLUE LYNX that some have bought the hardware/software package for their own internal needs.

"The BLUE LYNX" documentation was excellent. It went up easily and with no support from Techland required. We now use BLUE LYNX to support clients in New York City, as well as those in New Jersey. With BLUE LYNX behind us we can now use our communications ability not only for programming tasks but also as a sales tool."

BLUE LYNX terminal packages include:
3101/12 emulation for S/34, S/36 and S/38.
3270 emulation SNA/SDLC or Bisynch.
Hardware/software package $650 complete.
Combination of 2 emulators $725.
VT100/102 - DEC VT100/52 emulation software $325

ISO group forcing issue on Cobol-80

SOFTALK

PAUL GILLIN
CW Senior Editor

The recent decision by an International Standards Organization (ISO) working group to proceed on adopting a Cobol-80 standard before similar action has been taken by the American National Standards Institute should send a strong message to Ansi. The international community is becoming impatient with the slow progress that is being made toward Cobol-80 in this country.

But perhaps a more interesting sidelight to the Cobol activity in Vienna was the adoption of a proposal to change the current schedule for revamping Cobol. Under the terms of the proposal, new features would be added to the language every two years, and clarifications, or a complete overhaul, would take place every 10 years. Currently, Cobol comes up for modification every five years, although the 10-year lag between the Cobol-74 standard and the latest proposed revision indicates that that rule is symbolic at best.

The new proposal, which was submitted by Cobol-80 advocate Jerome Garfunkel, will no doubt be extremely controversial and may never see the light of day after it leaves the ISO working group. Garfunkel himself has come under stringent criticism for downplaying issues of upward compatibility in favor of adding power to the language. However, his proposal is an interesting one.

A fundamental argument is emerging

See COBOL page 58

Consider complete security aid

By Dennis Speconte
Special to CW

For data centers that use both batch and on-line facilities, a security administrator's evaluation won't be complete before he considers a comprehensive security package designed to meet the security requirements of both batch and on-line.

Proponents of multiple security systems argue that separate security packages are necessary for IBM's TSO and CICS because they are different systems which have different rules, or "user profiles," and may even have their own dedicated terminals.

IBM's TSO, CICS, IMS and batch all recognize the standard security interface in the IBM MVS operating system and will use this interface when directed to do so. The security package that uses this interface when reacting to security supervisor calls will comprehensively protect resources. When a security verification request is made by any facility, only one security data base is used.

Furthermore, the security information for a particular user is known by the security package, regardless of the facility originating the request. When the security package is designed with a "user-to-resource" logical structure, this verification can be done with a single I/O operation.

Hooking directly into the MVS security interfaces also means that modifications will not have to be made to the operating system. Therefore, a single security maintenance procedure can update both batch and on-line, making the security package easier to maintain.

For auditors who need multiple reports, a comprehensive security package displays any user's violations in one place, a convenience that is tremendously appreciated.

A total security package affords ease of use by providing centralized administration in place of independent jurisdiction over batch and on-line uses of a file. This means when a user is on-line (TSO, CICS) or identified in a batch region, all the resources allowed to that user are known to the security product. This allows security to be centrally controlled by one security administrator. If a security administrator is required for each facility, difficulties may arise as a result of each working independently and then trying to coordinate what they've done. With a comprehensive security software product, you don't distribute the responsibility or compound your headaches.

There are obvious benefits of using a single security package for all transactions. It's easier to evaluate and purchase one package and probably less expensive to deal with a single vendor. From the installation and maintenance point of view, one package produces one set of reports, one data base and one set of rules to learn. For auditors who need multiple reports, a comprehensive security package displays any user's violations in one place, a convenience that is tremendously appreciated. These benefits save a great deal of time and effort. Why use two security products which would mean twice the work and training?

A security package for "CICS-only" will only secure certain resources while CICS is running and only when these resources are accessed through CICS. So when CICS is down, so is your security. When CICS is

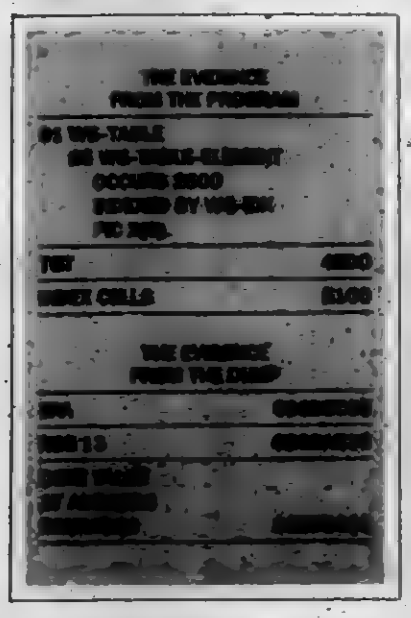
Solving the riddle: interpreting indexes in a Cobol dump

Do you avoid using indexes in your Cobol programs because you are not sure how to interpret them in a dump? I, Watson, will relate a tale of the great programmer, Holmes, caught in just such a dilemma. First, the evidence:



And now, the narrative:

"It is the 12th occurrence," stated Holmes in his usual unemotional manner.

Only a few scraps

"You have only a few scraps of a program and a partial dump, yet you are able to decide which occurrence of the table is being referenced by the index?," I questioned.

"The TGT [task global table] was the major piece of evidence," he said. "As you can see, it begins at a displacement of X'4EDO' into the program. Also, the beginning of the fields known as 'index cells' is at a displacement of X'5100' into the program," the great programmer stated.

"I see the EPA [entry-point address] of the program is X'000B6C68,'" I retorted. "If I add the displacement of the index cells to that, I calculate that the index cells begin at core address X'000BAD68,' but located at that address is the full-word [four bytes] X'00000068,' which hardly suggests occurrence 12 to me."

Usual sticky point

"That is the usual sticky point for debuggers, but the translation from the core value to the occurrence number is quite straightforward.

X'0000068' equals '88' in base 10, which suggests that we are interested in the occurrence that begins at the 88th byte past the table's first byte," he advised.

"Since the occurrences are each 8 bytes long," he continued, "and the first occurrence begins at the 'OTH' byte past the beginning of the table and the second occurrence begins at the eighth byte past the beginning of the table, it follows that the 12th occurrence begins at the 88th byte past the beginning of the table."

"One could say," I offered, "the hexadecimal value found in the full-word index cell is added to the address of the beginning of the table to calculate the address of the occurrence being referenced."

"Quite — but it takes some translation to decide which occurrence that really is," he continued. "A formula could be devised:

O = V/L + 1, where
O = occurrence,
V = value of the full, word in base 10 and
L = the length of each occurrence.

In our case, O = 88/8 + 1 = 12," he added.

"It seems you had extra information — the beginning address of the TGT and the value of register 12, for example," I injected.

Verifying results

"This further served to verify my results. Register 13 usually contains the beginning address of the TGT," he replied. "So by adding the contents of register 13 to the offset of the index cells into the TGT, I arrived at the same address for the index cells. X'000BAB38' + (X'5100' - X'4EDO') = X'000BAD68,'" he explained.

"If there were more than one index in the program, I surmise that their values would appear in successive full words following the first index cell's full word, in order as they were defined," I stated somewhat smugly.

"Elementary, my dear Watson."

Mindock is a senior programmer/analyst at Rosemount, Inc., which is located in Eden Prairie, Minn. He is no relation to Sir Arthur Conan Doyle.

SOFTWARE & SERVICES

Seeking upgrades, user turns to the source

DALLAS — HCB Contractors, one of the nation's major construction contractors, faced an increasingly common dilemma a year ago. The backlog of requests for on-line applications was much greater than the staff of six programmers could handle. And new requests were being added at an increasing rate.

"We've gone from [an IBM] System/34 to a 4341 Model Group 1 in three years," Ed Faulkner, HCB's MIS director, said. "Our people were turning out one on-line program for each seven man-days and losing ground against the demand."

HCB installed an application development system called Magec from Al Lee & Associates, Inc. here a year ago. "We've since implemented over 650 new on-line functions, and our backlog is now often expressed in weeks rather than years," Faulkner said.

"But that opened up the door for some new problems that we hardly had to be concerned with last year — security," according to Faulkner.

Security essential

With an HCB project valued at millions of dollars, a high level of security is essential, Faulkner said. Magec includes a built-in security system for generated applications. "But it became increasingly obvious that we were going to need more," he noted. "With the number of applications and terminals we have and anticipate having, our vulnerability has increased."

HCB's network includes a variety of IBM 3270 local, remote and dial-in devices and Motorola, Inc. microcomputers.

Sensitive information carried on the network includes job cost, estimates and payroll data. HCB has recently put much of the general ledger data on-line with Magec, with the off-line processing handled by a McCormack & Dodge Corp. general ledger package that is front-ended through Magec.

HCB considered purchasing a separate security system, but found that no package fit well into its environment, Faulkner said.

"We use the Datacom/DB [data base management system] from [Applied Data Research, Inc. (ADR)], which we are pleased with and which Magec handles well. We are also using ADR's Datacom/DC teleprocessing monitor, but have been considering switching to [IBM's] CICS," he said.

"We verified that all our Magec-generated applications, and Magec itself, will transfer to CICS without any program changes; therefore, whichever security system we used would have to do the same," according to Faulkner.

Faulkner contacted Al Lee Associates and arranged for the security enhancements to be made. All of the changes were made to Magec, and HCB is now using the updated product.

Changes to Magec

Among the changes to Magec were:

■ *Addition of real-time maintenance.* The system allows the security officer to "deactivate" terminals, operators or on-line functions immediately if needed, Faulkner said.

■ *Dial-in support.* The system handles line disconnects and other anomalies of dial-in networks in addition to the usual problems with dedicated lines and locals.

■ *Low overhead.* The security system does not interfere with the ability to handle high-transaction volumes.

■ *Passwords.* Operator passwords can be periodically changed, and the system forces changes at specified intervals.

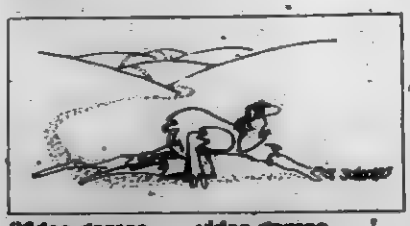
■ *Group identification.* It is possible to identify all operators belonging to a specified group in order to deactivate them as business needs change, Faulkner noted.

■ *Automatic logoff.* The system automatically logs off an operator who forgot to do so and deactivates an operator after a threshold number of inactive days, upon termination date or after a specified number of failed logon attempts.

■ *Time and day.* The system supports specifications of a range of hours and days of the week during which a terminal or operator is allowed access.

■ *Fine control.* It controls accesses at a finer level, down to what function could be done to what data.

"When you can sit down and discuss your idea of the 'perfect' system with a software vendor and then have him actually incorporate almost 100% of your input plus add some features you hadn't thought of, you can't help but be pleased," Faulkner said.



"Video games . . . video games . . ."

Backup system upgraded to fit DEC's RSTS/E

ANAHEIM, Calif. — Data Processing Design, Inc. has announced an upgrade to its Saver Disc Backup System to support the latest versions of Digital Equipment Corp.'s RSTS/E operating system. The package is said to provide a 100-fold increase in file efficiency by file reorganization.

According to the vendor, the upgraded Version 2.7 takes advantage of new features of RSTS/E to organize the disk for faster file access.

Saver 2.7 supports Versions 7.2 and 8.0 of RSTS/E. The price is $850.

Data Processing Design is located at 1400 N. Brasher, Anaheim, Calif. 92807.

SYSTEMS SOFTWARE

D.A. BRASK SYSTEMS, INC. CICS/TSO

D.A. Brask Systems, Inc. has introduced software support for IBM CICS transaction processing to IBM's TSO teleprocessing monitor.

CICS/TSO reportedly provides an alternative to running one or more test CICS systems, the vendor said. The package is said to give programmers immediate access to test regions that are isolated from other applications.

The software is implemented as a TSO command that creates a single-terminal CICS system within the TSO region. CICS transactions can then be processed, with CICS/TSO providing the terminal-control interface between CICS and TSO. An End command is used to switch back to the TSO environment, the vendor said.

CICS/TSO is designed for use in the IBM MVS environment and supports CICS Version 1.5.

The package is available now on a free, trial basis. A first-year license fee costs $3,000, and the annual renewal is 20% of the license fee, the vendor said.

D.A. Brask Systems, 4805 Pershing Road, Downers Grove, Ill. 60515.

PRECISION BUSINESS SYSTEMS Spy; Photo; Advisor; Access; Version 2.0 TMX-32; DMF/Driver; DV/Driver

Precision Business Systems (PBS) has announced a series of software systems for Digital Equipment Corp.'s line of VAX-11 processors running under the VMS operating system.

Three of the PBS packages are aimed at monitoring and controlling terminal usage. The Spy system is said to allow a privileged user to watch another user's terminal with or without the user's knowledge. The Photo system reportedly records and plays back a user's terminal sessions. The Advisor system is said to allow a user to redirect his keyboard so that commands and programs executed from a privileged user's terminal are executed in the context of another user.

PBS's Access system is said to be a system management security pro-

Tool fits mini, mainframe, micro systems

BATON ROUGE, La. — Communications Research Group, Inc. has announced Blast (Blocked Asynchronous Transmission), an asynchronous communications package that is available for more than 60 minicomputer, mainframe and microcomputer systems.

The package reportedly provides throughput, efficiency and error-immunity similar to synchronous communication through Blast's "sliding window" protocol. It uses a Synchronous Data Link Control-like, full-duplex sliding window Cyclic Redundancy Check (CRC) protocol, and binary or text files are transmitted as 8-bit-wide data.

Blast reportedly operates over standard dial-up telephone lines with asynchronous modems at any modem speed or over direct connections at speeds up to 19.2K bit/sec.

Blast uses a CRC algorithm to detect errors as they occur and requests retransmission of corrupted data, and data transfer, if interrupted, continues from the point of line loss, the vendor said.

The package is said to be available for a wide range of micro, mini and mainframe systems, including Data General Corp. processors under any operating system; Digital Equipment Corp.'s VAX-11, PDP-11 and Rainbow models; Hewlett-Packard Co.'s HP 3000, HP 125 and HP 150 systems; and IBM's mainframes and Personal Computer.

Blast is also available for Apple Computer, Inc. processors, Wang Laboratories, Inc. systems and Texas Instruments, Inc. and Vector Graphic, Inc. systems.

The IBM mainframe version of Blast for either the MVS/TSO or VM/CMS operating system is priced at $2,495; minicomputer versions are priced between $495 and $1,295; and microcomputer versions are priced at $250.

Communications Research Group is located at 5930 Jefferson Highway, Baton Rouge, La. 70809.

SOFTWARE & SERVICES

Continued from page 47

gram for VMS. Access reportedly allows the system manager to limit access to a select group of programs and commands on a user-by-user basis. It also produces reports of each user's activities.

PBS also announced Version 2.0 of its TMX-32 Transaction Management Executive system, which the vendor said supports IBM CICS-like functions for applications where system availability and recoverability are required.

PBS also announced two device drivers that implement a variety of Binary Synchronous Communications (BSC) protocols under VMS. Both DMF/Driver and DV/Driver are said to be table-driven to support IBM's 2780, 3780 and 3270 primary and tributary protocols, as well as custom, BSC protocols.

The Spy, Photo and Advisor systems are priced at $1,500; Access is priced at $3,600, and Version 2.0 of TMX-32 is priced at $30,000. Object-code-only licenses for DMF/Driver and DV/Driver are priced at $9,000, and full source-code licenses for the two device drivers are priced at $27,000.

Precision Business Systems, 39 Rector St., New York, N.Y. 10006.

CENTURY ANALYSIS, INC.
List/8

Century Analysis, Inc. (CAI) has announced List/8, an end-user list management system designed to allow workstation users of NCR Corp. mainframes to input, manage, display and print data.

List/8, according to the vendor, can be used with CAI's Boss/3 and Impact/6 teleprocessing monitors on NCR's 8400, 8500 and 8600 series mainframes. The system is said to simplify the entry, maintenance and printing of information.

The List/8 system is also said to feature a simplified menu structure and screen prompts, and users can create their own entry screens appropriate to their data format. Data can be extracted by field name from one file into a new file, sorted into any sequence by specifying the field name, selected based on field contents and selected by exact match or by matching range of values.

List/8 is priced at $2,000.

CAI, 114 Center Ave., Pacheco, Calif. 94553.

TRIANGLE SOFTWARE CO.
Netcheck

Triangle Software Co. has announced Netcheck, a system management facility for IBM's DOS and OS operating systems that includes IBM's CICS/VS Version 1.5 and above.

The vendor said Netcheck solves the problem of CICS network control and allows a network operator to control and identify the status of any resource in the network. Netcheck reports when there is a resource failure anywhere in the network; creates an on-line data base on all resources, such as terminals, control units and lines; and allows the network to be dynamically organized and controlled.

The system is also said to eliminate the four-digit identification code restriction of CICS by allowing up to 20 characters. The on-line data base created by Netcheck is said to provide profiles on all resources and groups, including the CICS terminal identification, the specific location of the resource and the IBM Vtam node name.

Netcheck is priced at $8,500 for DOS/VSE and $12,500 for OS/VS.

Triangle Software, Suite 108, 4340 Stevens Creek Blvd., San Jose, Calif. 95129.

DATA 21, INC.
Release 2.0 Remote Print Facility-Extended

Data 21, Inc. has announced Release 2.0 of its Remote Print Facility-Extended, an IBM CICS spooling and teleprinting package.

Operating under CICS or IBM batch with IBM Power/VSE or Software Pursuit, Inc.'s Sage spooling systems, the release reportedly provides for print and display of IBM VM files on CICS terminals and printers.

It allows the printers to be shared by IBM CMS and CICS users without detaching and attaching devices, while providing printer scheduling and control of print tasks through a centralized system, according to the company.

It is available now. A permanent license is priced at $4,200.

Data 21, Suite 300-5, 3868 Carson St., Torrance, Calif. 90503.

AUBUCHON & ASSOCIATES, INC.
IBM Series/1 utilities

Aubuchon & Associates, Inc. (AAI) has announced a set of utilities for IBM's Series/1 computer.

The S/1 Machine Language Disassembler functions by disassembling memory in a specified partition and dumping memory in that partition. The vendor said this can be done in hexadecimal or Ebcdic and logged to devices such as printers and terminals or to files located on either disk or diskette.

AAI's UTDSK1 full disk handler utility is said to allow a user to handle all file management functions such as allocation and deletion of single and generic files. It also provides the user with volume management features such as define target or source, list volumes, initialize, rename volumes and list space on volume.

AAI also announced the EDL session manager editor, which the vendor described as a source formatter that will list formatted source to any terminal or printer. It also features the ability to write formatted source to a defined data set and restart formatting from a write failure.

AAI's $Monitor utility is said to provide the capability to display a common menu on all controlled CRTs. The system provides control of terminals by start and stop commands, and built-in functions allow a user to stop any program or terminal.

In addition, AAI announced Utility Job Running, which allows a user to display the time of system backup on the main menu. After the backup, all terminals are automatically started by the utility, and the main menu is displayed ready for the next day's work.

The AAI utilities are priced between $250 and $1,000.

AAI, Suite E, 5523 Red Bridge Road, Kansas City, Mo. 64137.

SIMWARE, INC.
Sim/Passthru

Simware, Inc. has announced a package designed to allow intercomputer communications among IBM mainframes using IBM's MVS and VM operating systems.

Sim/Passthru is intended for use by large installations, in particular those with two or more mainframes, the vendor said. It is designed to allow users with IBM 3270 terminals on MVS to access the central processor of the VM system and terminals on the VM system to access the MVS system without extensive hardware and software changes.

It is said to provide a direct link between the systems through a binary synchronous line of communications and to support 64 terminals with a single binary synchronous line or more terminals with multiple lines.

Sim/Passthru is leased for $7,500 per year.

Simware, 969 Bronson Ave. Ottawa, Ont., Canada K1S 4G8.

VM SYSTEMS GROUP, INC.
V/Force

VM Systems Group, Inc. has introduced V/Force, a software product that is said to solve the problem of the "hung-up" user or virtual machine for the system product installation.

A user can be hung up because the end of an I/O operation is not signaled correctly, a frequent occurrence with tape drives, the vendor said. When that happens, the user becomes stuck, and other users may also be unable to work. V/Force removes the problem user's operation from the system, allowing normal system operation to continue, the vendor said.

V/Force is priced at $2,050 per year.

VM Systems Group, 3123 N. Military Road, Arlington, Va. 22207.

AVP SYSTEMS, INC.
Verazip System

AVP Systems, Inc. has announced the Verazip System, which is described as a Zip Code verification system for use with IBM's Vsam and Isam or any Ansi Cobol-74-compatible software.

The Verazip System reportedly allows the user to validate Zip Codes on files or on input transactions. It consists of a data base of all valid Zip Codes in the U.S. and a series of programs that are used to access the file, edit the data and print or display the results. Programs are also included to maintain the Zip Code file and to provide on-line capabilities.

The Verazip System leases for $1,900 the first year and $950 for each subsequent year, according to the vendor.

AVP Systems, 237 Washington St., Marblehead, Mass. 01945.

See SYSTEMS page 52

Is Your Computer Talking to Strangers?

Without changing your current software, you can put a DialSafe unit between your computer and your modems. The DialSafe will accept an ID and password entered from the user's terminal, and call the user back. The user does not gain access to your computer until the auto call-back is successfully completed.

There are two DialSafe models. The DialSafe 3 serves up to 65 users, using three ports to access the host computer. The DialSafe 3Plus has added switching capability so the users can switch from one computer to another. Each port is configurable.

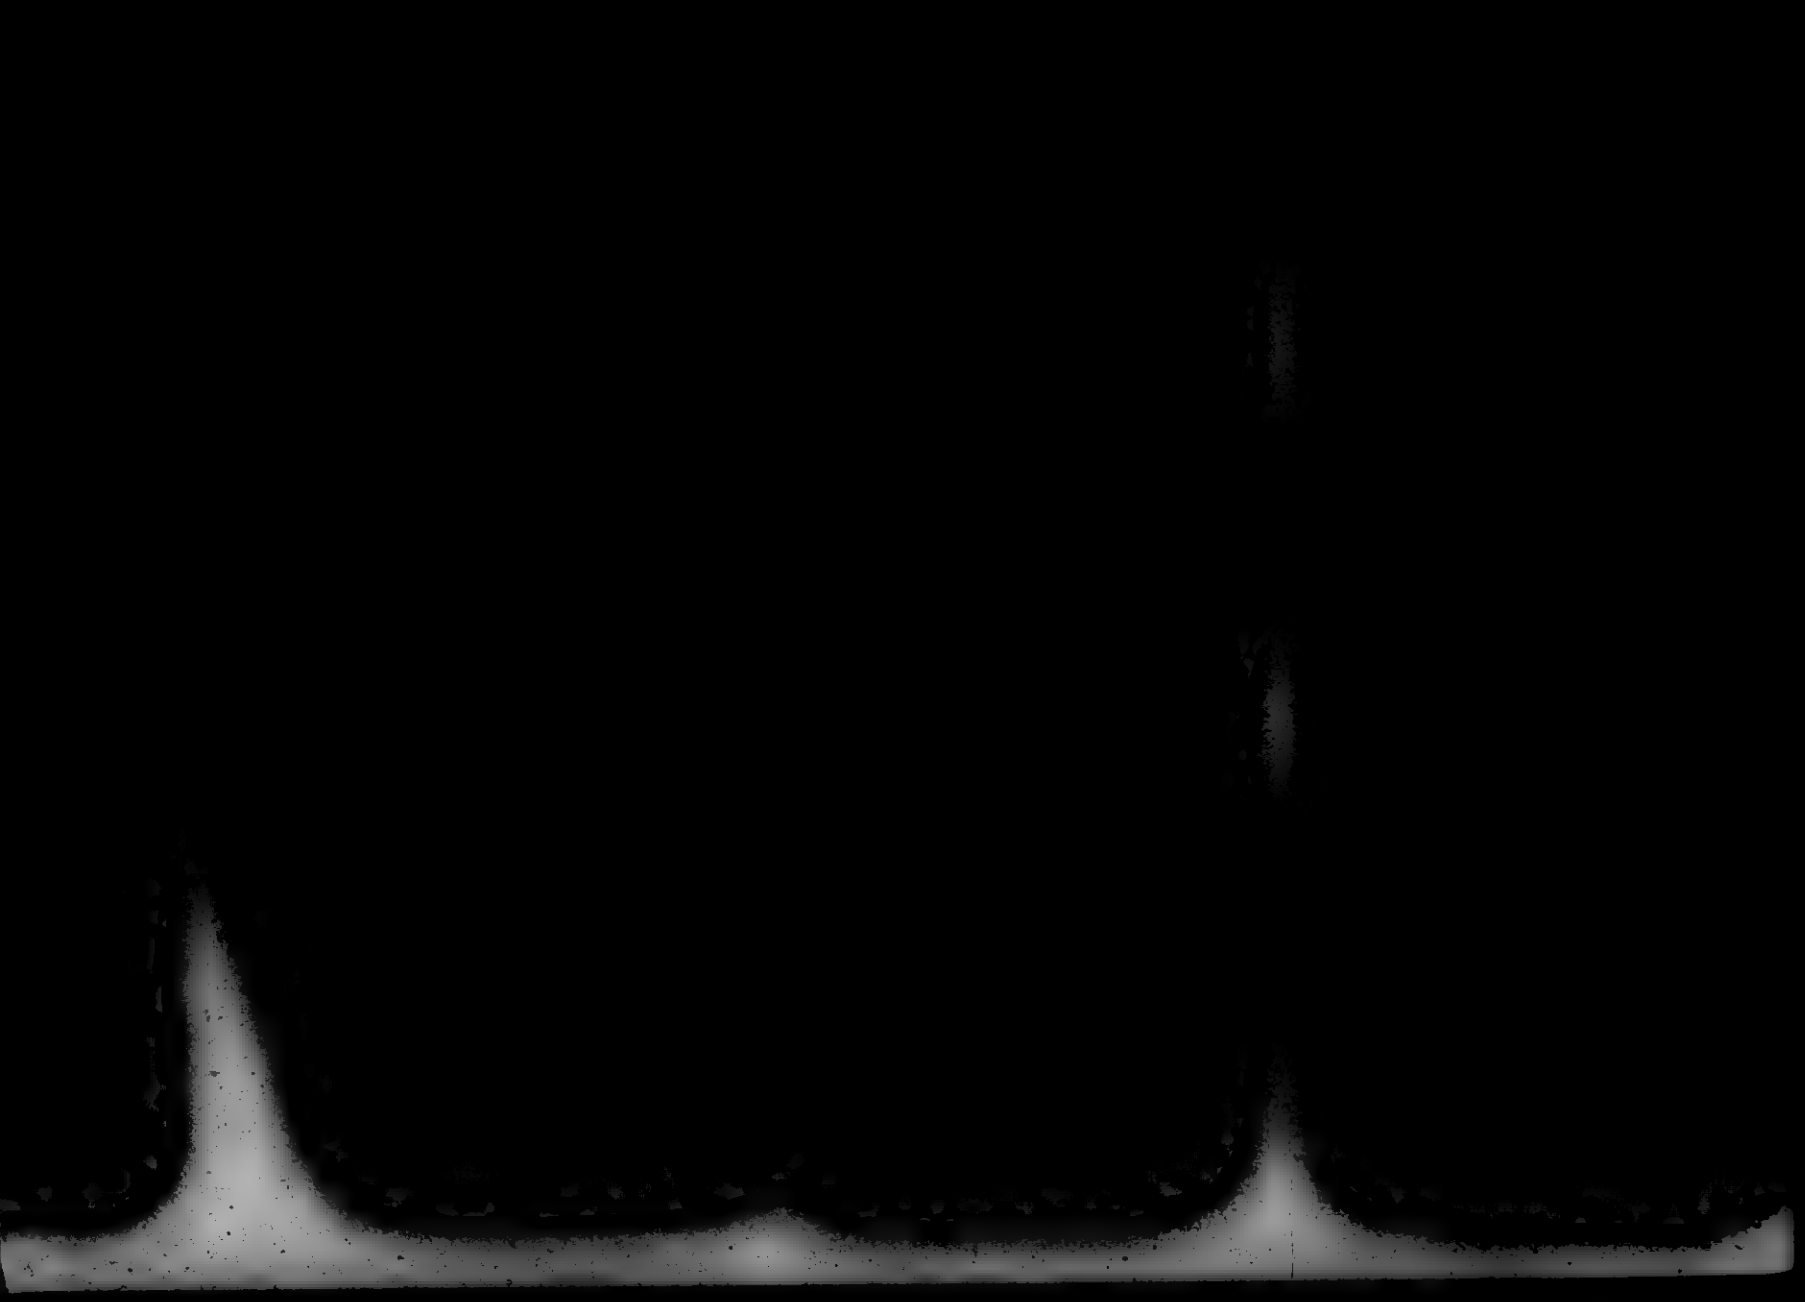
All DialSafe units have an optional printer port that enables you to keep track of incoming calls. And DialSafe units are designed for easy expansion; each one you add becomes part of your rotary system the minute it is installed.

DialSafe units are the most economical way to make your computer safe from strangers. Call today: Backus Data Systems, Inc. 1440 Koll Circle, San Jose, CA 95112 (408) 279-8711.

DialSafe gives you auto call-back, multi-channel security for less than $300 a port.

Backus
DATA SYSTEMS, INC.

A Subsidiary of Astronautics Corporation of America



SOFTWARE & SERVICES

SYSTEMS from page 48

COMPUTER NETWORKS, INC.
Honeylink

Computer Networks, Inc. has announced Honeylink, a Honeywell, Inc. VIP 7800 series terminal emulator for the IBM Personal Computer.

According to a spokesman, Honeylink combines hardware and software to provide the user with an emulator for either synchronous or asynchronous communications. It is said to be fully compatible with the full series of Honeywell 7800 video display terminals.

Honeylink reportedly provides standard terminal features, such as 72-line scroll, a buffered printer adapter and file transfer capabilities to transfer data between the Personal Computer and the Honeywell host computer. It is priced at $906.

Computer Networks, Suite 220, Building 6, 799 Roosevelt Road, Glen Ellyn, Ill. 60137.

PRODUCTIVITY AIDS

AMER-CAL, INC.
Productivity Tools

Amer-Cal, Inc. has announced three productivity tools for users of Cincom Systems, Inc.'s Mantis applications development system.

The Mantis Batch Submit (MBS) facility for IBM's DOS/VS and DOS/VSE operating systems is said to allow a Mantis program to submit jobs to the IBM Power reader queue. The JCL is defined in a Mantis interface which is created by the MBS facility, and information such as date cards or other parameters may be passed to insert into the JCL at execution time.

The Mantis Subroutine Library (MSL) is said to be designed to provide those structures commonly used in business, such as add, change, delete, display and browse, along with common subroutines needed to support those structures.

The Enhanced Mantis Security (EMS) is said to be a generic security system that provides Mantis security at the program function key level. The package is said to be resource efficient, and it allows for consistency and auditability.

MBS is priced at $2,000 or leased for $100 monthly; MSL is priced at $7,500 or leased for $375 monthly; and EMS is priced at $5,000 or leased for $250 monthly.

Amer-Cal, 115 E. University Drive, Arlington Heights, Ill. 60004.

MVC ASSOCIATES, INC.
Ramis II Reporting

MVC Associates, Inc. has announced Ramis II Reporting, which the vendor described as an addition to its interactive computer-based training library.

The system is said to utilize full screen simulation techniques to provide the student with education in the use of Mathematica Products Group's s Ramis II fourth-generation programming language. The course is compatible with IBM's Interactive Instructional System and Goal Systems International, Inc.'s Phoenix, according to the vendor.

Ramis II Reporting is interactive and self-instructional, and the simulation techniques are used to support the tutorial.

Ramis II Reporting can be purchased for $5,500 or leased at $250 per month.

MVC Associates, 849 N. Summit Ave., Lake Forest, Ill. 60045.

APPLICATION PACKAGES

ENHANCEMENT SOFTWARE CO.
Vsecalc

Enhancement Software Co. has announced an electronic spreadsheet system for IBM mainframes operating under IBM's DOS/VSE operating system.

The package reportedly provides three separate methods of creating and accessing spreadsheets: through CRTs, from user-written programs via subroutines or through batch.

The Vsecalc spreadsheet contains 64 columns and 512 rows. Cells may contain either string or numeric data or formulas that are used to calculate the value of the cell by using the values in other cells on the spreadsheet, the vendor said.

Other features reportedly provide variable column widths and attributes, random-number generation, table lookups, sorting, true/false logic, spanning of string values over column boundaries, spreadsheet merging, moving, copying and replicating of cells and cell protection.

The package is available now and is priced from $3,500.

Enhancement Software, P.O. Box 6276, High Point, N.C. 27262.

OUTLOOK SOFTWARE, INC.
Version II of Outlook/38

Outlook Software, Inc. has announced Version II of its Outlook/38 financial modeling package for the IBM System/38.

A spokesman said Version II provides more than 50 enhancements and features, including 22 predefined financial and statistical functions giving the package a total of 53 such functions.

The added functions include internal rate of return, linear regression, accelerated depreciation, least-squares forecasting, amortized repayment of principal, amortized principal amount, weighted average, correlation analysis, covariance and ranking.

The spokesman said calculations

SOFTWARE & SERVICES

can now be specified down to the element or cell level, both for model-level calculations and consolidation calculations, according to a spokesman for the vendor.

Version II of Outlook/38 is priced at $3,450.

Outlook Software, Suite 117, 1 Woodfield Lake, Schaumburg, Ill. 60195.

SHAWWARE, INC.
Stores System

Shawware, Inc. has announced the Stores Inventory and Purchasing Management System for the IBM System/34, System/36 and System/38 processors.

According to a spokesman, the Stores System comprises three modules that can be purchased separately or as an integrated system.

The purchasing management module automatically generates purchase orders and provides on-line inquiry into both the status of outstanding purchase orders and vendor performance levels.

The inventory management module provides maintenance of on-hand balances in both dollars and quantity for all products by warehouse location. The system generates suggested reorder reports. The accounts payable system provides audit controls while allowing flexibility in entering transactions, a spokesman said. The system also automatically produces and reconciles checks.

The complete Stores System is priced at $20,400 for the System/34, $25,200 for the System/36 and $28,000 for the System/38.

Shawware, 3405 Harvester Road, Burlington, Ontario, Canada L7N 3N1.

MANUFACTURING SOFTWARE SYSTEMS, INC.
MRP II Software Audits

Manufacturing Software Systems, Inc. has introduced MRP II Software Audits, an evaluation service for companies purchasing manufacturing resource planning software.

The company reviews any software package or in-house application. The service reduces evaluation time from nine to 12 months to two to three months and finds problems that companies often overlook, the vendor claimed. The reports do not recommend any package, but state facts and allow the buyer to draw his own conclusions.

The service costs $1,200/day plus expenses.

Manufacturing Software Systems, 85 Allen Martin Drive, Essex Junction, Vt. 05452.

UNILOGIC LTD.
Scribe for Unix version

Unilogic Ltd. recently announced that a version of its Scribe package for drafting, formatting and printing documents, is now available for use under the University of California at Berkeley's 4.2 Unix running on the Digital Equipment Corp. VAX-11 series.

Scribe is used to produce reports, technical manuals, proposals and similar documents and is reportedly able to print on a wide range of output devices.

The version for 4.2 Unix is provided free to all Scribe maintenance customers licensed as VAX/Unix sites. The product is available for a one-time license fee of $25,000, and maintenance fees are $200 per month.

Unilogic, 160 N. Craig St., Pittsburgh, Pa. 15213.

MCBA, INC.
P/O

MCBA, Inc. has introduced a purchase order package written in Cobol for Wang Laboratories, Inc.'s VS family of minicomputers.

The Purchase Order and Receiving (P/O) package reportedly can create and maintain purchasing records. It is capable of predicting cash requirements, monitoring vendor performance and preventing shortages of needed material, the vendor said.

P/O is said to permit on-line entry and editing of purchasing data, printing of purchase orders, correcting of purchase orders and cancellations. It also supports blanket purchase orders and drop-ship purchase orders, the vendor said.

A source code license ranges from $3,000 to $9,000 depending on the VS model.

MCBA, 2441 Honolulu Ave., Montrose, Calif. 91020.

SATCOM COMPUTING, INC.
QMS

Satcom Computing, Inc. has introduced a quality and manufacturing system, QMS, that operates on Hewlett-Packard Co. HP 3000 series computers. Written in Cobol, it uses Hewlett-Packard's Image data base management system.

QMS is parameter driven and consists of four integrated subsystems which span eight data bases. Modules include quality and specifications, materials, order processing and production management reporting, according to the vendor.

The license fee for the four mod-

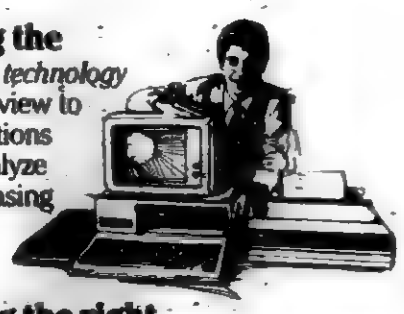
1."How can I be sure I'm getting the latest technology?" At GE, we're a *technology company.* So we have the technical overview to be familiar with major data communications developments. Plus the resources to analyze every piece of equipment we consider leasing to you. So you not only get the *latest.* You get the *best.*



2."How can I be sure I'm getting the right equipment for me?" We will help you analyze your need and likely growth pattern. Then help you decide on the equipment that's right for *you,* from a number of the industry's top manufacturers—like Micom, General DataComm, and IBM, to name a few.

3."How can I be sure I'll get the service I need—when I need it?" General Electric's nationwide service network is just a phone call away. Over 60 locations, with the people *and* parts you need—which usually adds up to *same-day* response.

We even carry the little stuff, like ribbon, paper, cassettes and disks—to save you valuable space.

4."How can I afford it all?" Our leasing alternative helps you conserve capital and credit, eliminate obsolescence, cut overhead, and may give you greater tax advantages than buying.

And with General Electric's service network *behind* the lease, you can minimize downtime—adding up to what may be the best *value* in the business.

GENERAL ELECTRIC.

5."How do I stop worrying?" Call us. We have the answer to practically *any* data communications question—your one-source solution, with the equipment, know-how, service, leasing—and the *security* that comes from dealing with GE.

For the phone number of the sales center nearest you, call 800-528-6050, Extension 406. (In Arizona, 800-352-0458, Extension 406.) Or write General Electric Company, Communication Leasing and Service, Building 4, Room 210, Schenectady, New York 12345.

sales is $135,000, which includes documentation, and a one-year product warranty.

Satcom Computing, 4530 Professional Circle, Virginia Beach, Va. 23455.

ROBERT ROUTMAN & ASSOCIATES
Impact 34/36

Robert Routman & Associates has announced Impact 34/36, a wholesale distributor software system for IBM System/34 and System/36 computers.

The package is designed to help wholesale distributors control their daily operations, the vendor said. It covers functions including order entry, pricing flexibility, invoicing, back orders, drop shipments and special orders, accounts receivable, purchasing, inventory control and manufacturer's programs.

The system also includes payroll, inside telephone salesmen's and outside salesmen's commissions, sales analysis programs, warehouse production, truck routes and catalog programs, the vendor said.

Impact 34/36 is available for a one-time license fee of $34,500, according to the vendor.

Robert Routman & Associates, 17 Colonial Drive, Youngstown, Ohio 44505.

DATA BASE MANAGEMENT SERVICES

PRIME COMPUTER, INC.
Prisam; Discover

Prime Computer, Inc. has announced a data base management product and an enhanced version of its data base management system (DBMS) Query and Report Writer for use in commercial environments with high-volume transaction processing.

Primes access method, Prisam, reportedly combines an Isam data model with automatic recovery. Concurrent data access control and automatic recovery are provided through Prime's Roam, allowing for system halts, media failure and software error, according to the company.

Discover is an enhanced version of the DBMS Query and Report Writer. It is said to update Prisam files and handle ad hoc queries and reports.

Prisam and Discover run on Prime 50 series, 32-bit superminicomputers. Prisam will be available March 19, and Discover will be available May 15.

Prisam is priced at $6,000. Discover is priced at $4,000 with Prisam support and at $10,000 with Prisam and Prime's DBMS.

Prime Computer, Prime Park, Natick, Mass. 01760

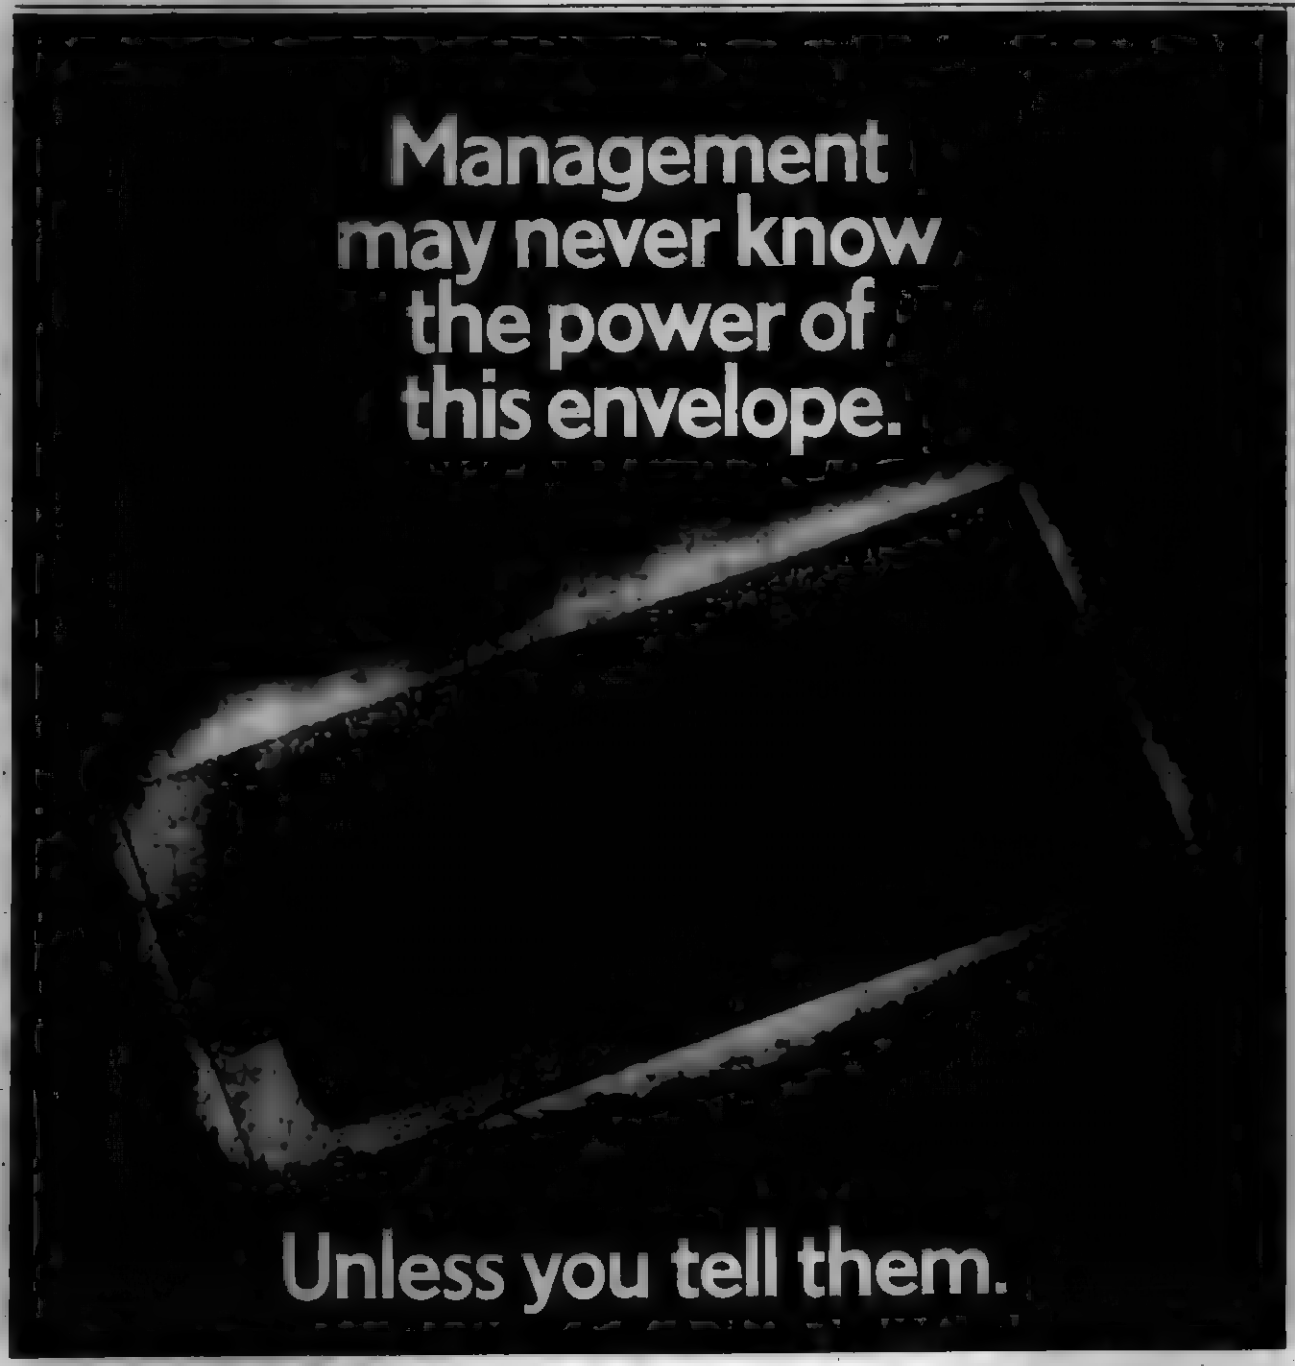
CRWTH COMPUTER COURSEWARES
Using Ramis II

Crwth Computer Coursewares has introduced "Using Ramis II," a computer-based training (CBT) course for Mathematica Products Group, Inc.'s Ramis II fourth-generation programming language.

The course runs on CBT presentation systems such as IBM's Interactive Instructional System, Goal Systems International, Inc.'s Phoenix or Boeing Computer Service Co.'s Scholar/Teach 3. It can run on IBM's TSO and CMS or any other operating system for IBM mainframe computers.

"Using Ramis II" can be leased for $3,750/year or purchased for $7,500. The license includes all new releases at no extra charge.

Crwth Computer Coursewares, Suite 900, 619 Wilshire Blvd., Santa Monica, Calif. 90401.



You don't have to tell management how easy it is to implement "E-COM" service. That can be your secret. Tell them instead about the power of an E-COM service mailing. How letters can be sent right from the company computer. How the Postal Service prints, folds, inserts, seals and delivers these letters for you. How the distinctive blue envelopes of E-COM service lend visibility and impact to your mailing.

Since you're the one who gets E-COM service up and running, you have three options—all of them easy. First, you can write the system interface yourself. It takes about a day, and Postal Service consultants are standing by to give you any help you need. Second, you can buy a dedicated interface from a third-party vendor. Third, you can access E-COM service through an independent communications carrier, without bringing the system in-house at all.

As part of the D.P. department, you're in a unique position to tell your management about the power of E-COM service. So find out more. Send us the coupon you see here. You may never again get so much credit for so little work.

"Electronic Computer Originated Mail

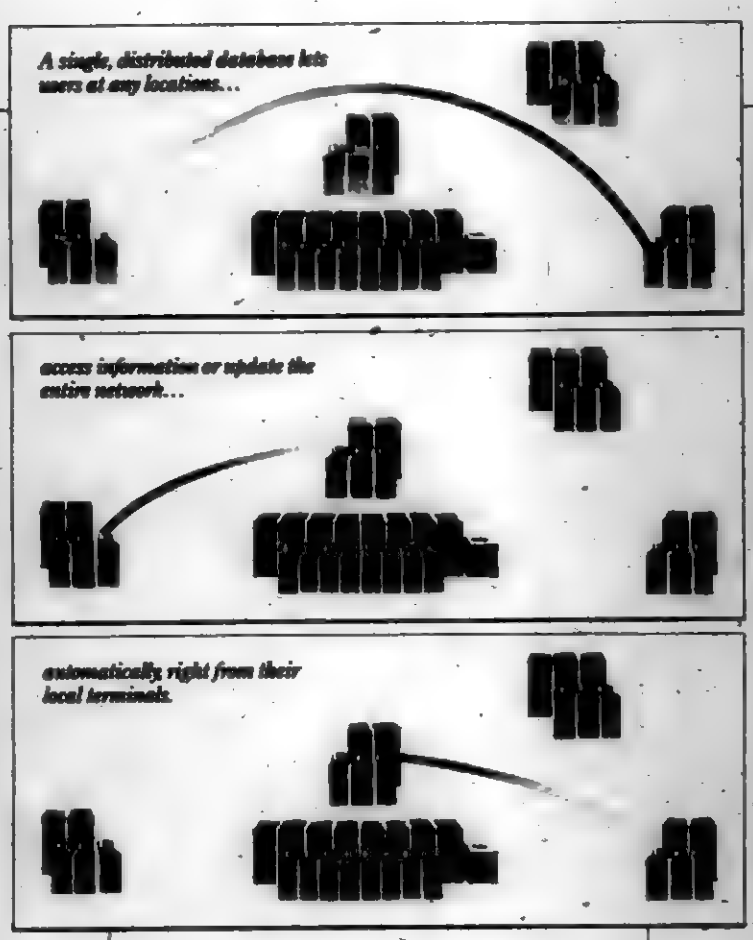
The Tandem NonStop Network eliminates information float.



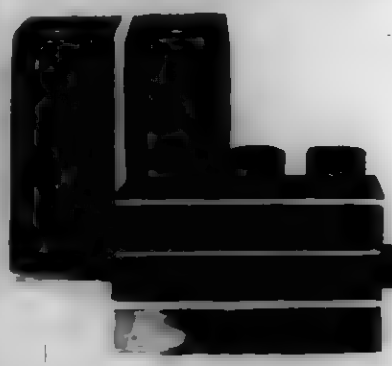
Information float. It's when your sales manager in Phoenix needs accurate inventory information from the warehouse in Atlanta—and at the exact same time a salesman at the Seattle office is asking for the product. Or when your plant foreman in Boise needs clarification on product specs from the engineering manager at the lab in Boston. When *any* of your people, in short, has an immediate need for timely, up-to-the-second information from people at other locations—and can't get it. That's information float.

Tandem's NonStop network solves the problem.

A NETWORK OF NETWORKS

With a Tandem information system, it doesn't matter where you're sitting—you've got complete and instantaneous access to the information you need—regardless of whether it's across town, or clear on the other side of the world.

The reason is simple. Each Tandem NonStop computer system has been designed from the ground up as a total information/communications system. Which means that each system is actually a self-contained network. A network that encompasses interprocessor communications in a single system at one physical location, and extends all the way to a 255-system configuration spread across the globe.



Phoenix/ Sales

By putting the most often used data on the local system, you get faster response time and lower communications costs.

way you work.

This approach to system design conforms to the way information is actually used and communicated throughout an organization—at different times by many people in various locations and at different levels of responsibility. That means that you can place the information you deal with most on your local system, giving you better response times for your users, lower communication costs, and independence from any problems that might occur at other points in the network.

In addition, because each location needs different *kinds* of information, the Tandem system lets you determine up front which departments can access what kinds of data. The result is that network-wide data is always available for corporate-level reporting and management, while the appropriate local data is available for managerial decision-making at each department, office or facility.

Tandem systems can be linked to other mainframes or networks (including SNA); a state-of-the-art fiber optics system for connecting hundreds of processors within your headquarters or plant; a

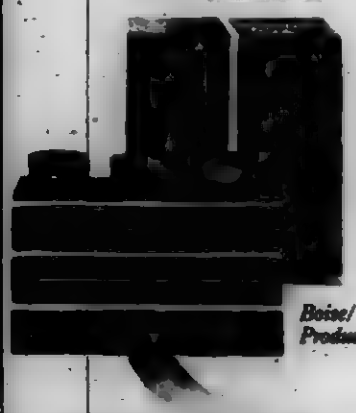
satellite link (in conjunction with American Satellite Company) for connecting widely dispersed offices; and an advanced communications package, called TRANSFER,™ to manage it all.

Plenty of room to grow. And change.

Tandem's modular approach to hardware design gives you a simple, ongoing, "building block" procedure for system expansion or rearrangement. You don't have to know up front exactly what your configuration will be. Or how—and when—it might change again. The result is that your original investment in equipment and program is always protected.

THE KEY IS A SINGLE, DISTRIBUTED DATABASE

Tandem's unique ENCOMPASS™ DBMS actually distributes a single, unified database across the entire network, providing your users with two important advantages: first, no matter where they are on the network, they can access data from anywhere else, without having to know where the data is located.



Boise/ Production

And second, by simply entering information at their local terminal, your users are instantaneously updating every single node in the system—automatically.

Relating data to information.

The key to manipulating data in such a simple, straight-forward manner is Tandem's high-performance relational database. Because setting up files merely involves creating or filling in tables with data records, no device-dependent "pointers" are used to maintain relationships, making the database extremely easy to use.

New files can be set up at any time, in any location—just by adding new tables or rows. This allows you to reconfigure your data files as needed, transferring the most often used files to the local node. So you can be continually fine-tuning your system, moving your data to where it makes the most sense, with no penalties in performance. In the proc you are reducing the float on info tion by dramatically lowering user onse time, as well as saving networ sources and increasing overall syste rformance.

Boston/ Engineering

WHEN YO NEED IT WITHOUT FAIL

From the CPU itself to our new satellite links, the entire system is maximized for completely fault-tolerant operation. If any component fails, the corresponding device or alternate data path automatically takes over and performs the function. And the defective unit can be repaired or replaced witho shutting down the s

Chicago/ Corporate

At corporate headquarters, management has network-wide access to continuously updated information for operations and reporting.

The data protection solution.

On the software side, our ENCOMPASS database manager includes a special subset called the Transaction Monitoring Facility (TMF), which is devoted solely to ensuring network-wide data integrity and recoverability.

With TMF, the system maintains an audit trail of all transactions, protects files from access when the database is in an intermediate state, and provides complete backout and roll-forward recovery procedures if a transaction cannot be completed for any reason.

In addition, Tandem's GUARDIAN™ operating system complements the ENCOMPASS database manager to oversee all aspects of NonStop architecture, ensuring that all database linkages are consistent at each node of the network.

THE TANDEM SUPPORT NETWORK

Whether it's a two-processor system or a 255-system global network, the Tandem NonStop network is uniquely suited to the complete information requirements of multi-divisional, multinational corporations.

Tandem provides local sales and service support around the world. Including fourteen software education centers in the U.S., Canada and Europe offering professional technical training courses for your programmers and analysts.

For more information on the Tandem NonStop computer network, mail in the postcard, contact Tandem at 800-482-6336, or call your local Tandem sales office.

SOFTWARE & SERVICES

REMOTE COMPUTING SERVICES

FINREPORT COMPUTER SERVICES, INC.
Twilight Service

Finreport Computer Services, Inc. has announced the Twilight service, a time-sharing service for IBM's VM/CMS-based operating systems.

The Twilight service will operate weeknights from 7 p.m. to 7 a.m. and weekends from 7 p.m. Friday to 7 a.m. Monday.

It offers a choice of programming languages, including Cobol, PL/I, Basic and Fortran, along with other VM/CMS operating-system-based products.

Twilight service is priced at $10/hour, and access is reportedly provided at a dial-up rate of 300 to 1,200 bit/sec through Tymnet, Inc.'s Tymnet.

Finreport Computer Services, One Moody Street, Waltham, Mass. 02154.

ON-LINE DATA BASES

BUSINESS RESEARCH CORP.
Investext

Business Research Corp. has announced an on-line data base designed to provide financial data on 101 American and foreign computer and data processing companies.

Investext is said to contain more than 400 reports from 27 investment banking firms on the 101 companies, as well as almost 600 reports on the computer industry and related industries.

Investext can be accessed by personal computers and terminals supported by a 300 bit/sec or 1,200 bit/sec modem.

The price is $95/hour, plus the cost of telecommunications and $4.50 per 3,000-char. electronic page. A typical eight-page report costs about $40, according to the company.

Business Research, 1660 Soldiers Field Road, Boston, Mass. 02135.

INTERACTIVE DATA SERVICES, INC.
Institutional Bond Quote Service

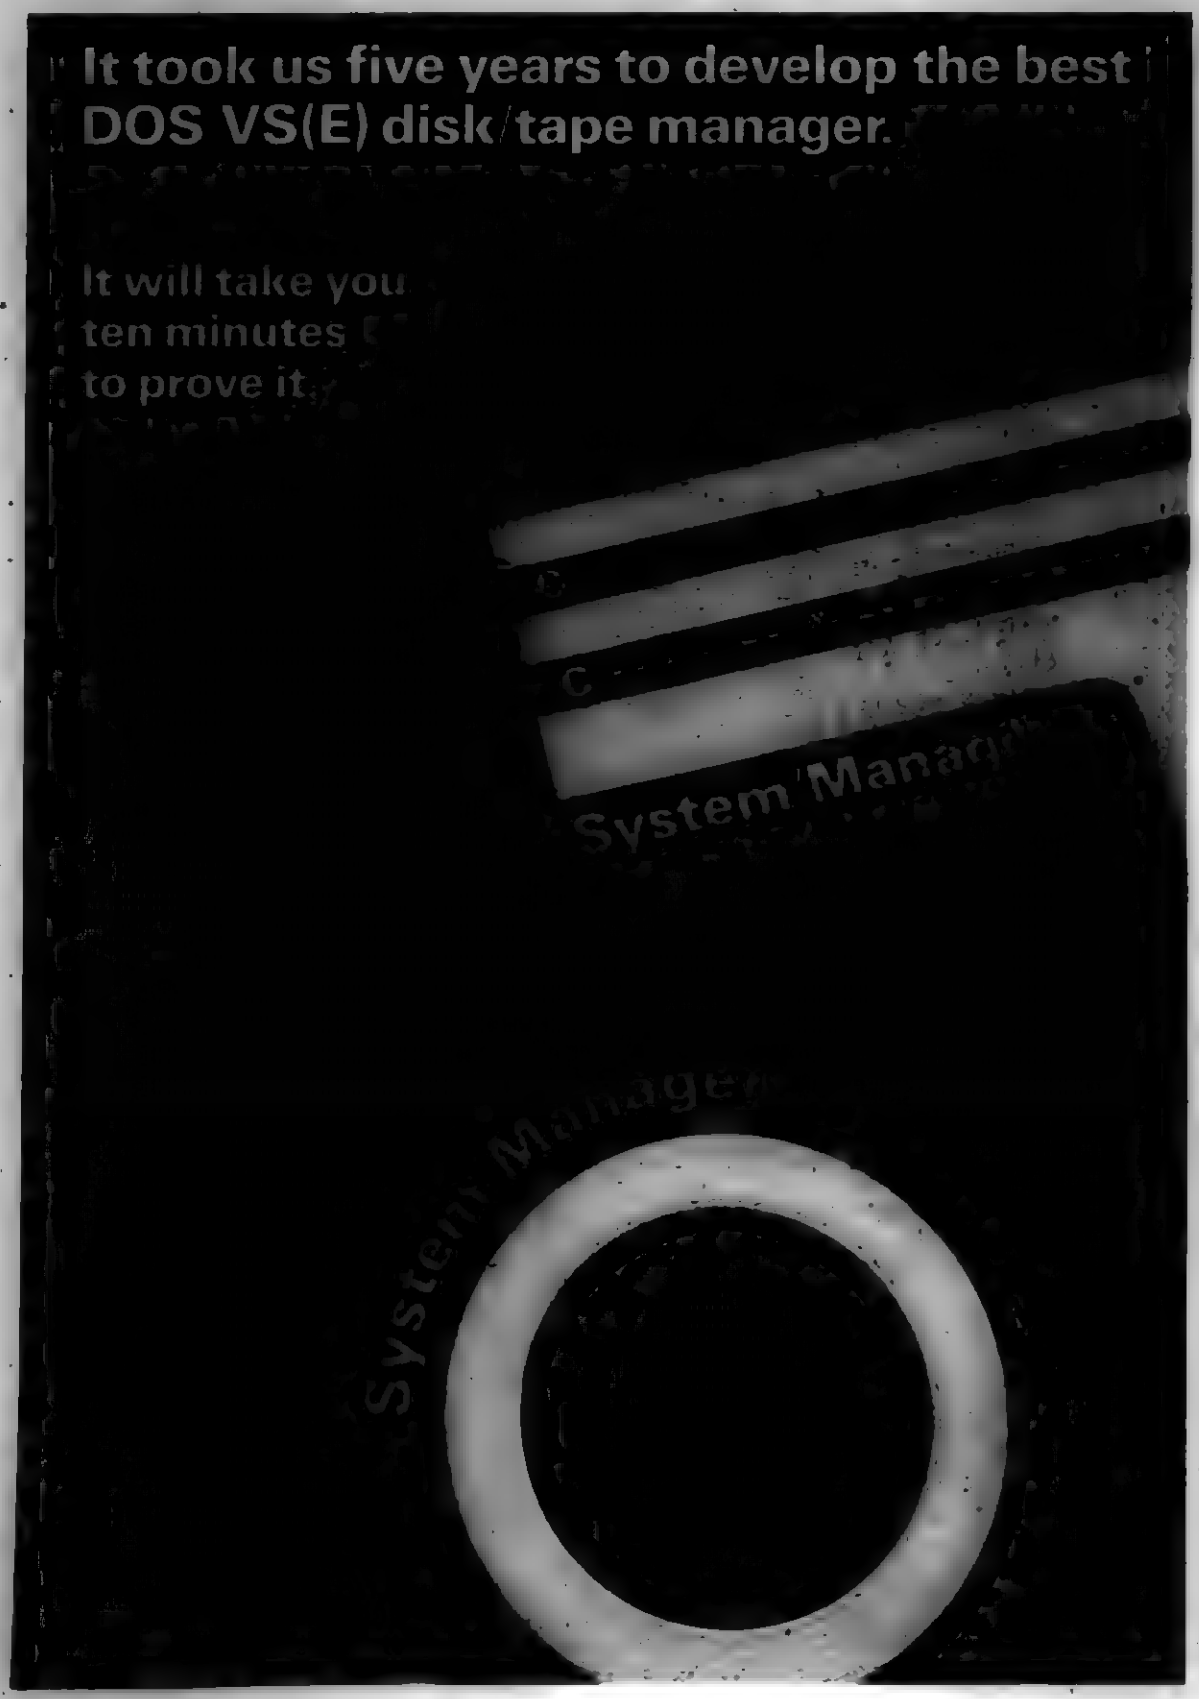
Interactive Data Services, Inc. has announced a quotation service designed to provide daily institutional bond prices.

Institutional Bond Quote Service is said to provide daily lot price quotations at 7:30 p.m. EST for bonds listed on the New York and American Stock Exchanges and more than 10,000 over-the-counter bonds.

Quotations are available on magnetic tape or by direct transmission to mainframe-type computers. Quotations are also available on-line for time-sharing users of Interactive Data Corp.

Prices vary according to the frequency of use, ranging from $8,500 per year for monthly quotations to $26,000 annually for daily quotations. In addition, customized service is available for 25 cents per quotation.

Interactive Data Services, 22 Cortlandt St., New York, N.Y. 10007.



COBOL from page 45

over the continued viability of Cobol in an environment that is starved for productivity improvements. In the past few years, fourth-generation languages have proliferated to the point that application development tools are now offered by virtually every major systems software vendor. These products are now beginning to be used for production-scale applications.

The drawback is that most of these tools still generate specialized code in which programmers must be educated to be productive. As more and more applications are developed in high-level languages, the industry's large existing body of Cobol knowledge becomes less useful.

If Cobol can be modified on a regular schedule to incorporate more of these high-level capabilities, it can establish itself as an alternative to the new languages, Garfunkel believes.

He points to the fact that some vendors have chosen to take their own course and introduce compilers based upon the proposed Ansi standards before ratification. Thus the problem of proliferating versions of the language becomes even more acute. Frustration will build and incompatibility problems will only persist if the 10-year-plus lag in the addition of new features persists.

The Garfunkel resolution is intended to keep Cobol in step with the fourth-generation languages by enabling the standard to be upgraded with new capabilities on short notice.

However, the change also poses some serious hazards. Cobol is already hamstrung by the fact that some shops have never even converted from the 1968 standard. If a new version of the language emerges every two years, the stage will be set for an unprecedented spread of diverse compilers.

But is that incompatibility problem any worse than the one already presented by the multiplicity of high-level languages? If present trends continue, the industry will find itself in a situation in which one shop has Mathematica Products Group, Inc.'s Ramis, another uses Information Builders, Inc.'s Focus and another programs in Oxford Software Corp.'s UFO.

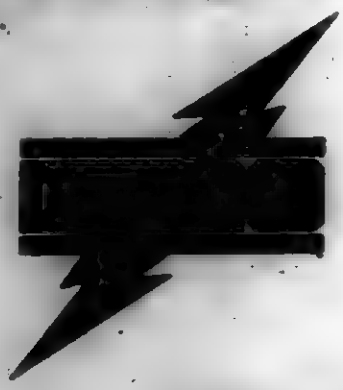
If Cobol can be made competitive with fourth-generation languages, it will at least provide an outlet for programmers who are already skilled in Cobol to take advantage of their knowledge.

Incredible as it seems, even Big Blue needs to be bailed out now and then. Personal computers are such a runaway success, they're running Information Managers ragged. The problem is personal computers and mainframes don't always work together.

The result is Computer Shock. And nothing short of a HERO™ can cure it.

HEROISM COMES TO PERSONAL COMPUTING.

HERO is the intelligent, desktop Networked Personal Computer from MDS®. It does everything a personal computer can do. And lots that it can't. But HERO's main fame derives from its interaction with the mainframe.



INTELLIGENCE AT EVERY STATION.

Mated with the MDS SUPER 21™ Communications Processor, HERO can converse intelligently in IBM networks. HERO emulates IBM 3270 SNA and the 3776 remote-job-entry systems. Our SUPER SNA™ option gives you both on one communications link. HERO runs software under MS-DOS. Plus its own multitasking operating system.

HEROS UNITE AND CONQUER.

With MDS HERO and SUPER 21, you can access private, departmental and corporate databases. Instead of not working, your entire organization can be networking. Under your control.

And only MDS offers you INTELLIGENT 3270™. So you can write your own programs and integrate them with data in the mainframe. HERO lets you retrieve information from the database, process it, display it and update it. Then either return it or store it locally.

EVEN HEROS NEED ALLIES.

In addition to HEROS, SUPER 21 is available with non-intelligent workstations within INTELLIGENT 3270 networks. MDS offer the PLUS 80™ family of plug-compatible controllers, printers and displays. They're directly interchangeable with corresponding IBM 3270 units.

MDS HERO MAKES A HERO OUT OF YOU.

With HERO and SUPER 21, your existing data processing investments become part of an ever-expanding fund of available data. All of it coordinated, cost-efficient and controllable.

MDS systems are planned for non-obsolescence. They're modular in design to accommodate future growth. So every MDS system, like a hero, is immortal.

GET THE ADVANTAGES OF BIG WITHOUT BEING BLUE.

MDS is a multidivisional, multinational corporation. We've grown by helping our customers to grow. By focusing our size and scope on responsiveness to their needs. Not just in IBM country, but beyond.

We can do the same for you, wherever you are. MDS offers service and support capability around the world, around the clock.

Ask our customers about us. And give us a call. Dial **800-MDS-HERO.** We'll show you how, when it comes to networking, MDS can help you unite and conquer.

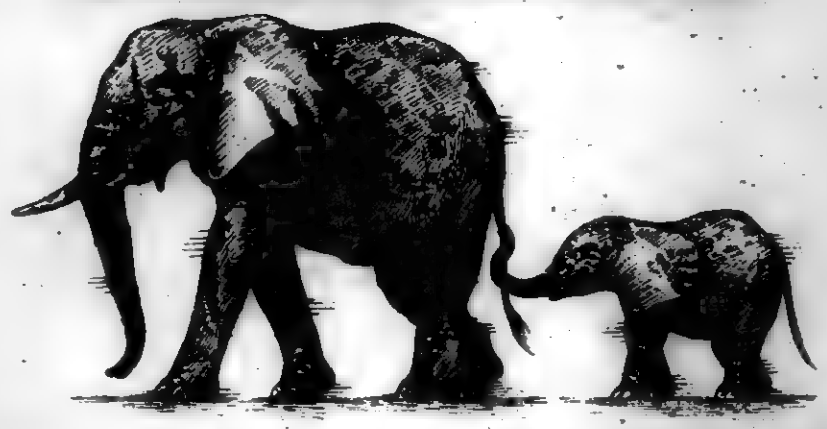
MDS MOHAWK DATA SCIENCES

7 Century Drive, Parsippany, New Jersey 07054. And over 430 locations worldwide.

MDS is a registered trademark and HERO, SUPER 21, INTELLIGENT 3270, PLUS 80 and SUPER SNA are trademarks of Mohawk Data Sciences Corp. MS-DOS is a trademark of Microsoft, Inc.

HERO SAVES IBM!

WHEN IT COMES TO LINKING PC's TO MAINFRAMES, ONE COMPANY IS A MILLENNIUM AHEAD.



You don't have to look hard to see why McCormack & Dodge has linked more PC's to more mainframes than any other business software vendor.

It's a classic case of a superior product leading to superior sales.

To begin with, our link does more than just link. It works like you do. Selectively. Analytically. And in real time—so that company decision-makers always have the freshest, latest data available. Current and accurate up to the second you display it on your PC screen.

If you've tried out other PC links, you'll notice the M&D difference the moment you start downloading information from the mainframe to your desk. For example, you'll see that you can access all applications, no matter who designed them—not just those designed by McCormack & Dodge. And you'll discover the ease of working with a system that lets you pinpoint and selectively summon exactly the portion of data you need.

Once you've called the data down to your PC, the Lotus 1-2-3 software in our link lets you crunch numbers backwards, forwards, up and down—anywhere your mind wants to take them. You can instantly construct detailed spreadsheets. You create brilliant color graphs.

And the moment you finish massaging the data to your liking, our link lets you shoot it back to the mainframe (assuming you have the proper security clearance). You do it yourself on the spot—in real time. Without keyboard operators or programmers. So the entire company has the benefit of the latest information immediately. Not days later.

The M&D PC link is one of several products in our highly acclaimed Millennium family of borderless business software. When you compare the entire Millennium concept to anything else claiming "total integration," you'll see that M&D isn't just out-linking the competition. We're out-thinking them.

WHEN YOU THINK ABOUT TOMORROW, MILLENNIUM MAKES SENSE TODAY.

McCormack & Dodge

a company of The Dun & Bradstreet Corporation

Sidestepping Centrex charges?

DATA STREAM

JOHN DIX
CW Senior Editor

Early this month, the Federal Communications Commission confirmed an earlier ruling on Centrex access charges [CW, Feb. 13]. Beginning on April 2, Centrex customers will pay an access fee of $2/line per month for lines in place before July 27, 1983 and a $6 fee for lines installed thereafter.

Centrex is a communications service provided by many telephone companies that provides users with features similar to, but more limited than, the telecommunications features of a private branch exchange (PBX).

The companies that offer Centrex services are rightly afraid the new access charges will drive customers away.

These customers include some of the largest telecommunications users in the country. For fear of losing them, some of the former Bell operating companies are trying to pull an end run maneuver on the access charges by filing new, lower rates with state public utility commissions that would obviate the access charges' effect.

This practice is being opposed by the North American Telecommunications Association, the trade association of independent manufacturers and suppliers of communications equipment, which argues that lowering Centrex rates is tantamount to cross-subsidization and is not in the public interest.

The former Bell operating companies counter this by arguing that if Centrex customers are forced to abandon the service, all ratepayers will suffer as telephone companies try to deal with the whipsaw effects of lost revenue and stranded investment.

How could a $2 Centrex access charge wreak such havoc, especially in light of the fact that, under the FCC access charge plan, the fees for other business lines will range up to $6 per line?

Centrex services are provided by letting users tap directly into a telephone company's central office switch, which supports all business and residential

National consortium proposed
To meet telecommunications needs

By Lynn Haber
CW Staff

ORLANDO, Fla. — At a meeting here last week, an ad hoc planning committee consisting of representatives from the telecommunications industry, education and government laid the groundwork for the development of a national organization for telecommunications education.

Designed to expand and improve the quality of education and training to meet the needs of the domestic and international telecommunications industry, the National Telecommunications Education Council (Ntec) will be established as a nonprofit association of organizations for users and individuals from the public and private sectors of education and the telecommunications industry.

The original call for the creation of a national consortium to meet the growing demand for telecommunications technicians occurred at the two-day Telecommunications Education Conference held in Detroit in January. That conference was jointly sponsored by MCI Communications Corp., the American Association of Community and Junior Colleges and the Association of Community College Trustees.

At the Detroit conference, Bert C. Roberts, president of MCI, told an audience of 120 participants that the demand for trained telecommunications technicians was running 30% to 50% above availability in some areas of the U.S.

At the Ntec planning meeting, preliminary charter bylaws and organizational plans were drafted. Goals established for Ntec included:

- A need for an industry education survey to identify telecommunications training materials available for use by educators and to identify current telecommunications programs offered.
- The formation of a telecommunications education institute that would be a joint venture between the North American Telecommunications Association and Ntec.
- The creation of a quarterly newsletter relating to training in telecommunications.
- The development of a national clearinghouse as a resource center where information on people, places or things related to telecommunications could be found.

See NTEC page 70

NCR unleashes product package

ST. PAUL, Minn. — In a flurry of product announcements, NCR Comten, Inc. has introduced eleven models of its 3690 communications processor; software support for the models; the Automatic Message Switch; and the Comten Communications Access Method 3 (CAM3) Release 1.0.

Ten similar 3690 processors, Models A8 through E8 (NCR does not produce a Model B8), are configured with a minimum of 512K bytes of memory and can be expanded to 4M bytes. Depending on the model and features selected, up to 512 communications lines and up to 8 channel-attached hosts can be simultaneously supported. The models can be configured for standalone, front-end or remote communications environments depending on the model specified, the vendor said.

System software support for the models includes the company's System Control Software (SCS), Communications Operating System 2/50 (COS2/50) and COS2/90, the vendor said. Prices range from $105,000 to $156,000.

The eleventh model, the T8, has 512K bytes of memory with 128 communications lines and two channel-attached hosts. System software includes SCS and COS2/50. The price is $66,000.

The Automatic Message Switch (AMS), is reportedly the first communications application program in the data communications industry to reside in an IBM Systems Network Architecture (SNA)-compatible front-end processor.

The AMS adds store-and-forward message switching services to the networking capabilities of the company's 3690 communications processor systems. The application program manages data communications with predefined terminal sets and queues messages for delivery to other terminals or host-resident applications.

Recovery, restart, retrieval and journal-

Report analyzes buying stimulus, advances in PBX mart future

WELLESLEY, Mass. — Private branch exchange (PBX) switches are purchased for voice-handling capabilities such as least-cost routing, speed calling, call restriction and direct dialing, as opposed to advanced data-handling features, according to a report released here recently.

The study, titled "The PBX Industry: A Strategic Analysis," published by Venture Development Corp., reports that the factory value of U.S. shipments of PBXs is now in excess of $1.5 billion. In five years, the market will exceed $2.5 billion.

Researchers found that the stimulus for industry growth won't be the result of a desire to create an "office of the future," and that even in the case of sophisticated third-generation PBXs, advanced data handling capabilities are desired mostly as a hedge against the possibility that they will be necessary in the future.

Data capabilities a factor

This, the report said, makes data capabilities a factor considered in selecting the specific supplier and model, but is not a factor in deciding whether or not to buy a PBX.

Researchers concluded that the office of the future evolution will proceed gradually, and Venture does not believe there will be a sudden, overwhelming demand for the new PBXs. Instead, the research company forecasts moderate growth. The more important technological advances are going to be made in the voice/data PBX field, rather than in the data-only PBX market, according to the report.

Data-only PBX sales are concentrated where large amounts of data are transferred in large companies, the report stated. They are sold to the department within the user company that also purchases local-area networks — the data processing group.

Eventually, there will be increasing integration of voice and data responsibility, the report continued, but it is unlikely that in the next few years those responsible for voice communications are going to add another PBX and a new system of interconnection unless the volume of data to be handled makes the combined cost of a voice-only and data-only PBX much cheaper than a voice/data PBX.

Venture believes that, for the next five years, sales of data-only PBXs will come from market niches that would not have been occupied by voice/data PBXs in any case.

The report is priced at $2,700 and is available from Venture Development, which is located at One Washington St., Wellesley, Mass. 02181.

BGS SYSTEMS FOR DP MANAGEMENT

COMMUNICATIONS

COMMUNICATIONS CONTROLLERS

DATAGRAM, INC.
DM2200B with Softswitch

Datagram, Inc. has announced the DM2200B communications processor with Softswitch, a system which enables Burroughs Corp. computer users to switch individual terminals selectively from host to host without affecting other terminals.

A single DM2200B with Softswitch can support a cluster of 40 terminals in the same location on multiple terminal direct interface strings. It can also support multiple RS-232 synchronous links to host computers in several other locations, the vendor said.

The communications processor with Softswitch completes the existing Datagram network architecture. Prices range from $16,000 to $21,100, depending upon configuration.

Datagram, 11 Main St., East Greenwich, R.I. 02818.

VOICE/DATA COMMUNICATIONS

M/A-COM, INC.
CP9000 Series II

M/A-COM, Inc. has announced the CP9000 Series II network node for applications such as packet- or message-switching networks.

This series utilizes a multimicroprocessor architecture capable of supporting several thousand communications lines for value-added network applications. It features some redundancy for fault-tolerant operation and security options.

Software for the series includes an X.25 packet-switching network along with routing, statistics, billing and network management and control features. Prices for a stand-alone system range from $15,000 to $250,000.

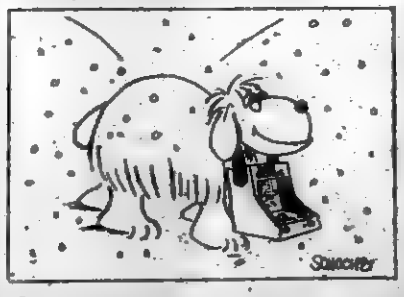
M/A-COM, 11717 Exploration Lane, Germantown, Md. 20874.

ADVANCED FIBEROPTICS CORP.
AFL-100

Advanced Fiberoptics Corp. has introduced the AFL-100 fiber-optic data link, designed for low-speed (less than 200K bit/sec) applications.

The product provides modem-recognizable signals and allows loopback testing of the transmitter and receiver electronics. The link was designed for Cmos and transistor-to-transistor logic integrated circuits, supports asynchronous and synchronous serial data transmission and requires a single 5V power supply. The link consists of the AFT-100 transmitter and the AFR-100 receiver. The price per pair is $99.

Advanced Fiberoptics, 637 S. Hayden Road, Tempe, Ariz. 85281.



PROTOCOL CONVERTERS

DIVERSIFIED DATA RESOURCES, INC.
Security feature for Hydra II

Diversified Data Resources, Inc. has announced a security feature for its Hydra II direct channel-attach protocol converter.

The new feature automatically sends a logoff sequence to the host mainframe if the line drops during communication or if the user forgets to log off.

The eight-port unit costs $6,900; the 16-port unit is priced at $9,900.

Diversified Data Resources, Suite 7, 25 Mitchell Blvd., San Rafael, Calif. 94903.

ICOT CORP.
362 protocol converter

Icot Corp. has announced the 362 protocol converter, which combines protocol conversion, line concentration and terminal emulation to allow asynchronous Ascii terminals and personal computers to emulate IBM 3270-type terminals and printers.

The product employs three processors and offers throughput for applications such as personal computer-to-mainframe file transfer. Standard features include emulation of an IBM 3274 Model 51C controller operating with Systems Network Architecture/Synchronous Data Link Control protocol, 19.2K-byte host and terminal support, split-speed RS-232C or RS-422 interfaces for asynchronous terminals and personal computers, table-driven configuration control and a message broadcast facility, the vendor said.

The standard configuration includes one host port and 16 terminal ports. The price is $9,900.

Icot, 339 Bernardo Ave., P.O. Box 7248, Mountain View, Calif. 94039.

COMMUNICATIONS SOFTWARE

MORINO ASSOCIATES, INC.
T/M Online

Morino Associates, Inc. has announced T/M Online, which the company described as an interactive TSO monitor providing real-time access to

Continued on page 68

COMMUNICATIONS

Continued from page 66

current status and utilization of TSO.

According to the vendor, using terminal displays, T/M Online assists the data center manager, operations personnel and systems programmers in tracking TSO performance, service and work-load-related problems.

The T/M Online displays the TSO System Summary Display, Response Analysis Display, Workload Analysis Display, Command Summary Display, MVS Malfunction Analysis Display, Primary Options Display, TSO User Display and Error Display, the vendor said. The price is $6,500, with a $1,300 first-year renewal fee.

Morino Associates, 8133 Leesburg Pike, Vienna, Va. 22180.

DATANEX, INC.
Version 4.0 of Hasp+

Datanex, Inc. has announced Version 4.0 of its Hasp+ communications software for users of Digital Equipment Corp.'s PDP-11 and VAX series computers.

The new version of the software supports the DEC DMF32 combination board on VAX systems. This allows users to use front-end direct memory access (DMA) capabilities at speeds to 56K bit/sec. It also provides eight DMA asynchronous lines and a DMA line printer interface. For PDP-11 users, the software supports DEC's DPV11 synchronous interface on Q-bus machines.

Enhancements for VMS users include support for automatic dialing, including alternate numbers for the same site. A new host-mode functionality has also been added to allow VMS systems to act as the mainframe in a remote job entry network. The price is $5,500.

Datanex, P.O. Box 1738, Eugene, Ore. 97440.

EDUCOM
Dreams-Mailnet Interface

Educom has announced that a software interface for Mailnet, the company's international electronic mail network, is available with DCXX Software Service's electronic mail software package called Dreams.

The Dreams-Mailnet interface provides users of Digital Equipment Corp.'s PDP/11 series, running under DEC's RSTS, with a link to Mailnet. The interface allows users to create, send and receive messages directly and communicate with other users with no additional hardware or operating system modifications. The price for the package is $3,000.

Educom, P.O. Box 364, Princeton, N.J. 08540.

MULTIPLEXERS/ MODEMS

CODEX CORP.
9035 INP

Codex Corp. has introduced the 9035 INP 124-channel statistical multiplexer designed to operate in both point-to-point and multinode networking environments, including star and ring network topologies.

The network management and control capabilities of the multiplexer include performance monitoring, statistics gathering and reporting and execution of a set of local and remote diagnostics. These functions can be centralized at one site or distributed to many nodes in a network, the vendor said.

The product accommodates any mix of asynchronous or synchronous data rates and terminal types and offers additional error protection and data compression features. Standard asynchronous speeds include 75, 100, 300, 600, 1,200, 2,400 and 4,800 bit/sec, while standard synchronous data rates include 1,200, 2,400, 3,600, 7,200 and 9,600 bit/sec. The multiplexer's maximum aggregate channel data rate is 19.2K byte/sec, the vendor said.

The basic configuration includes 16K bytes of random-access memory and supports eight channels. The price is $4,500. Units will be available in April.

Codex, 20 Cabot Blvd., Mansfield, Mass. 02048.

GANDALF TECHNOLOGIES, INC.
PIN 9101E

Gandalf Technologies, Inc. has announced the PIN 9101E, an enhanced version of the company's Private Intelligent Network (PIN) 9101 X.25 packet-switching multiplexer.

The enhancements include automatic speed adjustment; Hewlett-Packard Co. protocol support for enquiry/acknowledgement block-mode terminals; X.28 support to allow the user to control his own asynchronous channel configuration; aggregate input rate of 57.6K bit/sec; full break handling; and enhanced remote profile selection, the company said.

The product functions as a network starter kit and provides access to public X.25 networks and provides a packet assembler/disassembler function for private X.25 networks, according to the vendor.

The product is available in 4- or 8-channel stand-alone or 4- to 16-channel rack-mounted versions. Prices range from $2,650 to $5,250.

Gandalf Technologies, 1019 S. Noel, Wheeling, Ill. 60090.

GANDALF DATA, INC.
Sm/LDS 349

Gandalf Data, Inc., a subsidiary of Gandalf Technologies, Inc., has introduced the Sm/LDS 349 miniaturized synchronous short-haul modem, which operates over nonloaded, twisted wire pairs at speeds up to 19.2K bit/sec within a range of 3 to 6 miles.

The modem is designed to plug directly into terminals with RS-232C, V.24 or V.28 interfaces, personal computers and other data terminal

VMTAPE

"In only one day VMTAPE has changed my tape situation from total chaos to total control."™

VMTAPE—A comprehensive tape drive and tape volume management system for the VM environment.

- Manages tape volumes and tape drives
- Saves data from being clobbered inadvertently by offering standard label tape support
- Provides easy management of tapes with duplicate or non-standard tape volsers
- Reduces operator tasks for each tape mount from 8 to 2 by transferring decisions to VMTAPE
- Services multiple requests concurrently
- Uses a multilevel authorization scheme
- Provides roll forward recovery through an audit file
- Requires no mods to CP or CMS

"The office automation I bought for everyone in the corporation doesn't incorporate everyone."

Exxon stops the shock...with fully integrated office automation for everyone in the corporation.

Introducing the Exxon Business Support System.

An office automation system that can't support everyone in your corporation can lead to some very shocking experiences.

The right power to the right people

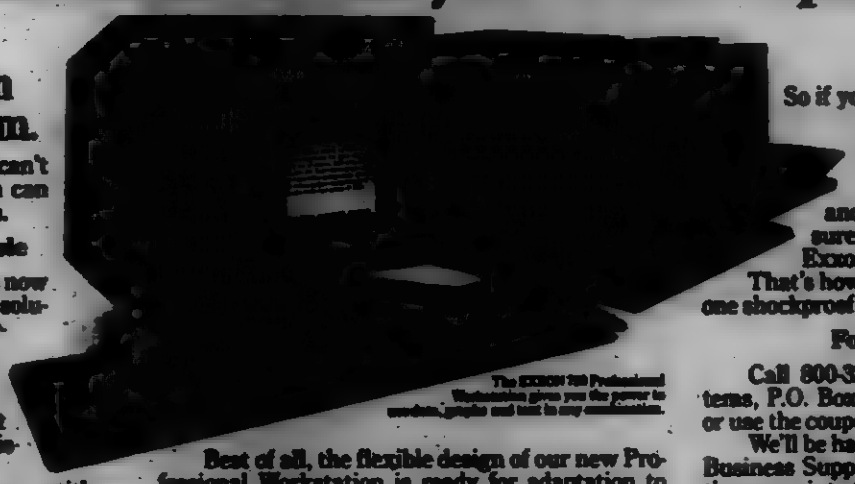
That's why Exxon Office Systems now offers more practical office automation solutions that help everyone in the corporation to be more productive. With the Business Support System, Exxon extends its fully integrated line of office automation products to support managers, professionals, and administrators, as well as secretarial staff.

Exxon puts it together for everyone with a fully integrated system — with full communications flexibility that lets you access outside data bases and interact with most mainframe computers. Without the complications. Without the shock.

Office automation for those who shape the corporation

The Exxon Business Support System features the new EXXON 750 Professional Workstation, specifically designed with powerful, integrated software that lets you move instantly from text to graphics to data processing — without changing programs.

You can divide the high resolution bit-map display into several windows and work in a number of functions simultaneously. You can shift information from one window to another. You can preview the page layout, and produce an integrated text/graphics document on our quiet EXXON 965 Ink Jet Printer. Or on a color plotter.



The EXXON 750 Professional Workstation gives you the power to combine graphics and text in any combination.

Best of all, the flexible design of our new Professional Workstation is ready for adaptation to the most popular operating systems and network interfaces.

Tying everyone together

At the core of the Business Support System is the EXXON 8400 Series controller. With its UNIX*-based operating system, it can integrate all levels of workstations to share information and programs. Everyone can keep track of schedules and meetings with time management and calendaring functions, whether their workstation is an EXXON 500 Series Information Processor or a new EXXON 750 Professional Workstation. And everyone can send and receive messages easily with transparent electronic mail.

An expandable, shockproof family

Exxon protects your office automation investment by making every workstation — from the EXXON 500 Series to the new EXXON 750 Professional Workstation — fully expandable and upgradeable.

So if you've already begun an Exxon system, the latest Exxon advances are completely compatible with our current product line.

And with our worldwide sales and service organization, you can be sure that when you need assistance, Exxon will be there.

That's how Exxon incorporates everyone—in one shockproof family.

For more information

Call 800-327-6666, write Exxon Office Systems, P.O. Box 10184, Stamford, CT 06904-2184, or use the coupon below.

We'll be happy to demonstrate how the Exxon Business Support System can help your corporation move into the future... without the shock.

EXXON OFFICE SYSTEMS

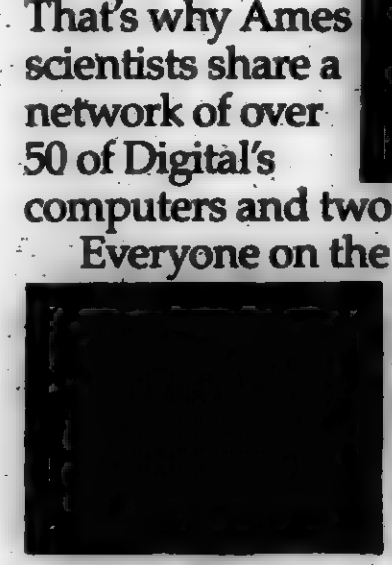
The future...without the shock.

At NASA's Ames Research Center, hundreds of scientists share hundreds of programs on one large computer network:

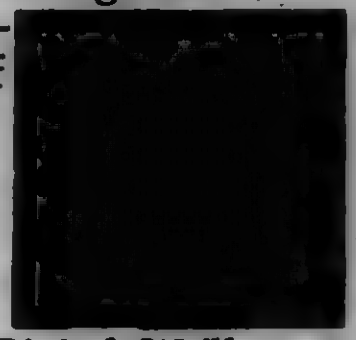
Digital's.

Aircraft design. Space biology. Computational fluid dynamics. Infrared astronomy. Interplanetary exploration. At NASA's Ames Research Center, the technology couldn't get more advanced. That's why Ames scientists share a network of over 50 of Digital's computers and two large mainframes.

Everyone on the Ames network has access to almost every computer on it. Researchers share not only data, but software, utilities, and peripherals as well. A program written anywhere is often useful everywhere on the network, so there is practically no duplication of effort and almost no need to retrain users when new programs are added. The savings, in time and money, are substantial.



The Ames network is an open-ended system. It has grown from one computer to over 50 in just eight years, with minimal disruption of service during its continuous expansion. Thanks to Digital's compatibility, even across generations, it wasn't necessary to replace any of Digital's computers. They simply added to them.



So if you're considering a network,

talk to Digital. We'll show you how you can start as small as you want. And grow as large as you need.

digital™

COMMUNICATIONS

NCR from page 63

ing functions are supported. Network users can also, without knowledge of the network configuration, reach any application on any host in the network and can access host and AMS applications in multinetwork domains, according to a company spokesman.

Data-sensitive routing, terminal-to-terminal communications and network security are also supported under AMS.

AMS is the first communications application program implemented with the newly announced CAM3 Release 1.0. The CAM3 allows users to implement value-added features, like AMS, and future communications within an SNA environment, the vendor said.

For store-and-forward message handling, AMS supports IBM 3330/3350 or compatible disk units. Terminal devices supported with AMS include TTY 33/35, 2741, 3270 Bisynchronous, 2780/3780 Bisynchronous, 3270 SNA and 3767 SNA. AMS also supports communications with IBM SNA host applications and pre-SNA host applications, the vendor said.

The price for AMS (which includes CAM3) is $945/mo. The individual price for CAM3, for users who write their own applications, is $360/mo. These two products will be available during the fourth quarter of 1984, according to the vendor.

Additional information can be obtained from NCR Comten, which is located at 2700 Snelling Ave. N., St. Paul, Minn. 55113.

NTEC from page 63

Plans were also made to have a national telecommunications education conference to formalize and finalize the plans.

Fees will vary

Funding for Ntec is proposed to come from membership fees and dues, which will vary for industry, educational institutions, faculty members, professionals and students.

A spokesman for the U.S. Department of Education said the government was committed to providing staff support in an advisory capacity to Ntec, as well as peripheral financial support in the form of computers, the establishment of data bases and so forth.

A spokesman for the ad hoc committee said that it is the goal of the committee to formalize the creation of Ntec by fall 1984.

CENTREX from page 63

telephone lines. Centrex users don't house any switching equipment or PBXs.

Typically, PBXs have trunking ratios of between 10% and 15%; that is, a single telephone line connected to a PBX will usually provide adequate support for 10 to 15 telephones.

With Centrex, every telephone must be supported by an individual line running back to a telephone company central office switch.

Herein lies the problem created by access charges.

An organization with a PBX that supports 1,000 telephones would use between 100 and 150 telephone lines. If that same company used Centrex, it would need 1,000 telephone lines.

The economics are easy to calculate. In the above example, the organization with a PBX faces access charges that may range up to $600 per month. The Centrex user, while he pays a lower access fee per line, will have to pay $2,000 per month.

And it gets worse. The Centrex access charges are slated to go up to $8 per line in 1985 for lines installed before July 27, 1983 and to $4 per line in 1986. Referring again to the example used above, by 1986 the Centrex user would be paying $4,000 per month, or $48,000 per year, in access charges.

Unless telephone companies can find some way to compensate users — by lowering rates, for example — many Centrex customers will consider installing PBXs.

Finally A Printer More Advanced than Your Software. Lear Siegler's VersaPrint™ 500.

Lear Siegler's new VersaPrint™ 500 Series printers – professional business printers for micros, minis and mainframes – utilize the full potential of your most sophisticated business software and are ready for even more.

Just one VersaPrint printer spans virtually all business applications: cut sheet letterhead correspondence, high volume continuous reports, financial spreadsheets and even complex color graphics. You can match the broad capabilities of such popular software programs as Lotus 1-2-3®.

You can have 72 x 72 and 144 x 144 dot per inch graphics for design applications on the same high volume, dot matrix printer that gives you 136 columns for reports and 224 columns for spreadsheets. All on an NLQ printer that's quieter than a typewriter.

VersaPrint printers connect to your system via RS232 serial interface or Centronics type parallel interface. You can run it at 180, 90 or 45 cps for draft, memo or NLQ quality. And it's so reliable, you won't have to change printheads for 1½ years.

Four VersaPrint models are available. To the basic Model 500, the Model 510 adds cut sheet feed, the Model 520 adds color printing, and the Model 530 adds both cut sheet and color. Short form tear bar option is available.

The VersaPrint Series is from Lear Siegler, world's favorite terminal manufacturer. It's backed by full service centers with walk-in Express Depot™ service, on-site service and extended warranty serving 3,000 cities nationwide.

Lear Siegler VersaPrint™ 500 Series printers combine with professional computers and/or Lear Siegler video display terminals for ideal workstations.

1-2-3 is a registered Trademark of Lotus Development Corp.

equipment. It operates at switch-selectable speeds of 2,400, 4,800, 9,600 and 19.2K bit/sec in controlled-carrier mode. At 2,400 bit/sec, the unit's operating range extends to 6 miles.

The modem meets AT&T 43401 and Bell Canada requirements for connection to private metallic circuits. The price is $295.

Gandalf Data, 1019 S. Noel, Wheeling, Ill. 60090.

TEST EQUIPMENT

INTERNATIONAL DATA SCIENCES, INC.
Model 61/90 EIA Tri-State LED Breakout Box; Analog Test Set

International Data Sciences, Inc. has announced the Model 61/90 EIA Tri-State LED Breakout Box and Analog Test Set, a battery-operated tester designed to troubleshoot both the digital and analog side of the modem.

The product provides access to all RS-232C and V.24 conductors at the modem-terminal interface and tests all leased or dedicated 2- or 4-wire telephone lines.

The product incorporates modem loop-back, self-test and modem eliminator simulation with terminal-modem interface and EIA interface monitoring, a vendor spokesman said. The price is $595.

The company also announced enhancements for its Hawk Model 4010 Datatrap and modem-terminal stimulator, which include full bit and block-error rate (Bert/Blert) testing as a standard feature. The unit costs $2,995.

International Data Sciences, 7 Wellington Road, Lincoln, R.I. 02865.

AUXILIARY EQUIPMENT

MICROLOG CORP.
Intelecom

Microlog Corp. has announced the Intelecom telex communications system, which allows users to access telex, TWX, Direct Distance Dialing, mailgram, telegram and cable. It can also be used to communicate with computers and word processors.

The system dials telex and TWX numbers and automatically negotiates the necessary protocols. It delivers a real-time or store-and-forward message and makes hard copy of all communications, according to the vendor.

System components include a keyboard, video monitor, high-speed printer, cassette tape storage system, work table and interconnecting cables. The price is $4,995.

Microlog Corp., Suite 116, 4 Professional Drive, Gaithersburg, Md. 20879.

INNOVATIVE ELECTRONICS, INC.
Data Collection System

Innovative Electronics, Inc. has announced the Data Collection System, a microcomputer-based data acquisition/supervision system.

The system provides the user with records of time and attendance, inventory control, patient-records accounting, positive-sample tracking (shipping and receiving), quality control and customer charge-back.

The system operates in either a stand-alone configuration or in conjunction with a host computer. The hardware components include the company's Netmaster — a 16-bit computer which may be connected to as many as 96 of the company's Transactor terminals.

The price for the system ranges from $10,000 to $50,000, depending on individual applications.

Innovative Electronics, 4714 N.W. 165th St., Miami, Fla. 33014.

FIBRONICS INTERNATIONAL, INC.
Coaxial Doubler

Fibronics International, Inc. has introduced the Coaxial Doubler, a connecting module that condenses the signals from any two ports of an IBM 3274 controller over a single coaxial cable and supports two IBM 3270-type peripherals.

According to the vendor, the Doubler can be installed by a user in minutes without special tools. It requires no external power. A pair of doublers is priced at $490 and can be delivered in 48 hours.

Fibronics International, 218 W. Main St., Hyannis, Mass. 02601.

PHILIPS ELECTRONIC INSTRUMENTS, INC.
Flexpac

Philips Electronic Instruments, Inc. has introduced Flexpac, a line of X.25 packet-switching equipment that includes a network management device, packet assembler/disassembler (PAD) modules and network switch modules.

The remote diagnostic and network management capabilities assist the end user in isolating line, terminal, host computer and equipment problems on a remote basis. The modules concentrate multiple asynchronous terminals to an X.25 network line. Models are available for use with seven or 15 asynchronous ports.

The network switch modules provide internal virtual circuit switching between all X.25 ports, as well as the routing, switching and number translation necessary to interconnect private and public networks with different capabilities and numbering plans. Prices range from $3,950 to $43,200, depending on configuration.

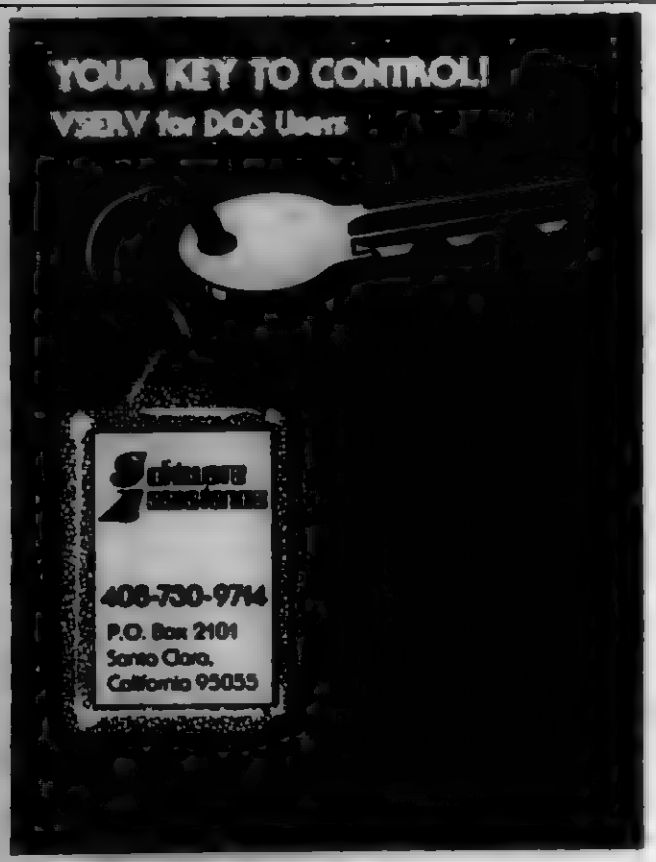
Philips Electronic Instruments, 85 McKee Drive, Mahwah, N.J. 07430.

ADM CONCEPTS, INC.
Commlock Model-96A

ADM Concepts, Inc. has announced the Commlock Model-96A, an asynchronous data encryption device that is connected between a terminal device (CRT or printer) and a communications device (modem, multiplexer port or computer port) via an RS-232C interface.

It also provides separate encryption codes for the transmit and receive paths. Commlock is programmable for data rates of 300 to 9,600 bit/sec, selectable word length (5-8 bits), parity and number of stop bits, the vendor said. The unit costs $600.

ADM Concepts, Suite 301, 1445 Los Angeles Ave., Simi Valley, Calif. 93065.



When you're ready to talk to DEC* with your IBM 3278, talk to NPI about getting attached to a PCI 74D deconverter.

It will get you everywhere!

When you can no longer stand being cut off from the rest of the world because you have an IBM 3278, come to NPI for a PCI 74D deconverter.

When the time comes that you want to talk to DEC, or check in with the Dow Jones™ News/Retrieval Service, or contact your Local Area Networks, or whatever, talk to NPI first.

Mart emerging for user-controlled nets

By Ken Krechmer
Special to CW

Fifteen years after the Carterphone decision, many companies provide communications equipment for the user's site, and many carriers provide a system for site-to-site communications as well as competing for on-site communications requirements. Now, a new generation of equipment is moving into the marketplace that allows the user to own (control) his local-area communication facilities.

Descriptors such as local-area network, local computer network, establishment network (by IBM) and local-area distribution describe the equipment, software and service provided for intrasite communications that are not required to be supplied by a common-carrier. When communications of data or voice, up to and including the day of the modem and handset, was supplied by the common carriers, terms such as local-area network were not required; the common carrier supplied it all.

From the user's perspective, networks that are not common-carrier-supplied have a key distinction — the user completely controls them. Obviously, user-controlled networks can be desirable or unworkable, depending on the user's resources and technical capabilities. The last 15 years have proven that customer-controlled networks are very desirable to many users.

The market for customer-controlled networks has been emerging since 1968. First, companies such as Racal-Milgo, Inc. and Codex Corp. began to provide the equipment to allow customers greater control of their common-carrier-supplied leased lines. Then, companies such as Rolm Corp. and Northern Telecom, Inc. began to provide private branch exchange (PBX) systems to allow customers control of their local voice-switching equipment.

Now these companies and many others are offering systems and equipment to integrate the customer's control of voice and data wherever a common carrier facility is not required or to provide expanded customer control where common carrier services are utilized.

The broad range of potential customers and the unique requirements of each customer have generated a large, expanding range of products and services for the customer-controlled network market. Looking at the different products in historical perspective may provide a better view of future possibilities.

PBXs have emerged as a new form of star network for data communications for two underlying reasons. One is the ability to connect non-common-carrier-supplied devices to all PBXs. In 1976 the Federal Communications Commission implemented Part 68 — registration for direct connection — allowing users to connect modems directly to common carrier facilities, including common-carrier-supplied PBXs.

The other reason is the dramatic increase in the cost of installing cable of any kind, due to more extensive regulations of all kinds (fire codes, unions, FCC Part 15 and so forth) and rapidly rising labor costs. PBXs are the most common form of star networks.

As more and more PBXs are customer owned, new features are evolving to allow data communications on this traditionally voice communications device. The evolution is taking two major directions. Companies such as Teltone Corp. offer the ability, using FCC-registered interfaces, to connect to any common-carrier-supplied or non-common-carrier PBX and transfer data up to 9,600 bit/sec over the same wire pairs that are being used for phones, even, cleverly enough, while the phone is being used for voice.

The Teltone approach requires the use of external port switching (similar to line drivers) for terminal-to-terminal communications. A new generation of PBXs is completely digital and therefore allows for data transfer, including port switching, as an inherent part of its design.

Manufacturers such as Rolm and Northern Telecom are currently manufacturing these digital PBXs. All of these products represent direct competition to line drivers in the local network area, as they provide star networks of similar or greater data rates without the necessity for running separate wire pairs.

Further, these PBXs are the natural extension of line drivers and port switches, combining the data handling capabilities of line drivers and port switches with the voice handling capabilities of PBXs to give the user more features, more control and lower total system cost.

Standards developing

Communications, by definition, is a technology that requires standardization to be able to function. The lack of comprehensive standards and the broad array of noncompatible products has been and continues to be the basic problem hindering the growth of customer-controlled networks. The Consultative Committee on International Telephony and Telegraphy (CCITT) and the International Standards Organization are developing comprehensive interfacing standards.

Starting with its Open System Interconnection, which specifies the seven levels of protocol necessary to achieve application-to-application communications compatibility across an interface, CCITT has developed detailed standards for five of the necessary protocol levels.

The CCITT X.25 standards describe the implementation of five levels of communications compatibility, but still leave unspecified the application and presentation levels. In the U.S., the Institute of Electrical and Electronics Engineers (IEEE) 802 Standards Committee is also working on standards for networking, and drafts are currently being reviewed. The European Computer Manufacturers Association (Ecma) is also currently working on a local network standard.

As these standards are completed and the implementation is worked out, the problems the user faces in choosing a communications networking approach will become somewhat more reasonable. Unfortunately, many users are hanging back waiting to see if vendor-sponsored standards will become generally utilized or if CCITT, IEEE or Ecma standards emerge with wide acceptance.

This state of affairs means the dominant manufacturers effectively force their own standards on their user community. In this environment (lack of broad, accepted, implemented standards), the user community is holding back its commitments to new forms of customer-controlled networks as long as possible. This is not a realistic approach.

IBM users have generally accepted Systems Network Architecture (SNA), probably because of a lack of other alternatives, but are still waiting to see the total range of products supported. The Xerox Corp. Ethernet implementations, which are gaining in number, also have a realistic chance to succeed in the marketplace. Xerox should be applauded in the user community for offering a broad licensing approach to allow many manufacturers to develop products, not maligned for failing to produce the perfect network, because there is no such thing.

Between the very broad, de facto SNA standard and potential local-area network standards such as IEEE 802 lies a wealth of usable technology and capabilities. AT&T and IBM are planning to produce new implementations of local-area networks. Emerging companies such as Metapath in Foster City, Calif., and Interlan, Inc. in Westford, Mass., offer low-cost, user-oriented networking approaches.

The organization striving to implement customer-controlled networks for current and future requirements has no reason to believe that it can or should pick one vendor or networking system.

Rather, the current technology and the standards environment suggest that networking equipment should be chosen based on the best combination of hardware, software and support available to solve the current needs. So long as the hardware and software selected offer clear interfaces to allow connectability to future systems, expansion will not be sacrificed. Nor will it be simple.

Single-vendor solutions are not going to predominate in the world of customer-controlled networks. Customer-controlled networks is the direction that users have asked for. Now, with the AT&T divesture, it is the direction they will have.

Krechmer is product architect at Prentice Corp., Sunnyvale, Calif., and is a principal in Action Consulting, a sales and marketing consulting firm specializing in the development of data communications products and markets.

SPECIAL REPORT

Network evolution: Putting it in perspective

Growth of strategically important DP sector

By Ronald M. Gnoinka
Special to CW

Data communications is emerging as one of the most strategically important sectors within the information processing industry. One of the critical reasons for this trend is that data communications enables a global exchange of information. There are no bounds to it, and its functions are worldwide, driven by reasons of profit and even national security. As a major element in today's expanding business and data processing environments, data communications provides a cost-effective way to do business on a global scale (see story on SR/4).

To understand the current and emerging capabilities in today's data communications networks, we need to put in perspective the network evolutions that have occurred in the last 20 years.

The first networks occurring during the '60s basically connected a terminal operator directly to a host computer. All facilities were dedicated. The terminal — local or remote — the communications processor and the host were all dedicated to the application. As a result, initially only large applications such as an airline reservation system could justify and afford to use communications.

In this initial phase, there was little real networking activity as we know it today. There was a direct point-to-point connection, with the lines directly attached to the system, and no interaction among multiple computer systems. In this environment, the implementation was done with hard-wired controllers and multiplexers. If, for example, an aircraft maintenance worker wanted to get at some information being maintained on the reservation application, he needed his own terminal and his own set of facilities.

Networks of the '70s

Progress was made very quickly to eliminate some of these shortcomings. In the '70s, for example, a significant amount of networking activity was introduced. First of all, communications were provided between multiple host computer centers, basically the first networking function that took place. The next development was to attach remote processors out in the network to provide some form of sharing or concentration. This first level of networking in the '70s included a form of concentration within the networking capability, trunking, line switching and support for multiple host processors. In other words, we had implementations that provided a network.

The concept of trunking, which connected lines between network nodes, was introduced in the '70s. The reasons for this capability are many. With a set of multiple circuits, there is a limit of some fixed bandwidth — whether it is 9,600, 19.2K up to 56K bits — that can be economically acquired from a common carrier. But if multiple circuits or a large bandwidth is needed between multiple locations, the user will have to install multiple links.

The first concept of trunking was to take the multiple links between nodes and group them as a trunk. The resulting combined bandwidth would allow the addition of the individual line capacities and would provide a basic trunk bandwidth between two nodes. Data now could flow on multiple links between the nodes without being dedicated to one physical link.

In addition to increased bandwidth, trunking provided some reliability and some fallback. If a line was getting a high error rate, for example, or was put out of service, there would be an automatic fallback to the remaining circuits on that trunk, with no disruption in service other than, possibly, diminished response time. Service, however, was still maintained between the network nodes.

As a second major capability, the concept of alternate routing was introduced. In a multiple-node network, alternate routing allowed the user to design the network to have an alternate path through some other node in the network. It provided for a fallback method of continuing to communicate when a major catastrophe occurred, such as a large set of circuits disappearing because a microwave station was destroyed or a facility was damaged. The trunking concept, then, provided for this level of capability in the '70s.

The next major element was data concentration. Data concentration was introduced to increase the utilization of the bandwidth or to utilize the bandwidth in an optimal fashion between nodes in the network. The underlying principle was to avoid loading the network with unnecessary traffic that was not real data traffic. As a result, data concentration allowed the remote processor to control the terminal. Once the real data was obtained from the terminal, the data was then transmitted through the network to a front-end processor to the host application. That form of concentration basically increased bandwidth utilization, specifically the long-haul bandwidth that has always been expensive.

Also introduced in the '70s was terminal-initiated line switching. Early networks used dedicated terminals and lines directly attached to the application. Terminal-initiated line switching allowed the terminal user to select different applications in the network. As a result, the user could make more efficient use of the terminal and the lines in the network.

In the airline reservation system, for example, maintenance personnel could use the same reservation terminal to get some maintenance information on a flight.

The concept of multiple host processors also became important in the '70s as the environment grew too large to be supported by individual processors. With multiple processors existing in a single large data center, terminals now had to access more than one host. This concept again allowed for the sharing of the network, getting the network attached to different applications and different hosts.

As we move to the networks of the '80s, progress is continuing. We now have regional data centers existing in networks, which are utilizing all forms of common carrier and local facilities. The attachment of public data networks is being provided for and even being used for part of the trunk bandwidth between nodes within the network.

The technology of the '80s is diverse. There are many competing technologies for local-area networks, and which ones will win will take some time to determine. But the connections will have to take place in the future. The important issues in networks in the '80s include packet and circuit switching, session switching, transaction switching, the introduction of satellites, gateways, the attachment of the local-area network and the trends toward IBM's Systems Network Architecture.

The concept of circuit switching through a data communications network is one involving a dedicated

SPECIAL REPORT

Trends signal future evolution of networks

SNA, public nets, micros, data centers seen significant

With the evolutions in networking, some questions arise: Where do we go from here? What else can the communications product vendors provide, and where is networking going? Some industry trends are emerging to provide answers to those questions.

One of the major considerations is that migration to IBM's Systems Network Architecture (SNA) protocol is occurring at a rapid rate. It is predicted that by 1985, 80% of all large IBM information processing systems will be performing some form of SNA communications. For the total IBM user base, SNA communications is predicted to reach around 60% to 65%. SNA is becoming a standard, and any networking plan has to consider this in its communications solutions.

Public data nets

Another consideration is the growth of public data networks, which are becoming a major factor in communications. One of the unique characteristics about public data networks is that they are based on an international standard — CCITT X.25. What we see happening throughout the world is that major countries are establishing networks based on X.25. With this common base, those countries can interconnect and communicate.

Countries around the world are establishing networks, and these networks, in many cases, are available today through the different postal, telegraph and telephone organizations. Japan has networks to which organizations can subscribe; the network in Australia is under development; in Europe, each major country is providing a packet network capability.

In North America, one of the first networks provided in the world was Datapac in Canada, and Bell Canada was an early promoter of packet network capability. In the U.S., a number of vendors provide packet network service, and in the future, AT&T will be able to provide a basic packet-switching service.

All of this means worldwide X.25 capability based on an international standard and organizations adopting that standard with very little modification.

Large data centers

Another consideration is the expansion of large data centers. In the last three or four years, we have seen a yearly expansion rate of over 50% for the host processor cycle required to do an application. This demand is mostly being driven by the requirement for on-line communications and the processing of the new information that the data communications network is putting on the host data center.

One of the reasons for this continued growth is declining costs. The cost per one million instructions per second has been reducing continually in the last 20 years, and it will still continue to decline.

Technology is also providing for this expansion in the data processing environment. By 1985 or 1986, organizations will be able to get an integrated circuit with 500,000 transistors. That half-million-transistor chip will occupy less space than the first transistor, developed just 30 years earlier.

Using new technology

We are also seeing the research organizations in major companies investing major resources to use this new technology. Their efforts in many cases are directed toward the information processing environment and the handling of data communications.

Finally, the personal computer will have a major impact on future communications networks. In 1983, approximately two million units were shipped, and we are approaching the point where micros will exceed the shipment rate for CRT terminals. The personal computer is now becoming the new information-handling device of choice.

By 1987, the expected annual shipment rate is seven million personal computers, with an anticipated installed base of approximately 50 million devices. Combine the CRT terminals that exist today with shipments of personal computers, and the figure will be close to one-fifth of the installed base of the telephone.

All of these trends are feeding the demand for on-line applications and networking capabilities ranging from local to global levels. In essence, these trends are moving data communications into the forefront of the maturing information processing industry. Advances in data communications will be integral to the future expansion and growth of the world economy.

Finally, the definitive for reaching today's data communications

It's called ANI™—Advanced Network Integration. From Infotron.

ANI is a definitive path for network growth and management that's reflected in a family of data communications products and services.

It gives you something you haven't had before—the means to plan and implement a data communications network based on long-term strategy.

ANI covers everything we make—from simple modems to stat muxes, to high-speed muxes, to network concentrators, to intelligent data switching systems.

ANI also includes everything we do. Systems engineering, from technical support to turnkey operations. Installation. Training. Telephone consultation and dialup online diagnostics. And worldwide field service.

Growth.
ANI products grow with you.

They're based on an architecture that's simple to expand and upgrade.

Because ANI products can be expanded both in size and function, they're easily integrated into larger, more complex networks. They grow with you instead of becoming obsolete.

Flexibility.
ANI products are versatile.

They can accommodate computers and terminals with almost any combination of protocols and speeds.

And because of their modular structure, ANI products will accommodate bridges to other networks, and gateways to public and private resources.

SPECIAL REPORT

Greatest risk in resource sharing: technology

By Gautam Gupta
Special to CW‡

"Networking" has been a boon to buzzword bards and jargon generators for more than a decade. Today end users are lost in a forest of local-area networks, carrier-sense multiple access with collision detection, token passing and ring topologies.

This networking problem has become more acute with the spread of microcomputers to managers and professionals who operate without a technical training base. The problem is best defined as resource sharing, rather than, in jargonese, as networking.

In this environment, how can end users assess the risks and costs of resource sharing and select a product appropriate for their needs?

How can multiple users economically share valuable computer resources? The resources that could be shared are fairly straightforward. One resource, for example, is data stored in files. Through networking, different users can conveniently access this data.

Thus, the needless replication of data for each user or application can be avoided. Hardware devices are also resources that are commonly shared by a number of users. It would be wise to share, for example, letter-quality printers and Winchester disk drives, the cost of which is often in excess of the cost of the basic microcomputer.

The greatest risk in selecting a resource sharing product is technology. Today there are no standardized resource sharing products. The multiplicity of vendors spawned by the rapidly changing computer hardware environment — mainframes to minis to micros — has made such a standard elusive.

End users should look for a resource sharing product designed to minimize organizational and operational changes needed to implement resource sharing. Because these changes bear significant costs, do not select a resource sharing product that alters the microcomputer environment just to fit a so-called standard. With some investigation, a product that most easily fits the existing framework can be found.

End users should examine whether the product was expressly designed for microcomputers. Products that have been a blessing for mini and mainframe resource sharing have not been designed for microcomputers.

Extrapolating risks great

The risks in extrapolating what works in one computer environment and applying it to another are great. Remember, what is cost-effective for mainframe and minicomputer resource sharing systems may be expensive for microcomputers.

It is risky to embark on a broad-based resource sharing system. Gradual implementation of resource sharing on a trial basis has had good results. Because resource sharing requires significant changes, starting small minimizes the surprises.

The most obvious costs of implementing a resource sharing system are the product costs and the additional costs for wiring and cabling. Additionally, while some resource sharing products also serve as managers of the resource sharing system, others require dedicated servers.

A dedicated server is a microcomputer that has been selected to act as a resource sharing traffic director. It will no longer be available as a workstation. This opportunity cost must be factored in.

First, when examining a resource sharing product, consider the resources the system will support. Disks and printers are commonly shared, but also consider gateways and communications devices to other networks. Gateways are, for example, modems for communication via telephone and micro-to-mainframe communications capabilities.

Does the resource sharing vendor have these other products as part of his product line? If he does, then one-step support and compatibility are guaranteed. If he doesn't and he promises compatibility with multiple vendors' products, then think twice.

By choosing a vendor that offers a broad, fully integrated product line, the risks of resource sharing are reduced. And, more importantly, the resource sharing product may be easily upgraded to meet increased needs due to growth. The ability to upgrade is a basic tenet that should always be kept in mind during the selection process.

Second, user access should be examined in the resource sharing system. File locking, which governs a user's access to files, can be divided into two levels. On one level, file locking is necessary for setting up arbitration logic within resource sharing. This feature is used to delineate who has access to files first, second, third and so on.

The other level of file locking is necessary for security purposes. All files should not be available to all users. A resource sharing product

Infotron communications networking. First in performance and reliability.

NETWORK from SR/3

work is one involving a dedicated path. Point A communicating with Point B, for example, has a dedicated path through the network where the data is transmitted, and nothing is done on the traffic itself. But A can, in fact, establish a connection between different points in the network. Once that is established, data flows directly on that path.

Packet switching, however, changes the concept somewhat. With packet switching, the same connection from A to B forms a virtual, not a dedicated, path. The facilities are not dedicated to that particular connection. Instead, bandwidth is allocated when data needs to flow from A to B, and packets of information move between those particular nodes from

Network characteristics

the origin to the destination end points. Packet switching also allows for network load sharing. If a node becomes congested and slows response time, alternate paths through the network can be utilized to ensure fast response time.

One of the key elements in the networks of the '80s is session switching. Session switching is an extension of the terminal line-switching concept. Where there are multiple devices on a circuit, session switching allows each individual device to have a particular path through the network. As a result, one terminal on a particular line can talk to one application, while another terminal on that same line can talk to a different application.

Another development in the networks of the '80s is satellite networking. One of the key elements in networking is the continually high demand for bandwidth between multiple locations, and the satellite capability is providing for a more economical method to provide that bandwidth. It is another form of communications that in certain environments provides an economical implementation of long-haul communications.

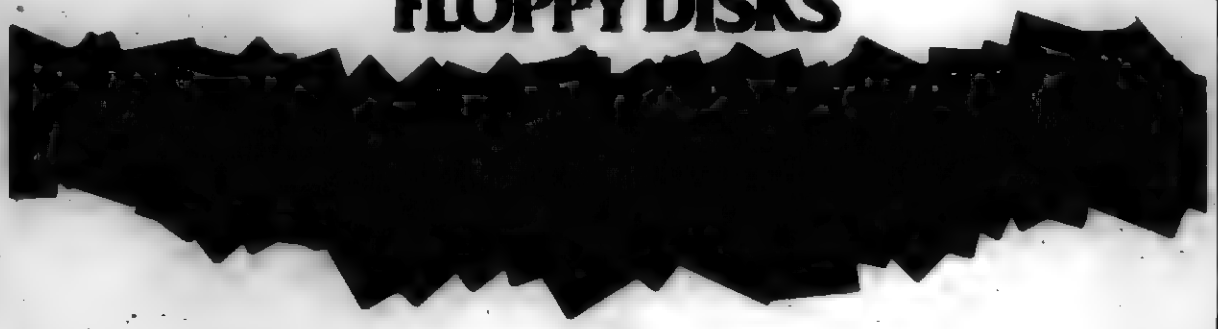
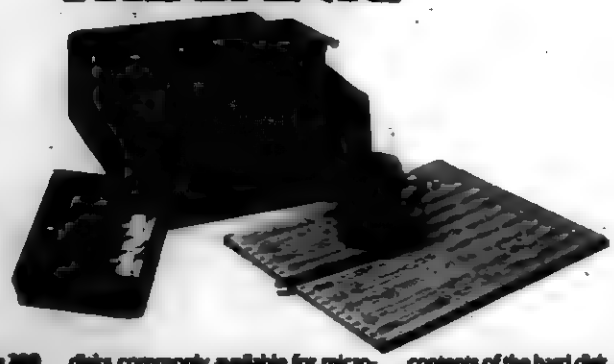
1000
FLOPPY DISKS



VS.
THE BANK.



Savings you can take to the bank 200 MB only $2,195. CORVUS is proud to introduce the BANK.

It's the most dramatic breakthrough in low cost, high capacity mass memory systems since CORVUS introduced the Winchester disk for microcomputers in 1979.

The BANK's removable tape cartridges hold up to 200 megabytes of information. That's equal to 1000 double density floppies or 10 times the capacity of the largest hard disks commonly available for microcomputers. You can use the BANK to complement a Winchester disk. It has 19 times the capacity.

And the BANK's cartridges are removable for unlimited capacity and storage.

On-line archival back-up you can bank on. You can use the BANK as a random access archival device. If your Winchester disk fails, you can restore selected volumes without having to restore the entire contents of the hard disk.

The BANK is the perfect solution to your back-up storage problems as a shared storage device on OMNINET™—the leading Local Area Network for microcomputers.

Call CORVUS for the name of the dealer nearest you. We're sure you'll smile....all the way to the bank.

For more information contact: CORVUS SYSTEMS, 2100 Corvus Drive, San Jose, CA 95124, 1-800-4-CORVUS.

CORVUS
THE NETWORKING COMPANY

The BANK connects to various brands of microcomputers using OMNINET Local Area Network TRANSPORTER™ interface cards. The BANK is currently available for the CORVUS CONCEPT™ and the IBM PC™. SHARING from SR/5

should accommodate restrictions on file access.

Additional security features to look for include the use of passwords, the ability to create private files, the ability to divide disks and record locking. A record-locking feature can help improve system performance. Two users can access the same file, but use different records.

Vendors making claims of strict record locking should be closely examined. The structure of some microcomputer operating systems prohibits record locking.

Discern whether it is through changes in the application software, not the resource sharing software, that record locking will be implemented. Manipulating an operating system to accommodate a record-locking feature can lead to future systems incompatibility.

Third, when assessing a resource sharing product, examine the language interface. Is the language of the resource sharing system an easy-to-use extension of the system commands already in use? Or will the resource sharing product require its users to learn an entirely new interface language?

Fourth, don't be overly concerned with promised transmission speeds when examining a resource sharing product.

Instead, be concerned with functional speed. Keep in mind how fast the microcomputer currently transfers a file to a printer or disk.

If a demonstration of the resource sharing product is available, assess system response time. Then apply that to the environment in which it will be used. A good resource sharing product should not perceptibly slow down the microcomputer's functional speed. Forget about theoretical claims, and look at system performance.

With these risks and benefits in mind, a resource sharing product can be selected wisely. The added value of utilizing resource sharing will undoubtedly lead to a more productive and, therefore, a more competitive business.

Resource sharing, if properly chosen, can be the boon to business that it has been hailed to be.

Gupta is president of IDE Associates, Inc., a designer and manufacturer of a line of peripherals for the IBM Personal Computer and Personal Computer XT.

SPECIAL REPORT

Some users opt to base local net on PBX

By Gary L. Alpert
and W. Edward Thomas Jr.
Special to CW‡

A common question asked by many organizations is "What is my best choice for local-area networking?" Unfortunately, in many cases organizations do not effectively examine and define their true needs before making a decision. Quite often, networks are established and then only after the die is cast are user applications examined and actual data communications needs clearly defined.

The advent of local-area networks has been primarily spurred by the needs of staff professionals and managers. Thorough answers to a few key questions can greatly change the makeup and often reduce the cost for a fully effective local-area network. These questions include:

- Is the data to be accessed located on the mainframe computer, another user's microcomputer or a public data base?
- How often is the data accessed, for how long, by how many users and to how many devices?
- Are the communications requirements primarily from user to computer or user to user?

Staff professionals and managers require access to multiple caches of information, regardless of the type of computer device that contains the information. They are often part of the personal computing explosion, using personal computers for information gathering and manipulation. This data for decision making is contained in many computers, and greater speeds are required for file transfer of such documentation.

One type of local-area network that is receiving increasing support is that of the digital private branch exchange (PBX). Why such increased popularity? First, organizations have seen the efficiencies of owning their own telephone and communications systems.

Most presently being purchased and installed are purely digital due to their obvious benefits, and the cost of adding data communications hardware and software is usually quite reasonable.

The leading-edge vendors can provide connections at a cost of $500 per asynchronous device and $900 per synchronous device, which compares quite favorably with a connection cost for a broadband or baseband coaxial network. Broadband networks require a fixed-frequency or frequency-agile modem, and baseband networks also require a specialized interface such as the transceiver in the IEEE 802 or the Xerox Corp. blue book Ethernet specification.

Added to the cost per connection in such a network is the coaxial cable cost, which can be anywhere from [illegible] to $7 per foot. With a digital PBX local network, the cost of the twisted pair is usually absorbed with telephony installation, which runs about 20 cents a foot per twisted pair.

In addition, most digital PBX connections for terminals and computers only require an accepted electrical interface such as RS-232 and RS-449 providing level-zero transmission compatibility with almost any vendor.

Some PBX vendors with purely digital systems enable transmission over the same wiring simultaneously with voice. Signals are transmitted in some manner of statistical or frequency multiplexing along with voice and control signals.

Other vendors transmit over a dedicated pair for data transmission, using one pair for transmitting data and one for receiving data.

What other benefits can PBXs provide to the data communications user? Certainly, in a large terminal or personal computer environment, with a need to access multiple host computers, there are many benefits in the area of contention and controlled user access.

With leading PBX technology today, if all ports are busy on a CPU, users can queue for an available port, and the PBX will signal the user when it is available. An organization can even set priority access levels for users waiting in queue; for example, a casual user would perhaps have a lower priority access level than a vice-president of finance.

In addition, users from outside the organization can dial into modems attached to the PBX and receive the same user interface from the PBX's data communications software as an internal user.

A great many statistics are provided in the leading PBX data communications packages which allow an organization to administer details of who was on-line, with what, for how long and so forth.

In the '80s, the growth of digital PBXs and personal computers will drive PBX manufacturers to provide value-added services to their data products offerings. Devices in the area of protocol conversion, network gateways, electronic mail, file and electronic (laser) print services will be developed.

Many leading vendors already pro-

Networks steer mover through deregulation

Connect agents nationwide with computerized information

ST. LOUIS — Like many companies caught in the deregulation crunch, United Van Lines, Inc. is easing the transition by implementing new high-technology products into its operations. A major part of its strategy is the integration of two different data communications networks to handle the flow of information from its headquarters here to its family of agents scattered across the country and around the world.

United Van Lines has combined the services of a public, value-added satellite network with its own private network that uses leased telephone lines. This helps its agents in their efforts to win new shipping business and keep shipments in progress running smoothly.

"By opening up the moving industry to competition based on price, the Motor Carrier Act of 1980 put us nose to nose with the strong forces of an unrestrained market," said Bob Baer, president of United Van Lines. "This challenged us to be more flexible in our rates and services while still maintaining quality service. It also forced us to be more prudent in controlling our costs."

One of the largest movers of household goods in the world, United Van Lines was formed as a cooperative association to serve the needs of a large network of agents, 600 in the U.S. and 500 internationally. Agents are owners of their respective moving companies, but depend on United Van Lines to assist them in servicing clients who wish to ship from state to state and country to country.

Although service takes on many forms at United Van Lines, according to Jim Beacher, vice-president of information services, "The change in the regulatory climate has put the need for information at the top of the list.

"Agents looked to us to provide them with creative strategies to compete in this new marketplace," Beacher explained. "We responded by devising innovative programs built on information, in operational areas such as job pricing, accounting and billing, mileage verification, shipment tracking and claims handling. These are parts of the business that play a big role in winning new business and delivering quality service."

With these programs in place, Ellie Sirota, manager of telecommunications, undertook the task of making this information accessible to agents on-line at a minimal cost. However, her options were limited due to United Van Lines' particular communications protocol. There is a wide variety of computer protocols, and not all are addressed by every data communications network, she said.

"When we went shopping for a network in the spring of 1982, [RCA Cylix Communications, Inc.] contacted us to arrange a test," Sirota said. "At the time, however, [its] network did not address our technical needs of an IBM Synchronous Data Link Control [SDLC] protocol." As a result, United Van Lines chose a private network based on leased lines to connect its agents with computerized information located here.

The RCA Cylix Communications Network added SDLC to its network in September 1982. "A month after I learned of this," Sirota said, "we tried using RCA Cylix to transmit registration infor-

Networks are expanding faster than anyone expected

...and controlling that expansion, whether it is in your data processing center or data communications network, or both, is almost impossible without the NETMAN™ Information System.

NETMAN is an on-line total management software system that keeps you informed about every aspect of your network.

NETMAN...

- Optimizes your inventory and reduces equipment shortages by showing the status of your hardware and software—where it is, how it's working, how much it costs and what is on order.
- Eliminates installation delays by showing how your configuration ties together today and how it can be expanded to meet future needs.
- Minimizes problem outages by pinpointing trouble spots, noting their status, their impact, how soon correction was made and by whom.
- Improves vendor performance by tracking who is most responsive, whose products work best in your environment, and the status of contractual obligations.
- Saves money through improved financial control by validating invoice details and totals, reporting on contract status and lease accruals, and projecting current costs into the future for budget planning.

NETMAN gives you a complete on-line audit of your environment. Users say the money saved by gaining financial control alone justifies NETMAN's installation.

Bus networks gaining on traditional star nets

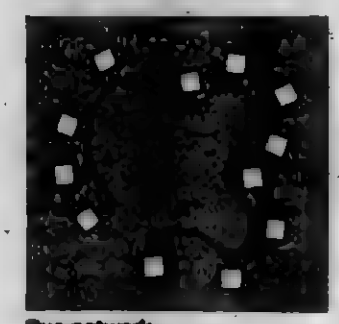
By Patrick M. Bourgeois
Special to CW

One trend that is becoming apparent is that data networks that are used in a local environment — a single building or a multibuilding campus — are beginning to take a different direction from in the past. That direction is toward bus networks and away from the traditional star configuration.

The bus networks offered today fall into three categories using two types of media: either shielded, twisted-pair lines for low-speed, low-cost requirements with total bus speeds up to 1M bit/sec; or coaxial cables for medium-speed (2M to 10M bit/sec) and high-speed (10M bit/sec) networks. The shielding afforded by these media provides excellent protection, and individual port speeds can range to speeds up to 60% of the bus speed.

Star network

Although it is difficult to fault proven equipment, it is also difficult to justify 10-year-old technology that is used in today's centralized data switches or port selectors. Similarly, it is difficult to justify the need for limited-distance modems when communicating further than the standard RS-232 distance of 50 ft over twisted wires, with the inherent possibility of line errors and electromagnetic interference problems.



Bus network

Rarely can individual port speeds exceed 19.2K bit/sec. The cost or the inflexibility, or both, just do not meet the modern-day requirements to connect low-cost, intelligent devices that vary widely in interface needs, data rates, flow control, bit configuration and even protocol.

The new direction is toward intelligent local-area networks, where the intelligence is distributed throughout the network rather than at one vulnerable site. Therefore, failure at any one site does not cause the failure of the entire network. And with intelligence being distributed to the point of interface, the node can handle the characteristics of the device located at each site.

The power of a microcomputer operating system in each node allows the network to become almost device-independent, so that changes in brands of terminals, computers or peripherals allow the network to remain intact.

The centralized switch or port selector system has a port cost that usually exceeds the cost of the dumb terminal that is connected to it. Yet, the network adds no intelligence to the device, but merely provides an electrical transport between a terminal and a host computer port.

With the intelligent networks that are being offered today, there is an operating system at each device interface node which adds intelligence to the device so that flow control can be selected; printer formatting (line feeds) can be handled, as well as character formatting.

SPECIAL **REPORT**

Firm installs private satellite net

DALLAS — Communications managers and management information systems directors nationwide are faced with the burdensome responsibility of providing their organizations with efficient, manageable data communications systems at a cost-effective price. A data services firm here established its own private satellite network.

Electronic Data Systems Corp. (EDS) provides integrated data services to clients in the financial, insurance, health care, retail, manufacturing and higher education markets. The firm is a major supplier of such services to the federal government.

EDS' local data processing systems are interconnected with larger, geographically dispersed computer centers, forming an internal network the company calls Edsnet.

"In order to design, integrate and operate systems of this size," explained Dr. Clairborne H. Johnson Jr., director of technical development for EDS, "available and reliable data communications are imperative, both for our customers' operations and for services EDS offers."

To help meet its data communications requirements, EDS embarked upon the installation of a private network of satellite earth stations manufactured by Vitalink Communications Corp. of Mountain View, Calif. Vitalink provides intelligent earth stations, satellite transmissions and network program management.

EDS has completed the first phase of its network migration by installing three Vitalink earth stations between its three major data centers in Dallas, Camp Hill, Pa., and Sacramento, Calif. The Dallas site has a 9-meter, Dual-Trac earth station capable of a maximum throughput of 6M bit/sec. Camp Hill and Sacramento each operate with 7-meter stations expandable to 4M bit/sec. The EDS network is expected to quadruple in bandwidth and number of locations over the next two years.

Edsnet uses a combination of Vitalink satellite earth stations for the backbone of its network and terrestrial tail circuits to connect customer sites with EDS' regional satellite nodes. Vitalink's current generation of products enables an interstate private line of 56K bit/sec or greater to be replaced with a Vitalink network. EDS has replaced two lines between Dallas and Camp Hill and one line each between Dallas and Sacramento and Sacramento and Camp Hill. "The real payoff in switching to satellite communications," Johnson emphasized, "is in the benefits to quality and performance."

EDS' business communications must be ultrareliable and flexible enough to respond to both its customers' and its own internal network requirements. This flexibility includes being able to add bandwidth to the network or add service to a new account in a very short period of time.

The network must come as close to continuous operation as possible because outages can cost both EDS and its customers significant financial losses. For example, certain of EDS' U.S. Department of Defense contracts specify the mandatory provision of redundant data centers and communications facilities. Furthermore, there are many applications, such as videoconferencing, which require a large amount of bandwidth for a relatively short period of time. "For these reasons," Johnson said, "we determined that satellite communications was the only way to construct the kind of network we needed."

At the heart of the EDS network is the intelligent, microprocessor-driven earth station. To maintain reliability, each station is manufactured under an integrated system design with solid-state, modular components.

There are two complete and independent data paths operational in each station and through the satellites as well. In the event of a failure in any single earth station component, that network location loses only one-half of its data communications capability. The other half of the earth station remains in full operation. "This allows us to provide redundancy where required without the addition of duplicate circuits," Johnson explained.

In the event of a problem in a station, a built-in network monitoring system automatically diagnoses the condition, sounds an alarm and notifies Vitalink's Network Operations Control Center via an autodial modem in each station.

THE NEW 924. THE TELEVIDEO SUCCESS STORY (cont'd.)

TeleVideo® has combined the best innovations in technology, design and quality of manufacturing to bring you superior terminals. Now with the new 924 we've built in comfort and productivity features that leave the other manufacturers behind.

For user comfort, the 924 has a tilt and swivel non-glare screen and DIN-standard low profile keyboard. 16 programmable, non-volatile function keys (shiftable to 32) turn often used instructions into one key commands. Extra display features include full screen editing, character and block graphics, plus 32 non-embedded visual attributes. The 924's logical attributes define protected and unprotected regions for accurate data entry.

If you don't need the full power of the 924, our 914 has all the design advantages of the 924 at less cost.

Whatever your application, nothing measures up to TeleVideo. And nothing succeeds like the 924!

Call us at (800) 538-8725 for more information. (In California call (408) 745-7760) or contact your nearest TeleVideo office:

TeleVideo Systems, Inc.

Service is available nationwide from General Electric Electronic Instrumentation and Computer Service Centers.

EDS from 39/10

"By setting the proper performance windows in each of the 94 control points in each station we monitor, we can usually identify a problem before it affects the performance of a customer's network," said Michael Fagan, national account manager for Vitalink. "Then we instruct the customer to replace the problem part online while that earth station is still operating at one-half capacity."

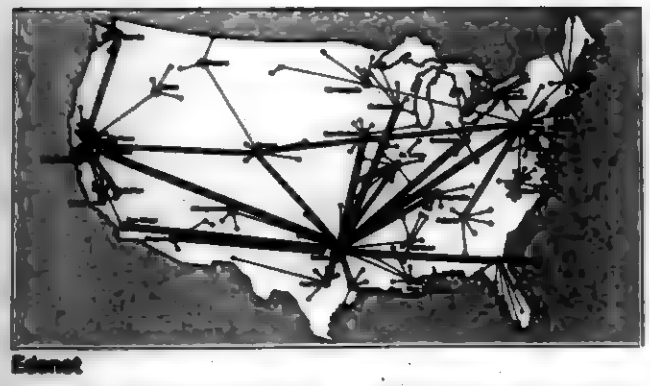
Additional functions of the network software allow the user to route bandwidth dynamically through the network as required. For example, EDS can set up a large file transfer or videoconference at 1.544M bit/sec for an hour and then drop that application off the network, paying only for the actual satellite usage. Up to four user-programmed networks can be stored in the system to be activated on a time-of-day basis as business volumes dictate.

Because of the broadcast nature of the satellite, any new location added to the network via an earth station is automatically connected to all other sites. This allows for full-mesh connectivity at about the same cost as one high-speed, point-to-point terrestrial circuit. "This answered our problem of data center backup," Johnson said.

Financially, the investment EDS has made in the earth stations allows the company to control a greater portion of its network cost through one-time capitalization.

Furthermore, Vitalink offers its network services on a fixed monthly price for terms of 12 months or longer. "For the first time, we can accurately predict and control the costs of our data communications budget," Johnson added.

The strategic benefits that EDS expects to derive from a flexible, in-house satellite data network are seen to be key to its business. Johnson noted, "Our commitment to this technology is indicative of the increasingly vital role EDS recognizes that communications systems will play in the data services the company offers."



Edenet

PBX from 39/7

vide asynchronous terminals with 3270 bisynchronous and pass-through emulation. Capabilities such as X.25 gateways, including X.29 padding functions, are also supported by leading vendors.

Agreements for joint cooperative work among microcomputer and mainframe manufacturers and PBX vendors have already been established.

The IBM purchase of 18% of Rolm Corp.'s stock last year could be construed as an endorsement that the digital PBX is the glue that binds workstations and resources in an office environment.

Many standards groups have started work on a digital PBX-to-mainframe interface, which will certainly increase the popularity of the PBX as the office hub for data communications.

In short, the era of the truly effective and flexible local-area network is just beginning, and the PBX can be expected to play a continually expanding role as more attention is directed to the real user and the real use. The technology will be available and waiting.

Alpert is a data applications consultant for the Tysons Corner, Va., branch of Rolm, and Weems is president of Office Technology Corp. of McLean, Va.

R&D had certain requirements that had to be met; manufacturing, accounting and marketing had others. Then microcomputers started showing up on desktops, with modems and printers here and there. Now you face the task of making it all work together. Sharing resources. Sharing information. And making more effective use of the information processing equipment you've already invested in.

NET/ONE LEAVES YOU IN CONTROL OF EQUIPMENT DECISIONS.

Net/One® is a general purpose communications system that turns equipment from different vendors into a fully functional, fast, powerful, information processing network. Because it can connect equipment from virtually any vendor, you remain free to choose equipment based on capability, rather than compatibility.

Off the shelf, Net/One supports industry-standard equipment interfaces—Async, Bisync, SDLC, through RS-232, V.35, RS-449 and IEEE-488—as well as many high speed parallel interfaces. The list is expanding every month. But if you have special equipment that isn't in that list, Net/One is the only local area network that's fully programmable at every level so special interface protocols can be added now, or when you need them, later.

BROADBAND, BASEBAND, OR ANY COMBINATION THEREOF. YOU CALL THE SHOTS ON MEDIA, TOO.

Net/One is the only local communications system that gives you the option of broadband or baseband or a combination of both, with architecture that will allow you to add other media such as fiber optics in the near future.

YOU DON'T HAVE TO KNOW EXACTLY WHERE YOU'RE GOING TO BUY A NETWORK THAT WILL GET YOU THERE.

Everything about Net/One has been designed to respond to your needs, as they evolve, and to remain fully adaptable to evolving communications technology. System architecture is completely modular, so it can grow at the

Fiber optic's time has come in phone network

Offers advantages over wire line, radio systems

By Raymond White
Special to CW‡

Early technology forecasts predicted the widespread use of fiber optics in telecommunications applications. These forecasts have begun to come true. There are, at present, several trial or traffic-carrying systems in use in telephone operating company trunk and loop plants.

The use of optical fiber communications systems in the telephone network has advanced very rapidly since the first use of a fiber-optic T1 transmission system in 1977. Since then, both trunking and loop systems have been put into use carrying live traffic.

The use of fiber optics in feeder, interoffice or toll digital transmission systems can offer several distinct advantages over conventional wire line and radio systems:

■ Fewer repeaters. Fiber-optic systems can have repeater spacings exceeding 8 kilometers. As a result, most urban interoffice trunks can be repeaterless. Rural trunks would require fewer repeaters. This means lower installation and life-cycle costs.

■ High capacity for small cable size. Cables less than 2 centimeters in diameter have the capacity of several 10-centimeter-diameter wire line cables. This eases the capacity problem in overcrowded urban cable duct systems; old duct capacity can be better utilized to eliminate the need for expensive additional duct work.

■ Immunity to lightning-induced surges. The fact that the transmission medium is dielectric means that lightning-induced surges with their resulting damage to cable and electronics are no longer a problem.

■ Frequency allocation not required. With radio transmission, a long and involved licensing procedure is required in order to get Federal Communications Commission approval to operate the radio. Fiber optics is a high-capacity alternative that does not require such licensing.

Cost will be the ultimate deciding factor regarding the extent to which fiber-optic systems are used in transmission applications. Even with today's low-volume manufacturing costs, fiber-optic systems can "prove in" economically at medium to high capacities when compared with conventional systems.

The costs include typical installation and duct costs for urban installations. The fiber-optic link becomes less costly than the wire line link at a capacity of approximately 500 voice circuits. This result is typical of the comparative costs of fiber-optic and conventional systems.

Hence, fiber optics is a viable alternative to conventional transmission technologies, provided the system capacity is relatively high, above approximately 500 voice circuits.

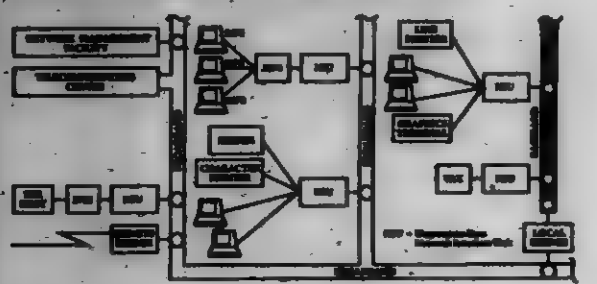
Two technologies, which are beginning to emerge from laboratory development, will have a significant effect on the application of fiber optics to digital telephone transmission. The first — long wavelength transmission — will allow repeater spacings that rival those of radio systems. The second — wavelength division multiplexing (WDM) — will allow simultaneous transmission of several signals over a single fiber through the use of "color" multiplexing.

At long transmission wavelengths, both loss and dispersion in optical fibers are

See FIBER SR/15

same time and in the same direction you do. Regardless of the direction that turns out to be.

When separate divisions within a company or a campus need to share resources, one Net/One system can be bridged to others, and to remote networks. These bridges can interconnect baseband, broadband, or Net/One systems that include both. And like vendor independence and media independence, this bridging capability is available now from Ungermann-Bass.



NOW, THE IMPORTANT DIFFERENCE BETWEEN TALKING A GREAT NETWORK AND DELIVERING ONE.

We've been installing Net/One since July of 1980. Hundreds of our systems are already out there moving information for people like Control Data, Caltech, Fairchild, ITT, RCA, Boston University, U.S. Forest Service, and Ford Aerospace.

So we can do more than talk about what you need in a local area network. We can actually deliver one, now. And we can refer you to a long list of customers who are actually using one (or two or three) now.

Let's talk about how to turn the equipment you have, now—whatever it is—into the network you want, now. And the network that can take you wherever you want to go from here. Net/One.

Ungermann-Bass, Inc., 2560 Mission College Boulevard, Santa Clara, California 95050. Telephone (408) 496-0111.

Net/One from Ungermann-Bass

quipment you have
rk you want. Now.

MOVER from 39/8

mation on a new moving job between two agent sites — one in California, the other in Boston. The trial went smoothly. Confident that the network could save us money and help our agents deliver better service, I recommended the network to my colleagues."

Initially, only new agents were linked to the network. Sirota eventually implemented a program to convert existing agent sites from leased telephone line to satellite.

According to Sirota, the ability to save thousands of dollars in line charges is one of the main reasons United Van Lines decided to go with RCA Cylix. "Leased-line service is very expensive for us because it is billed on the basis of distance rather than volume," she noted. "We have agents all over the country, so you can imagine the cost of linking everyone to the network.

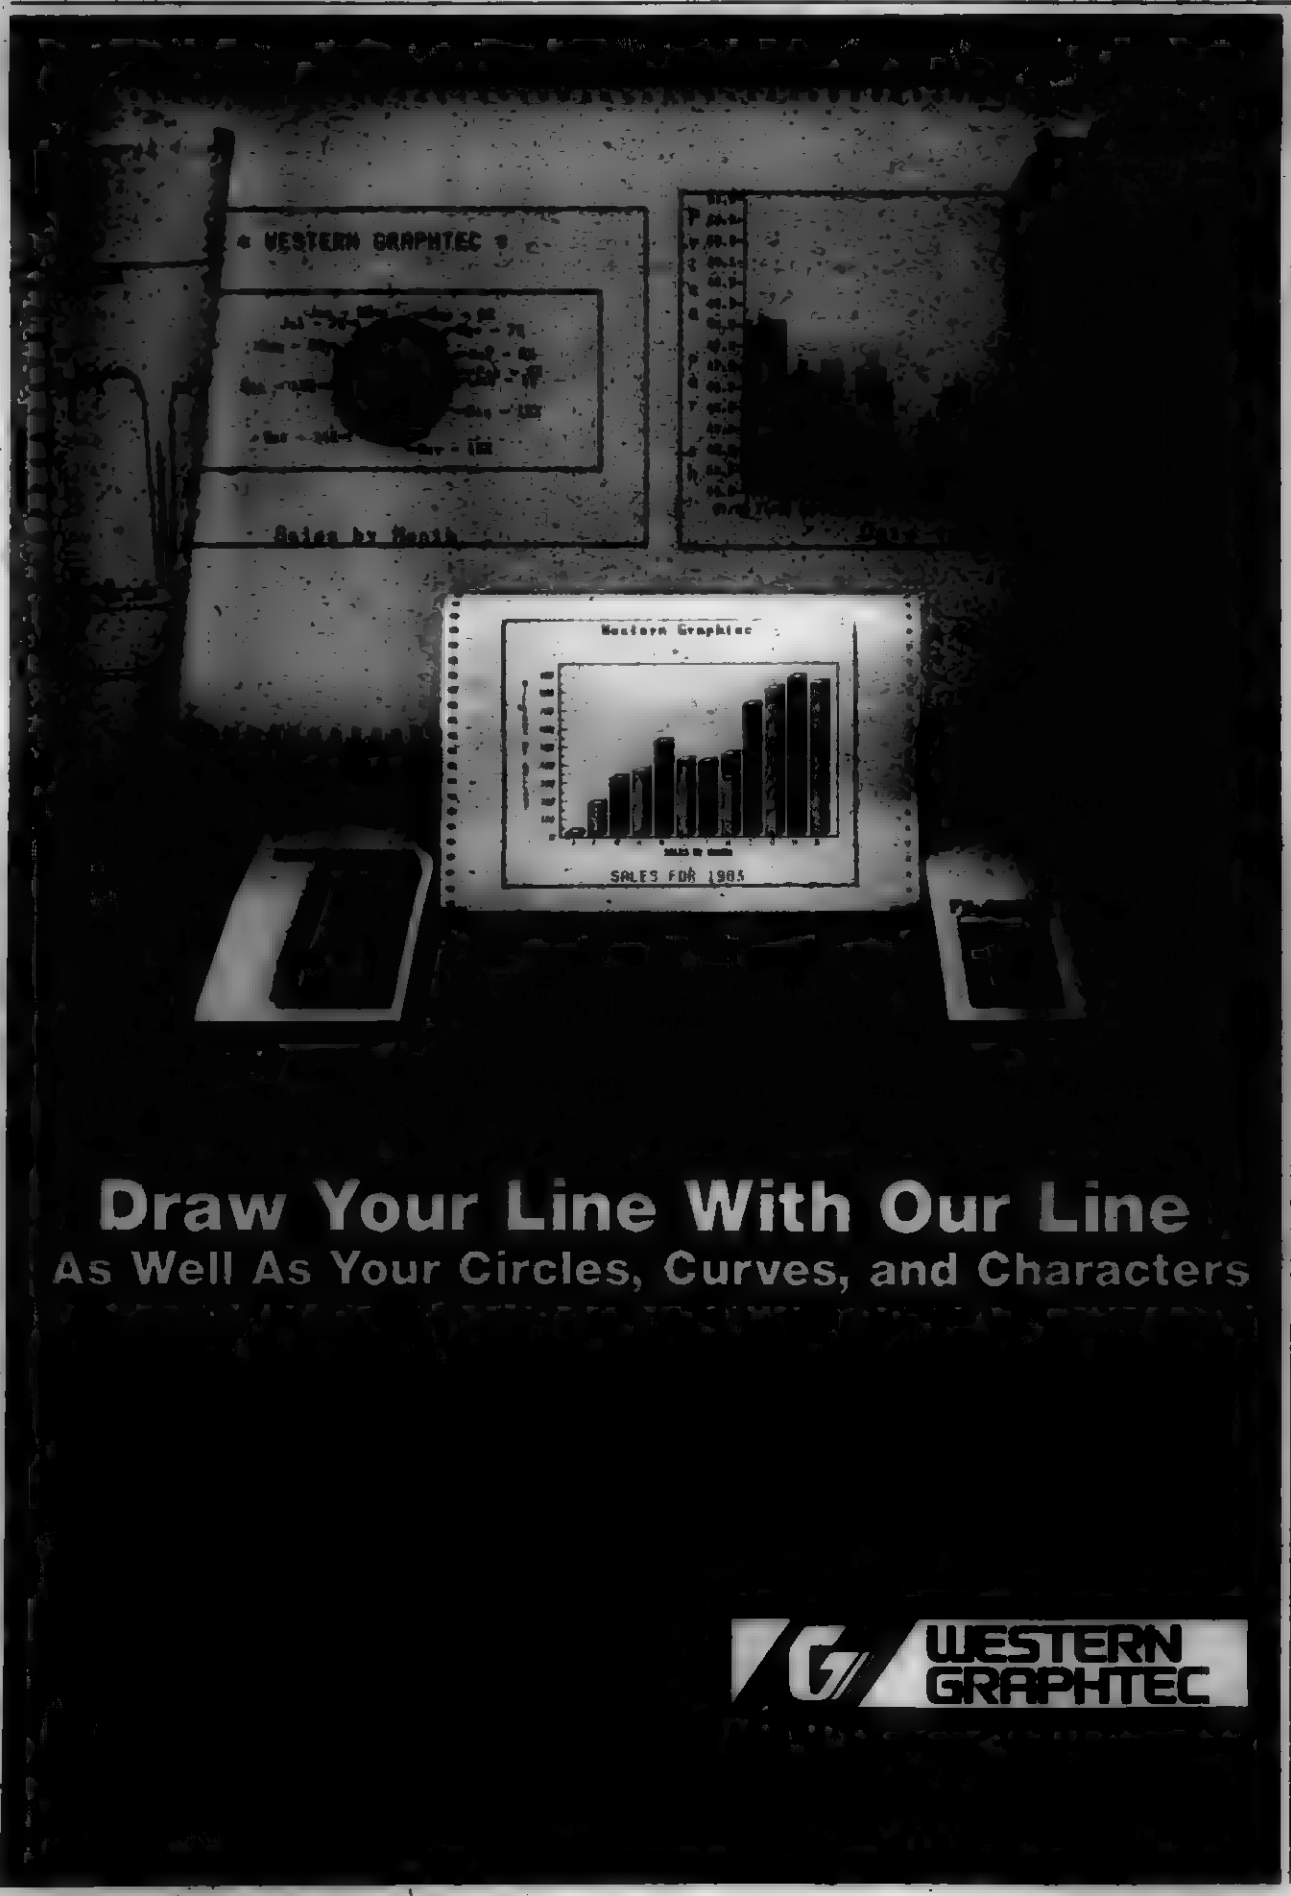
Those agents already on the satellite network are enjoying the benefits of accessing information on-line without the assistance of an operator. This allows them to provide quicker responses to a shipper's queries concerning equipment availability, shipment location and freight estimates.

Those agents already on the satellite network are enjoying the benefits of accessing information on-line without the assistance of an operator. This allows them to provide quicker responses to a shipper's queries concerning equipment availability, shipment location and freight estimates.

"The ability to supply accurate, competitive estimates can be the difference between winning and losing a prospective shipper's business," Sirota said. "This process was relatively uncomplicated under regulation because rates were set by law. Open market pricing has made things more difficult. Now, agents must compile estimates by calculating various mathematical ratios involving a shipment's weight and destination.

"United Van Lines has simplified this procedure with a proprietary software package that assists agents in their calculations. Using the satellite network, agents can access this automated mileage guide on-line to deliver an accurate freight bill quickly," Sirota said.

Since last June, the satellite network has steadily made its presence felt throughout United Van Lines' entire agent community. With 35 remote sites on the network already in place, the network equally shares the responsibility of distributing operational information with the leased-line network.



BUS from 39/9

speed adapting and many more features. The dumb terminal is no longer dumb. And none of these devices has drawn upon the operating system of any computer attached to the intelligent network.

When comparing the total cost abilities of the star network (central switch) vs. the bus network (distributed switch), it is important to consider:

- Higher hardware costs (redundancy, line drivers and so forth).
- Higher installation costs (greater distances of wire).
- Higher expansion costs (wiring and line drivers).
- Total system reliability questions.
- Some limitations of type of I/O devices.
- Higher cost of transmission media per foot.

With the simplicity of stringing a single-bus cable in a building, attaching switching intelligent nodes where desired, the whole networking concept becomes easy — easy to install, operate and expand.

Bourgeois is vice-president and director of marketing for Complex Systems, Inc. located in Huntsville, Ala., a manufacturer of data communications equipment.

FIBER from 59/13

reduced relative to the loss and dispersion of so-called short wavelengths. As a result of improved transmission characteristics, link length or repeater spacing can be dramatically increased.

The technology of WDM allows the combination, transmission and subsequent separation of several different optical signals each of a slightly different wavelength. WDM, combined with the very large bandwidth of optical fibers, makes possible very high-capacity cables using only a few optical fibers.

For example, if WDM was used to combine 10 duplex signals onto a single optical fiber, a capacity of 40,320 simultaneous two-way telephone circuit would result. The technology to accomplish that will be available in a short time. Multiple wavelength systems are today being demonstrated in the laboratory. The advent of integrated optics will make such systems even more practical.

While fiber-optic trunking systems are a practical reality today, fiber-optic subscriber loop systems appear to be a few years off. One major telephone company (Bell Canada) has predicted that fiber loops will be economical by 1986. There are, however, several major trials being conducted. Among the more prominent are the Bell Canada Yorkville trial, the Manitoba Telephone System/DOC Elie trial and the Japanese Hi-Ovis experiment. Fiber-optic local loop systems are attractive for several reasons:

- Broadband capability. Fiber-optic systems have such a large bandwidth that they are capable of transmitting multiple services, including voice, video and data signals. Fiber optics is the likely pipeline that will be the key to future "wired city" broadband systems. However, it should be pointed out that there are political and social considerations that could delay single-pipeline broadband networks.
- Ultimate low cost. The rising cost of copper, coupled with the falling cost of optical fibers, indicates a crossover in cost some time in the near future. Furthermore, the fact that fiber-optic systems can carry more services than copper will mean a lower cost per service with the fiber-optic system.
- Immunity to lightning surges. Local fiber-optic systems would eliminate the need for lightning protection in the local loop.

One present-day drawback of local fiber-optic systems is that an alternative means of powering the telephone set is required. The approach considered most often involves the use of local ac power with a battery backup in the home capable of powering the telephone service for up to eight hours in the event of power outage.

The services provided by the system are:

- Multiple telephone and data channels.
- Broadcast, pay TV and educational TV.
- Library and information retrieval (so-called "viewdata" system).
- Entertainment audio programming.
- Fire, security and panic alarms.
- Meter reading and power shedding.
- Electronic banking and shopping.

Two technologies will have a significant effect on the application of fiber optics to digital telephone transmission. The first — long wavelength transmission — will allow repeater spacings that rival those of radio systems. The second — wavelength division multiplexing — will allow simultaneous transmission of several signals over a single fiber through the use of "color" multiplexing.

- Subscriber-originated video for business conferencing and video games.
- Opinion polling.

Cost studies using computerized parametric analysis have been carried out for the system. An estimated cost per subscriber for a system serving 100,000 subscribers is approximately $700 to $800 per subscriber, which is reasonably attractive, especially considering the variety of services provided and the flexibility of the system.

The results given in the foregoing discussion indicate that:

- Fiber-optic trunking systems are cost-competitive today while offering users several other advantages.
- Future technology developments will make fiber-optic trunks even more attractive.
- Local fiber-optic broadband systems can provide moderate-cost, flexible-service networks.

What remains for the future implementation of such systems is political actions and social acceptance. It can certainly be said that fiber optics is a technology whose time has come as far as application in the telephone network is concerned.

IS YOUR COMMUNICATIONS NETWORK BREAKING UP?

Don't miss
"MANAGING THE COMMUNICATIONS NETWORK."
Exclusively from
Computerworld Reports.

How many vendors, how many different technologies does it take to make your network work? How many end users, how many decision makers can it take before something—or someone—cracks up? And does the telephone company break-up mean telecommunications tie-ups?

These are some of the critical questions posed by host John Gantz in "Managing the Communications Network," third in a lively, provocative series presented on 30-minute videocassettes and produced by DELTAK and CW Communications.

This month, you'll get the views of an industry expert, an MIS director, and a leading communications consultant. And be sure to stay tuned, because next month's Report will address another vital concern: the AT&T divestiture and its impact on information management. Watch for future Reports on subjects such as application development centers, artificial intelligence, end user training, the maturing information center, and more.

To learn all the signs of network break-up before your organization cracks up, order Computerworld Reports: "Managing the Communications Network." Call DELTAK order entry at (312) 369-3000; (416) 678-9222 in Canada.

State moves to organize independent nets

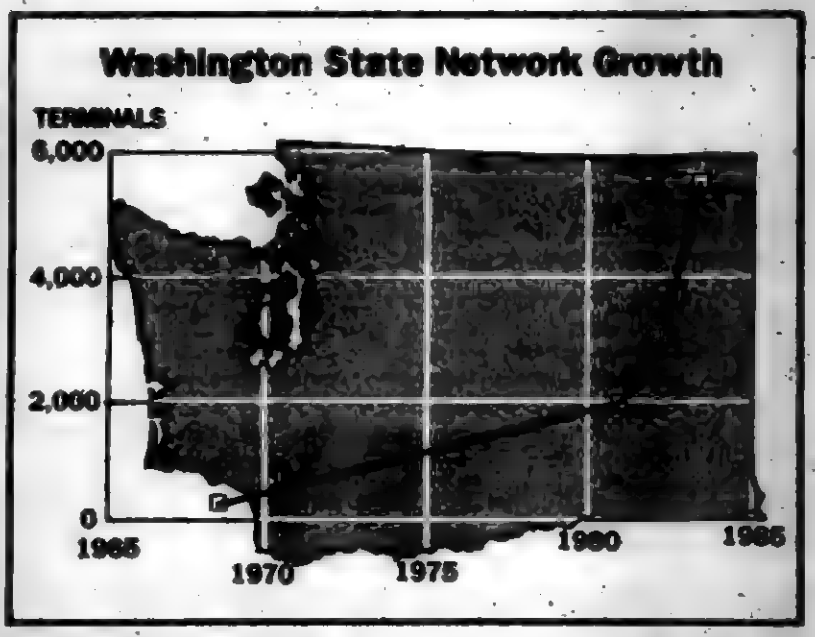
For optimal use in decentralized management structure

By Dennis Jones
and John Flanagan
Special to CW

Today, Washington state government is poised on the threshold of a new era in telecommunications. New responsibilities for end-to-end network management, new competitive environments for acquisition of hardware and facilities, new service offerings such as electronic mail and a confusing new array of vendors and rates are but a few of the challenges that must be faced. Washington state's confidence in its ability to meet the future is founded on a cooperative organizational concept, structured to meet these coming challenges.

Long before the court-ordered Bell divestiture became an issue, Washington state government recognized the need to bring order and efficiency to its communications networks. In the 1960s, the pressures for improvement seem to have grown at an exponential rate, paralleling the state's growth in telecommunications. (Currently there are about 6,000 remote terminals installed on Washington's networks, and these are doubling every two years.

The demand seems unrelenting as terminals and microcomputers spring up in government offices throughout the state. Income assistance determination, criminal offender tracking, determinant sentencing, business licensing and college class scheduling are just a few of the state's programs where interactive computing is being demanded for improving services to citizens.



Administrative systems such as accounting, budgeting, personnel and payroll have also gone on-line to streamline management control. In addition, increased computer literacy among government workers is bringing demands for electronic mail, electronic document distribution and shared access to various data bases.

While almost everything involving telecommunications has seen dramatic changes over the past decade, Washington's decentralized network management structure has remained intact. In the past, with few exceptions, various Washington state agencies and institutions have independently planned, implemented and operated their own data communications networks.

There are at least 20 significant independent networks in existence. The most frightening aspect of this is not knowing just how many networks there really are.

The severity of the current situation can be illustrated with examples such as the government offices in the city of Wenatchee, Wash., which are linked individually to 12 different state networks.

It is clear from the description of Washington state's networking structure that many of the fundamental problems may be attributed to the decentralized data processing management.

While this structure may complicate and confuse the optimization of resource usage (be it networks, systems or staff), it does provide agencies with direct control and simplifies the application of information processing to their business problems.

The challenge facing Washington state is not how to organize for optimizing network resources, but how to organize the network for optimal use in a decentralized management structure.

The focal point of this challenge is the state's Data Processing Authority (DPA). Created in 1973 to provide for the efficient and effective use of data processing in state government, this board consists of 11 members — seven state government executives and four private sector executives — and is supported by an executive director and eight professional staff members.

Traditionally, the DPA had concerned itself with control over the proliferation of computer installations. By the 1980s, the DPA's early achievements of consolidated computer centers and close control of acquisitions seemed less important. The new demands for resource sharing (systems, data and networks) and resource optimization appeared attainable only through some massive

SPECIAL REPORT

Local nets spur evolution to distributed DP

By Ralph E. Stuguemann
Special to CW

Local-area networks have captured the imagination of the computer user community — with good reason. Local-area networks provide the necessary links by which microcomputers, minicomputers and large mainframes can be interconnected with one another and with other information-processing devices into a cohesive system where vital information and expensive resources can be shared. Fueling the heightened interest in local nets is the proliferation of powerful but relatively inexpensive personal workstations.

The evolution in computing has been away from large central computers and toward smaller application-specific systems. A recent Data Decisions, Inc. survey found that data processing managers look to microcomputers to improve managerial or professional productivity, reduce mainframe work load and provide faster access to data. Increased experience with computers, an attendant benefit, was also cited by DP managers as an avenue to future productivity increases. Clearly, distributed information processing using microcomputers will play a vital role in the future.

The most visible sign of this movement from centralized to distributed information processing is the number of personal computers installed in offices throughout the U.S. Though only 7% of the office workers in the U.S. had a personal computer at the end of 1983, an estimated 40% will be using a personal computer to access information by 1990. The personal computer revolution that we have been hearing about for the past five years has merely begun. In the near future, these personal computers will not only share information among themselves but will also easily and transparently be able to obtain information from and enter information into centralized data bases such as mainframe computers.

Local-area network technology allows very high communications bandwidths to be implemented economically, with data rates typically from 1M bit/sec to 50M bit/sec. This bandwidth is essential if large numbers of stations are to be accommodated, and it is vital for increasing user productivity when moving files between workstations and centralized data bases.

This technique contrasts with the conventional private branch exchange (PBX) or data switch approach of dividing bandwidths simultaneously among many slower speed transmissions. In addition, local-area networks use distributed communications processors rather than centralized processors, providing the dedicated intelligence needed to interconnect specific devices. Because local-area networks and PBXs solve different communications problems, they will continue to coexist for the next several years.

Currently, over 16,000 local-area networks of all types are installed worldwide, with 65% of these in the office. By the end of 1988, the number of local-area networks installed is expected to reach more than 100,000. This expansion is mirrored in the growth of local-area networking systems suppliers both in total number in the marketplace and in the size of each individual supplier.

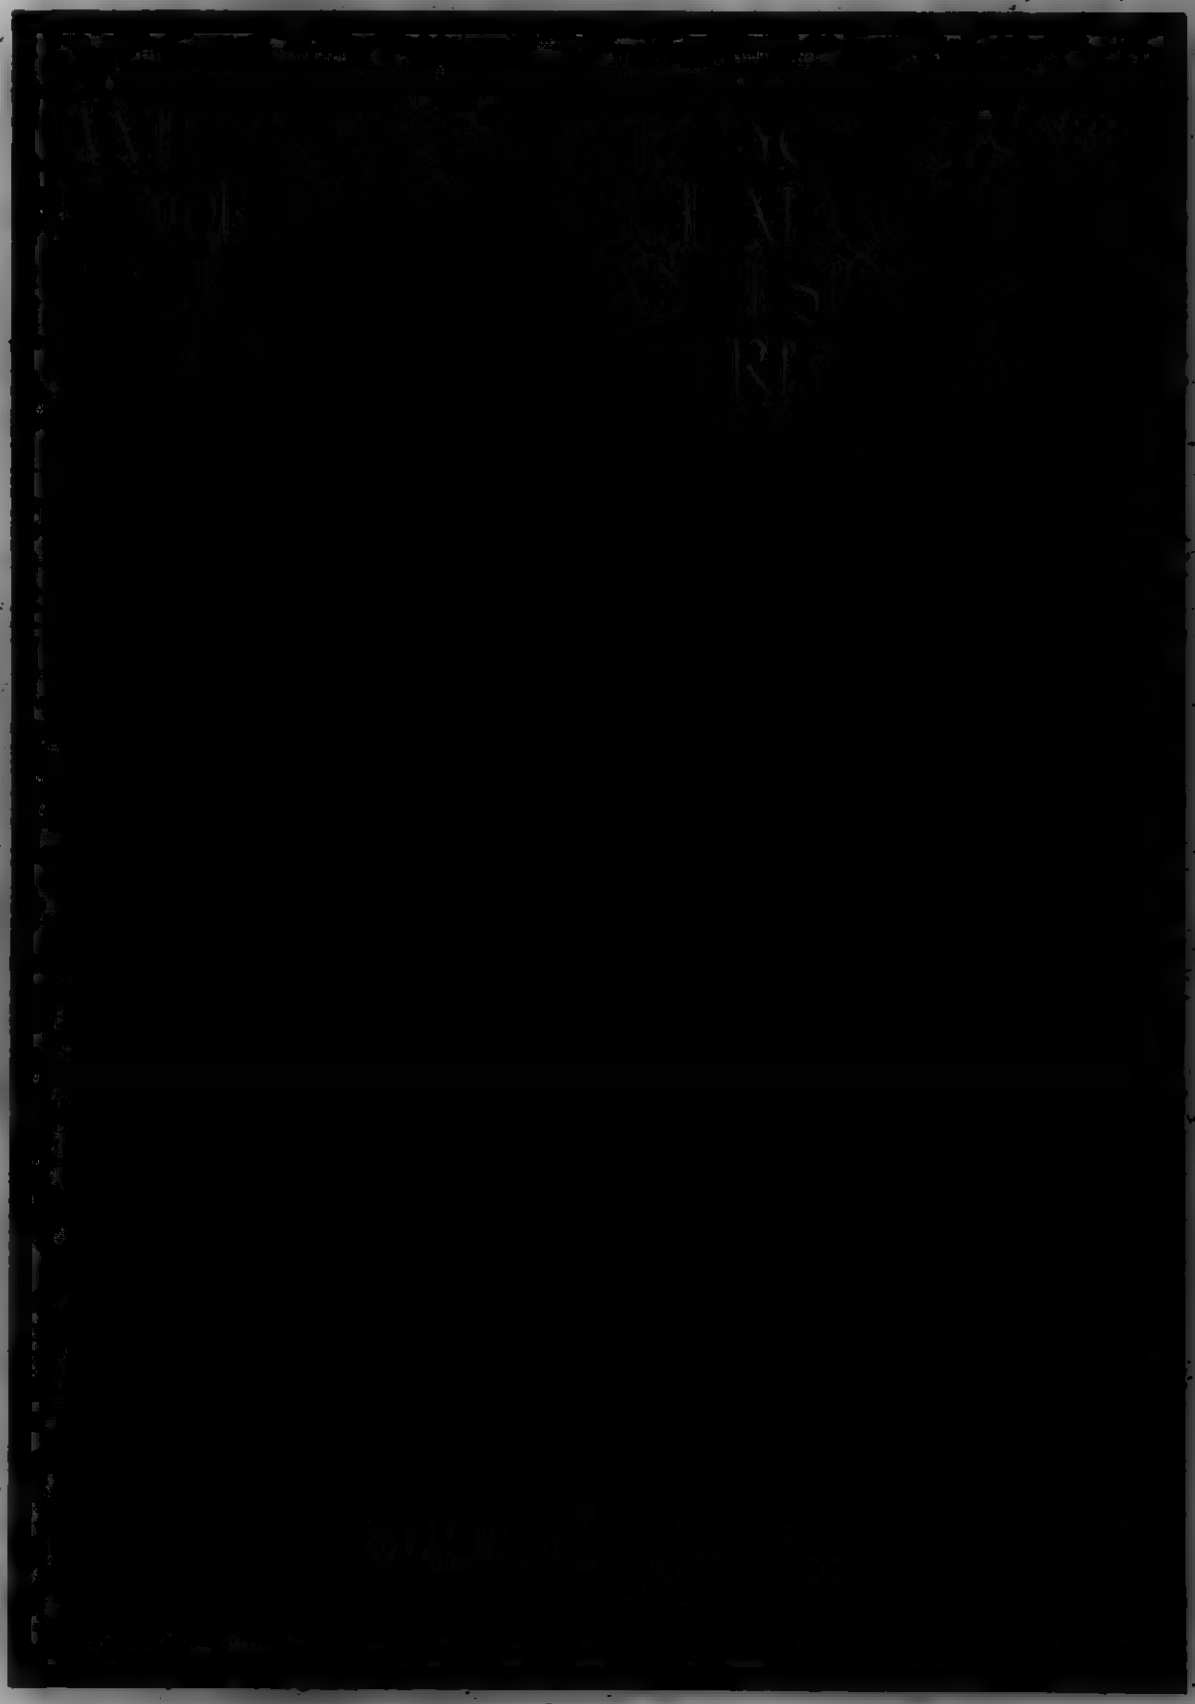
Local-area network technologies come in many shapes, sizes and levels of capability and are offered by an equally broad range of vendors. As a result, two local-area network markets have emerged: proprietary computer systems and vendor-independent communications systems. The latter market can also be divided into three segments: namely, personal computer clusters, mainframe computer room networks and general-purpose networking systems, which incorporate aspects of both micro-to-micro and mainframe-to-mainframe networks.

The size of the general-purpose local-area network market will exceed $150 million this year and will at least double annually for several years. Thus, the market may well be in excess of $1 billion by 1987. This market, though large, will not be big enough for computer vendors to abandon their proprietary approach to local nets, however.

Because such diversity exists in the local network environment — from physical interfaces to data exchange management — it will become increasingly important that international industry standards be established. The development of such standards not only provides the basis for increased compatibility among many vendors' products, but also significantly lowers the cost of local-area network products since industrywide semiconductor implementation is possible. Moreover, customers need to know that a network installation is a long-term proposition, capable of serving tomorrow's communications needs as well as today's.

Much of the industry discussion about local nets has centered on what

See STORY 2, P. 18



SPECIAL REPORT

STATE from SR/16

reorganization toward centralized management and leadership.

In 1982, after consideration of other options, the state chose to continue with the decentralized data processing management structure. This new method of operation relies on three key principles:

■ Deal with a few specific addressable issues at a time, making use of subcommittees to deal specifically with the issues.

■ Involve top data processing executives and staff from state agencies in the process of identifying these issues, defining goals, establishing objectives and developing solutions.

■ Place greater emphasis on planning and leadership, while de-emphasizing some regulatory and control responsibilities.

Over the last year, three significant elements of the architectural strategy have been developed that have led to a clearer picture of Washington's net organization.

The first element is the definition of primary nodes. Nine major data processing centers have been designated as the primary nodes in the statewide data network. (Communication links do not exist at this time among all primary network nodes, although several service centers have taken the initiative to create some of these links.)

Secondly, each state agency has been assigned to one of these primary nodes as the agency's primary link to the data communications network. As the network plan is developed, it is expected that the definition of communications standards between agencies and their hosts will be simplified.

Lastly, the expected benefits and merging technologies indicate that voice and data telecommunications must be addressed simultaneously.

Although the definition of these elements is important, there are many more complex issues which must be resolved. The plans for the next step of requirements definition, planning and design are now being finalized. Among the issues to be addressed in this next step are:

■ Network management. Will a common statewide network be managed by a single state agency? Should network management services be contracted out?

■ Services required. The scope of services provided by a common network may vary from simply providing least-cost circuits to providing a variety of value-added services like gateways and protocol conversions.

■ Private vs. public transmission systems. Should the state establish its own telecommunication circuits in the high-density corridors? (In 1982, there were 594 circuits for voice and data between Seattle and the state capital in Olympia.)

Jones is the assistant director of the state of Washington's Office of Financial Management. Flanagan is senior data processing coordinator for the state's DPA.

GROW from SR/17

transmission medium should be used — broadband (multiple channels) or baseband (single channel) coaxial cable or fiber-optic cable. The major growth in 1984 will be seen in broadband, which by the middle of 1984 is expected to represent almost 50% of the market.

If, as anticipated, IBM uses data-grade twisted pair for its local nets, we can expect to see this medium rapidly gain industry acceptance as the dominant medium for the next few years. Fiber-optic-based local nets, in their infancy now, will ultimately become the most common, because they offer extremely high bandwidths together with resistance to electrical interference.

In 1984, local nets will be even more widely used to implement effective distributed information-processing. Providing long-term integrated local-area network solutions will require that corporate-wide networks utilize several media, be capable of interconnecting all equipment — regardless of vendor — and support international standards. Thus, adherence to international standards will become a key issue in the upcoming year.

Ungermann is president and chief executive officer of Ungermann-Bass, Inc. of Santa Clara, Calif.

Worldwide E-Mail program helps Ford share resources

DEARBORN, Mich. — To the businessman facing a deadline, nothing is more frustrating than the knowledge that his urgent message to a distant colleague is traveling at the speed of an office boy's mail cart. Or, that his rush telex may be 20th in line for transmission. Time zones and communications equipment differences magnify the problem for companies dealing worldwide.

Ford Motor Co., based here, is eliminating communications bottlenecks with a three-phase program based on electronic mail.

Faced with the need to tie together the efforts of U.S. operations and those of its foreign affiliates in developing automotive products with international market appeal, Ford is emphasizing a sharing of resources, exchanging ideas and engineering techniques, for example, to achieve high product quality while reducing development costs.

Implementing this kind of operating strategy on a world scale calls for highly effective worldwide communications — in Ford's case, a unified electronic mail system that integrates the majority of Ford's communications requirements and both simplifies and speeds the transmission of administrative messages, word processing documents, business reports and schedules.

Gerald L. Decker, manager of Telecommunications Services at Ford headquarters, said his department's objective is to build a user-friendly corporate electronic mail system that acts as a hub for all electronic mail activities within the company.

"Ford presently uses several different forms of electronic mail technology," Decker said. "Most are centered around a 'community of interest,' where users need to communicate with each other on a regular basis. Our goal is not to replace local community-of-interest electronic mail systems, but to provide a means of information exchange among them."

Two years ago, the company replaced a private-wire teletypewriter network with the Worldwide Integrated Communications (Wiznc) electronic mail service. Wiznc is a service of Mohawk Data Sciences Corp. (MDS) of Parsippany, N.J. Now, Ford users can transmit typewriter-quality documents at speeds of up to 2,400 word/min, in comparison with 66 word/min on the teletypewriter system.

"The new electronic mail network has resulted in annual savings in excess of $200,000 in equipment and services, as compared with the previous in-house network," Decker noted. "This is in addition to savings related to increases in productivity, something that at this point is evident, but has not been evaluated in actual dollars."

FORD from 28/19

Ford is building a three-phase network. Phase I is an automatic electronic mail service that links 97 of Ford's factory and corporate locations in the U.S. and Canada with interconnection to international record carriers for worldwide message distribution.

Ford uses MDS message terminals and communications processors. Installed at strategic locations throughout the company, the terminals serve as message centers for employees in each vicinity. Terminals in the domestic network are controlled by the Winc operations center in Norwalk, Conn., a facility managed by MDS.

"Pickup and delivery of messages from these centers is automatic, requiring no operator involvement," said John Nopiuk, telecommunications specialist at Ford. Ford's electronic mail system could have accessed the public dial telephone network, but using existing voice lines rather than dedicated lines keeps the cost of the network low, according to Nopiuk.

In planning a corporate electronic mail system, Ford insisted on an open network concept. "The system had to be flexible," Nopiuk said, "allowing different types of terminals to access the network depending on each user's requirements. This is the primary focus of Phase II of the system, implemented in 1982."

Any standard communications terminal — a word processor, personal computer, electronic mail or buffered time-share terminal — can access the Ford network. Six different brands of word processors are presently accessing the network on a dial-in basis. In addition to normal business correspondence, letter-quality documents such as engineering reports or market analyses can be transmitted to Ford facilities around the world in a matter of hours.

Relating this capability to Ford's overall business philosophy, Decker said, "Electronic mail fits perfectly into our world-car-company strategy. The system enables a free-flowing dialogue to take place between our foreign and domestic operations, whether it be the sharing of technical information regarding research and development or correspondence between high-level executives." Mayford Roark, Ford's executive director of Systems, is a particularly enthusiastic user of the electronic mail system. Roark regularly uses both his office terminals and a terminal at his home to send messages to systems managers in the U.S. and overseas.

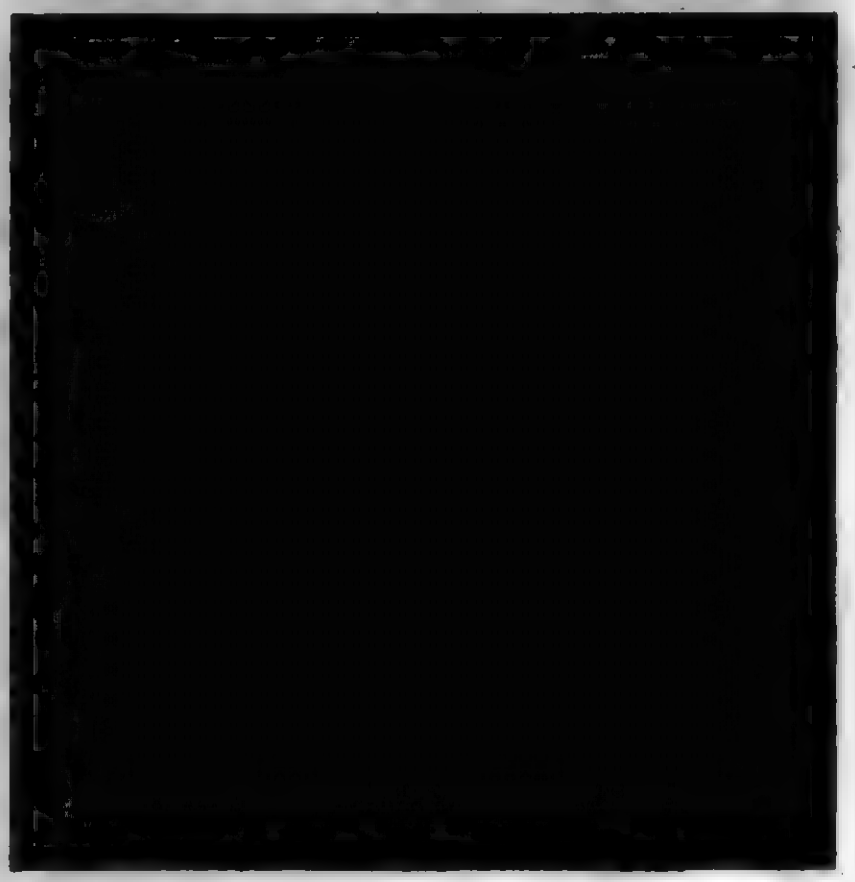
"Electronic mail is most useful as a replacement for the telephone call, which is time-consuming and expensive," Roark said. "Without interrupting or waiting for the other party, I can send questions or instructions to one manager and copy three or four others at the same time."

Since Roark composes much of his own correspondence, he spends little time dictating or revising. And, unlike the telephone, the electronic mail system gives him hard copies of all his messages.

Ford is preparing for Phase III, which will further enhance the use of word processors on the corporate electronic mail system. "Presently, our word processors are supported in a 'plain text' mode," Nopiuk said. "Because the word processing industry has not standardized on a common protocol and code set, transfer of documents between dissimilar word processors is limited.

"With the Phase III enhancement, we will have the ability to exchange text and document format control codes — underline, tab, page-number commands and so forth — between different models."

How can you afford to have an office full of computer equipment that can't communicate?



XLAN™ lets your mini and micro computers, along with related peripherals, talk to each other. Regardless of type, brand, or nationality.

Because XLAN is compatible with virtually all kinds of computer equipment, its versatility makes networking easy. Your office is connected with an inexpensive shielded-pair cable. It's economical to install and maintain, and it easily permits network additions or reconfigurations.

XLAN was designed for easy use. And cost-efficient operation. Think of it as a computer party line for sharing information and resources. The simple network from Complexx. XLAN.

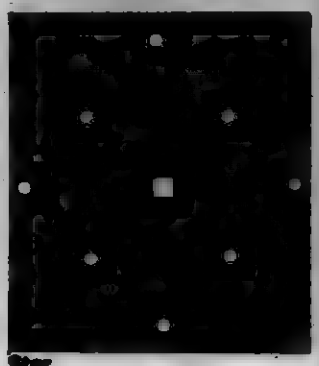
SPECIAL REPORT

Architects' plans should allow for data wiring

By James Hamilton
Special to CW

While there is still some conjecture about the automated office of the future, two things are relatively certain: It is not that far in the future, and it probably will utilize at least as many data terminal devices as the office of today does telephones.

Consequently, this affects — or certainly should affect — the architect's planning today. If the architect does not provide for a well-planned and effective data wiring system or local network in the budget for each building, the tenants may well be destined to work in a chaotic data communications environment.

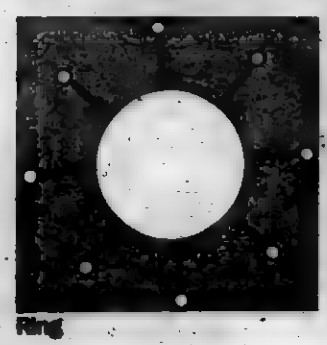


Star

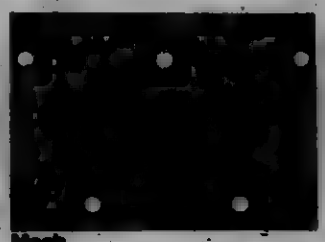
Tree

A local-area network is the connection portion — wires, adapters and access protocols — of a system that makes possible the transfer of information between devices that are all located on the same premises. This could be an office building or portion of one, a manufacturing plant, hospital, university campus and so forth. The information will typically be carried on the network at speeds exceeding 1M bit/sec.

The devices linked in a local-area network may include a variety of informat-



Ring



Mesh

tion display stations, word processors, file and printer units, facsimile equipment, computer-graphics devices, video cameras and monitors, even whole computer systems, control systems or telephone switchboards.

Obviously, the design of a local network and possibly its installation might require electrical engineering skills and electrical contractors. But it is up to the architect to include communications wir-

Bus

ing needs in the budget and building plan if they are to become reality.

Why is it necessary to plan for data communications wiring? Whatever the outlook for the office of the future, the number of data terminals in the office of today

See WIRES 39/22

WIRES from SR/21

has been growing 25% to 30% a year, and a wide variety of these devices are now counted in the millions. Moreover, the number of terminals moved from one location to another ranges from 10% a year to 100% within six months and averages nearly 30% a year.

Until now, initial installation and movement of these devices has been a haphazard process. Consequently, a lot of cables that are no longer usable may still be installed and take up valuable and limited space. Individual cables may be unlabeled, and systems overall are not well documented. An existing cable is useless if the user does not know where both ends are. And, unfortunately, when a terminal is moved, a new cable must often be installed.

Up to the present, this approach has simply added to the maze of cables and their cost. But when the number of terminals reaches predicted levels, it will be a physical impossibility.

Consequently, modern, user-oriented data communications wiring requires the architect to plan for:

- As many wall outlets to plug in data terminals as the average office has telephone outlets today.
- A structure wiring approach for data communications, with wiring closets and a system of cross-connect panels similar to those employed for telephone communications to simplify installations, maintenance and change. This can be achieved either by using larger wiring closets to accommodate both data and telephones or by using a separate, adjacent closet for each.

This approach can potentially reduce the cost of a cable run to an office. It may allow the same cable to be used over and over for a variety of terminals, particularly when the wiring system is designed to handle several transmission systems which have wide use and will simplify movement of terminals within an establishment.

For example, if a department moves from the fifth floor to the eighth floor, its terminals will be unplugged on five, plugged into the wall receptacle on eight, and interconnections will be changed in the closets. There will be no cables to pull, hence little expense and time lost.

By contrast, if some firms want to make a major move in an existing building, up to six months are needed in order to get the required new cables installed.

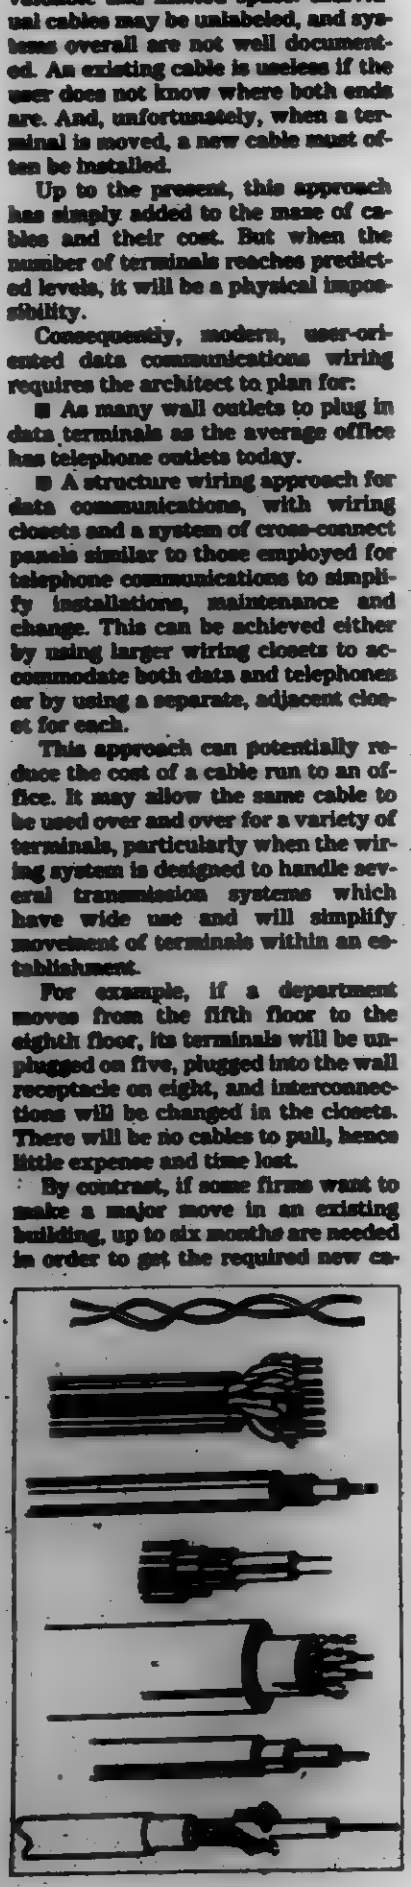
Naturally, the wire that must be installed to serve an individual terminal is the most expensive. In a building that has partitioned walls and removable ceiling tiles, it may cost $200 to $300 to install a new cable from the office to the computer room. But in an older building with stone walls, marble floors and old-fashioned ceilings, the cost can go up to $5,000. In contrast to pulling separate wires for individual users, it often costs much less per user to pull multiple cables at a time.

Eventually, the electrician or electrical contractor will be spared even that. The single-cable approach (not necessarily a single conductor) is the way local networks are evolving. The cable may include the familiar twisted pair or shielded multiple twisted pairs; coaxial, twin-axial and triaxial cables; mixed-media cable; and fiber optics. These cables will be linked in a variety of ways: star, mesh, bus, tree, ring and so forth. And in many instances, the architect may no longer have to design for, nor the electrician cope with, the volume of wires necessary in the past.

The newer communications wiring systems offer a user maximum flexibility, higher data transmission speeds, more channels with less noise and interference and the like. One goal of the architect should be to design or remodel buildings so that whichever local network the user ultimately adopts, the building design will facilitate the network's installation, maintenance and alteration.

Some of the factors to consider in

See WIRES SR/24



Era one.

SPECIAL REPORT

Net turns broker bullish on communications

PITTSBURGH — As a highly successful investment management firm located here, Federated Investors, Inc. knows the importance of planning for the future. It also knows that having ready access to the right information at the right time is vital to itself and its clients. For these reasons, the company made expandability and accessibility the main priorities when it decided to implement changes in its computer system.

Expandability was important because Federated was growing at a rapid pace. Over a period of three years, the company grew from approximately 65 to over 750 employees. During that same period, monies under management went from $2 billion to $31 billion. Because this expansion was expected to continue, it was essential for Federated's computer system to be able to handle continually increasing data processing requirements.

Accessibility was important because Federated and its clients depended upon the data processing capabilities of the resources and the information these resources contained.

Federated wanted a system that could readily provide it with access to the knowledge it needed to continue to serve the interests of its clients.

Of these two priorities, accessibility was a more complicated, though not necessarily more important, problem. System resources and users were widely dispersed. In addition to 12 Tandem Computers, Inc. T16 Nonstop II CPUs and an IBM System/34 in here, Federated accessed an Amdahl Corp. host in Kansas City, Mo., and an IBM 4300 in Blawnox, Pa., a town about 20 miles outside of Pittsburgh. The users of these resources included over 1,600 clients around the country and Federated personnel in three buildings.

Achieving accessibility was further complicated by Federated's use of equipment from different vendors and its separate asynchronous twisted pair and synchronous IBM 3270 coaxial systems. System incompatibility in this multivendor environment caused applications to be bound to a particular terminal family and denied some users access to all the resources. A number of other users needed two different terminals to perform all their job-related tasks.

The addition of new computers and terminals would be a step toward addressing Federated's growing needs, but it would not address the problem of accessibility. Neither would it be a very cost-effective solution, especially over the long term, since the cost of equipment and new cabling could quickly get out of hand.

The fundamental need, therefore, was seen to be a cost-effective method of integrating widely dispersed and different data devices into a readily accessible data communications network that could handle future growth.

Three goals

To create this network, Federated concentrated on three things: linking the separate systems, providing users with the ability to switch among the computer hosts and minimizing the need for additional equipment and cabling facilities.

Federated accomplished these goals by installing Alastrus Data Communications Corp. C-80 protocol converters, Gandalf Technologies, Inc. Line Miser data-over-voice, two-wire local modems and a Gandalf Dual Pacx IV data private automatic branch exchange. The protocol converters make the synchronous systems accessible from Ascii terminals, and the Line Misers provide data service to Federated personnel over existing telephone lines. Both help to maximize the use of existing terminal and cabling facilities.

The key to integrating the network, however, was the Gandalf Pacx, through which everything was routed. The Pacx allows a terminal user to switch among the various resources, which are grouped by classes. Users access any resource by asking for a particular class of service.

Before the installation of this equipment, Federated's system was relatively complex. Synchronous terminals in accounting accessed the System/34 over direct coaxial cable links. Asynchronous terminals in various other internal departments accessed the Tandem CPUs over direct links or used Infotron Systems Corp. multiplexers when cabling considerations dictated.

Also interfaced to the Tandems were Digital Equipment Corp. LA34 keyboard/printer terminals in 1,200 financial institutions around the country. These devices accessed the CPUs via an X.25 packet-switched network. The institutions used the terminals, which comprised Federated's "edge network," for such investment transactions as the purchase and redemption of Federated's money market funds.

The IBM 4300 host in Blawnox, on which Federated bought time, was used to develop application software. The Amdahl host in Kansas City,

Era One saw the personal computer increase the productivity of the business executive dramatically. Yet for all their power, personal computers have not fulfilled their potential. Because the different makes have been unable to communicate reliably with one another and with the various public data networks.

But now, Microcom moves the personal computer into a new era of communications compatibility with Era 2–the first Personal Computer Communications System with the industry-standard communications protocol MNP. Era 2 finally enables dissimilar personal computers to communicate with one another reliably and cost effectively. It also allows the personal computer to access public data networks easily and error-free.

Era two.

A closer look at Era 2.

Era 2 with MNP is a 1200 baud Communications System (software and inboard modem) designed to operate with the IBM PC, PC XT, compatibles and PCjr; Apple IIe, Apple II Plus and Apple II. Its features include IBM 3101, Digital VT100 and VT52 terminal emulations. Era 2 executes multiple functions with a single keystroke. Stores a virtually unlimited number of telephone numbers – each one up to 31 digits. Era 2 is Bell 212A compatible, works with Pulse or Touch-tone™ dialing. Its speaker alerts you to busy signals, wrong numbers, etc. Era 2 gives your personal computer error-free compatibility with other personal computers, data bases, mainframes, almost any information source that can be reached by telephone line.

Microcom, Era 2 and MNP are trademarks of Microcom, Inc. Apple is a trademark of Apple Computer Inc. Digital is a trademark of Digital Equipment Corporation. IBM is a trademark of International Business Machines Corporation.

A new era in dependability. Era 2's electronics are so well put together we're able to offer a four-year warranty–twice the term of protection you get from yesterday's products.

On top of that our product support is outstanding. Our 800 number operates 9AM to 8PM (EST), Mondays through Fridays, 9AM to 5PM Saturdays with experts available to solve any problem or answer any question.

The state of the price of the state of the art.

We're able to offer Era 2 for an amazing $429. By any standard the price/value ratio of Era 2 is outstanding.

Move your personal computer forward into a new era of communications. Visit your Era 2 dealer soon. Call 800-322-ERA2 (in MA, 617-762-9310) for the name of one nearest you. Or write us, Microcom, Inc., 1400A Providence Highway, Norwood, MA 02062. We'll send you a brochure with complete information on Era 2.

Only from Microcom: The Personal Computer Communications System with MNP.

LINK from 39/23

which was accessed via 3270-compatible modems and Four Phase Computer Systems, Inc. 3274 controllers, was used for shareholder accounting. Approximately 120 terminals were interfaced to the controllers by coaxial cable.

Most of the terminals interfaced to the Amdahl host were in account administration and bank services. These departments used the terminals to access on-line inquiry updates of client accounts. Bank services also had eight asynchronous terminals which provided access to the Tandems. The asynchronous terminals were used to enter data for those financial institution clients that did not have edge network terminals.

Although this system adequately served Federated's needs, there were two problems. The first was that the system was actually four separate systems. The second problem was that a larger user base for any or all of the separate systems required more terminals and computer ports. In addition to the expense this would involve, there would be the expense and trouble of pulling more cable to install the equipment.

With the solution Federated opted for, however, the resources and terminals are integrated into a single data communications network. This network provides the accessibility Federated needs. It also makes more efficient use of existing facilities and allows for cost-effective expansion.

In the current system, all the resources of the previously separate systems and all the terminals, except the edge network terminals, are interfaced to the Pacx. A DEC VAX-11/780, which is used for distributed word processing and marketing information, has now been added and is also interfaced to the Pacx.

The VAX and the Tandem CPUs are connected directly to the Pacx. All the other resources are interfaced through Alanthus protocol converters installed in the Pacx cabinet. Modem links are used between the protocol converters and the remote hosts, and Line Misers are used for most internal terminal connections.

Besides being accessible, the system is cost-effectively expandable. Now, less expensive Ascii terminals can now be used, and only one terminal per desk is ever required. The Line Misers make the installation and relocation of these terminals inexpensive and fast. Federated can now install terminals at a cost of about $2,500, including the cost of the terminal, Line Miser, Pacx terminal board and installation.

WIRES from 39/22

optimizing a local network installation include provision for:

- Ample wireways.
- Wiring closets.
- Duct systems (trenches and cells, raised floors).
- Conduits.

Wiring closets should be aligned vertically, and whatever the data wiring facility, it should be connected to a wall outlet with a faceplate in the office.

Typically, a conduit runs from the outlet to the wiring tray or duct with ample space for telephone wiring as well as data wiring.

Proliferation of terminals complicates the architect's life in two more areas. Ideally, a cluster of terminals should have a separate power circuit because the increased number of new devices may likely require more power. Terminals also have a significant effect on air conditioning. Air-conditioning needs are usually related to the number of employees in an area. But one school of thought now contends that one employee plus one terminal has the same air-conditioning requirement as two employees.

For decades, architects have done a thorough job of including facilities for power and telephone wiring, but they have not really addressed information processing needs throughout the building. These rapidly growing, rapidly diversifying requirements can no longer be ignored.

The architect who thinks the office of the future is a concern for the interior designer should look again.

Hamilton is a senior marketing support representative for IBM in Raleigh, N.C.

ONE OF THE BEST BRAND NAME PRINTERS HAS A BRAND NEW NAME.

GENICOM

The General Electric 3000 family of printers has become an industry leading product. But now, this popular printer series has a new name, because the Data Communication Products Department of GE is now an independently owned company called Genicom.

At Genicom today, we offer the same complete line of printers we offered while a part of General Electric. We have the same facilities, the same nationwide service network, and the same corps of experienced employees...only the name has changed.

Above all, Genicom offers you the same reliable product quality you've come to expect from us over the years. Our Genicom 3000 printers feature outstanding performance for end-users as well as superior flexibility for many OEM's, distributors, retailers and dealers. There are 3000 models with speeds from 40 to over 400 cps. Single or dual mode printing. Type quality from EDP to NLQ. Multi-color printing. Graphics. Selectable type fonts, American craftsmanship and more. There are even 3000 family printers for personal computers...ideal for business needs.

We're proud of the excellent brand reputation we established under General Electric. But now we're going to make a new name for ourselves by bringing you more innovations, and more of the reliable quality you've always found in each of our products.

Genicom Corporation, One General Electric Drive, Dept. M331, Waynesboro, VA 22980. In Virginia, call 1-703-949-1170.

Only Lee Data's Universal Terminal System can satisfy all of your information processing needs... 3270, Async and personal computing.

Finally, there's a single, universal way to satisfy the individual information processing needs of all your people. From sales manager to accountant. From research to production. The Lee Data Universal Terminal System can do it all.

And our system is modular by design to provide you any or all of these cost-effective, problem-solving advantages:

3270-compatibility plus more

Combine complete 3270 system-compatibility with an innovative Lee Data design and you have a System that delivers greater convenience and flexibility.

Our System not only offers standard 3274-compatible local and remote control units, but now also provides combination local/remote controllers with a unique dual-host access capability.

In addition, you can choose from a full line of terminal capabilities, beginning with our cost-effective 3178-compatible display on up to our popular All-In-One Display which offers, in a single unit, four selectable screen sizes—including 132-column—a great advantage in program development, spread sheet applications and many others where flexibility is required.

3270-plus-Async: another cost-effective advantage

If your application needs currently find you switching between 3270 and VT100-style terminals to get the job done, Lee Data has a better way.

As part of our System, you can enjoy the further advantage of a 3270/Async capability that allows dynamic selection of 3270 and VT100 operating modes from a single Lee Data display. A simple command entered at the keyboard provides you access to applications running on an IBM CPU, non-IBM systems (such as DEC, H-P or Prime), as well as timesharing services. Another Lee Data solution to simplifying your company's terminal network.

And now integrated personal computing too

That's right! Now our System also includes a sophisticated personal computing package that can easily be integrated into an existing Lee Data 3270 system.

With our approach, you get continued interactive access to host-based files, plus all the advantages of professional business computing from the same Lee Data workstation.

Advanced features include a host file transfer capability, a single-board design, four standard system expansion slots and, of course, complete IBM-compatibility.

All these additional capabilities plus the same user-friendly Lee Data displays.

Plus these added benefits...

To any Lee Data System, add our unique Coax Eliminator products and realize additional savings of up to 85% in cabling costs alone.

Combine this with all the outstanding features already mentioned and you'll find a System offering everything you need for efficient, cost-effective operation.

Discover the advantages of our Universal Terminal System for yourself. For more information, call our system specialists toll free:

SPECIAL **REPORT**

Telecommunications to be glue for info

By John Vacca
Special to CW

Telecommunications will become the glue that holds all of the information resources together in the 1980s and 1990s. This technology will be the force that allows information managers to integrate computers, systems, networks, distributed processes and office systems into an effective integrated-resource management capability.

Advances in telecommunications are accelerating rapidly, and costs are dropping. The telecommunications movement is likely to build into an explosive force in the next 20 years; a force making possible automation, communications and information movement heretofore not even dreamed of by information managers.

Microwave links, which were considered exotic 15 years ago, will become much more common for business, medical and other communications needs in the next two decades. These links will probably consist of 4.632M-bit systems, using 21 channels of 168 each. They will be able to handle all data transmission between various points at speeds ranging from 14,400 to 57,600 bit/sec.

A major trend in the use of satellite communications systems is forecast for the '80s and '90s. The space shuttle and the proposed space station for the early 1990s will work together to manufacture and put into orbit huge satellites — weighing hundreds of tons, spanning thousands of feet — to cast communications footprints that will cover half of the world.

Two such satellites, in geosynchronous orbit some 30,000 miles in space, would cover the entire world. By the year 2000 there will be a worldwide need for 240 transponders for data, 2000 transponders for voice and 16,000 transponders for videoconferencing. Therefore, the satellite will be one of the stars of our emerging communications technology.

By the year 2000, some 72 million households in the U.S. will have subscribed to CATV. The recent marriage of CATV and satellite communications will eventually result in the manufacturing of cheap antennas at a cost of $65 each by 1995. These antennas could then be rented to home owners for about $5 a month.

The terrestrial answer to satellite communications will be fiber optics. Fiber-optic technology, which carries communications on a beam of light, will lower terrestrial communications costs dramatically for decades because it is so inexpensive to manufacture. Benefits include higher bandwidth, less noise interference, greater security and suitability for digital transmission.

While still more costly than copper cable, fiber optics will fall from today's 70 cents per meter to one cent per meter by the year 2000, thus eventually being cheaper than today's copper wiring. In the 1990s, we will see a rapid growth in the use of fiber optics by the telephone industry, CATV, computer coaxial cable and in government and industry installations.

Infrared transmissions will be another technology utilized before the turn of the century. Infrared is an optical transmission system that uses the infrared spectrum of LED.

By the year 2000, these systems will be able to operate as high as 15M bit/sec and if multiplexers are used, be segmented into 7.1M, 14.4M, 28.6M, or 57.6M bit/sec. It will be cost-effective at less than $5,000 per unit and replace local loops, which tend to be the weakest link in any system.

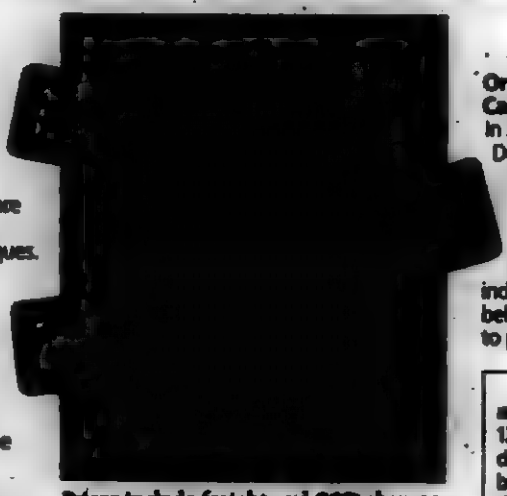
5 Day Delivery!

Paradyne 2,400, 4,800, 9,600 BPS CHALLENGER Modems

Call 1-800-482-3333
and Paradyne will send your modems COD to be delivered at your site, anywhere in the continental U.S., within just 5 days! Paradyne's CHALLENGER Series high performance modems are state-of-the-art technology using advanced signal processing techniques.

Installation is Fast and Easy. You can install these modems yourself!
Plug in the modem, follow a push button configuration procedure, attach your DTE connection and the modular jack, connecting the modem to your 4-wire leased phone line. You're ready to go!

High Performance Backed With Paradyne Reliability. All three models operate in either point-to-point or multipoint applications. An optional four-port buffered multiplexer is available for the 4800 and 9600 models. And the Series has a calculated mean time between failure of more than four years.



Prices include freight and COD charges.

State-Of-The-Art VLSI Technology. Front panel soft strapping configuration is easy and each modem has automatic, adaptive equalization at all speeds, including 2,400 bps.

If You Need Modems NOW, Order Direct From The Manufacturer — Call 1-800-482-3333 or mail in your order. In Florida please call 813-530-2516.
Delivery time and price discounts for large quantities available on request. Multiplexer option available at additional cost. Dealer inquiries invited. The new CHALLENGER Series...a challenge to the modem industry offering quick delivery at prices below what you normally would expect to pay...only from Paradyne.

1,200 BPS Modem. Also available for 5 day delivery is the DTU 1200D, a 212A compatible full duplex dial modem. This 1,200/300 bps modem features automatic dialing, CRT prompts and automatic test capabilities and sells for $655 including freight and COD charges.

SPECIAL REPORT

X.25 conversion supported by PAD function

Seen as an alternative to standard leased lines

By Leigh S. Hawley
Special to CW

Many companies currently operate multiple data networks, which are linked only between hosts used for file transfers. However, as communications costs begin to soar, alternatives to standard leased lines become more attractive.

One widely used alternative is the X.25 packet-switching network, which allows companies to consolidate their network facilities, eliminate duplicate communications lines and reduce overall network costs. X.25 networks also provide enhanced services that allow increased device utilization and flexibility by providing worldwide multiple host access to specialized applications and protocol conversions.

Further, the X.25 networks can provide users with increased reliability due to redundancy and automatic backup facilities, as well as simplified network expansion and improved network management and control. Using X.25 network technology, corporations are able, therefore, to create a single, integrated, easily managed network that is cost-effective.

But in order to use the packet network, each user device must communicate with it using the X.25 protocol defined by the Consultative Committee on International Telephony & Telegraphy (CCITT). Unfortunately, most data processing devices use either an asynchronous protocol, a Binary Synchronous Communications (BSC) protocol (for example, contention BSC for remote job entry [RJE] devices or polled BSC for IBM 3270-like devices) or a bit-oriented synchronous protocol.

These non-X.25 devices, therefore, require their native device protocols to be converted to X.25. The equipment or software used to perform this conversion is known as a packet assembler/disassembler (PAD).

The PAD function may reside in different kinds of equipment. For example, many public X.25 packet-switching networks have built the PAD function into their network nodes. Alternatively, many host computers support PADs built into their front-end communication software, thereby significantly reducing line interface hardware costs.

Vendors of front-end software PADs include IBM (NPSI software), NCR Corp. (Comten, Comm-Pro) and GTE Telenet Communications Corp. (DMEP software).

Some terminal manufacturers also have developed terminals which support some of these PAD protocols. Most prevalent is the "black box" PAD. More than 15 vendors today provide these black box PADs, which are best described as specialized concentrators which interleave several device lines into one X.25 line to the packet-switching network. These PADs may support one or more PAD protocols simultaneously.

In addition to converting native device protocols to X.25, the PAD is responsible for establishing X.25 virtual circuits (the communications paths through the packet network) for detecting and correcting device-related errors and for ensuring the smooth transfer of data between end users.

Thus, the "PAD protocol" that defines the rules used to perform these functions is specific to each device to be supported by the network. Also, the same PAD protocol must be used at both end points of a virtual circuit so that data may be properly transferred.

All PAD protocols share certain basic characteristics. For example, all PAD protocols transfer both PAD protocol control information and user data through the network. All information is passed in the user data field of X.25 data packets.

Some PAD protocols use separate packets called "qualified data" packets for PAD protocol control information. These are distinguished from normal data packets by setting the "qualified data bit" in the X.25 packet header. Other PAD protocols send the PAD protocol control information in a "PAD protocol header," which usually occupies the first few bytes of the user data field of the data packet. The X.25 network passes all information in the user data field of the data packet transparently through the network.

Another basic characteristic of PAD protocols is that a PAD is always required at each end of the X.25 virtual circuit in order for two end users to communicate. When sending data through the network, the sending PAD translates the end-user data into the X.25 protocol for-

PAD from SR/27

mat, and the other PAD translates the data received in X.25 format into a format recognizable by the receiving end user. The PAD protocol control information is used to tell the receiving PAD how to translate the user data properly.

Actually, X.25 alone cannot support end-user to end-user (for example, device-to-host) communications. The X.25 protocol is only a network interface standard. X.25 defines how to get information into and out of the network — not what to do with the information once you have it. Thus, a PAD protocol is always required to control end-user to end-user communications through a packet-switching network. So far, the CCITT has defined PAD protocol recommendations only for asynchronous devices and hosts. All other device-specific PAD protocols have been left up to the PAD equipment vendors to define. As a result, the packet-switching equipment vendors have developed pseudo-standards for the PAD protocols they use to support some device types.

These PAD protocols are: the 3270 Display Systems Protocol (DSP) for 3270 BSC devices; the block-mode PAD protocol (Bpad) for BSC RJE devices (such as 2780/3780); and the high-level data link control PAD protocol (Hpad) and IBM's Qualified Logical Link Control (QLLC), the last two for Sychronous Data Link Control devices. Other device-related PAD protocols have been developed, but they are proprietary to the developing vendor and therefore are not standard throughout the industry.

CCITT Recommendations X.28, X.29 and X.3 define the PAD protocol for allowing asynchronous devices and hosts to communicate through an X.25 packet-switching network. These recommendations were adopted in 1977, and since then many PADs have been developed to support them, including the access facilities of most public X.25 packet-switching networks.

With this PAD protocol, a virtual circuit is established for each asynchronous device on the X.25 network. X.28, X.29 and X.3 (nicknamed the "triple X" recommendations) use only qualified data packets to transmit control information. The X.3 recommendation defines this control information in the form of parameters.

The value of each parameter determines how a particular event is to be interpreted and handled. For example, one parameter defines how to handle break; another defines how to handle character echoing; and another defines the packet-forwarding rules.

The X.28 recommendation defines how the terminal user communicates with the PAD to control the connection through the X.25 network. The terminal user may ask the PAD to establish or clear a virtual circuit or to change the values of specific parameters for a virtual circuit. The X.29 recommendation defines how data and control information flow between PADs.

DSP defines the procedures that control the emulation functions and coordinate the host and terminal PAD operation. These procedures cover the 3270 data transmission through the network, virtual call establishment methods and procedures and local and end-to-end error recovery. The DSP protocol uses both qualified data packets and PAD protocol headers to pass control information through the network.

In order to communicate with a host, each 3270 device must first establish a virtual circuit through the network. Since separate virtual circuits are established for each 3270 device, each terminal can access a separate host or host application on the network. Once a virtual connection between a 3270 host and 3270 terminal is established by the PADs, the network is completely transparent.

The Bpad protocol allows BSC remote job entry devices, such as IBM 2780s and 3780s, to communicate through an X.25 packet-switching network. The Bpad protocol defines the procedures for virtual circuit establishment, flow control, time-out handling, error recovery and data transfer.

All BSC control sequences may be processed locally so that only user data is sent through the network. Unlike 3270 DSP, the Bpad protocol is a symmetrical protocol. Thus, it allows host-to-host and terminal-to-terminal communications through the X.25 network in addition to host-to-host terminal communications.

As X.25 packet-switching networks are expanding their services to support more synchronous devices, the need for PAD protocol standards is growing. These standards allow devices to communicate with multiple hosts on X.25 nets provided by vendors all over the world.

They allow the interconnection of synchronous services on public and private X.25 networks, domestically or internationaly. Standardized PAD protocols are an integral step toward providing universal access to X.25 networks, thereby obtaining a single integrated network supporting all communications needs.

Hamby is manager of network services for GTE Telenet Communications, a public packet-switched network services vendor in Vienna, Va.

IT'S WHEN NO ONE KNOWS THERE'S BEEN ONE.

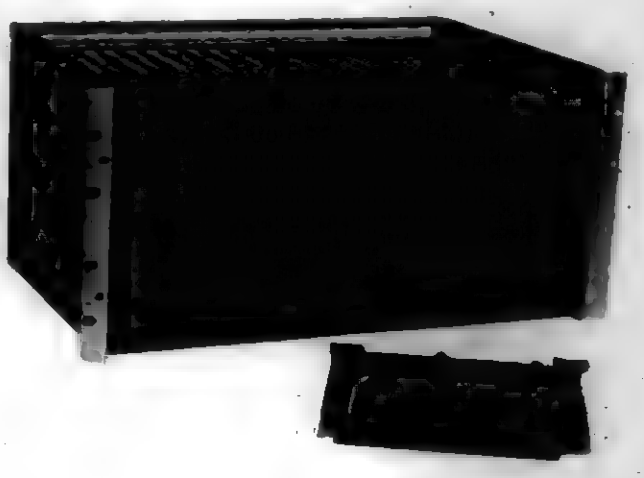
Computer crime is 10 times more profitable than robbing a bank. That's a fact. But, this statistic is only available on KNOWN computer crime... it's impossible to know how much monetary and informational theft goes undetected; some of it, perhaps, from your own system.

The ability to access computers via dial-up ports adds efficiency and reduces cost. But it creates a potential exposure akin to leaving the vault door unlocked. Disgruntled employees, strikers, malicious hackers and dishonest competitors can obtain information, vandalize the system, even misappropriate inventory... all from a push-button phone.

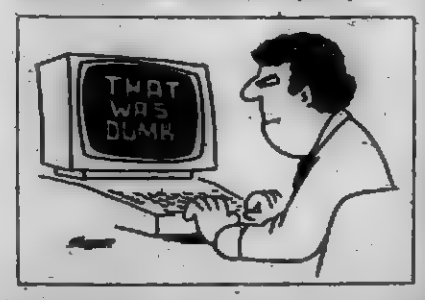
Now, this computer crime, fraud and abuse can be stopped. LeeMAH has a "lock" for your computer even the whiz kids can't crack... LeeMAH's Secure Access Systems, both the single port (SAU) and multi-port (SAM).

Both SAU and SAM reduce your system's vulnerability by allowing access to AUTHORIZED LOCATIONS ONLY via callback. This separate piece of hardware connects on the analog side between modem and telephone lines.

You can stop the perfect crime... with LeeMAH's SAU and SAM.



LeeMAH 729 Filbert Street, San Francisco, CA 94133 • Telephone: (415) 434-3780



CHANGING OUR NAME WAS A STICKY BUSINESS.

After 14 years as Intertel, it wasn't the easiest thing to do. Sure there were the obvious problems; like licking 19,453 labels so we could show off our fancy new logo. But we also found that Intertel was more than just a name to the hundreds of companies that depend on our network command center systems and diagnostic modems for high-availability data communications. It was a constant reminder to them of our commitment to providing the products, support, and services they need to keep pace with the ever increasing size and complexity of their private-line networks.

However, we had to face the fact that our old name described only a part of what our current products can do and what the systems we are developing will offer in the future. We decided that changing our name would be an important first step in linking our past accomplishments with future networking needs.

Now, when you think of controlling, managing and measuring the performance of large networks, remember what we did as Intertel. When you need to assure fault-tolerant operation of networks with both analog and digital links, remember Intertel did it first. But when you're ready to find out more about our networking capabilities, please think of them as INFINET.

INFINET
Six Shattuck Road
Andover, MA 01810

Size us up.

We solve tomorrow's computer problems today. EVERYWARE™ systems from Perkin-Elmer.

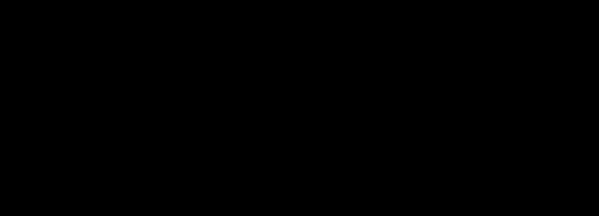
With so much at stake, your doubts about choosing the right computer system are well-founded. That's why you should take a look at the one family of computers that without a doubt offers everything you've been looking for: EVERYWARE systems from Perkin-Elmer.

The EVERYWARE family embodies a comprehensive merging of the world's major hardware, software and communication standards. A solution for virtually every computing need. Ready to grow with you, while protecting your software investment and data integrity every step of the way.

A Comprehensive Family.

We offer one of the broadest choices of mutually-compatible professional micro and supermini computers, easily integrated and supplemented as your processing needs change. Our Series 3200 32-bit superminis span a complete spectrum of computing capabilities with outstanding performance. . .from the compact, economical 3205 to the incredibly fast and powerful 3200 MPS. And all points in between.

The newest member of our family is the advanced, M68000-based 7350 super micro, bringing EVERYWARE systems to your desktop. With vivid color graphics. Windowing convenience. And



a choice of off-the-shelf applications software–including word processing, spread sheets, graphics packages and development tools.

Operating Environment Flexibility.
Only EVERYWARE systems offer such diverse operating environment alternatives. Real-time processing under our proprietary OS/32 operating system. Reliance PLUS, our proven on-line relational DBMS that enables powerful, user-friendly transaction processing. The Resilient System,™ a new concept in fault tolerance that offers the high-availability advantages of two real-time, on-line processors while assuring 99+% uptime. Or time sharing. Or batch processing. Work in the environment that suits your needs. Or run any combination of them simultaneously through one powerful system!

To protect your single most important investment–the software–EVERYWARE computers offer a common operating environment derived from world-standard UNIX* software. Via FORTRAN and C, it's bridged to our OS/32 real-time operating system. That's the best of both worlds. And results in true software portability, from system to system, environment to environment.

Communications Everywhere.
We can share information with IBM environments via SNA and BSC emulators. Form a local network using Ethernet. Or communicate globally through the CCITT X.25/X.29 Packet Switching Network.

And that's about the size of it. Except to remind you that Perkin-Elmer is strongly committed to supporting your systems with complete customer training, worldwide service. . .and world-class products.

We invite you to "size us up" soon.

SPECIAL **REPORT**

April: A little machine goes a long way

The dust from the corporate microcomputer boom is finally starting to settle. For many firms, the mad dash to buy and install microcomputers is ending, and the development of plans for coordinating and controlling micro use is beginning.

Computerworld will publish its second annual "Micros in Big Business" Special Report in the April 30 issue. This special section will focus on the success and failure of micros in large organizations. Included will be articles covering micro-to-mainframe links, microcomputer networks, compatibility issues and the growing concern about security and data protection.

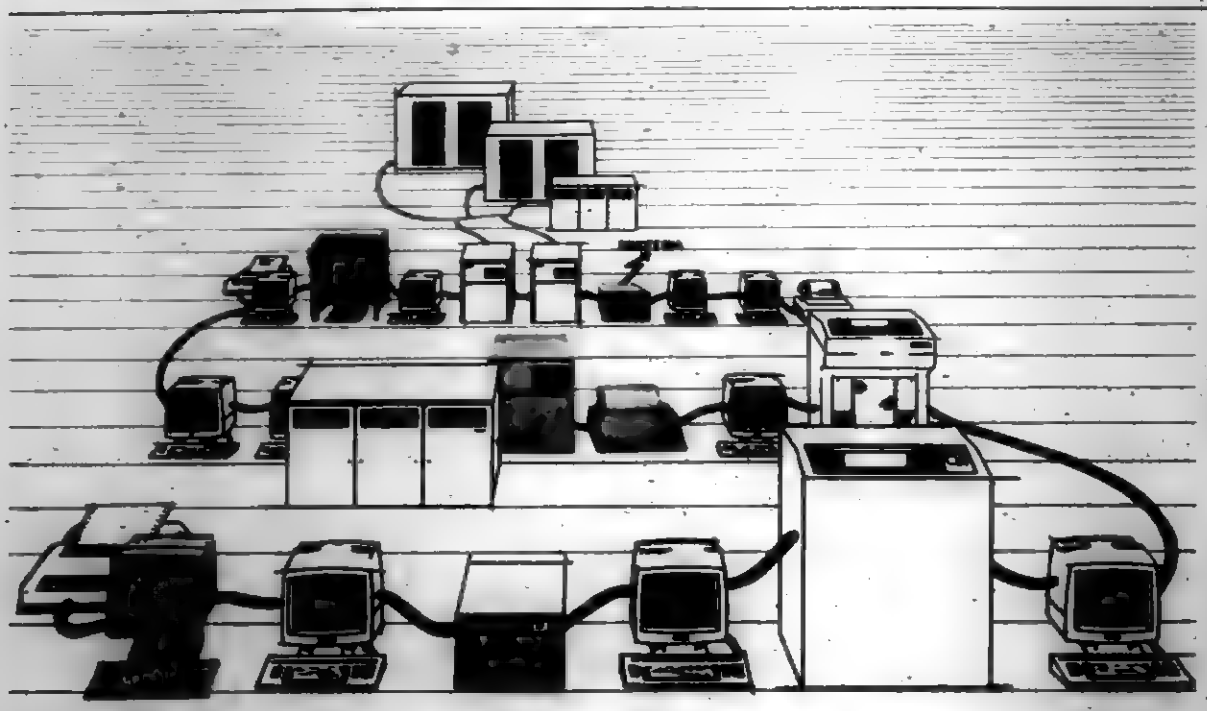
How are microcomputers working out in your organization? If you have a story you would like to share (either bitter or sweet), *Computerworld* would appreciate hearing from you.

Contributions can take one of two forms: a tutorial article that discusses an issue in corporate microcomputing; or a story that outlines a user's experience with micros.

Articles must be typewritten (double spaced) and no longer than eight pages. Artwork such as charts or photographs is encouraged. Authors should include a brief biography and a phone number where they can be reached.

The deadline for submissions is March 5.

Articles for the April 30 Special Report should be addressed to Donovan White, Special Reports Editor, *Computerworld*, 375 Cochituate Road, Box 880, Framingham, Mass. 01701.



3270 Networking: No More No Man's LAN.

Imagine. 3270 Processing. IBM-Compatible Personal Computing. Local Area Networking. And SNA Compatibility. In One System.

Imagine a system that successfully settles the uncharted territory of 3270 local networking—that "no man's LAN" of unlinked and unrealized potential.

Imagine a system that delivers the power of 3270 processing, and the flexibility to build two local area networks from a single controller. Imagine being able to attach up to 120 devices to that controller. Or attaching four distinct controllers—and multiple coaxial links of up to 10,000 feet each—to any of those LANs.

Imagine the economies of a system that handles that networking with standard 3270 coax. That requires no commitment to special architectures or non-standard LAN technologies. And that, thanks to a multi-drop, station-to-station design, can eliminate thousands of feet of new coax.

Of course, such a system would have SNA compatibility. But it would also have a set of capabilities to dramatically increase throughput, while reducing hardware and support costs in *any* environment. Capabilities like multi-host and multi-personality support, application and address switching, and system printing.

This system would have multi-user personal computing "built into" the network—allowing you to assign true 16-bit computing power, maintain overall MIS control, and share expensive disks and printers.

Such a system would boast an intelligent display station that displays a mastery of ergonomic and aesthetic design. With multi-screen formats, anti-glare screen, low-profile keyboard, and a tilt-and-swivel pedestal with the smallest footprint in the industry. Such a system would also include a full line of printers.

Imagine. 3270 processing. IBM-compatible personal computing. Versatile, economical, powerful local area networking. In one system.

Braegen *has* imagined just such a system. They have designed it. Built it. And called it the ELAN™ System.

If such a system sparks your imagination, give us a call. We know the feeling. The Braegen Corporation, 525 Los Coches Street, Milpitas, CA 95035, (408) 945-8150; TWX: 910-338-7332.

BRÆGEN

*ELAN is a trademark of The Braegen Corporation.

GLUE from 39/26

switches will represent another technical evolution. Data and voice will be merged and transmitted over the same lines.

In the next two decades, 78% of all switches will be digital, while today, 90% of them are of the analog variety. Digital networks will eliminate the need for special cables and modems to translate from analog to digital and back again. These networks are faster, of better quality, lower cost and computer-compatible.

In addition, they will allow all terminals, computers, telephones and other data and voice communications systems to hook up to the same physical lines. Digital technology will have a profound impact, not only on business communications, but for consumers as well.

Growing on a variety of different fronts is the new service of electronic mail. The U.S. Postal Service's effort to stay in business in the next decade will be its proposal for electronic communication of mail.

In addition, banks will provide electronic-mail lockboxes to speed corporate cash flow; communicating word processors will spread rapidly around corporate offices; message-switching systems will grow at a fantastic pace; and facsimile transmission for physical document distribution will be much faster and cheaper. As more users are found for this new mode of communication, electronic mail will no doubt continue to increase steadily.

Teleconferencing in the year 2000

As an alternative to person-to-person communications, teleconferencing promises to be one of the most effective future methods of communication. By the year 2000, teleconferencing will be available in virtually all U.S. cities.

Present rates will drop to $1.50 per minute for coast-to-coast calls. The system which presently connects two groups in separate cities so that they see, hear and interact audiovisually with each other as if they were in the same room, will eventually be able to connect as many as eight separate groups together. A $90/hour meeting will pay for itself many times over in tens-of-thousands of dollars saved in travel costs.

The real future of teleconferencing will be international. Slow-scan or freeze-frame video will be used to provide service on an intercontinental level.

These new technologies and services are all examples of the dramatic changes that we can expect in the world of telecommunications. This new technology and accompanying changes will give the information and telecommunications managers both the challenge and the opportunity to put them to work for the corporation. Computing and communications costs will eventually replace labor and transportation costs.

Communications and computers will rapidly merge into a single industry. As we move into the interlinked information world of tomorrow, the growing cost of telecommunications services in the company will receive increasing attention from management. A more sophisticated management will be needed to meet the future challenges of this increasingly complex environment.

Vacca is a free-lance writer based in Topeka, Kan.

SPECIAL REPORT

Users access bank accounts with home micros

NEW YORK — Paying bills has always been a tedious chore for many people — writing checks, addressing envelopes, buying postage stamps or perhaps even hand delivering payments to creditors. This time-consuming process, along with the accompanying paperwork, can now be eliminated with the help of a new electronic home banking system developed by Chemical Bank of New York.

Offered on selected personal computers, the Pronto Home Banking System has already allowed hundreds of customers to pay bills, send messages and conduct banking transactions quickly and reliably from their own homes.

The system, which has been tested by 200 users in the New York metropolitan area since November 1982, was launched commercially to the public in September 1983, according to Charles Forbes, a vice-president in Chemical Bank's Electronic Banking Division. Over 1,500 customers had subscribed to the service by the end of 1983.

More than 400 New York area and national merchants, including major department stores, credit card companies, utilities and large landlords, already accept payment from the home banking system. In addition, Chemical Bank has licensed Pronto to eight banks throughout the U.S. and plans to create a nationwide network for home information. Pronto currently is offered on personal computers from IBM, Apple Computer, Inc. and Atari, Inc.

To ensure the service's around-the-clock availability, Chemical Bank runs Pronto on a Nonstop II computer system from Tandem Computers, Inc. Tandem builds fault-tolerant machines designed to keep on working even if a processor fails.

The home banking function currently supports six major services: bill paying, bank balance inquiry, funds transfer, bank account statements, budgeting and electronic check register.

To pay bills, customers simply key in the amount and date of the payment. Until the payment is actually made, the user, sitting at home, can modify or cancel it. The user receives immediate confirmation, and a reference number indicates the payment has been scheduled.

"Bill paying is the most important banking service we offer," Forbes said. The average customer receives and pays about 150 bills per year. Pronto allows these bills to be paid directly from accounts without writing checks.

Because this eliminates paperwork and speeds up the entire bill paying process, it saves money for everyone involved — banks, creditors and consumers. In fact, many companies will soon begin billing consumers electronically, yet still provide as much information as they now do on a paper invoice, he says.

Robert Lipp, president of Chemical Bank, agreed. "By eliminating the paper bill and postage required to deliver it to the customer, along with the customer's check and return postage, we estimate annual savings in the billions of dollars," he said. "Consumers will benefit from these savings directly as well as indirectly in the form of lower prices on merchandise."

Lipp also noted that U.S. companies mail out about eight billion bills each year at a cost of $1.03 per piece, including postage and check handling. In contrast, electronic bill payment runs about 35 cents each, he said.

Another important home banking function, balance inquiry, permits customers to check balances on all their Chemical Bank accounts — checking, savings, Mastercard, Visa or installation loan files. For example, customers can verify Visa balances by pushing a button and calling up detailed account listings on their home screens.

The electronic mail service allows customers to send messages instantly, either to the bank or to one another. Similar to a telephone book, the electronic directory service provided by Chemical Bank assists users in looking up other customers' names. In addition, electronic mail permits Chemical Bank to contact customers individually or as a group.

With account maintenance, users can change their personal identification codes or request that new bank accounts be added to their Pronto service. This feature is extremely popular because it gives customers the flexibility to change the way they use the service without first contacting the bank, Forbes said.

Additional services include funds transfers, which allow users to transfer money between predesignated accounts approved by the bank; statements, which provide descriptions of all transactions; budgeting, through which customers can establish up to five separate budgets and classify payments into 50 possible budget categories; and electronic checkbook.

"Electronic checkbook is a mini-account reconciliation program,"

IF YOU'VE
EVER OUTGROWN
A FINANCIAL SYSTEM,
THIS IS A SEMINAR
YOU WON'T WANT TO MISS.

The Walker "Once and for All" Seminar. If you're looking at financial applications software, you're probably planning to replace an unwieldy system. One that fails to meet your needs for information management, technological compatibility or operating efficiency. Even perhaps, all three.

Walker offers a full range of financial systems specifically designed to grow with you. Easily. Which means the Walker Seminar could be the last financial software seminar you'll ever attend.

You know the problem. Every time you have to change or add to your current system, you discover new roadblocks. Custom reports have to be programmed on top of your old system. Changes and additions have been so frequent that nobody understands just what the system can do. Or how it does it. New technology could make your business run better...but your financial system won't run on it. And you must divert valuable time and resources to find a new system. Again.

Financial software you won't outgrow. Walker introduced a revolutionary technology: Software that separates the applications (what the software does), from the database (how the system interfaces with your data center). It's a proprietary technology which continues to grow with the needs of hundreds of corporations. Worldwide. Including the 1984 Olympics.

GL, AP,
MM, PO,
AND SOON ARC

Better management tools. Walker's "Strategic Software" allows you to modify your financial system to work the way your company works. And change as your company changes. Simply. Immediately.

Freedom. Walker financial applications packages are not dependent upon a specific technology, operating system or data base management system. By utilizing a unique "software bridge," Walker isolates the applications software from both the mainframe and the DBMS. Which means you're free to choose the technology and DBMS that's best for your company's needs. Without the need to replace or rewrite your financial system, or retrain your staff.

A free seminar. In a few short hours, you can see how integrated, interactive financial systems can save you time for years to come.

Even a free phone call. You can fill in the coupon below, or call us today, toll free: 1(800) 4 WALKER (outside California), (415) 495-8811 (within California). That way we can register you for the seminar that's most convenient for you. In realtime. Like Walker software.

matchmaker, matchmaker.

A word processor and a computer aren't a match made in heaven.

Of course, neither are a telex machine and CRT. Or any of the machines listed here.

Rather, they're all matches made by us: ITT World Communications.

You see, until we came along, it wasn't very easy for businesses to send information from a word processor to a computer. Or from a telex to a CRT. Or vice versa.

Now all that (and more) is possible—by sending information through us.

Our network simply eliminates all the usual problems of unlike equipment.

So a company never has to be in the costly position of owning unneeded terminals, just to "talk" to other terminals.

Which means, you'll not only get the communications your company needs, but you could save money as well.

Advanced communications *and* economy?

It sounds like a perfect match to us.

For more information contact your local ITT sales representative or write Marketing Department A/PR, ITT World Communications, 100 Plaza Drive, Secaucus, New Jersey 07096.

ITT

SPECIAL REPORT

Electronic firm ties 8,500 stores nationwide

FORT WORTH, Texas — With some 5,500 company-owned retail stores and 3,000 dealer/franchise outlets, Tandy Corp. operates the largest number of consumer electronics outlets in the world. Efficient management of this $2 billion per year business has mandated the evolution of a highly reliable and efficient data transmission network.

The initial charter of Tandy data processing — operating out of headquarters here — was to support the corporate mailing list. Today, Tandy's corporate data processing department supports literally every phase of the domestic operation as well as some international needs. Whether it's manufacturing, distribution, payroll, accounting or mailing lists, DP growth has accompanied corporate expansion.

The retail stores and dealer sites are supported by six regional warehouses located here and in Boston; Charleston, S.C.; Columbus, Ohio; and Woodland and Garden Grove, Calif. Fort Worth is the locale of a "force-feed" warehouse which supplies both overseas and domestic outlets.

Until recently, order entry, warehouse distribution and inventory control were carried out using a combination of manual and batch procedures. Gary Jolley, DP operations manager of warehouse distribution, explained some of the old methods: "Preprinted order forms were filled in by hand at the stores and mailed to our warehouses," he said. "These forms were sorted and then taken out to the warehouse floor where merchandise was pulled."

The old method, in short, was not keeping pace with Tandy's growth. More significantly, it wasn't contributing to that growth, as Tandy's DP distribution system manager Mary Lou Edwards pointed out.

"The data on those orders was then keypunched and transmitted to our corporate data center at headquarters through a 2,400 bit/sec modem on a dial-up line daily," Edwards said. "The next morning we sent the warehouse a printout of their invoices, a billing method which did nothing to increase warehouse productivity. The warehouses weren't getting enough reports in a timely enough fashion to help them control their work flow.

"About seven years ago we began developing a plan to computerize our warehouse distribution system," Edwards said. "At first, we elected to install a computer at one of the remote warehouses as well as here in Fort Worth. Each warehouse would have its own computer, handle its own data processing activity and just transmit records to the central mainframes at night.

"The total cost for that approach would have been comparable to that of our present system; however, with our present configuration we have better central site control over the data base. We don't have to worry about things like software updates and file control, and we require fewer technical support people both here and at the remote sites," Edwards said.

So Tandy opted for a centralized processing approach for the warehouse distribution system.

Radio Shack's own TRS 80 Model 4 microcomputers at each retail store handle an operating system which

TRS from SR/37

performs, among other things, the order-entry function. Tandy's store operating system assists the store with information on what to order, how much and when, in order to maintain optimum inventory levels.

The orders are transmitted to the corporate data center here, and then the information goes to the system located at the Fort Worth distribution DP center. Inventory will either be shipped out of the Fort Worth forcefeed warehouse, the computer warehouse or one of the regional warehouses; at this point in the ordering process, all data transmissions between the mainframes and the warehouse terminals are on-line. And the volume of traffic in the network is enormous.

Tandy's Fort Worth warehouse alone distributes 800 shipments daily, requiring a pulling of some 120,000 lines and shipment of more than 6,000 cartons. Combined regional warehouse daily volume totals some 2,100 shipments of 65,000 lines in 28,000 cartons.

Data describing 50 million lines and 500,000 shipments is transmitted through the network annually. All of the warehouses throughout the U.S. access the mainframes through Codex Corp. data communications equipment.

Each of Tandy's warehouses and the data center are configured with Codex 6030 Intelligent Network Processor statistical multiplexers.

Most warehouses have 13 terminals and five printers. The 6030s take data from multiple terminals and concentrate it using statistical multiplexing and data compression techniques.

In the event problems occur, backup is available with the modems. "The Codex LSI 9600s have dial backup capability," Edwards noted. "So if we lose a telephone line, we can provide backup service. And with the Codex Comm diagnostic equipment, we can detect line problems and actually determine the type of problem."

Some six different warehouse systems have been installed within a 16-month period as modular additions to the warehouse mainframe and Codex equipment. "This expansion caused absolutely no impact on any of our existing warehouses," Edwards said. "We simply added them on weekends or nights."

HOME from SR/35

Forbes said. When the customer enters the check number and amount, Pronto balances the account for them. "Electronic checkbook is an invaluable service for those of us who always seem to have trouble balancing our accounts."

Forbes added that the Pronto system soon will include several nonbanking services. "We plan to package the system with other capabilities, including recordkeeping, news and educational services, catalog shopping, weather reports, stock quotations and portfolio analysis."

To use the Pronto home banking service, the customer needs a home computer, with a modem hooked up to a telephone, and a television set or display terminal.

Costs and security

Forbes said the cost for the home computer and modem is as low as $125, while the monthly subscription rate is $12. For security, each authorized user assigns himself an identification number, as well as an individual code name or "handle."

The user activates Pronto by inserting a special communications software cartridge or floppy disk into the home computer and instructing it to dial up the bank automatically through a public packet-switching network.

After the home terminal connects with the bank's computer system, a three-item main menu appears on the screen, allowing the user to call up either the electronic mail, account maintenance or home banking functions, Forbes said.

Subscribers can access the service 24 hours a day, seven days a week through an automatic dial-up modem attached to their terminals and telephones.

Forbes pointed out that as the network of banks using Pronto expands, the computer system will grow with it. Chemical Bank currently has an eight-processor Nonstop II system.

NETWORK HEALTHCARE

DATA COMMUNICATION NETWORKS AREN'T LIKE PEOPLE BUT...

One thing's for certain. Poor advice early in the design stage, the wrong equipment, or inadequate product support could make your network very sick.

We can help prevent that. Meet ComDesign's data comm "doctors". They are a group of dedicated, service oriented data communication specialists. Talented, qualified, and helpful, they dispense the application engineering answers that will keep your network in the pink. For large networks or small. And you don't have to be a ComDesign customer to take advantage of this service. As a matter of fact, you'll never even need an appointment. Just use the **toll-free** number below. The doctor's always in.

SPECIAL REPORT

Corporate info needs reliable transport

Network failure may mean large dollar losses

By Alan Ruhl
Special to CW‡

Corporations are now facing one of their toughest challenges — the information explosion. As business becomes more complex, executives at all levels find they must have more information relating to how the company operates. This quest for expanded information has led to the increased collection of data in virtually all departments within a company.

As these data bases proliferate, information must not only be accessed, but analysed and processed throughout the corporation in an understandable form.

And since most business information systems are now automated, the ability to deliver information where and when needed within the organization becomes crucial to efficient, continuous operation.

With the growth of personal computers and local-area networks, automated delivery of information within a corporation requires a reliable transport mechanism readily available to all users. This type of transport mechanism is typically referred to as the corporate communications network. It provides the capability for management to access vital information and maintain a competitive edge. It's also the resource that keeps customer service at eye level in a post-divestiture environment.

In many industries, the uninterrupted flow of information is the lifeblood of a company. Airlines, hotels, car rental firms, banks and brokerage houses are among the more noteworthy examples. As such, companies in these industries are extremely dependent on an efficient, real-time data communications network.

If a network failure occurs, companies dealing in time-critical information are vulnerable to high revenue losses, to say nothing of good will — $10,000 per minute in the case of airlines and up to $1 million per minute for an international brokerage firm (see Figure 1).

With increased reliance on corporate communications facilities, operating costs have steadily risen. This has lead telecommunications professionals to seek tools that help to optimize their operations. Network managers, working closely with data communications suppliers, have developed specialized systems to control network operations totally.

Originally, these systems were based on test equipment that monitored technical operating parameters to give highly trained communication network specialists detailed data. Such systems measure complex parameters and were meaningful only to skilled technical personnel.

Now, sophisticated computer-based communications systems have dramatically increased the quantity, quality and availability of critical data for the decision-making process. Using computerized analysis of network data, the telecommunications staff is now able to create a data base that helps to make the corporate communications system more reliable and less costly to operate.

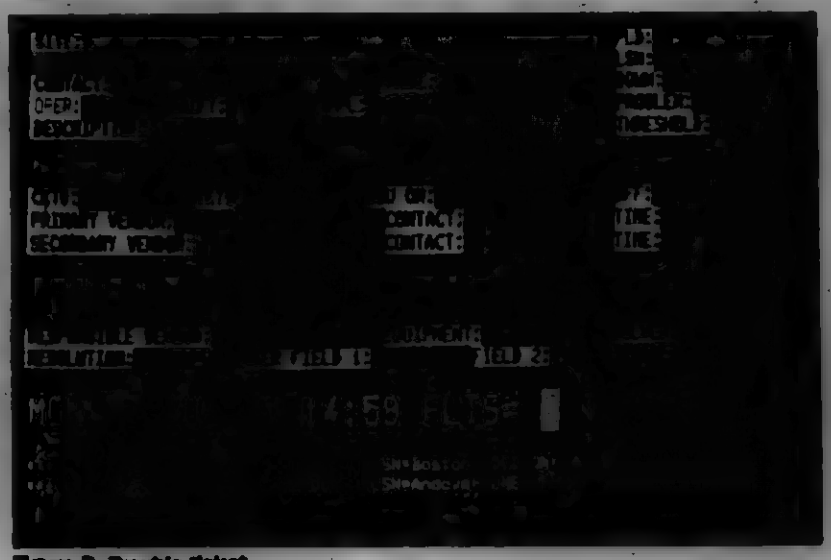

Figure 2: Trouble ticket

Continuous monitoring of normal network operating parameters is vital to improving the efficiency of these systems. When operators know the network threshold levels that are needed for trouble-free operation, they can easily detect degrading line conditions that lead to malfunctions and outages within the network. Operators can download these parameters, and the system will automatically alarm if the thresholds are exceeded (see Figure 2).

These systems will help provide nonstop operation, optimize network configuration, record all network faults and events and continually monitor network performance. In or-

INFO from SR/39

der to collect this type of data, the system must have the capability to monitor the condition of these communications lines, terminals and cluster controllers, which provide intelligence for a variety of devices operating on the network.

The ability to collect this network data gives management the key to making the network operate more efficiently and with greater reliability, both from the external perspective of line, modem and terminal failures, and from the internal dimension of software problems, bit error rate, response times, mainframe problems and other parameters of the data processing system.

As long as operations are maintained within normal limits, system operators receive no unusual indications at the control center. However, any deviation from established norms can trigger a series of alarm indications, depending on how the system is programmed.

On lines which must remain operational, it is possible to set alarm thresholds to give preliminary warnings even when the slightest deviation from normal is detected. The establishment of threshold levels is an important criterion that must be considered carefully by those versed in the corporate goals of the network. If levels are set too tightly, alarm indications will be triggered for random line deviations, often wasting the time of staff specialists on little more than routine situations.

On the other hand, if levels are set too loosely, serious line degradations might not receive attention until a line is close to a total outage. In the final analysis, the proper threshold level can only be determined by the telecommunications manager.

Today's integrated systems make it possible for network operators to track performance data in real-time. Network faults and alerts are typically detected within one minute. If users at a specific location indicate they are experiencing response-time problems, an operator in the network control center can immediately confirm the status of network facilities.

With access time at about five seconds for this type of information, the operator has immediate answers that help to pinpoint the cause of malfunctions and estimate when off-normal conditions can be corrected, thereby improving the reputation of communications staff among users. Once a problem has been isolated to a specific location or parameter, it is much easier to apply specific test sequences. This, in turn, reduces the time to clear an off-normal condition.

As more detailed performance data becomes available, specialized software will allow a variety of users to access detailed network information. While technical specialists may need to have very precise tabular data displayed, corporate managers may not. Their requirements may be for more general summary statistics in an easy-to-read graph.

Maximum graphics

A fully integrated network command center system can provide maximum graphics features to serve the needs of both specialists and managers. In these systems, network performance data can be displayed in color on visual display terminals or printed out for hard-copy analysis. The availability of a system processor with a large data base provides the flexibility to present network data in a format that can answer a multitude of questions relating to network operation and performance.

By providing telecommunications features necessary to present network data in graphics formats, it becomes easier to make management aware of network operations. Nontechnical managers may not want to see a detailed report on technical data, but might be interested in a summary of terminal usage in certain time periods or by application.

Using stored traffic pattern data, the telecommunications manager can simulate the impact of more terminals, higher speed modems and similar changes to existing network operations. Proposed solutions can be easily tested against the known traffic patterns.

Indeed, the age of information is upon us. And with networks growing faster

Intelligent nets: tying incompatible equipment into cohesive info system

By Joel Edwards
and Sandy Klotz
Special to CW3

While technology planning is best done before incompatible computing equipment is purchased, computing equipment tends to spread a lot faster than technology plans. There is one way to implement technology planning after incompatible equipment is in place, a way that will leverage that equipment into a cohesive information system. It involves the concept of an intelligent network.

An intelligent network integrates existing incompatible equipment into a single information network, so data generated in diverse application domains is available to the corporation as a whole (see figure). This can be accomplished by implementing a backbone network of similar processors and gateways linking that network with applications throughout the company.

The backbone network performs all advanced communications and integration functions for the corporation, such as managing a corporate data base that includes data from all the application domains and message-switching for the various forms of information (graphics, text, facsimile) that are available through the gateways. Each gateway is a customized interface designed specifically to meet the needs and capabilities of its application domain. When new domains are added or new equipment is added to existing domains, integrating that equipment becomes a matter of adding another gateway.

There are stringent requirements that must be met to implement an intelligent network successfully:

- The information that it manages must be continuously available. The intelligent network stores and handles vital corporate information. It must, therefore, be extremely reliable. Virtually no downtime can be tolerated because any system failure will cripple the organization. In addition, the system must guarantee the integrity of the information that it stores and transports.
- The information must be accessible from any application domain. Users must be able to access information throughout the network from any of these domains, assuming that they have the right access privileges.
- The network must be flexible enough to accommodate change. It must allow the organization to adapt to changing technologies, changing organizational topologies, increased information volume and varying reporting requirements.
- The network must be able to store and transport any type of information relevant to the business. Graphics displays, data base records, edit files, facsimile images, digitized voice and so forth must all be accommodated, and the system must provide straightforward, consistent interfaces between them.
- The distribution information in the intelligent network must be accessible as a single corporate resource. The information system must consolidate and control the flow and sharing of data in the distributed environment (that is, between many sites of activity).

To meet all of these needs requires a backbone network with a combination of features. Sophisticated networking facilities are necessary to keep the various application domains in constant communication, and to make full use of this corporatewide communication, the network

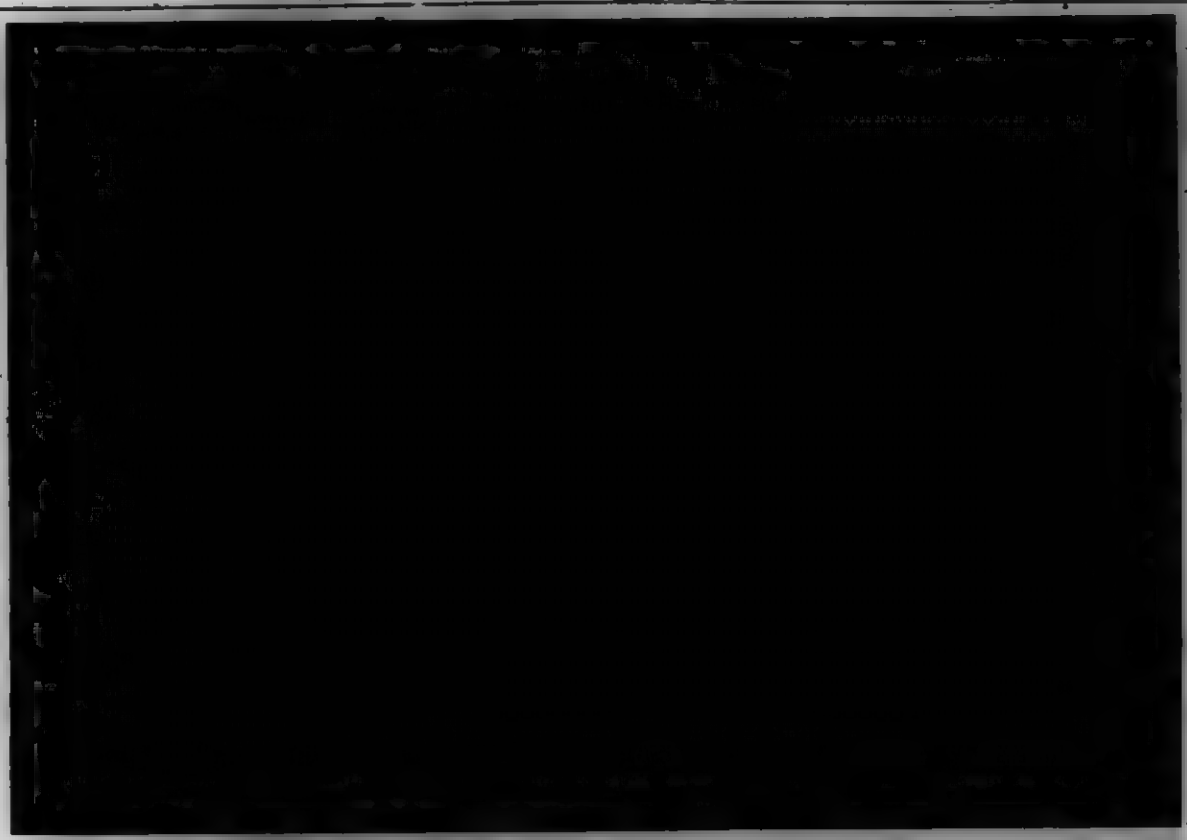
Intelligent network



Do you have a data communications network or does it have you?

Why tie up your resources when you can take advantage of ours? And there's never been more reason for taking advantage of RCA Cylix than right now during this period of deregulation and divestiture. Here's why.

Unlike the other guys, we don't just hand you a line. We deliver the stars. Because we're a satellite based, value-added network. Providing end-to-end management and a permanent virtual circuit that's perfect for transaction oriented applications.

What's more, you'll always get our undivided attention. Because data communications is all we do. And since you're working with just one company—not several—you'll never get lost in the shuffle.

RCA Cylix isn't just more convenient. It's also more efficient. Setting up your own network involves a huge commitment of time, personnel and capital funds. Our single vendor simplicity eliminates all that.

One phone call puts our experienced people to work for you. Setting up your network. Handling all those dealings with all those phone companies. And then keeping your network running smoothly thanks to our unique service concept. Plus our design flexibility makes growth easy.

We can do all this more efficiently than you can due to our years of experience. And that can save you money. Because research indicates that personnel, benefits and associated overhead account for up to 1/3 of all networking costs.

Whether you're expanding an existing network or building a new one, now more than ever RCA Cylix is not only the easy choice. But the right one for data networking anywhere in the United States, Canada or Alaska. For more information and our free brochure, "Managing Your Network: Post-Divestiture Costs and Concerns" call our marketing department today at 901-683-3043. Or send in this coupon.

NET from SR/41

should include an electronic mail system.

The purpose of the mail system is to facilitate noninteractive communications. This allows information to be delivered in a timely fashion throughout the network, whether the recipient is immediately available or not. Information can be communicated between application domains in this manner.

To accommodate such communications, the information and processing capabilities of the backbone network must be distributed. Distribution of control enhances the efficiency, modularity and reliability of the intelligent network as a whole. It also allows the diverse application domains to customize their particular interfaces to the network.

A sophisticated backbone network with distributed intelligence makes another feature possible — a distributed data base. The files in a distributed data base are located on systems throughout the network, wherever they are most needed. This means that corporate headquarters in New York can access manufacturing data located at a manufacturing plant in Texas. At the same time, that plant in Texas has local access to the data, as well as local control.

The intelligence located within each network node means that the nodes can be multifunctional. Each node must have the capability of running various applications and utilities (local or network) and acting as an intelligent switch between the application domains and the backbone network.

Fault tolerance and on-line access are also necessary features in an intelligent network. Because the business is literally run with that network, the network must be continuously available despite component failures. And the information available throughout that network has to be available on-line because it may be needed at any given moment for use in critical business decisions.

An intelligent network with these features would solve the problem of integrating incompatible computing equipment and would leverage an investment in existing software. Being evolutionary and flexible by nature, an intelligent network leverages investments without locking the user into a single vendor solution or requiring integrated networking standards to be set.

With an entire corporation integrated in this manner, productivity and, therefore, profitability would be vastly improved. Increased corporate communications, improved decision making through the constant availability of timely information and remote access to locally controlled data are just some of the benefits of linking a corporation into a single operating entity through an intelligent network. But implementing an intelligent network requires more than technology; it requires a firm decision and commitment by upper management.

Edwards is a data communications engineer and Metz is a technical public relations specialist at Tandem Computers, Inc. in Cupertino, Calif.

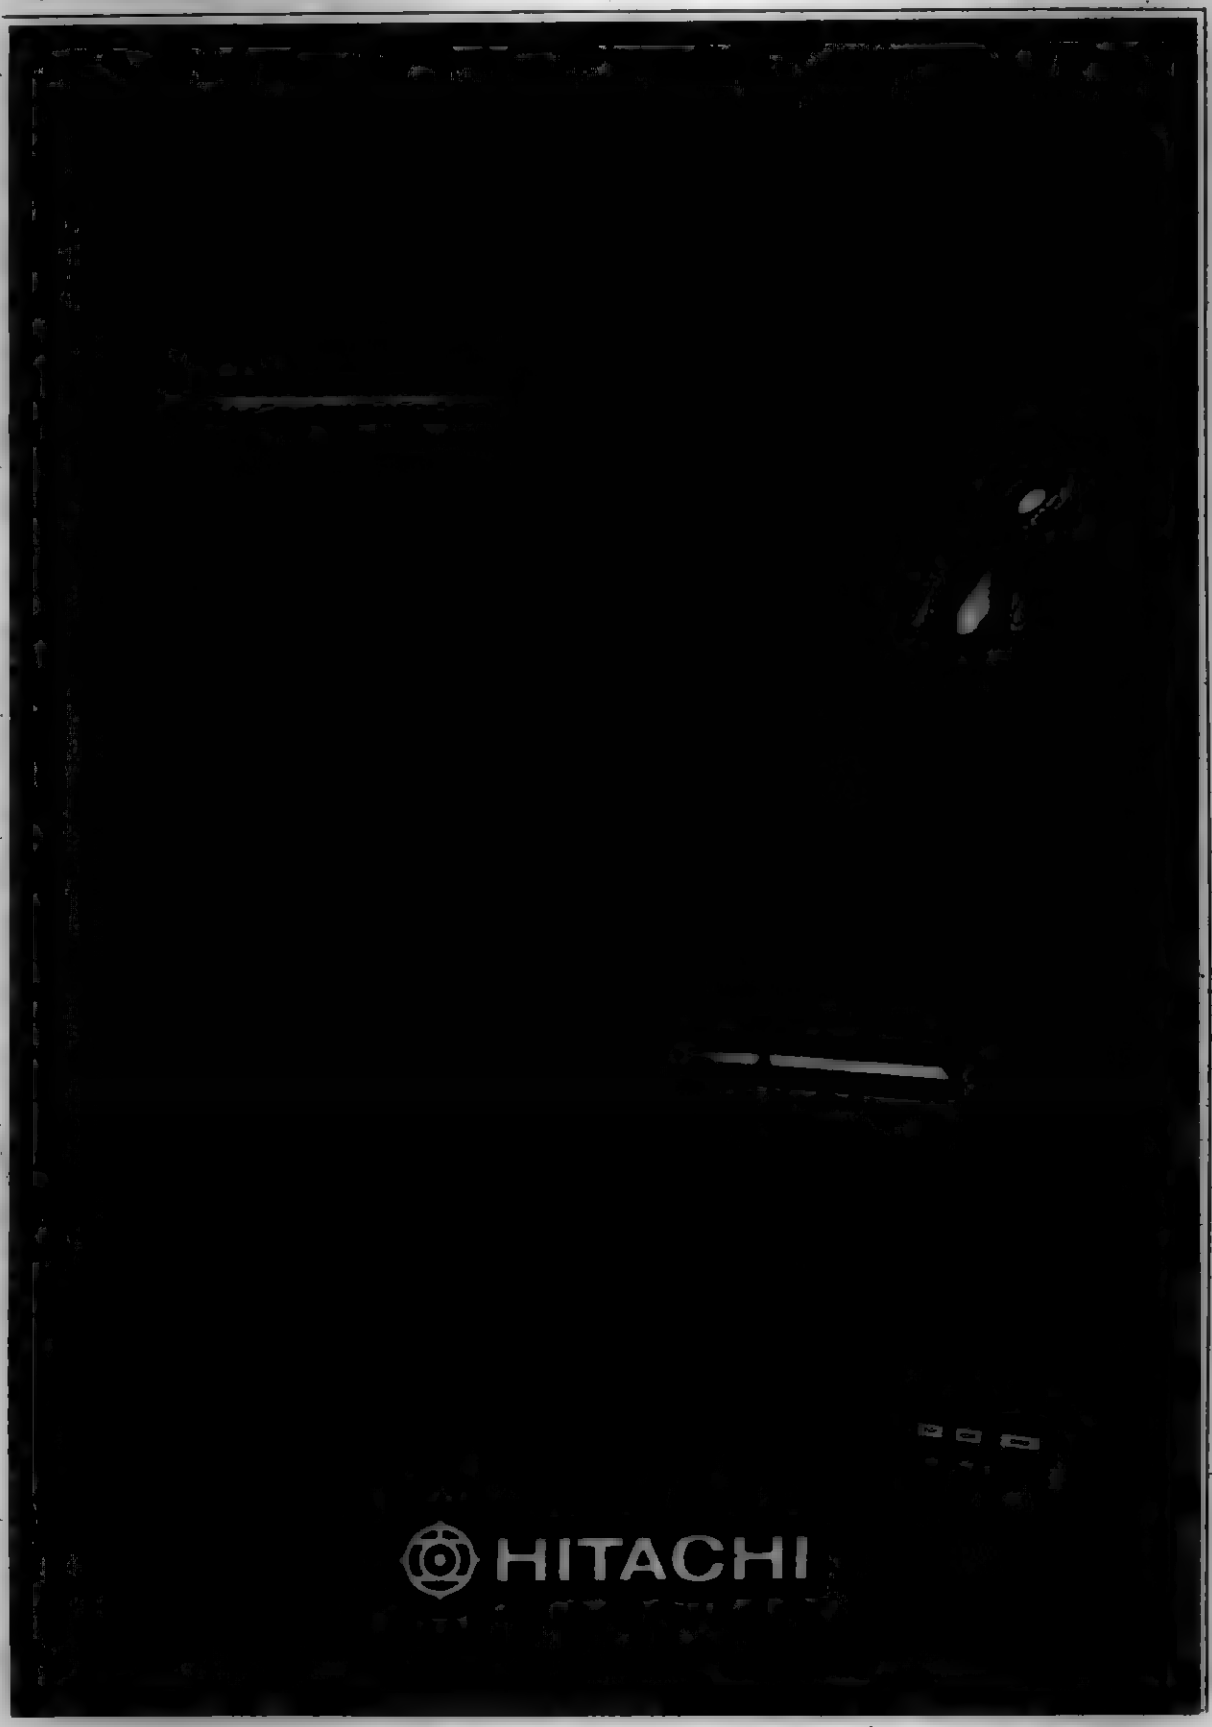
INFO from SR/40

than the availability of people to manage them, strategic communications planning is beginning to take place on many levels.

Analyzing user needs and responding to these needs are the foundations of such strategic planning. And it is along this path that fault-tolerant networks earn their daily bread, applying the technology to acquire and disseminate information in a sensitive marketplace.

As more and more companies are learning, the corporate communications network is sparking a transformation in the way they conduct their business and providing an ever-present vision of the network as a corporate asset.

Brind is manager of product marketing for network command center products at Infinet, Inc. of Andover, Mass.



Now you don't have to be rich to be powerful.

Riches and power don't always go together. Take Plexus, for instance. The world's most powerful UNIX*-based supermicros.

Powerful because multiple processors share the UNIX load. So processing power is distributed to where it does the most good.

Terminal I/O. Disk I/O. Data communications. And, of course, data processing.

Our unique architecture also lets us bring you the world's first UNIX Network Operating System (NOS). So you can combine Plexus systems in an Ethernet network for even more power.

NOS gives you real time, continuous access to files. From anywhere in the network.

Files are also updated on the same basis. So everyone in the network works with up-to-the-minute data. Automatically.

No waiting for file transfers. And that's a decided improvement over everything else that's out there.

You also get to save money on powerful UNIX-based software, including COBOL, FORTRAN, Pascal, BASIC, and C. Database management and word processing, too. As well as hundreds of third party UNIX packages.

Plus our own software and maintenance support. And even a software referral service for your OEM programs.

Does all this make us expensive?

Absolutely not.

In fact, Plexus systems cost thousands of dollars less than the minicomputers we outperform.

To get a better idea of just how good that performance is, come get a demonstration. Call *800-528-6050*, ext. *1444*. In Arizona, *800-352-0458*, ext. *1444*. Or write Ralph Mele at Plexus Computers, Inc., 2230 Martin Avenue, Santa Clara, CA 95050.

You see? You don't have to be rich to be powerful. Just smart.

Oil drilling firm strikes it rich by transferring info with own packages

FORT WORTH, Texas — Since 1939, Western Co. of North America based here has provided the petroleum industry with essential drilling and completion services for the exploration, development and production of oil and gas. With assets in excess of a billion dollars, Western has consistently been a pacesetter in this highly competitive industry.

But high growth has brought on new technical challenges. According to Joe Adamo, telecommunications manager, "During the 1979 to 1980 time frame, with the [Organization of Petroleum Exporting Countries] price increases, drilling activity was very high, and the company was doubling its growth. We had to improve the handling and transfer of information critical to our operations."

This information — everything from materials inventory and equipment maintenance to management reporting and payroll — is continually transferred between Western's regional office centers, 50 district offices and corporate headquarters. "Prior to 1980, many functions were accomplished through manual systems," Adamo said. "The districts maintained written logs on materials usage and inventory. Some managers would stock lightly, while others would stock heavily on items. It was essential to even out inventories and go into volume purchasing across the company to improve materials management."

Ben Albino, shift supervisor in the operations section, also noted the inefficiencies. "We had an IBM 370/138 operating under DOS, with .5M byte of memory. After the data was mailed in from the districts, it would take a day to key it into the system for processing — and our payroll would take an agonizing 16 to 26 hours to run."

It was apparent that a major upgrade in computer and communications capabilities was required. Western's management viewed the investment as one that would increase both service to customers and the efficiency of internal operations.

The comprehensive blueprint for data processing and the supporting communications network that Western designed more than met the company's goals, resulting in an inventory tracking system that Western is marketing to other companies. Western customers benefit from an engineering software package that gives them better analysis of field data on well drilling operations. They also have access to Western's "supervan," a mini computer center on wheels that does analysis at the well sites.

Success of new software programs

The success of the new software programs developed by Western depended upon how readily the programs could be accessed by Western personnel at remote locations around the country. Western needed a communications network that would reach all locations cost-effectively and reliably while being centrally controllable.

Why was central site control crucial? "The staff in our regional and district offices is comprised of sales and administrative-type personnel who simply do not have the technical background or training required to assist in extensive network testing," Adamo said.

Fifty-eight dedicated private leased lines tie 73 separate locations to the Western data center here. An

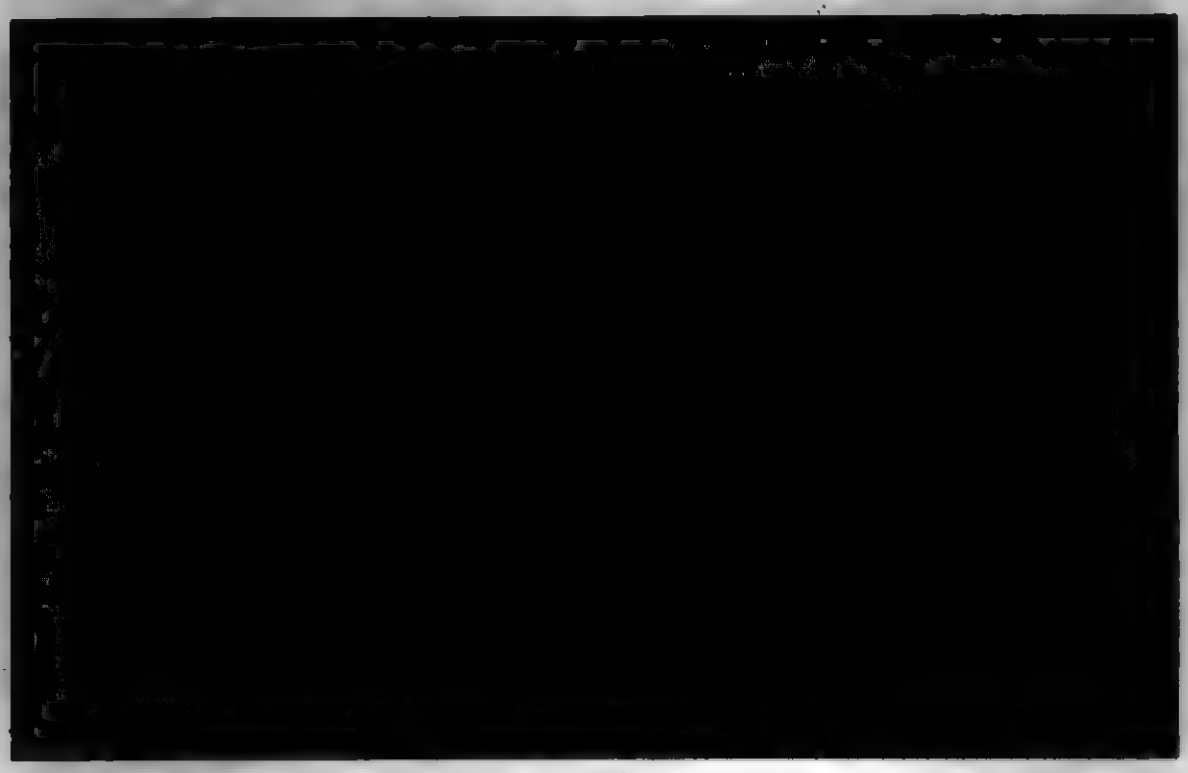
Combining Boeing's distributed services with IBM's PCs could revolutionize your financial planning.



We know.

Introducing a totally new program from Boeing Computer Services. Designed to help you take maximum advantage of IBM's technology in microcomputers. While ensuring you get the same reliable, high quality computing solutions that are synonymous with the name BOEING.

For financial planners, Boeing offers the EIS® Micro Workstation — a distributed extension of the well-known EIS Decision Support System. EIS software gives business managers the information they need. Faster. More accurately. Without complicated computer programming. And now delivered economically to your desktop, via the IBM PC/PCXT.

The EIS Micro Workstation lets you download, manipulate and upload data to our MAINSTREAM® remote computing network. It gives you extensive graphics capability. What's more, with MAINSTREAM power, you gain access to the many economic and financial data banks you need for up-to-the-minute modeling. And through our Value Added Dealer (VAD) relationship with IBM, Boeing can be your single, reliable source for host processing, PC/PCXT hardware, software, maintenance, consulting, and training.

You save valuable financial planning dollars while gaining greater control over your planning and business management.

The EIS Micro Workstation is just one more unique service from Boeing, a leader in software and computing solutions. Give your decisions more support. Call 800-447-4700. Or write Boeing Computer Services, M.S. CV-26-9A, 7980 Gallows Court, Vienna, VA 22180.

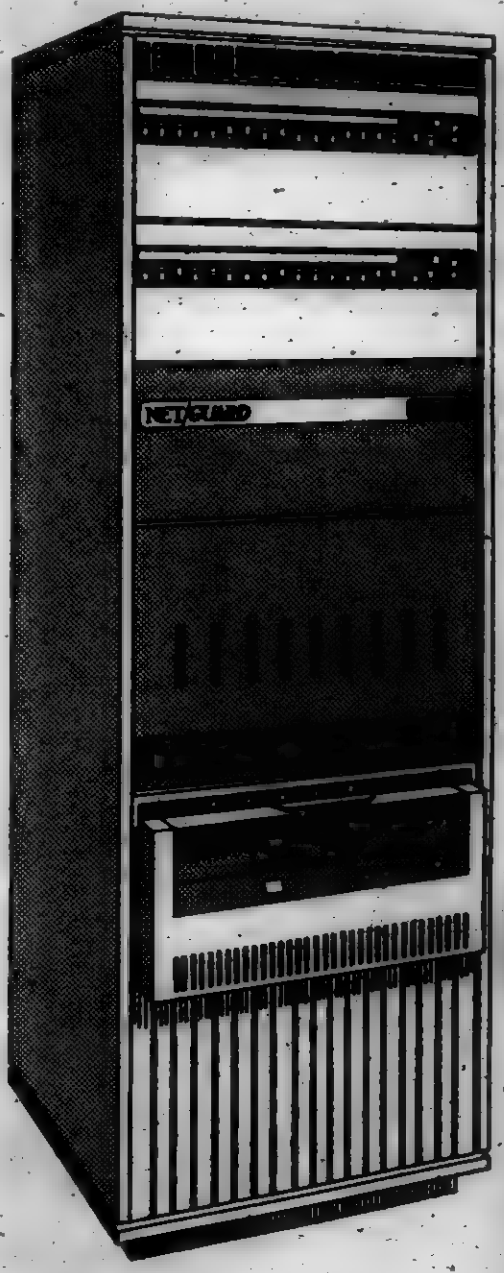
NET/GUARD™

The System Solution to PC Integration



Net/*Guard*:
- Allows datacom network managers to control access by personal computers to the central network, databases, and computers.
- Provides basic performance and utilization monitoring of any dial-up device.

Net/*Guard* means you can:
- Know who is accessing the network and why.
- Provide real-time operational control.
- Alert operations to potential functional and performance problems.
- Plan for growth and additional capacity.
- Provide greater end-user service and credibility.

Net/*Guard* means your users can:
- Dial in to your network.
- Use central database and computing resources.
- Communicate with the network control center.
- Send and receive mail.
- Maintain files to which access is restricted.

See Net/*Guard* at Interface booth 279. If you can't make it because your network has you tied up in knots, fill in the coupon fast. We'll speed you information about Avant-Garde's products to simplify network management. Or call Art Alberding on (609) 424-9620.

Stock exchange trades traditional net idea

NEW YORK — Compared with more traditional arrangements, local networks are usually touted as a better way to allow the sharing of information, whether on a central computer, peripherals or a number of microcomputers. But a primary benefit of phasing out a traditional network can be to decrease the number of I/O devices, thus conserving a very scarce commodity: floor space in a crowded stock exchange.

Over a period of years, the American Stock Exchange (Amex) designed and implemented a data communications network to serve the trading posts located on the exchange floor.

The network also connected the posts with the member brokerage houses of the exchanges. Unfortunately, the design of the network dictated that increases in overall trading volume often led to the installation of new peripherals on the trading floor.

Flow of transactions

The general flow of transactions around the network was as follows: Orders for the purchase of stocks were usually entered in a member firm's own computer network by the firm's stockbrokers at their offices around the country. The orders were then transmitted either to a message-switching host computer at Securities Industry Automation Corp. (Siac) or directly to the firm's own booth area at Amex.

Siac, a subsidiary of the New York and American stock exchanges, acts as the data processing organization for the exchanges. Amex is located on Wall Street in New York and is the second largest stock exchange in the U.S. Orders sent to Siac are routed via Siac's common message switch to a host computer designated post-execution reporting (PER) for initial processing. PER then routes the order to a printer at the appropriate post on the trading floor.

Each stock is traded at only one floor post. Orders sent directly to a firm's booth area are carried to the appropriate post by the firm's personnel. Each order is then handled manually by the specialist for that particular stock, who then matches compatible buy and sell orders.

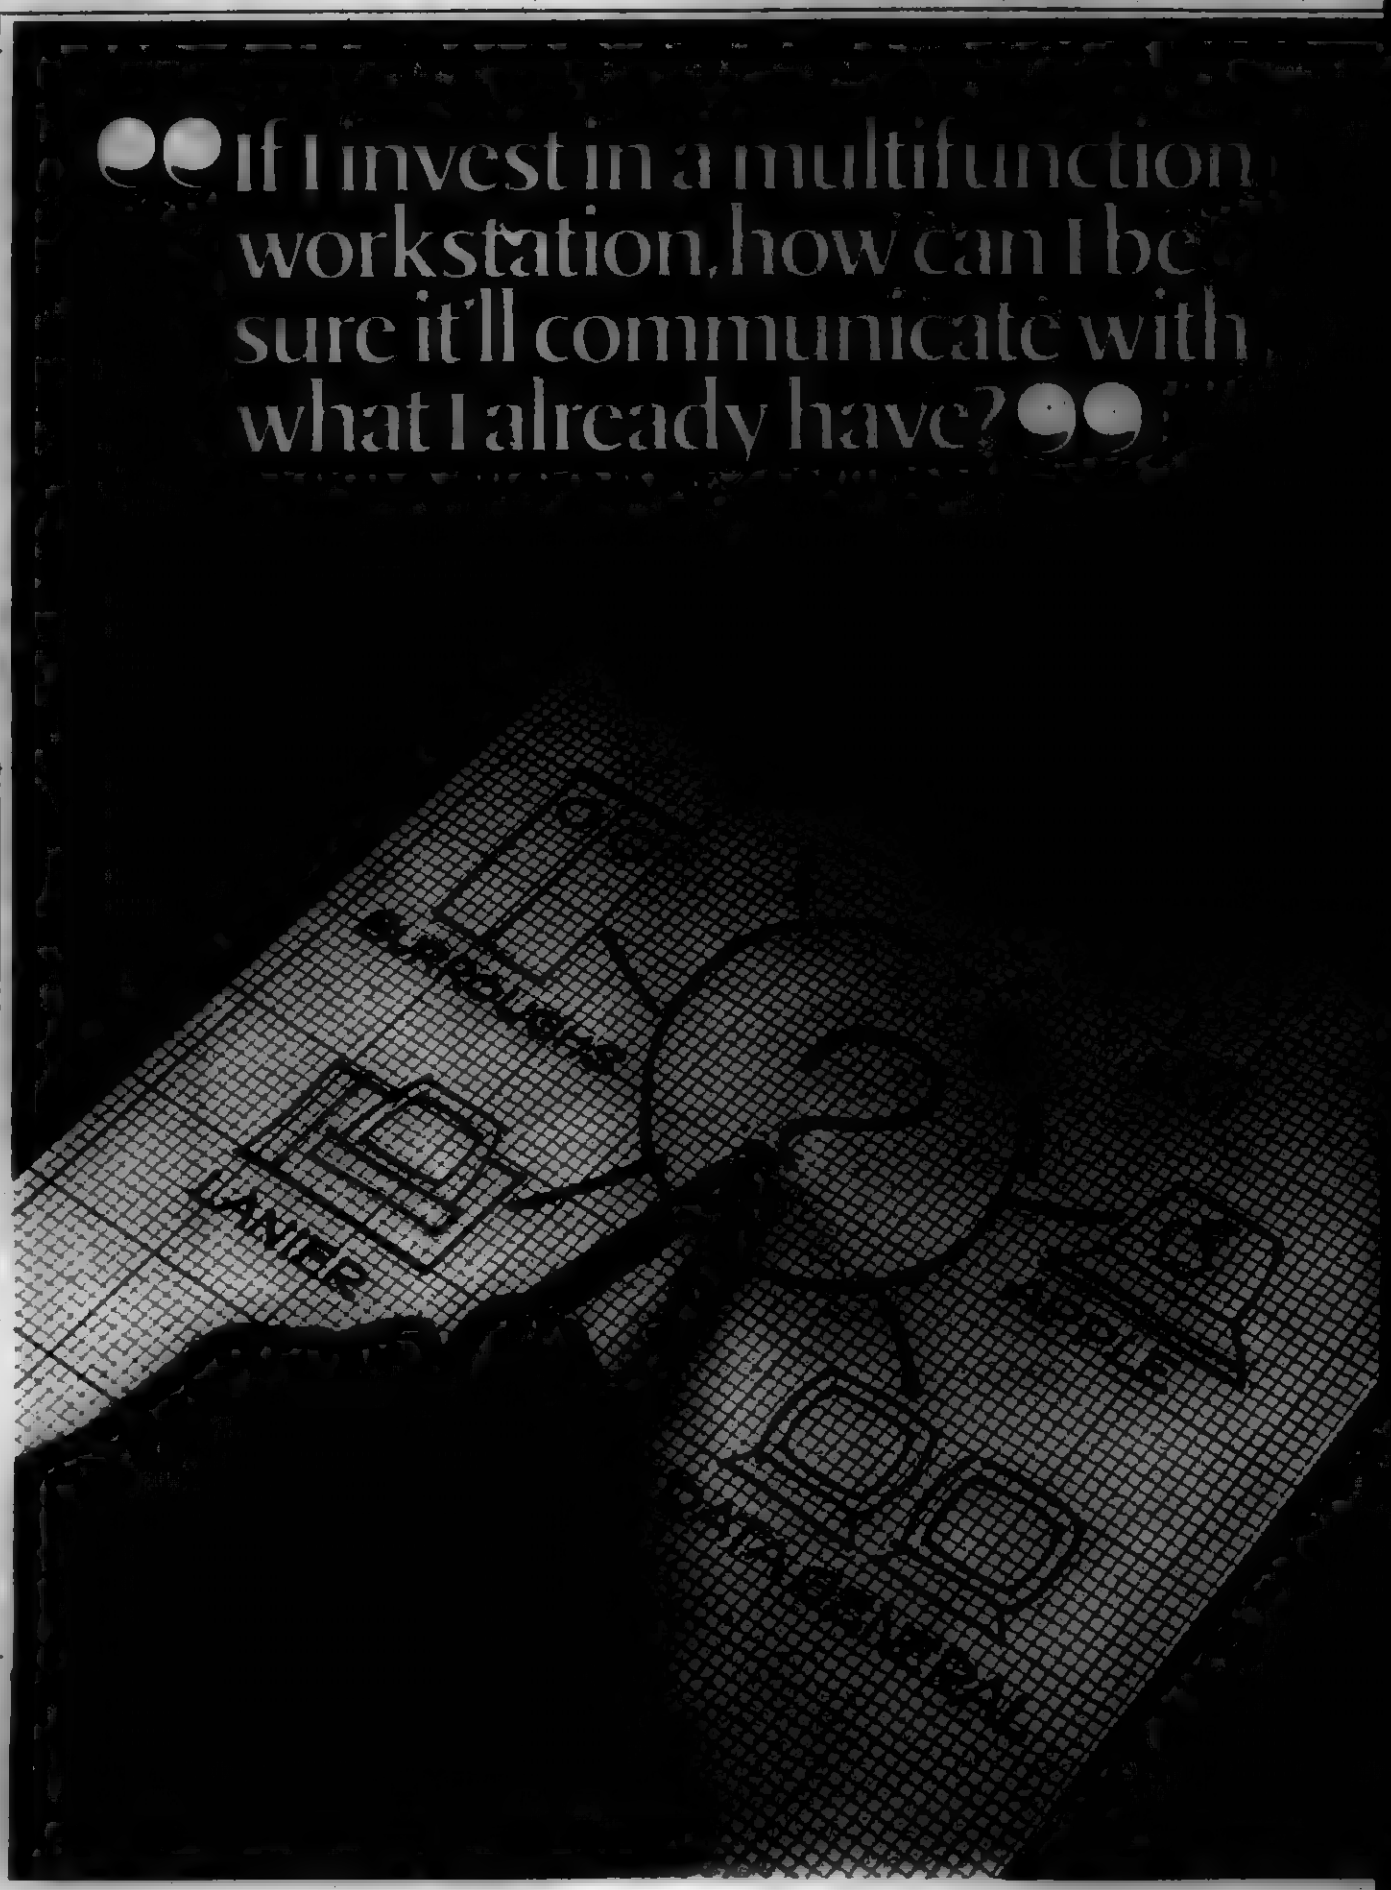
Once an order is executed, either one or two cards are marked to record the trade. Orders that entered via a booth produce a market data switch (MDS) card that is sent to the MDS host computer. This computer produces the well-known ticker that shows all trades. Orders that entered through Siac produce an MDS card and a PER card that is sent to the PER host. Eventually, the order information is routed back to the originating brokerage firm and then back to the office placing the order.

Initially, PER and MDS each had its own dedicated card readers and printers. Before long, the number of these peripherals began to mushroom. As these devices began proliferating, so did wiring and modems. If an additional device was needed, due to increased overall trading volume, two devices had to be added — one for PER and one for MDS. Since the devices used a dedicated communications line, each new device meant another line from Amex to Siac, with the host computer site located a few blocks away.

More computers also meant more card readers and printers. The hardware and wiring needs began to snowball, and the problem was intensified by the shortage of space on the exchange floor.

In late 1980, Siac and Amex began looking for a new network design and technology to support Amex trading. Around the same time, local-area nets were emerging, and this technol-

"If I invest in a multifunction workstation, how can I be sure it'll communicate with what I already have?"



SPECIAL REPORT

for local network to conserve floor space

ogy was chosen as the most effective means of coping with the problem of connecting the devices and computers while efficiently using space on the trading floor.

The local network approach offered many advantages. First, and perhaps most important, a local network costs about half as much as an equivalent message-switching approach. The use of the local network meant that one card reader or printer could serve MDS and PER as well as all future hosts. In addition, the number of dedicated lines and modems would be reduced. The local network also would help to reduce future wiring and installation costs and, thus, would provide a relatively inexpensive incremental growth path.

Another advantage is the network's ability to handle multiple data channels, as well as CATV, closed-circuit TV and voice and facsimile transmissions.

The network, provided by Contel Information Systems, Inc., Great Neck, N.Y., is based on an early version of Contelnet, a local network developed by Contel that uses broadband coaxial cable bus architecture.

The initial application of the network connected 30 card readers distributed on the exchange floor to the MDS and PER host computers located in the Sinc building. Twenty-four communications lines and 48 modems were eliminated in the first phase of development. Plans are now under way to provide communications between the hosts and printers on the floor of the exchange.

Once the local network technology was chosen, Sinc's and Amex's long-range objective was to implement the overall architecture. The new network is called the American Stock Exchange Network (Amnet). However, Amex and Sinc decided to take a phased approach to the realization of their final architecture. The first step is a network named Amex Card Reader System (Acars). The Amnet configuration will be realized during the recently begun phase of network development.

Bus interface units

Both Acars and Amnet use bus interface units for connections to devices and hosts. These are micros that provide the hardware and software interface between the card readers and the cable bus. The bus interface units perform protocol conversion, insulate host software from the card readers and control all the movement of card images between bus interface units over the bus.

Only card readers are supported on the Acars network. Printers continue to be handled by each host. Further, because the RS-232C cabling from the Amex equipment center to the trading posts was already in place, the bus interface units supporting the card readers were not distributed around the exchange floor. Instead, all bus interface units are located on shelves in the Amex equipment center. Since the host and the network control center are located in a separate building, communications lines are necessary to connect these devices to the local networks.

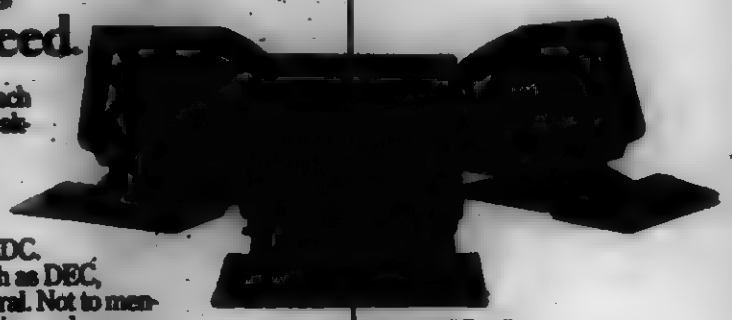
In addition to the bus interface units, Acars includes a network control center that provides eight on-line control capabilities:

■ Network definition and initialization commands allow the user to define the particular configuration. For example, the user must define the characteristics of each bus interface unit and each port.

■ Downline loading is available under operator or programmed control. Downline loading occurs at initialization and fault detection in

See ANEX 59/68

Northern Telecom's information processing products have the communications capability you need.



The 500 Family.

Besides being compatible with each other, Northern Telecom's 503 desktop computer and 565 and 585 information processing systems communicate effectively with a multitude of mainframes, including IBM, Burroughs and CDC. They also talk to other minis such as DEC, Hewlett-Packard and Data General. Not to mention word processors such as Lanier, and even micros such as TRS-80 and Apple.

This means you'll have more flexibility—and more control over your information system. Even if more and more personal computers are becoming a part of it. Our 500 family supports the CP/M* operating system software, so employees can have the personal computing capabilities they want, while your company keeps the organizational unity it needs.

At the same time it's running CP/M, the family can also be running its own unusually powerful operating system which is compatible across the whole 500 line. It permits a unique approach to multitasking—with a few simple keystrokes, up to 16 tasks can be performed simultaneously on the same terminal. Data processing, personal computing, spread sheets, word processing, information management, electronic mail, whatever task needs to be done can be done at the same time. An incredible timesaver.

All in all, the 500 series is quite a family. Versatile, reliable and a perfect example of Northern Telecom's OPEN World* commitment to compatibility. Northern Telecom is a world leader in digital technology and we're using this expertise to make sure our products fit comfortably into a multivendor world.

For more information, call 800-621-6476 (in Illinois 800-572-6724), or write to Northern Telecom Inc., P.O. Box 10934, Chicago, IL 60610.

OIL from 38/44

IBM 3705 serves as the front end to an IBM 370/3033 mainframe operating under OS/MVS, ACF-Vtam/Network Control Processor with IBM Systems Network Architecture/Synchronous Data Link Control. From the 3705, all data is sent through a Codex Corp. Intelligent Matrix Switch, which is used primarily for line monitoring and A/B switching within the 3705.

"The Intelligent Matrix Switch gives us the ability to monitor any line. . . . We can also do any reconfiguration electronically instead of using manual patching," Adamo said.

From the Intelligent Matrix Switch, data paths are concentrated in five centralsite Codex 6040 Intelligent Network Processors (INP). All of the data traffic between the five regional concentrator locations in New Orleans; Midland, Texas; Oklahoma City; Denver; and Houston are transmitted over five 9,600 bit/sec leased lines. The statistical multiplexing and data compression capabilities of the INPs yield an apparent 225% to 230% efficiency on the 9,600 bit/sec trunks.

About 100,000 Intelligent Matrix Switch and time-sharing transactions alone are transmitted through Western's network each day.

Improved management reporting has been, perhaps, one of the most important benefits of the network.

"Our detailed general ledger reports used to be printed here in the data center and mailed to the districts," Adamo said. "And they wouldn't receive it for a day or two after printing, whereas all of our upper level management staff at headquarters here would have same-day service. Consequently, they'd call the districts with questions on expenditures before the managers had a chance to see the same information.

"Now everything — from the profit-and-loss statements to the detail general ledger — can be transmitted in real time. That's one of the major benefits we've been striving for: improved corporate communications," Adamo added.

Fill in your IBM micro/mainframe communications picture.

AST Research, the leader in IBM PC enhancement products, brightens your micro/mainframe communications picture with a full palette of economical, integrated hardware/software masterpieces. With AST Products, you can emulate IBM terminals or create PC-based Local Area Networks.

AST improves your office operating cost picture.

AST communications products give your IBM PC the flexibility to act as a terminal for your host system or as a stand-alone computer for smaller tasks. Your PC won't bog down the mainframe with unnecessary small jobs and local computing on the PC eliminates phone line charges too. Get the power of a mainframe when you need it and personal computer convenience right at your fingertips.

Applications solutions that save shelves of goodies.

AST keeps pace with your ever-changing applications requirements with reliable, high quality, cost effective communications products. AST products provide support for Bisync and SDLC communications protocols as well as networking multiple PCs for sharing resources.

Choose AST products — by the numbers.

These AST communications packages are currently available:

1. AST-SNA™ emulates a 3274/3276 controller and 3278 or 3279 display terminal using SDLC protocol.
2. AST-RJE™ emulates 2770 batch RJE and remote 3270 display terminals using 3270 Bisync protocol.
3. AST-POOL™ allows your PC to connect to an IBM 3274/3276 cluster controller via coax cable and emulates a 3278 or 3279 display terminal.
4. AST-3780™ emulates 2770, 2780, 3741, and 3780 RJE workstations using Bisync protocol.
5. AST-5251™ emulates a IBM Model 11 remote workstation connected to an IBM System 34, 36 or 38.
6. PCnet™ is the first Local Area Network designed specifically for the IBM PC or XT and the PC-DOS 1.1 or 2.0 operating system.
7. DC-232™ is a user-programmable dual-port card capable of communicating in Async, Bisync, SDLC or HDLC protocols.

AST RESEARCH INC.

Number One Add-Ons for IBM PC.

AMEX from 38/47

order to load or reload software to one or more interface units.

Status display continuously displays the up-to-the-minute status of the cable, each bus interface unit and each port. The status is derived from periodic status messages and on-occurrence error reports from the bus interface units.

Network control commands allow the control center operator to set the state of a bus interface unit or a port, switch a device to a new port, switch to a backup interface unit, downline-load a particular program to one or more interface units, transmit specified interface information to the control center, copy the screen contents to the printer and control the logging and reporting functions.

Event logging includes the capture of status, error and alarm information and all operator commands and actions taken by the network control center. Logging can be to disk and/or to the printers.

Printed reports allow printing the contents of the status CRT terminal in three standard report formats.

Switch-over control handles switch over from the primary to the backup net control center in the event of a control center failure.

Bus interface unit parameter modification allows the network control center operator to use a mnemonic name to change the value of any parameter in the software of an interface unit.

Using the Acars network control center architecture, Siac can achieve any level of availability simply by increasing the number of control centers. Siac uses two active control centers and maintains a third for program development and hardware backup that includes all of the vendor's standard software development aids.

Eleven months passed between the active date of the Acars contract between Contel and Siac and the beginning of acceptance testing. Toward the end of that period, Siac and Amex made a gradual cutover to full operation. Occasional vendor support was required before full cutover could be made.

SPECIAL REPORT

Bank redesigns corporate net with CATV tech

PORTLAND, Ore. — When First Interstate Services Co. (Fisc), the communications services provider for First Interstate Bank (FIB), launched a massive redesign of its corporate data network, it teamed up with a cable television vendor. The resulting relationship was one of only a handful of its kind in the country.

Fisc handles communications services (voice and data) for FIB's 11-state network. Tom Findley, Fisc assistant vice-president, heads up the Oregon network supporting 170 branch banks, 35 of which fall within the geographic boundaries of Rogers Cablesystems, Inc.'s Portland CATV service area.

In 1981, Findley's mission was to deploy a corporate-mandated advanced communications facility for Oregon. This meant incorporation of new technology as well as the redesign of the Oregon network. At that time, Fisc was operating on two networks — one for automatic teller machines (ATMs) and teller terminals operating on seven backbone circuits to corporate headquarters in El Segundo, Calif., and a different network for the administrative services with backhauls into Portland.

Rogers' involvement in cable-delivered data communications services was mandated by its 1980 franchise to serve the city of Portland. While the franchise granted residential service rights for Portland's East Side only, rights to provide business services on a B cable, or Institutional Network, were granted citywide. Operating on a separate bandwidth on the East Side's A-2 cable and built to order on the West Side of the city, Rogers' Institutional Network is now about 1,000 miles long and serves hospitals, schools and government agencies as well as banks.

In redesigning the Fisc Oregon network, all FIB branch banks reachable by cable were excluded onto their own analog network. "This was not accidental," Findley said. "We wouldn't have done it if we hadn't known that cable-delivered data service was possible." With the conversion of all of Portland's 35 branch banks to cable, Fisc would be able to drop three analog circuits without losing any branches.

Fisc's redesigned network has all nodes in Oregon, regardless of terminal type, coming into a central hub in Portland. Data is then processed through one multiplexed 56K bit/sec highway to El Segundo.

The idea began to become reality in July 1982 when, after eight months of preliminary planning, Rogers initiated service to Fisc with a 60-day demonstration using two terminal drops and a host drop operating at 9,600 bit/sec. The test simulated the activity of a remote branch 12 miles from the host. Findley said in a report following the demonstration: "In comparison with conventional analog circuits . . . [there was] a 100% reduction of recoverable errors and nearly a 40% reduction in nonrecoverable errors."

In 1983, a contract was signed for the conversion of all Portland FIB branches to Rogers' Institutional Network. Although delays in obtaining downtown underground construction permits have slowed the conversion, eight drops are now in place, and the remainder of the conversion to cable should be accomplished in 1984. The reliability figures stated in Findley's report still hold for that circuit, he said, but now Fisc is monitoring the performance of the new cable circuits closely.

Cable delivery also simplified Fisc's cost planning in that Rogers' data transmission price rates are based solely upon speed. The elimination of distance and usage sensitivity, Findley said, "changes the way you design the network. Cable allows us to deliver low-speed service to those who require only a low speed and to deliver high-speed service exclusively to those users who require high speed. This translates in a budget perspective to knowing — when we put a new branch onto CATV — exactly how much it's going to cost us for the next year, regardless of its usage."

Increased security is a further advantage of the Rogers technology and of the finite nature of cable coverage itself. According to John Rivenburgh, Rogers' Institutional Network manager, "The system is sweep-scanned by a Digital Equipment Corp. PDP-11/44 every 10 to 12 seconds. All amplifiers are polled, and status information is reported. Any illegal tap, unless the network has actually been cut, creates signal noise that is seen on the diagnostic equipment."

Findley said, "The way the network is designed and amplified adds a level of security we don't have on the analog circuits today. It is possible for somebody to tap into an analog circuit with common technology available today and eavesdrop on our data. Whereas on cable, any time a tap is made, it is detected that it has been done and that it is happening between two particular amplifiers."

Flexibility was another factor that

See CATV 39/54

In a world of dumb printers, Memorex has a Remote Printing System that thinks for itself.

In theory, remote computer output printing is a dynamite concept.

Reports get out to the right people, right away. Turnaround time goes down, costs go down. Your central printer gets a break instead of a breakdown.

In theory.

Perhaps your own experience has been less than ideal. Because most remote printing systems aren't designed with enough control to manage a really heavy workload; there's no flexibility. No security measures, either.

But consider DPS by Memorex. The first Distributed Printing System with complete flexibility for the remote user, and complete control for the central site.

Why it's better.

For starters, installation is a matter of minutes, integrating perfectly into your MVS or VTAM System without modification and without an IPL.

Second, DPS will accept data from batch output, from a TSO data-set print command, or directly from user-written programs.

And the data stays confidential. You can assign specific or master passwords, and DPS will ignore any command that doesn't include your assigned code.

You can also specify that reports be printed on special forms (labels, checks, invoices, etc.).

Network control.

No matter how big the load, DPS keeps your system *manageable*. From either the central console or from remote terminals, you can enter commands such as start/stop, display, cancel, re-route, change copy count, priority, names or other attributes.

Data with a life of its own.

DPS keeps your reports safe from accidental erasure. You can print them or purge them, but DPS won't lose them, ever. Even after system error or failure.

Free 30-Day Trial.

We'll give you free installation and a 30-Day free trial to see how our system and your hardware can give you incredible printing performance.

Just call now (408) 987-9604, collect, or fill out the coupon below and send it *today!*

Remember — just because your current system falls short, doesn't mean you don't have a second chance. It just means you don't have DPS.

Memorex Corporation
San Tomas at Central Expressway, Santa Clara, CA 95052

Computers took the strain out of processing data.

Now Raytheon has taken the strain out of data processing.

Introducing the PTS-1000/4000 family of 3270-type information display systems. Designed to combine mainframe compatibility, operator comfort, and peace of mind for DP managers too.

How can we promise all that?

After more than a decade of experience in 3270 emulation, Raytheon designed the PTS-1000/4000 family to offer the utmost in flexibility, so you can mix and match any of our new controllers with any of our new display and printer terminals.

When it comes to operator comfort, no one offers interactive displays with more built-in ergonomic features than Raytheon. Features especially designed to ease the strain on one's neck and back, hand and wrist, and eyes.

The microprocessor-based PTS-1000/4000 family enables efficient distribution of your data processing workload with flexible configuration options and extensive self-diagnostic capabilities. Binary synchronous, systems network architecture (local and remote), and airline link control communication protocols are supported. Large and small control units, multiple screen sizes, and a wide variety of peripheral input/output devices and printers can be mixed and matched with varying star, multidropped cabling, or multiplexed configurations.

Special system features include productivity enhancements like local format storage, response time monitors, row/column indicators, and unprotected field indicators.

As for the DP manager's peace of mind, Raytheon offers flexible financing and leasing options, competitive pricing, over 2000 service people worldwide, and a commitment for today and tomorrow that can come only from the largest independent supplier of intelligent terminal processing equipment.

The PTS-1000/4000 information display systems from Raytheon Data Systems. We take the strain out of your data processing. For the sales office nearest you, check your telephone directory or call 1-800-343-6676.

SPECIAL REPORT

PBX helps college, hospital keep costs down

EVANSTON, Ill. — Many corporations have found that one sure way to reduce operating costs is to purchase, rather than lease, their telecommunications systems. Industry experts predict that within the next three years, 75% of Centrex users who utilize more than 5,000 lines will make decisions to purchase their own systems. Some large corporations are even creating their own independent communications networks.

Northwestern University and Northwestern Memorial Hospital here have been working to create their own telephone company. That company is built around a Northern Telecom, Inc. SL-100 private branch exchange system. Scheduled to cut over in September 1984, this system will be the largest privately owned network based in the Chicago metropolitan area and one of about 12 of that size nationally. The 10,000-line system will link the Northwestern University campus and Northwestern Memorial Hospital facilities in downtown Chicago with the university campus here. It provides for voice, data and two-way video transmission.

A digital switch installed in Chicago will service approximately 6,000 lines in the 19-building complex there. Another 4,000 lines in 155 buildings on the Evanston campus will be serviced by a separate digital switching center there. Included with the system are a communications management center and Halon fire prevention systems at both switch sites.

In 1981, the university and the hospital jointly initiated studies to examine communications operating efficiency, cost control and maintenance. These studies concluded that significant cost savings could be realized if both institutions made a shared purchase of a telecommunications system.

Northwestern Telecommunications Services (NTS) will administer the installation and operation of the system for the participating institutions. Based on its research and needs analysis, NTS established several objectives for the purchase and installation of the telecommunications network: NTS wanted a system that:

- Is easy to manage.
- Requires a minimum of staff to operate.
- Can be quickly and easily installed.
- Allows control of time and costs in order to make adds, moves and changes.

The bottom line was, as always, the bottom line — Northwestern wanted to save money. Lee Ellis, senior vice-president for business and finance at Northwestern, projected that the university and the hospital would spend $50 million for telephone services over the next 10 years if they did nothing to reduce the expenditure. With the new system, Northwestern expects a total buyback in seven years and cost containment in the years ahead.

Because it was actually creating its own telephone company from the ground up, NTS wanted a vendor with experience in that area. Eight of the original 11 vendors who submitted bids for the Northwestern proposal were dropped because they were primarily manufacturers that were not directly involved with the operation of a telephone company.

The final choice of Centel Business Systems as the vendor was based on two factors: It is a subsidiary of Centel Corp., which operates the nation's fifth largest telephone company, and the Chicago area is Centel's largest operating service area.

NTS decided that experience would be vital to the engineering, installation and maintenance that would go into creating Northwestern's telephone network. In addition, Centel had experience operating the Northern Telecom DMS-100, a product similar to the SL-100.

A major concern for Northwestern was the necessity for continuous communications service to the hospital. Through the network, the hospital and university facilities in downtown Chicago will be hooked up to two central offices. There will also be another central office for the Evanston campus, so that three central offices service the system. To maintain communications in the event of a disaster or other potential disruption of service, the system will have dual power from two separate power stations, backed up by a four-hour battery source and a diesel generator. In addition, emergency stand-alone service will be provided should the main system fail.

The choice of fiber optics rather than a microwave application was also an effort to ensure reliability. Although the bid did not specify fiber optics, Northwestern chose it because it was seen to be more cost-effective and because of its greater capacity and greater reliability. Outside cabling will be installed along 13 miles of the existing Chicago and Northwestern Railroad lines between downtown Chicago and suburban Ev-

Your Most Precious Resource

In any business, time is money! This is especially true when dealing with Data Communication Networks where system performance and RESPONSE TIME is critical to the user.

Degradation of system performance (responsiveness) is inevitable as customer work loads increase. Installing faster, more sophisticated hardware is a popular but temporary solution. It is only a matter of time until the problem reappears.

Questronics offers a solution through statistical performance analysis of your system. Over seventy-five categories of line utilization and response time information can be generated in eleven different reports (hard copy and/or data based).

Questronics model CPA/7 is setting the standard in the industry by providing vital performance statistics in the areas of:

- •User/System Response Time
- •Network Transmission Time
- •Line Utilization
- •Polling Counts
- •Character Transmission Counts
- •Poll List Wrap Time
- •Transmission Errors
- •Histograms
- •Host Resident Time
- •Alarm Conditions

Utilizing this information, DataCom managers can then make the crucial decisions necessary to fine tune and balance the network. Each line may also be further refined to greater efficiency, enabling planning and projection for new growth.

Call Questronics and discuss your situation. We'll give you straight answers.

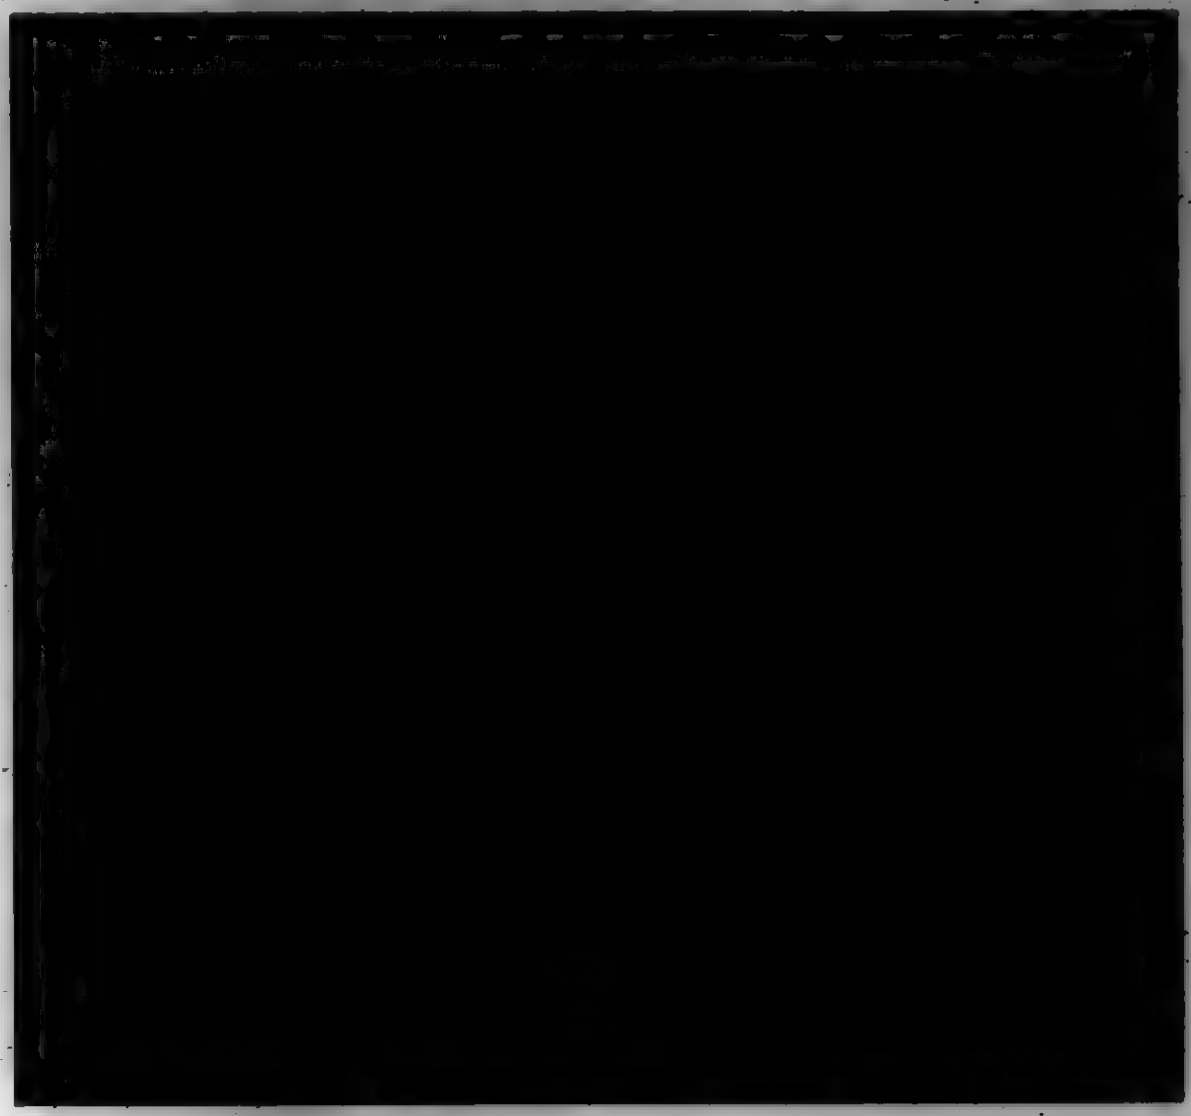
PCOX™

YOUR PC-TO-HOST CONNECTION NOW ONLY $1145

FEATURES:

- Connects by coaxial cable to any channel-attached IBM 3274, remote BSC or SNA/SDLC 3274 or 3276, or 4321/4331/4361 Display/Printer Adapter
- Exact emulation of 3278 - Models 2, 3 or 4 or 3279 Models 2A or 3A,
- Screen print and screen save to disk
- Screen-control application program interface
- U.S., foreign and RPQ Keyboard support (including Entry Assist)
- Menu-driven installation
- Compatible with IBM PC, PC-XT or any IBM-compatible personal computer
- DMA-attached for high performance
- Proprietaty microprocessor architecture
- Menu-selected high-speed file transfers between PC and host
- Binary and compressed text options



PCOX, the Personal Computer Coaxial Interface from CXI, is the best, most economical way to connect your IBM* or IBM-compatible personal computer to your IBM host-based network, and it's available *now*! For $1145, CXI combines the PCOX Personal Computer Coaxial Interface, Control Unit Terminal Program and Professional Workstation Facility. PCOX lets you enjoy many of the functions of the IBM 3270-PC and offers extra features available only from CXI.

*Trademark of IBM Corporation.

CXI is not simply another PC-compatible board company. We understand the IBM 3270 and its marketplace, and we are introducing a family of products to allow your PC to grow with your needs.

For immediate delivery and a list of PCOX distributors, call CXI today at toll-free (800) 221-6402. In California call:

CXI Announces Bundled Pricing

For $1145, CXI combines the PCOX Personal Computer Coaxial Interface, Control Unit Terminal Program and Professional Workstation Facility. PCOX supports the operation of IBM or IBM-compatible personal computers as IBM 3278s or 3279s. In addition to the support of 1920-character (Model 2) screens, PCOX offers support of 2560 and 3440-character (Model 3 and 4) screens. PCOX also provides the ability to save screens to disk, to print screen contents and, via the Professional Workstation Facility, to transfer files between the PC and TSO or CMS host. For existing PCOX users, the Professional Workstation Facility is available, as an upgrade, for $195.

CXI, Inc., 3606 West Bayshore Road, Palo Alto, CA 94303.
Toll-free number (800) 221-6402. In California 415/424-0700.

CXI Offers PCOX/m3278/SPF

For $1895, CXI's PCOX/m3278/SPF combines the PCOX Personal Computer Coaxial Interface, the Control Unit Terminal Program and the Professional Workstation Facility with m3278/SPF.* For the programmer, systems analyst or any other user of IBM's TSO/SPF (System Productivity Facility), this package provides SPF functions without the usual host connect time and usage charges. Current PCOX users may buy an upgrade package for $845. The m3278/SPF utility menu accesses a number of utilities, including the file transfer capability of the Professional Workstation Facility. PC files may be treated as members of partitioned data sets.

CATV from SR/48

made CATV attractive.

"The planning and scheduling necessary to alter the host-dependent relationships of branches on the CATV network is much less than that of a comparable analog network," Findley's report stated. Fisc's teller and ATM network is a series of backbone circuits with dependent loops running between the host controller and remote teller workstations. This allows multiple branches to operate off one host controller.

When remote loops are CATV, one physical cable carries and broadcasts all signals throughout the network. "What we can then do," Findley said, "is designate a host controller with spare capacity for remote loops that is not used. Then, when a controller goes down someplace, all we need to do is go to the downed controller and reprogram the radio frequency modem there to the spare modem's frequency levels and — presto. We don't have the branch that's housing the controller up, but we've got the remote branches up."

The disadvantages Fisc has experienced with cable delivery are, in Findley's words, "not all that significant." There is, as in all DP shops, risk inherent in dealing with a new vendor. Problems tend to appear in direct proportion to the number of vendors employed. "We knew," Findley said, "that the Institutional service is a new service for Rogers Cable-systems as well, and they need to learn to support that service differently than they support their residential service." Rivenburgh said that Rogers employs different response procedures, different monitoring procedures and different technicians to support Institutional Network service delivery.

Fisc's early projections show the cable vs. analog costs being about equal in hard dollars. CATV costs are projected based on a 9,600 bit/sec backbone service (twice the speed of the analog service) and a 2,400 bit/sec dependent loop service. Analog costs are projected based on a 4,800 bit/sec backbone service and a 2,400 bit/sec dependent loop service.

For the future, Fisc envisions using the cable network for applications beyond data transmission. Point-of-sale credit card authorization is one possibility as analog service increases in cost.

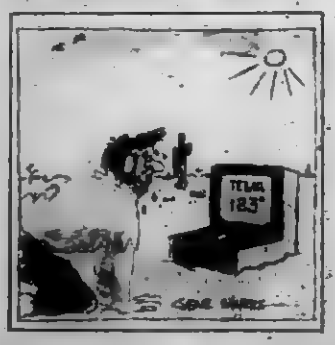
NTS from SR/52

anston. This was a faster, more cost-effective alternative to laying cabling under the shores of Lake Michigan.

In an effort to reach its objective of a quick and easy-to-install system, Northwestern used Centel as a general telecommunications contractor. Centel has taken on the responsibility for finding vendors for projects such as air-conditioning the private branch exchange rooms and construction of the rooms themselves and all other areas of the installation. Before launching into the system installation, Centel held several work-through sessions with Northwestern officials.

Inclusion of the communications management center in the system will allow Northwestern to exercise the management control over communications that it set out to achieve. Operating on a Data General Corp. MV8000 Series 2 with 2M bytes of memory and 354M bytes of disk storage, the communications management center will include data collection and report generation, data base management, directory assistance and maintenance and status reporting. These features will be helpful in reducing usage costs and in quickly locating and correcting any problems with the system.

The Northwestern system will also have twisted-pair cable to allow for voice and data integration at every location. Almost 1,000 data terminals will be interfaced upon cutover in September. Currently, 95% of the plant engineering is complete.



RAMIS II MAKES YOUR INFORMATION CENTER A GREAT PLACE FOR PEOPLE.

LISTEN TO OUR USERS

Send for our free guide, "Why Information Centers Succeed." It contains practical suggestions for success from RAMIS II Information Center staffs of organizations like yours. Organizations that have found that RAMIS II, the real leader in complete software for business, is the sure way to make an Information Center a great place for everyone.

RAMIS II's complete solution is the most effective way to multiply the productivity and satisfaction of your end users and your Information Center staff. Today, RAMIS II means success at hundreds of Information Centers around the world.

POWER AND SIMPLICITY FOR END USERS

RAMIS II provides everything users need for maximum productivity. Its powerful report writer, relational database and language, full-color business graphics, SAS® interface, and many other capabilities meet the most advanced decision support needs. And, with our new RAMLink, IT series, and RAMIS II/PC software, end users have the ideal solution for mainframes and personal computers.

RAMIS II English comprehension extends the power of your Information Center to a multitude of new computer users. Through advanced knowledge-based technology, even people who've never been on speaking terms with a computer can ask questions, obtain answers, and create reports in only a few minutes using everyday English.

EFFICIENCY AND RELIABILITY FOR SUPPORT STAFF

Our complete solution lets your existing staff support many more users by dramatically reducing the number of products you need. And RAMIS II makes your support job easier with built-in computer-based training plus facilities to monitor and control usage.

RAMIS II delivers the performance and reliability needed to tackle even the largest decision support tasks with confidence. In fact, because RAMIS II is also a complete application development system, single-user systems can evolve smoothly into full-fledged applications.

SPECIAL REPORT

Voice/data PBX at core of transparent net

By Tom Rizzo
Special to CW

Change is upon the information management world like a rising tide of never-ending bits and bytes. However, the basic need or premise for the information managers who try to control this seemingly chaotic onslaught remains the same: that is, to determine application needs in order to choose the right information conduit. It's never been more necessary to realize that the application determines the network.

The past several years have seen the coming of word processing, office automation, information centers and personal computers all within the office business environment. This might be called the micro environment pertaining to business information networking.

On the macro scale, we've seen the rapid growth of value-added networks and the emphasis on digital as opposed to analog methods of communication to interconnect various information nodes on a predominantly nationwide business scale.

And now the official breakup of AT&T in the U.S. and the development of national digital networks are leading toward universal information handling.

Specifically, the word processing/office automation arena showed management how information could attain the status of a commodity with intrinsic value. This monetary orientation within this environment is still being developed with the realization that the private branch exchange (PBX) can be used as the controller for office information management.

Information centers served an extremely useful purpose because they began to break down the barriers between word processing and data processing on both the end-user and MIS level. The end user realized he could use a computer, and the computer expert became aware of the business profit-oriented area.

Personal computers now are everywhere and, combined with integrated voice and data PBX, are forming the networking tentacles necessary to exploit a universal and versatile information network.

So what the business world is witnessing is a total entwining of communications and computer technology that embraces the office, the home and the public sector.

Among the various kinds of computers and office equipment available, the telephone instrument or system obviously is the most commonly used apparatus. This being the case, a universal and versatile information network should be developed using this device that could embrace all applications ranging from conventional telephone switching to very high-speed data link categories.

This development has to take place within the micro world of the office environment, or else the macro and universal networks simultaneously being developed will leave this cluster of automation, called the automated office, an isolated island.

Let's concentrate now on this office-oriented telephone environment. If the phone system is to be the information hub, it must handle not only voice, but data, text and image.

This local phone-based network must handle various kinds of communications, each having different traffic characteristics, such as holding time, data transfer rate, protocol conversion, format translation and so on. The local communications network must, therefore, include transmission, switching and data processing technologies.

But the network cannot stop at this point because it must adjust to different end-user-dictated sizes, from a small-scale network in an office building through intrapremises networks to a nationwide or international interpremises network.

Currently, it appears as though no one technology or architecture can do all that is required from the standpoint of technical feasibility and cost-effectiveness to satisfy all network users.

But one thing is becoming exceptionally clear. The integrated voice and data PBX that includes applications software combined with coaxial cable/fiber-optic extension is the foundation, or cornerstone, upon which to build a versatile micro information network that is macro- or wide-area-network-oriented while being universal in scope.

Therefore, the base PBX controller system would accommodate, in reality, three types of internetworking subsystems: the high-transfer 30 bit/sec or more optical fiber loop, the medium-transfer 10M bit/sec or less baseband coaxial cable system as well as the low transfer speed twisted-pair telephone cables that are found in most offices today.

This, coupled with packet-switching techniques and network tandem capabilities, should be what is necessary to form a universal and versatile information network transparent to the end user.

Rizzo is chief executive officer of RPC Systems Integration, a Dallas consulting firm.

CONNEWS.™ THE APPLICATION MENU THAT GIVES YOU THE HOT NEWS AND THE COLD FACTS.

CONNEWS is the user-friendly ACF/VTAM software product that lets 3270 users select from a convenient application menu of view up-to-the-minute information from an electronic bulletin board. No systems modifications are required.

CONNEWS. It's the MENU that really satisfies your taste for applications, and installation NEWS. Some of the more desirable entrees include:

- Customized Company LOGO displays
- Individual MENUs for specific terminal groups
- Terminal ID permanently displayed
- Operator MODIFYable "HOT NEWS" area

SPECIAL REPORT

Boston leaning toward broadband cable nets

Could ease daily operations, reduce long-term capital costs

BOSTON — Technology advances over the past 10 years, coupled with the acceptance of CATV, will soon benefit the city of Boston. Broadband-based data communications are being used to alleviate crowded wiring conditions in many of Boston's older buildings, expand data processing services and provide information processing to a growing number of subscribers.

In 1969, then-Mayor Kevin White commissioned a study on the feasibility of CATV for the city of Boston. The commission reported that the technology was not mature enough to serve the city's diverse needs. Ten years later, the mayor commissioned another study, and this time the results were positive.

CATV had been installed successfully in other cities throughout the U.S. The popularity of CATV was enhanced by entrepreneurs like Ted Turner, and technology had been developed to increase the number of channels available to the general public. The available bandwidth for CATV had expanded from less than 300 MHz to over 450 MHz — allowing for an increase of between 30 and 52 new television channels. New applications had been developed that used the same television cable hardware and radio frequency as CATV, but with the added advantage of being designed for two-way data communications rather than video distribution.

Before these developments, most data communications installations were either tied in to twisted-pair IBM. The latter approach, the IBM 3270, consisted of point-to-point connection between 3274 cluster controllers and 3278 baseband coaxial cable. However, a problem occurred because the cable used in these configurations — RG-62 A/U — had a characteristic impedance of 93 ohms, which differed from that used for CATV. Another dilemma was the vast amount of wiring that existed in many of Boston's older buildings, which left no room for additional wiring for new services.

Broadband data communications was looked on as a possible alternative, since the technology was immune to twisted-wire problems such as the difficulty of relocating equipment and susceptibility to electromagnetic and radio frequency interference and ground loop problems. Another favorable aspect of broadband technology was that a single piece of ½-in. coaxial cable was comparable to over 50,000 twisted pairs of wires in terms of capacity.

Until broadband-based data communications began to attract the attention of potential users, the most popular method of sending information from one point to another had been modems. However, that method had no provisions for error detection and correction or circuit switching.

After weighing the possibilities of broadband data communications, the Boston commission gave a positive recommendation of CATV to the mayor. The process of awarding the franchise began, and in 1980, Cablevision Systems Development Co. was selected as the CATV operator for the city of Boston.

Three developments influenced the commission's decision. Digital Equipment Corp., Xerox Corp. and Intel Corp. jointly announced Ethernet, and more importantly, Intel pledged to develop custom-integrated circuits for implementing the access technique known as carrier-sense multiple access with collision detection (CSMA/CD).

A second factor was the development of a reliable, low-cost and frequency-agile broadband-based radio frequency modem by Network Resources Corp. The third factor was the development by Sytek, Inc. of a protocol for a broadband-based, packet-switched network using CSMA/CD as the cable access.

The cable network consists of four separate cable systems: S1, S2, I1 and I2. S1 is the basic CATV video distribution system. S2 is a video distribution system with additional programming and movies for extra fees. I1 is the public institutional system, while I2 is controlled by Cablevision. Both I1 and I2 allow an equal amount of bandwidth distribution in both directions in the same cable. They are also designed to support two-way video and data communications simultaneously. These multiple video channels can be used for different program material, and multiple data channels can be used for different data communications at the same time.

The data communications requirements for the city of Boston began with communications within a building. The typical DP center was provided with emergency standby power, fire extinguishing systems, air conditioning and a series of ducts or wireways that lead to other parts of the building. Some of the problems that could arise range from central processor failure, resulting in loss of processing resources to all users; processor power being used for I/O and communications control instead of a distribution of resources; and space limitations.

Whether the traditional or newer techniques or combinations of both are used, an intelligent communications network can result in significant savings both in daily operations and in long-term capital costs.

Boston's City Hall, an eight-story complex, has a computer room on the first floor that includes an IBM 3033, disk drives, high-speed printers, a 3274 cluster controller and a 3705 communications controller. There is a DEC PDP-11/70 on the seventh floor. Other equipment includes Wang Laboratories, Inc. distributed word processing systems, IBM Displaywriters and several IBM Personal Computers.

Currently, the duct space into the computer room is exhausted, and additional duct space is too expensive.

In addition to supporting intrabuilding data communications requirements, the City Hall DP department is also responsible for support-

SYNC TO TDI conversion with an elastic buffer and RTS/CTS modem control. Handles multiple terminals - Only $895

3 EX-CON
TDI OR RS-232 TDI OR RS-232

TDI LINE EXPANDER AND CONVERTER
- Inexpensive Async RS-232 to TDI conversion and TDI line extender - $195 up

4 DeCAT
TERMINAL TERMINAL TERMINAL TERMINAL

DeCATENATOR a modem Splitter with diagnostics that eliminates terminal dependent concatenation. Operates up to four terminals independently - Only $160

5 TAP
MONITOR PORT
AUXILIARY PORT

TERMINAL ADAPTOR PORT device
- MONITOR PORT permits any Burroughs CRT Terminal to be used as a bi-directional line monitor
- AUXILIARY PORT provides an in house synchronous network drop - Only $325

6 LSD
MODEM MODEM

LINE SHARING DEVICE
- Connect Multiple Modems to the same line adaptor
- Share slave printer among several CRT terminals - $325

NOW YOUR APPLE® CAN HOOK TO ANY MAINFRAME.

Apple is a registered trademark of Apple Computer, Inc. CP/M is a registered trademark of Digital Research, Inc.

If you have an Apple II, Apple II Plus, or Apple IIe, we have good news for you. Now there's an inexpensive software program that can turn your Apple into a much more valuable tool.

Softerm 2 connects you with your company's computer.

Softerm 2 lets you gain access to the information stored in your company's main computer from your home or office in any format you choose—DOS, CP/M, or Pascal.

Also included is a source program for your host computer to ensure compatibility with Softerm's file transfer capabilities. Other features include user-defined keyboard macros, built-in phone book for automatic dialing, terminal mode line capture simultaneously to print or disk, copy screen to print or disk, and terminal status display.

Makes your Apple work smartly like any major terminal.

Softerm 2 provides complete emulation of these terminals: ADDS Regent 20, 25, 40, 60; ADDS Viewpoint; Data General D200; Datapoint 3601; DEC VT102, VT52; Hazeltine 1400, 1410, 1500, 1520; Hewlett-Packard 2622A; Honeywell VIP7205, VIP7801, VIP7803; IBM 3101 Model 10 and 20; Lear Siegler ADM-3A, ADM-5; and TeleVideo 910, 925, 950.

Free update service.

We make improvements available to you free. To update your program, just dial our computer and transfer the improvements to your disk.

Now low price.

Softerm 2 is only $195, and it's available now from dealers or Softronics, Inc. For more information or to order, call today.

SOFTRONICS

3639 New Getwell Road, Suite 10, Memphis, Tennessee 38118, (901) 363-8850

WHEN THERE'S NO CHOOSING, CHOOSE ICOT.

More personal computers. More workstations. More remote locations.

Everyone seems to be demanding *more* of your 3270 network. And management says, "Do it—but do it for less."

It's a tough spot to be in, unless you know about ICOT's Virtual Terminal System™ protocol converters. In place in your network, they deliver the compatibility everyone wants and the economy and flexibility you need.

You can make inexpensive asynchronous terminals and printers compatible with your BSC or SNA/SDLC network. A single terminal can access multiple applications and multiple hosts. And personal computers can be included easily in your network. All without expensive software modifications.

You have the flexibility of either dial-up or leased-line communications, letting you choose the option that's least expensive for your situation. Plus the option of adding ICOT's value-enhanced 3270 lookalike terminals.

It can all be done easily. Economically. With a built-in flexibility that makes future expansion fast and simple.

And when you use ICOT's protocol converters, we back them up with our expert installation, service and engineering support.

Now you don't have to choose between expansion and economy. Just choose ICOT. To find out more about the ICOT Virtual Terminal System, call or write:

SPECIAL REPORT

Moving firm 'relocates' with distributed DP

GLENDALE, Calif. — With nearly 100 years experience, the Bekins Co. based here is one of the oldest moving companies in the U.S. In the late 1970s, when the company decided to change its method of centralized bookkeeping and recordkeeping, it chose to move some of the processes out to field locations, using a technique that had recently come of age — dispersed data processing.

Bekins is one of the world's largest local, long-distance and intrastate moving and storage firms. Services include the transportation and warehousing of household goods, office and industrial equipment, electronics, business records and air freight forwarding.

Management of these businesses — subsidiary companies that generate $325 million in revenues annually — requires extensive accounting procedures including accounts payable, accounts receivable and general ledger. Bekins uses dispersed data processing to collect the necessary information from its 150 locations across the country.

"When we first started using automated data processing in the early 1970s, we had two computer sites, one in Chicago and one on the West Coast," said Robert Forstrom, MIS vice-president. "It was a classic situation of central sites serving subsidiaries from each city. The data processing was later consolidated in Glendale, where data was entered interactively or on-line batch to an IBM mainframe from information supplied by the subsidiaries."

During the mid-1970s, Bekins acquired a number of other companies. "Some had their own computer systems," Forstrom continued. "Others were using service bureaus for data processing. It became apparent that Bekins would have to standardize its operations and move data processing out to the field locations. Even though we wanted to give the field that control, the cost of on-line processing from various locations was high."

Bekins' various locations today include 40 company-owned offices and 350 independent U.S. agents. Of this total, 150 now have dispersed data processing equipment in offices across the country supplied by Datapoint Corp. The Datapoint Small Business Computer systems, which consist of a desktop microcomputer, 64K bytes of memory, a 2M-byte diskette drive and a communications interface for each system, collect and process data which is later transmitted via GTE Telenet Communications Corp.'s Telenet to the Bekins IBM mainframe here.

"At first we weren't sure if we should keep the data processing centralized, regionalize it or totally disperse it. We knew we had to satisfy the needs of the smaller subsidiaries, allowing them to do some basic financial processing. Yet we wanted to keep a large mainframe in Glendale to consolidate the accounting, payroll and business data the subsidiaries would generate," Forstrom said.

"A larger problem was this: How do we collect the resultant data concurrently from 150 locations across

BEKINS from SR/58

the country (including our offices and a portion of the 350 agents we had at the time)?" Forstrom continued.

Decentralizing the data processing operations was selected for two main reasons. It avoided the time delay caused by sending paper through the mail, and it gave the subsidiary offices more control over their data.

"Each business is a profit center that can generate more profit by controlling its costs. Using distributed computers has saved Bekins more than half a million dollars in costs," Forstrom said.

"The offices with Datapoint computers can dial up Glendale at any time. The dial-up and batch transmission features were part of the cost justification for buying Datapoint equipment.

"In the past, the offices had hard-copy terminals. When they were ready to send data to Glendale, they dialed the number and then began to key data. We were paying connect charges all the time. Now the offices key in the data off-line and then batch it all to Glendale," he said.

An automatic process takes over on an IBM host here. Forstrom explained that the transmission causes data to be stored on disk for the host to process overnight. The result is billing and accounting for each Bekins service, including general ledger and payroll.

The types of applications Bekins is developing are as diverse as Bekins' services.

One universal application Bekins runs is its interstate on-line scheduling and dispatch system for management of a nationwide fleet of household moving trucks. Forstrom reported that 90% of the Datapoint processors installed across the U.S. enter data into that system.

Four Bekins staff programmers developed all the software, using the Dataprints business programming language. Bekins also designed an applications generator program for systems development using a small Datapoint Attached Resource Computer local-area network, which allows up to 255 processors to share the same disk files and other peripherals.

Bekins has a technical services group that is responsible for training and installation. The first 50 Datapoint sites were installed by two Bekins technical representatives who personally delivered most of the computers during a cross-country tour.

Training was done at the site on the actual computer that would be used. As more applications are developed, training continues to be done on site. The majority of users are clerical personnel.

BOSTON from SR/56

ing remote, off-site data processing. In-house processors are used with off-site terminal equipment connected via telephone lines on a dial-up basis. The existing phone users include the public school system, the police department and the fire department. These telephone lines dump into the 3705. The primary application is administration, but some of the resources are used by the school system for teaching.

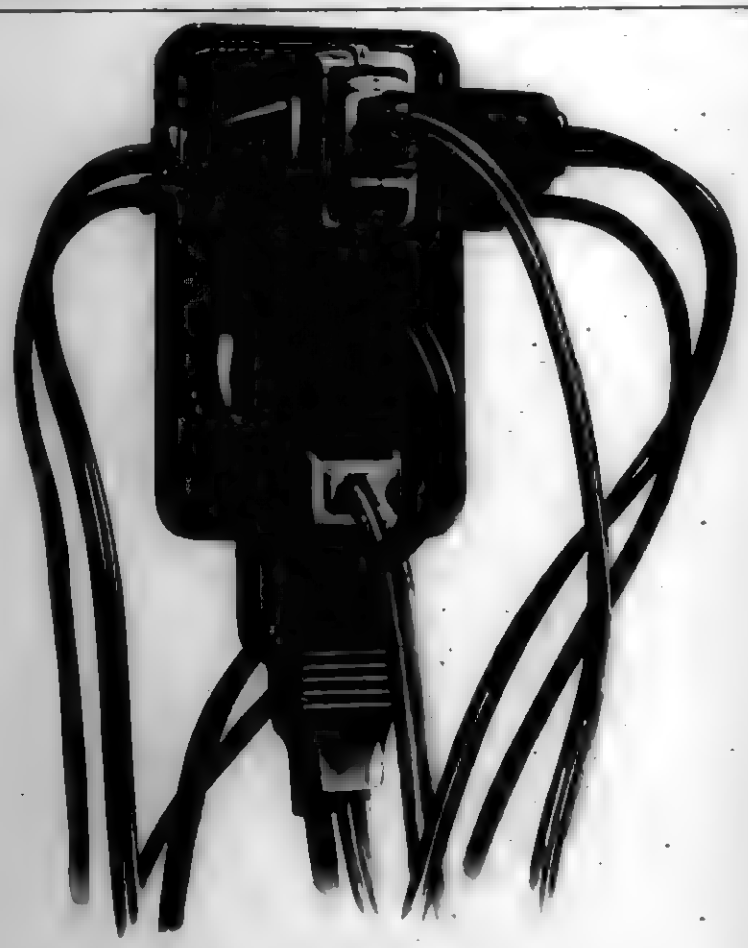
This alone is not enough to justify the installation of broadband-based local-area network technology. The reasons behind Boston's decision also include the following: Broadband supports multiple users; the technology is vendor-independent; the capacity of a single coaxial wire is enough to replace 50,000 twisted-wire pairs, relieving duct space crowding and allowing for future expansion of broadband wiring.

Boston is currently evaluating Localnet 20, a broadband-based data communications system manufactured by Sytek. It is expected to save money for the city on modem rental charges, remove the modem bottleneck and allow any authorized user access to the resources of the local-area-network-based system.

The manager of information systems planning for the city of Boston, Jerrold Patz, developed an application for accessing the IBM system. Rather than use an IBM 3270 display station, which must be directly connected to a 3274 control unit with dedicated point-to-point wiring and cannot be used with any other system, he is replacing the 3278s with dumb teletypewriter-type Ascii asynchronous terminals that have 3278-like keyboards. He has attached a protocol converter to one port of the 3705 via RS-232, through which up to 24 users can be served.

Current applications include IBM's TSO and CICS. The same terminal can be used to access the PDP-11/70 on the seventh floor. The dumb terminal approach costs approximately $1,000 for each terminal — compared with the $4,000 price tag for the 3278s. The existing 3278 terminals are leased, so removing them will save the city approximately $3,000 per terminal. The elimination of the 3278s also means that a 3274 is no longer needed and no additional wiring is needed.

The final step after City Hall has proven the technology and demonstrated the methodology of broadband-based data communications is for Cablevision to offer data communications on the commercial and institutional cable system, I2.



Pull the plug on your inefficient data communications. We can help.

Many data communications networks, perhaps yours included, have grown in the same add-on way as this common octopus plug arrangement. Yes, it works. But it contains many built-in risks and could ultimately let you down.

The time is right for you to take a careful look at how General DataComm can streamline and improve your data communications, and save you money at the same time.

Here's how.

Since we are a full-line data communications manufacturer, everything from modems and multiplexers to network management systems and service support, we can design a complete system for your company. It will not only work better but save line costs, too.

When we install a system it not only means higher efficiency now but it will expand easily to meet your needs tomorrow.

Tie your network together.

Our true systems approach also helps eliminate compatibility problems. Since we design and manufacture the full product range, you can be sure everything will always work in harmony.

Put our experience to work for you, especially now in the new divested telecommunications environment.

For a free brochure detailing our approach and product range call or write to General DataComm Industries Inc., One Kennedy Avenue, Danbury, CT. 06810. (203) 797-0711.

SPECIAL **REPORT**

College nets must keep pace with info needs

By Albert L. Harris
Special to CW:

The influx of networks into the college and university environment is beginning to accelerate. Several schools have taken an evolutionary approach to the opportunity afforded by this capability. Networks are not just for students, but rather a tool for the entire institution, especially faculty and staff.

Demand and reliance on computer resources at every college and university are at an all-time high — and increasing. Most students expect computer training as part of their education. It has not stopped at the student level either.

To keep pace with the students, most members of the faculty are requiring access to computer resources. To keep up with the faculty, the staff is demanding access to the latest in technology. As needs increase, networks are providing the solution.

College networks are being created to meet the needs of institutions with a large number of terminals and microcomputers. They also must meet the communications needs of such environments. Two types of networks are being used and developed. Neither type is fully developed to allow users maximum use of the resource. The two types are microcomputer networks and mainframe-based networks.

Microcomputer networks are communications links that connect large numbers of microcomputers and other peripherals and storage equipment. They usually include communications (networking) cards, containing communications software used to control the entire network; storage devices, including Winchester disks, cartridge tape and floppy disks; and printers, plotters and other hard-copy media.

When part of microcomputer networks, individual microcomputers do not have to have a floppy or hard disk capability. This allows colleges to keep the costs of microcomputer networks low. Program and data libraries are maintained on the system's disk storage. Peripheral and storage devices can either be dedicated to one user or be used as system resources.

Currently, microcomputer networks are being used by several colleges for instructional use. Some schools are also using this concept for administrative data processing. The concept requires a substantial communications network.

The advantages of the microcomputer network in a college environment include low initial cost, centralized data storage and unlimited expansion. The disadvantages of this approach include limited disk capacity and limited vendor support.

Mainframe-based networks rely heavily on the central computing capability or on another central processor. Here, the mainframe acts as the system controller and data manager. Access on mainframe-based networks in colleges is through hardwired terminals and dial-up capabilities. If a user operates a microcomputer, it usually acts like a dumb terminal.

The ultimate capability is for the microcomputer to be able to access data as stored on the mainframe's disk and use its microcomputer capabilities to execute the programs and manipulate the data.

In this manner, the host mainframe and the users' microcomputers can access the data, given the proper security, as if it were a standard file. This type of network capability would allow colleges and universities to maximize the capabilities of both the mainframe and the microcomputer.

The advantages of this type of network in a college environment are centralized storage and control and data compatibility and accessibility. The disadvantages of the mainframe-based network are cost and the fact that different mainframe manufacturers maintain different communications standards.

Several colleges and universities are approaching the solution from a mainframe-based network. These schools are generally setting the standards or dictating the microcomputer that will be used to reduce communications protocol and data storage incompatibilities. Usually, the standard revolves around the mainframe manufacturer's network software packages and capabilities.

Networks are needed to support the college environment in three important application areas. These are: office automation, faculty needs and staff requirements.

Office automation is usually the first application that is implemented on a network basis. Office automation includes access to information, communications, document generation, personal computing and personal management. Office automation functions are usually justified through an increase in productivity.

Access to accurate and timely information is one of the primary advantages of the network concept. By creating networks, individual users

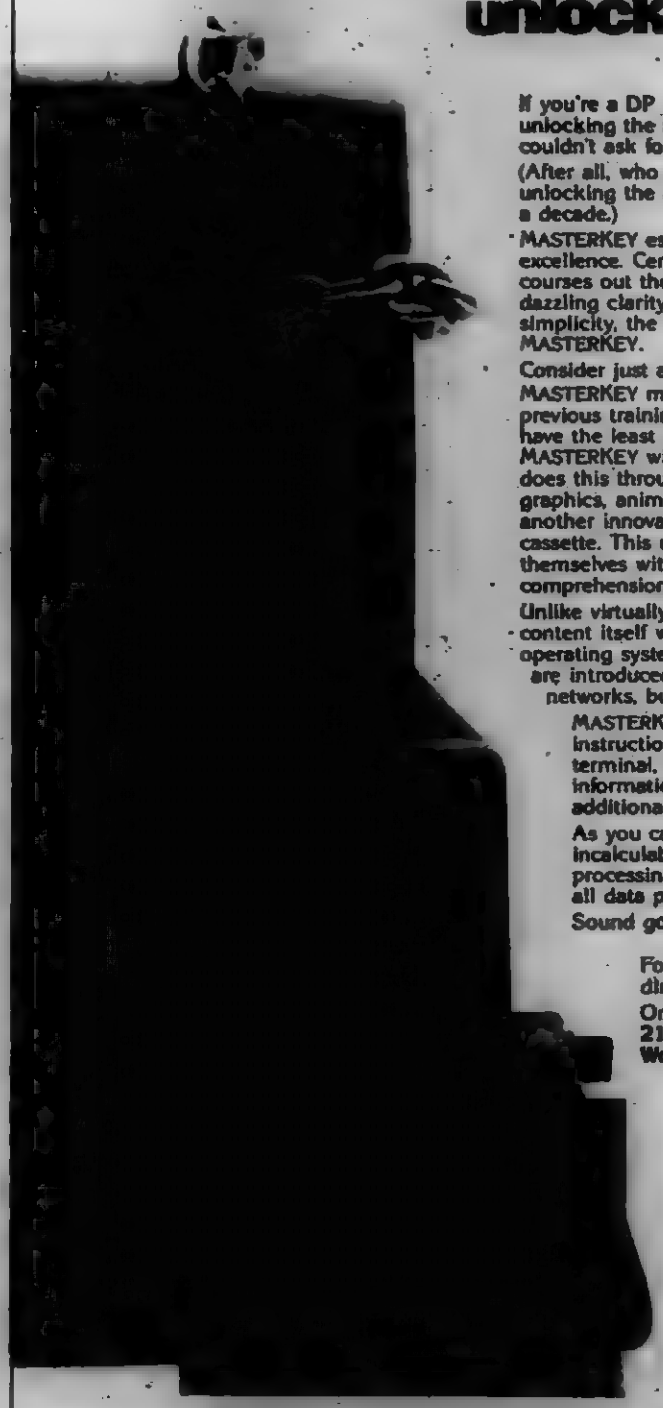
ATS introduces MASTERKEY.

The ultimate way to unlock the mysteries.



If you're a DP Manager, you know that when it comes to unlocking the mysteries of the IBM® PC for your people, you couldn't ask for a more brilliant source than ATS.

(After all, who has more experience than we do? We've been unlocking the mysteries of computers for more than a decade.)

MASTERKEY establishes a whole new standard of tutorial excellence. Certainly, there are other good IBM PC teaching courses out there. Yet none combines in one package, the dazzling clarity, the building block by building block simplicity, the sweeping, comprehensive range of MASTERKEY.

Consider just a few of its advantages:

MASTERKEY makes learning a snap for anyone. It requires no previous training whatsoever — even for those who seem to have the least aptitude. In astonishingly little time, MASTERKEY will give them a solid grasp of the IBM PC. It does this through an extraordinary combination of powerful graphics, animation and sound. MASTERKEY also boasts another innovation: an interactive but separate audio cassette. This unique concept allows students to pace themselves with far greater ease, thereby making comprehension practically effortless.

Unlike virtually every other course, MASTERKEY doesn't content itself with just teaching the keyboard and the operating system. It goes well beyond that. Students are introduced to word processing, communications networks, business graphics and spreadsheets.

MASTERKEY leaves nothing unexplored. It offers full instruction on how to use the IBM PC as a smart terminal, and how to access, retrieve and store information from S/34-38. It even advises you on what additional software you may need.

As you can see, MASTERKEY is a tool of incalculable value. It enables you and your data processing department to take firm control over all data processing functions.

Sound good?

SPECIAL **REPORT**

The use of networks in colleges and universities has come a long way since the days of traditional data processing. Because of their potential in everyday college life, networks are here to stay. It is incumbent upon colleges and universities to take the lead in the use of networks.

PACE from SR/61

will have access to the needed information in an understandable format.

Document generation includes word or text processing, but goes far beyond the simple clerical tasks most people think of today. Professional faculty and staff will find it easy to input text, especially internal documents, access student papers and information and create research papers.

Faculty needs are the second set of applications that should be a part of the college network. Faculty applications include the availability of office automation tools, support for research and tools for increasing teacher productivity. Faculty will use many of the applications available.

Support for research will include the technical, data gathering and data storage and handling needs to support the research efforts of faculty members. Statistical packages must be a part of the network. Microcomputers will be a big aid in supporting the data handling and minipulation needs of research.

Finally, tools for increasing teacher productivity will be part of the college or university network. Examples of faculty tools are computer-aided instruction and computer-managed instruction. Tools must be available to assist individual faculty members to create automated teaching aids and assist in grade retention, filing and computation and recordkeeping and reporting. Use of the college network will mean all faculty members access and use the same data bases and programs to increase consistency in recordkeeping tasks.

The final focus will be on staff requirements. Areas such as institution research, decision support, alumni and development and job placement are just a few examples. Many of these applications are computerised now, but their inclusion in the network will enhance their usefullness. As with the other applications, access to college or university data will expand the ability to perform these tasks.

The use of networks in colleges and universities has come a long way since the days of traditional data processing. There are more improvements to come. Because of their potential in everyday college life, networks are here to stay. It is incumbent upon colleges and universities to take the lead in the use of networks.

All the tools, however, are not available now. We are on the verge of technological breakthroughs to allow maximum use of the networked environment. Common data and programs and the communications link between microcomputers and possibly one or more mainframes provide the real advantages of networks.

There will be problems, but those problems will lead to opportunities and those opportunities to innovation. Colleges and universities must keep pace with industry in the area of network systems to prepare students better.

Industry is marching toward communications networks that will link managers' and professionals' microcomputers to each other and to the corporate data bases. Toward that end, networks must go to college if colleges are to be the training grounds for the next generation of information users.

Harris is president of Management/Systems Advisors, Inc., an Atlanta-based firm specializing in university DP planning, acquisition and usage.

...It will be a lot tougher to copy our performance

In 1980 when Tandberg Data introduced the TDV 2200 family, they were the first and only terminals in the world meeting the stringent specifications of the 1985 German Ergonomic Standard... a standard set to protect the safety, health and comfort of the operator. The TDV 2200 includes such features as tilt, swivel, height adjustment, ultra-low profile, detachable keyboard for comfort of operation, non-reflective surfaces, and anti-reflex tube for screen clarity. Since its introduction and as a testimonial to its innovative design, over 50,000 units have been installed. Today, there are a lot of "me-too" terminal manufacturers who have tried to copy our ergonomic design and that's certainly a plus for the industry. But, with our new TDV 2200S, an even improved version, it will be a lot tougher to copy our performance.

The TDV 2200S can emulate virtually any popular terminal and protocol. It can be equipped with up to 56k bytes of memory and some models will store up to eight pages of data. It has superb communications capabilities including networking; up to 1024 different characters in a single terminal; optional high resolution business graphics; a 70Hz refresh rate for flicker-free viewing; and a 15" screen and big letters for easy readability.

Like its predecessor, the TDV 2200S also features sixteen soft switches called PUSH keys that recall previously stored words, phrases or code sequences; a simplified menu protocol that cuts set-up time in half; and character, page, block or line/field transmission. No other terminal on the market today can match all of these features. But, they are probably trying.

So, you can wait while they try to catch up with us, or you can go with the terminal that sets the pace for the industry. Tandberg Data, Inc., P.O. Box 99, Labriola Court, Armonk, N.Y. 10504. Phone: (914) 273-6400. Telex: 137357 Tanberg Amk.

TANDBERG DATA

Tandberg Data, Inc.

SPECIAL REPORT

Multinational turns from 10 vendors to one

MEMPHIS — In mid-1981, the International Consumer Products Division (ICPD) of Schering-Plough Corp., based here, determined that its 10-vendor computer environment (and spiraling information systems costs) needed to be replaced with a systems architecture that would better meet the present and future needs of ICPD, a division with international operations scattered worldwide. Schering-Plough is a diversified manufacturer of pharmaceuticals and consumer products, including Coppertone suntan lotion and St. Joseph's aspirin.

The plan would necessitate a complete revamping of all computer application systems and a retraining of all systems personnel.

In addition to high systems costs, ICPD had no ability to share resources, to have cooperative systems development projects or to implement a cost-effective communications facility, due to the 10-vendor environment. As a result, costs were increasing, efforts were duplicated, productivity was low, and there was little systems documentation.

It was the spiraling costs that prompted ICPD to look closely at its worldwide systems situation. Also, the division realized that worldwide communications networking would eventually be a necessity, and that a standard architecture would be a tremendous asset in making such a network a reality. The general inaccessibility of computerized data — along with the cumbersome means by which key operating data was being sent into ICPD (Telex, followed by a labor-intensive rekeying effort) — simply dictated that the entire situation be reviewed.

Two major efforts

So, there were two major efforts that were put on the drawing board: a project to standardize computer hardware and software and a project to provide access to computer systems and data bases on a worldwide basis. The computer hardware chosen for the majority of ICPD's sites was the IBM System/38, with the System/34 and System/36 designated for the smaller ICPD businesses.

The system packages chosen included the McCormack & Dodge Corp. G/L system; IBM's DMS/38 customer service applications (order entry, receivables, sales reporting); and Arthur Andersen & Co.'s Mac-Pac manufacturing system.

As the division headquarters' financial reporting requirements increased fivefold, an IBM System/38 was implemented. This System/38 served not only as a vehicle for customizing the above packages for the division's offshore sites, but also as the financial consolidation and planning system for ICPD staff-level personnel.

Since beginning the computer hardware standardization project in mid-1981, ICPD has installed System/38 computers in Memphis; Toronto; Grosspetersdorf, Austria; Dusseldorf, West Germany; Caracas, Venezuela; London; and Basel, Switzerland. It has also installed System/34 computers in Sydney, Australia, and Johannesburg, South Africa.

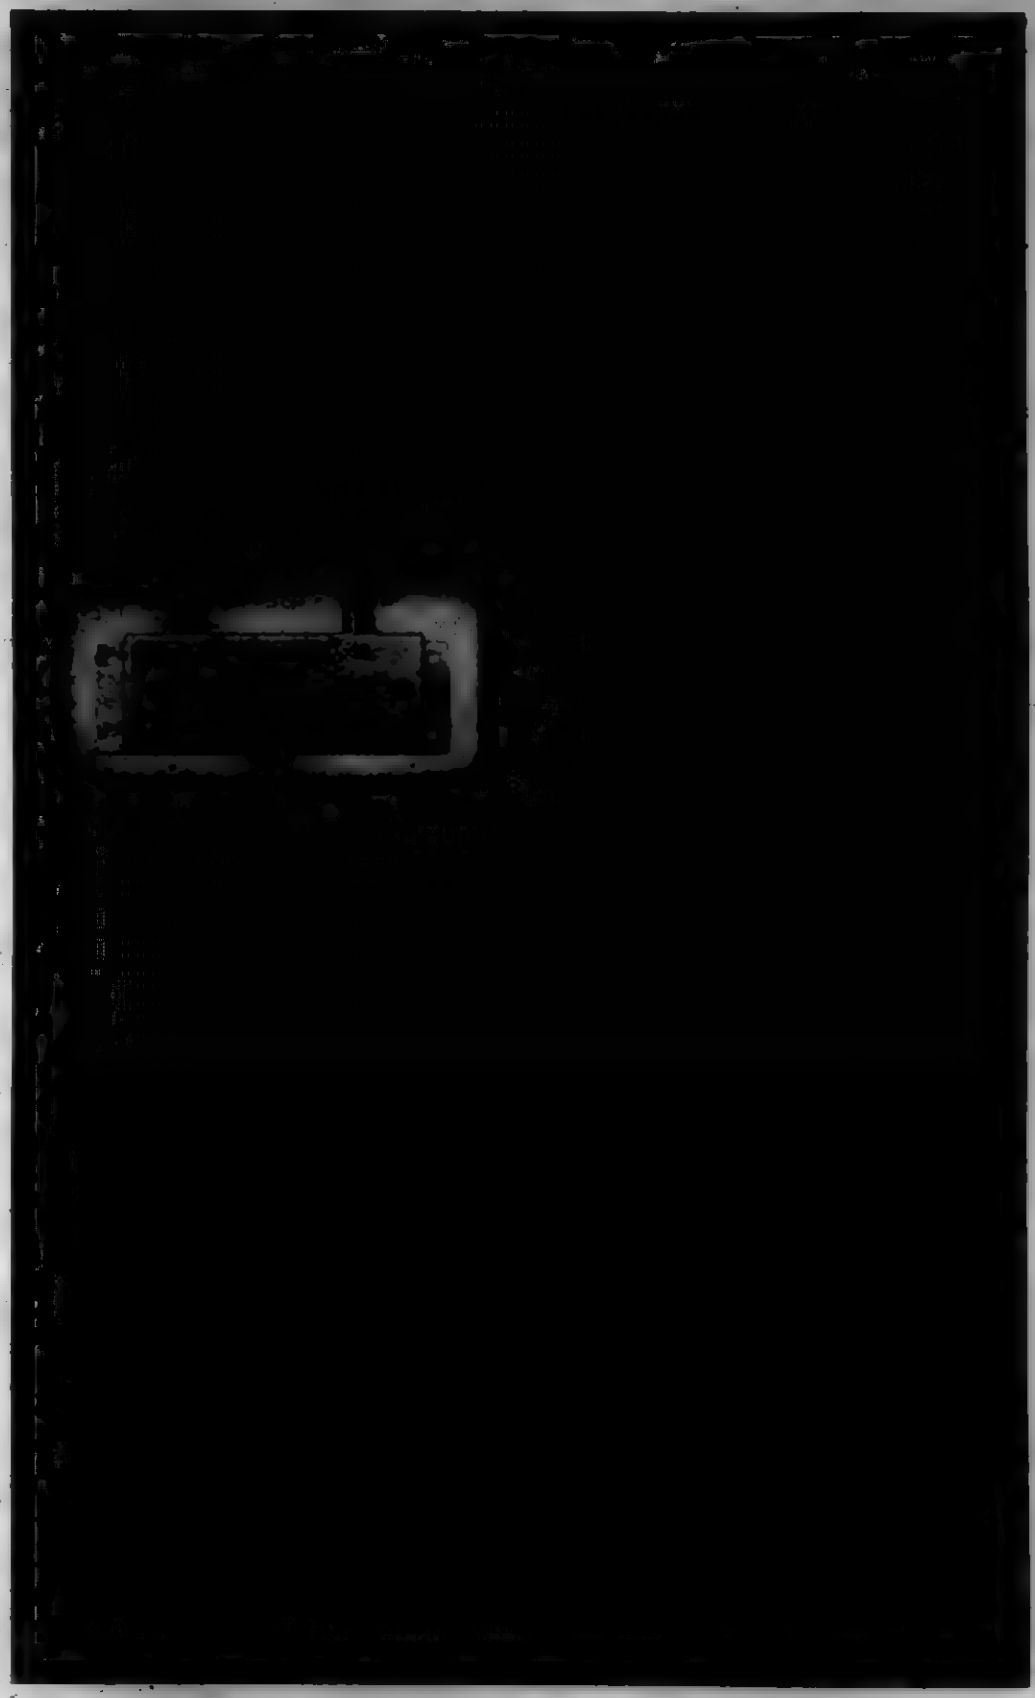
ICPD has assisted four of its smaller businesses in their transition to the world of automation via outside DP service bureaus. It has scheduled System/38 installations for Stockholm, Mexico City, Frankfurt and Paris over the next 12 months, and another six international installations have been scheduled for 1985. By the end of 1983, ICPD had reduced worldwide information systems staffing by 32%, and had provided 1982-1983 accumulated cost savings of $1.27 million in the information systems functions alone.

While the overall divisional systems architectural direction and the selection of the System/38 were originated by the ICPD staff, each business unit information systems group provided the "horsepower" needed during the implementation/conversion process.

Not only did costs come down, but the quality of the divisionwide information systems functions (as well as the applications systems) increased dramatically, and cost benefits began to accrue in areas other than information systems. Substantial cost reductions, totaling hundreds of thousands of dollars, have been targeted divisionwide in general administrative areas and in manufacturing/inventory areas.

In response to the problem of not being able to get subsidiary data effectively and efficiently into the ICPD system, an IBM Series/1 communications minicomputer was installed to act as a front-end system to the System/38 general-purpose computer.

Via a Series/1 software package, Systar Corp.'s Gateway, the Tymnet, Inc. international packet-switch communications network and an IBM 3101 CRT, to be located at each offshore subsidiary, each of the business units will have access to the Memphis-based host in an on-line mode for the purpose of inputting financial, operating and planning data.



SPECIAL REPORT

Firm's local net yields unexpected benefits

FRIDLEY, Minn. — Although a manufacturing firm here is still in the early growth stages of its local network, a number of unanticipated benefits have been realized.

The standardization of terminals, printers and modems on the network has allowed the firm to leverage buying power through large-scale purchases, but has not forced it to rely on a given manufacturer or type of device.

The company — Medtronic, Inc. — is a manufacturer of implantable medical devices. The largest manufacturing site and the location of the corporate MIS function is the Rice Creek facility in this Minneapolis suburb. The facility consists of three buildings connected physically by a tunnel and a skyway.

A single terminal connected to a network interface unit has access to many different processors, from micros to mainframes. Cabling requirements have been considerably simplified and standardized.

Medtronic's central data processing configuration consists of a Sperry Corp. mainframe, a Prime Computer, Inc. supermini and an IBM System/38. Medtronic also supports some two dozen IBM System/34s and 36s distributed worldwide at remote manufacturing and sales sites and linked to the central Sperry by a batch communications network on dial-up phone lines.

During the construction of the newest building and the skyway, a dual broadband coaxial cable was installed in parallel throughout the facility. Although one cable is used primarily for video and audio and the other for data, they differ only in the location of taps, so that either cable can be used simultaneously for both data and video, thus providing a measure of backup redundancy.

The Sperry and Prime machines first made use of the cable for workstation support through radio frequency modems and multiplexers. Before a true local-area network area utilizing general-purpose gateways to the transmission medium could be implemented, a measure of peripheral standardization had to be achieved since the Sperry and IBM processors each use their own incompatible synchronous protocol and the Prime communicates asynchronously.

Asynchronous peripherals were chosen for their low cost and superior compatibility with different network architectures, which necessitated protocol conversion for the synchronous Sperry and IBM processors. After considerable research and testing, a Kanfman Research Manufacturing, Inc. converter was chosen for the Sperry and a Perle Systems Ltd. for the IBM machines.

For compatibility with the protocol converters and wide market selection, the Digital Equipment Corp. TE100 terminal protocol was chosen as the network standard. However, the nature of the network is such that a wide variety of asynchronous devices are easily supported.

To provide the general-purpose gateways to the network, 3M Corp.'s LAN/1 network interface unit was chosen. The ultimate architecture of the network is a logical token-passing ring imposed on the physical bus structure of the cable, with more than enough bandwidth.

There were a number of unanticipated benefits in some formerly unrelated areas of the operations, many of which grow out of novel combinations of hardware made possible by the peripheral standardization realized as a part of network implementation.

Annual seminars

Once a year the central MIS groups present a week-long seminar for the Medtronic worldwide data processing community to chart a course for the coming year and to promote a face-to-face interchange of ideas.

Since the broadband cable system is available in the meeting rooms that were used for the presentations, the data processing resources of the entire Rice Creek installation were available.

One of the talks was concerned with the IBM System/36, and the speaker was able to illustrate some points by signing on to the machine in the data center.

Rather than using a standard terminal, however, the company used an IBM Personal Computer running a terminal emulation program. The Personal Computer's video output was used to drive three large-screen projector TV sets so that everyone in the room was able to see the examples easily.

The Personal Computer was also used as a presentation device in lieu of a standard slide or overhead projector, again displaying the images on the large-screen TVs.

A second interesting application for data transmission and peripheral interconnection is computer-aided education. Various departments within MIS give classes on the different hardware and software tools available within the company.

Typically these have consisted of lectures given in a classroom equipped with an overhead projector, followed by hands-on sessions at whatever terminals happen to be free, as the instructor tries to keep track of where the students are and vice versa. By placing a network interface unit and a protocol converter in the classroom, giving the instructor a Personal Computer connected to a large-screen TV and each student a terminal, lecture and lab can be combined and questions and answers shared.

A general-purpose, multifunctional network can provide far more than simple computer connectivity and peripheral sharing. It can lead to new connections between formerly unrelated areas of the company. The network can also be fertile ground for the germination of ideas.

Medtronic has done some initial experiments with combined video and data video cassette recorder-based computer education. It is possible to distribute data processing into the homes of employees using inexpensive equipment and dial-up phone links.

Its sites worldwide are making use of the protocol conversion lessons that were learned during the network installation. And the network continues to grow and suggest new uses for itself.

The Solution.

Dial-Up 3270

LineMaster An intelligent device for dial-in access to your mainframe 3270 Bisync line. **LineMaster** is a communications watchdog which keeps a line in service until a user dials in.

- For any remote 3271/4/6 line—up to 19.2K baud.
- Compatible with any 3270 BiSync emulator including microcomputers.
- Connects between modem and mainframe.
- Installs in minutes.

$639.

SYSTEMS & PERIPHERALS

Whatever happened to IBM's FBA?

By Tom Henkel
CW Staff

Shortly after it announced its long-awaited 4300 series of processors in late 1979, IBM dropped another bombshell on the computer industry. This time it was a new way of storing data in disk drives.

Fixed block architecture (FBA) differs from the traditional count key data (CKD) storage format in that it divides the memory tracks on disk drives into 512-byte blocks. While FBA does not give users the freedom to decide where on a disk platter information will be stored, many industry watchers feel that in the long run, FBA is more efficient than CKD because it greatly reduces the amount of disk space used for internal housekeeping functions.

When FBA — and the 3370 disk drive with which it was introduced — was announced in 1980, many industry watchers said IBM had created a new standard for data storage. But now, more than four years later, IBM has done relatively little to bolster the technology. In fact, the two big system disk drives announced since the 3370 — the 3375 and the 3380 — use the CKD format.

IBM statement in support of FBA

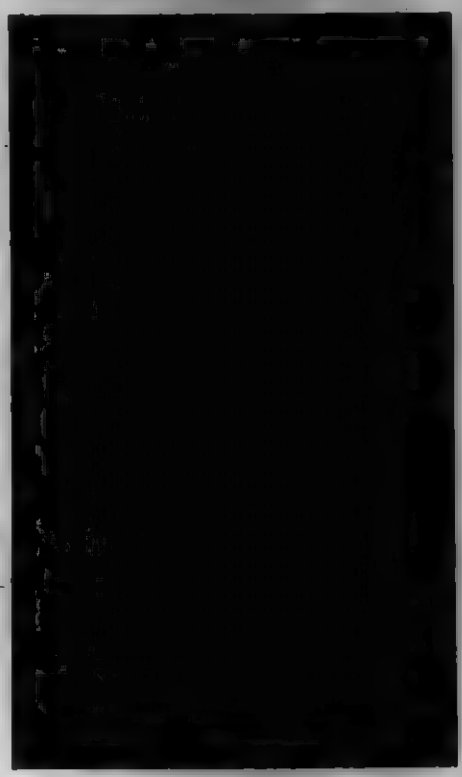
Perhaps the only strong statement IBM has made in support of FBA came last September, when it announced four enhancements to the 3370 line [CW, Sept 19]. The enhancements boosted the maximum capacity of a 3370 drive by 27% to a maximum of 730M bytes.

But nearly a year before that announcement, back in October of 1982, IBM had announced a no-charge feature for the 3310 and 3370 drives which appeared to offer users a migration path away from the FBA format and back to the CKD format [CW, Oct. 25, 1982]. The option allowed FBA drives to emulate the CKD formats on the larger IBM drives.

An IBM spokeswoman said IBM still considers FBA a viable part of its product line, but she would not elaborate on IBM's future plans for the recording technique.

Fred Moore, manager of corporate systems engineering for competitor Storage Technology Corp., said that to date FBA has not been one of IBM's more popular items. In fact, according to Moore, a lack of demand for FBA devices prompted STC to stop production of its IBM-compatible 3370 look-alike, the 8870.

Currently, Memorex Corp. is the only compatible peripheral manufacturer making a 3370-compatible product (its 3690). Control Data Corp., the third major vendor of IBM-compatible peripherals, never offered a 3370-compatible disk drive.



However, STC's Moore contends that FBA is not dead, but merely resting up for another grand appearance — possibly later this year in the form of a new top-of-the-line disk drive. It was the timing of the 1980 FBA announcement and not the concept itself that contributed to whatever acceptance problems IBM may be having with the storage format, he maintained.

Moore explained that storing data in the FBA format requires users to convert from a CKD environment. How difficult and how expensive that conversion is depends on several factors, such as the amount of data that has to be converted.

In general, however, the conversion tends to be fairly easy for users of IBM's Vsam, Moore said. For users of other IBM access methods, the conversion is much more difficult.

Moore pointed out that there are many more Vsam users today than in 1980, when FBA came out, so the market may be ripe for an FBA revival.

Jeoff Seabrook, director of marketing for Memorex, thinks the FBA revival is already here. Like STC, Memorex decided to get out of the 3370 market, but the firm's international divisions insisted it continue to market the 3690.

"That proved to be one of the more fortunate decisions we've made," Seabrook said, predicting that Memorex could probably sell twice as many 3690 drives as it can produce.

"The market seems to be getting stronger and stronger," he added, noting that sales of 3370-compatible devices are outstripping sales of 3375-compatible products by 4:1. "It's a nonglamorous product, but we're making a lot of money."

With many IBM watchers predicting that the company will announce a larger capacity version of its top-of-the-line 3380 disk drive (currently a CKD device), STC's Moore said a double-density or quad-density 3380 drive would be an ideal way for

Harris to offer gallium arsenide-based circuits

MILPITAS, Calif. — Harris Microwave Semiconductor, Inc., a division of Harris Corp., claimed to be the first semiconductor house to offer commercially available circuits based on gallium arsenide technology.

The firm announced two products that are said to be five times faster than similar circuits based on conventional silicon technology: a universal shift register and a binary counter. The firm expects the strongest appeal for devices from developers of very high-speed signal processing, test instrumentation, computing and telecommunications applications, Harris said.

The gallium arsenide circuits are available immediately and cost about $325 each in quantities of 100. The spokesman said similar silicon-based devices cost between $20 and $40 each; however, they are not as fast as the gallium arsenide units.

Harris Microwave Semiconductor is located at 1530 McCarthy Blvd., Milpitas, Calif. 95035.

Calma introduces workstation based on Apollo CPUs

SANTA CLARA, Calif — Calma Corp. has introduced a workstation for the design, analysis and simulation of digital electronic circuits and components.

Called Tegastation, the product is based on 32-bit Apollo Computer Corp. nodal processors that use Apollo's Domain local-area network, a spokesman for the company said.

Tegastation features the following software:

- Taskmaster — an interactive graphics editor for constructing schematics for a variety of design uses, including printed-circuit boards and integrated circuit designs.
- Termim — a technology-independent logic and design verification simulator for integrated circuit and printed-circuit-board design.
- Tscope — an interactive waveform display processor of simulation results in analog form.
- Textout — an interactive program that allows the user to obtain printed reports of simulation output in truth table or character waveform displays.
- Tnet — an integrated communications link that allows data transfer between the Tegastation and a Digital Equipment Corp. VAX-11 superminicomputer.

There are two Tegastation models: the DN300 with a 34M-byte disk and the DN420 with a 156M-byte disk, according to the company spokesman.

The DN420 system can be expanded with additional memory, peripherals and communications capability to act as a file server and/or communications gateway for a ring of Tegastations, according to the the company spokesman.

Prices for Tegastation begin at $50,000, the company spokesman said.

Calma is located at 2901 Tasman Drive, Santa Clara, Calif. 95050.

Uptime

Provide 24 hour CICS access

CICS Dynamic File Allocation is a must for effective CICS scheduling. It is the gateway to non-stop, round-the-clock CICS systems. It eliminates batch update constraints. It guarantees bullet proof restarts. It allows you and your batch jobs to add and remove CICS files at will, without disrupting your user community.

SYSTEMS & PERIPHERALS

Masscomp MCS-537 bows

WESTFORD, Mass. — Masscomp has introduced the MCS-537, a higher capacity configuration of its 32-bit Unix-based MC-500 series computer systems.

The MCS-537 features a 474M-byte Fujitsu Ltd. Eagle Winchester disk drive and a Cipher Data Products, Inc. vacuum-column ¼-in. magnetic tape drive. The Fujitsu drive has a slip-sector capability that is said to relocate bad blocks of data automatically.

The Cipher tape drive records information at either 800 or 1,600 bit/in. and can read/write at a speed of 125 instruction/sec.

A typical configuration of the MCS-537, supporting up to 16 users, is priced at $71,000. The configuration includes a 32-bit virtual address CPU, with a 4K-byte cache memory and 1M-byte error-correcting memory; Unix System III with Berkeley 4.2 extensions and Masscomp's Real-Time Unix software enhancements; Fortran and C languages; three RS-232C serial lines; and single disk and tape drives.

The mass storage devices may also be purchased separately as upgrades to any MC-500 system. Prices are $23,000 for the Fujitsu Eagle and $19,000 for the Cipher tape drive. Other options for the MCS-537 include additional storage, process controller and graphics display terminals and software.

Masscomp is located at 1 Technology Park, Westford, Mass. 01886.

TURNKEY SYSTEMS

STRATUS COMPUTER, INC.
APPLIED COMMUNICATIONS, INC.
Base 24-atm system

Stratus Computer, Inc. and Applied Communications, Inc. (ACI) have announced the availability of ACI's Base24-atm processing and switching software on the fault-tolerant Stratus/32 Continuous Processing System.

The Base24-atm system was designed for financial institutions requiring medium- or small-size automated teller machine (ATM) networks. It reportedly provides fail-safe operation and on-line availability 24 hours a day, seven days a week. It allows an institution to provide customers with electronic funds transfer services through a proprietary network and through sharing arrangements with other institutions and national ATM networks.

Features of the software include a variety of transactions, three types of authorization, a settlement and reporting module and the capability to switch transactions into national and regional interchanges.

A full configuration of Base24-atm costs $140,000 and is available from ACI. An entry-level 4M-byte Stratus System/32 costs about $140,000 from Stratus. It includes one to two terminals, 60M bytes of disk storage, a magnetic tape drive, operating system software and a Cobol compiler.

Stratus, 17 Strathmore Road, Natick, Mass. 01760. ACI, 206 50th Ave., Omaha, Neb. 68154.

REMOTE COMPUTING CORP.
Scheduled Amortizations System

Remote Computing Corp. has announced the Scheduled Amortizations System, which was designed for use with the IBM Series/1 minicomputer and the multiuser Datamedia Corp. Model 932 microcomputer.

A spokeswoman said software will be sold as a turnkey system with an IBM or Datamedia processor and will utilize Pick & Associates, Inc.'s Pick operating system. The Scheduled Amortizations System features book basis and tax basis calculations, standard depreciations and appreciation

Large systems hardware is not an impulse buy.

Now there's a guide coming to you that will help with your homework.

The *Computerworld Buyer's Guide to Large System Hardware* is designed to give you a valuable, one-stop information source for large systems hardware and peripherals. Take a look at all the tools it will give you to help you make the right large systems choice:

- Large systems product listings, including mainframes, supermini's, minis and small business systems and the terminals and peripherals designed to work with them. You'll get listings of printers, memory products, teleprinters, controllers, magnetic media and supplies, plotters, digitizers and much, much more.
- Vendor profiles that include company name, address, contact information, and primary markets served.
- An industry-specific editorial section that's designed to keep you right up to speed on the trends in large systems hardware. We'll give you news of the latest developments in mainframes, superminis and minis and their changing roles. You'll get information on the latest management techniques used in running data centers; planning for cost effectiveness and the new technologies in fifth generation computing.
- In addition to its comprehensive listings and editorial, the *Computerworld Buyer's Guide* will give you pages of detailed ads for large systems hardware products and peripherals that you can refer to all year long.

Each issue of the *Buyer's Guide* is updated before publication, and contains hundreds of listings that are accurate, complete and easy to use. The *Buyer's Guide to Large System Hardware* is distributed to *Computerworld's* 114,000 subscribers in the U.S. — it's one more of the additional benefits you get as part of your *Computerworld* subscription. Look for it this April 16th.

And if you market your products to buyers of large systems hardware and peripherals, this *Buyer's Guide* will reach them with your product message just when they're researching products and vendors. Reserve space in this *Buyer's Guide* by March 2nd by calling one of the sales offices listed below, or call Ed Marecki, National Sales Director or Kevin McPherson, Product Manager, at (617) 879-0700.

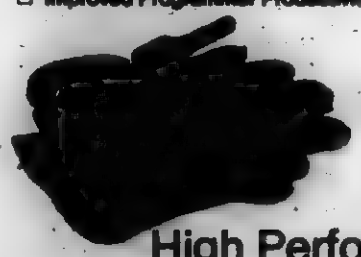
HIGH PERFORMANCE HANDLING

File-AID Puts You in the Driver's Seat to Access Data without Programming.

File-AID gives you high performance handling benefits.

- ☐ Immediate Data Access Without Programming
- ☐ Improved Testing Effectiveness
- ☐ Lower Conversion Costs
- ☐ Better Use of VSAM
- ☐ Reduced Production Delays
- ☐ Increased Security
- ☐ Improved Programmer Productivity



File-AID the Key to High Performance.

File-AID speeds up the utility functions associated with record and file handling.

File-AID is a dependable and reliable tool. And it is supported by a crew of professionals at Compuware, a company with over 2,000 users worldwide.

File-AID is flexible and able to respond in all situations: test and production; regular and special functions.

File-AID is efficient. It combines many utilities into one inexpensive, easy-to-use productivity tool.

File-AID gives the professional greater control over his data environment.

File-AID can put you in the driver's seat fast. It is easy to use and requires virtually no training. The menus, panels, tutorials and control-information make it a natural extension of your current environment.

File-AID/SPF

All Access Methods.

File-AID/SPF supports BROWSE, EDIT & UTILITY functions for all standard IBM access methods.

Record/Member Selection.

File-AID/SPF provides expanded IF, AND, and OR logic for record or member selection and processing.

Logical JCL Processing.

File-AID/SPF recognizes JCL as a special format and JCL is treated as logical statements.

Improved Edit.

File-AID/SPF provides a record editor for all access methods with no record or file length restrictions.

New SPF Utility Functions.

File-AID/SPF provides many new utility functions including:

- ☐ Load module CSECT and directory entry mapping
- ☐ Selective COPY functions for records/members.
- ☐ New full function VTOC utility.
- ☐ Full VSAM cluster, alternate index and path support (display, delete, etc.) without the IDCAMS utility.

Ease of Use.

File-AID/SPF requires no training.

File-AID/BATCH

All Access Methods.

File-AID supports all standard IBM OS or VS access methods and device types.

Multi-Function Utility.

File-AID/BATCH is a parameter-driven utility which combines the most often used file and record handling functions.

- ☐ Print, list or dump whole records or portions of records.
- ☐ Copy up to 99 datasets without control cards while mixing any file organization or record format.

File-AID is a comprehensive, easy-to-use data manipulation utility.

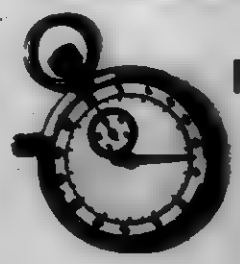
- ☐ Selective retrieval or sampling from any file based on record position, or data contents to the bit level.
- ☐ Altering data format or record structure.
- ☐ Access multiple datasets.
- ☐ Accumulate data in any format.

Additional Information.

File-AID/BATCH provides complete audit trail information as well as concise control card error messages.

Flexibility.

The flexibility of File-AID/BATCH is demonstrated by its ability to combine data from different sources or to copy data from or to unlike devices or access methods or record formats.



Test Drive File-AID with a FREE PRODUCT EVALUATION TIME TRIAL.

Get behind the wheel. Try File-AID's High Performance Handling with your own drivers and crew. For your FREE 30-day evaluation call 800-521-9363 (in Michigan or Canada: 313-540-0400).

tions, including straight line, sum of the month's digits and double-declining balance.

The system also offers standard as well as custom management reports. Standard reports include detail and summary trial balances, detail and summary reports by location, sales and retirements and current depreciation. It is integrated with Remote Computing Corp.'s General Ledger System for the IBM Series/1 minicomputer and the Datamedia 932.

The Scheduled Amortizations System for the IBM Series/1, including standard hardware configuration, is priced at $100,000. The system for the Datamedia 932 is priced at $60,000.

Remote Computing, 1076 E. Meadow Circle, Palo Alto, Calif. 94303.

EASTMAN KODAK CO.
Release 1.2 of KAR-4000

Eastman Kodak Co. has introduced Release 1.2 of KAR-4000, a software package for its KAR-4000 information system.

According to the vendor, the KAR-4000 is a system that stores document images on microfilm and corresponding computer data on magnetic media. Enhancements include multivalue data entry, batch data entry, check digit routines and international date capability.

The system includes a Mentor Graphics Corp. CPU, disk storage of varying size, CRT terminals, a printer and operating system and application software, the company said.

The software is free to system customers. The price for the KAR-4000 system starts at about $70,000.

Eastman Kodak, 343 State St., Rochester, N.Y. 14650.

PROCESSORS

COMPUTER AUTOMATION, INC.
Syfaplus

Computer Automation, Inc. last week unveiled a slightly smaller version of its Syfa 16-bit minicomputer for distributed processing applications.

Called the Syfaplus, the unit can either function as a stand-alone minicomputer or be integrated into the firm's Syfanet local-area network. The Syfaplus system reportedly offers roughly the same performance as the firm's upper-end Syfa 1000 processor plus the cache memory capability of the firm's top-of-the-line Syfa 2000 processor. The company refused to comment on whether the Syfa 1000 or 2000 is still being offered.

The CPU, which occupies a 2-ft cube, comes with 256K bytes of random-access memory, a 32M-byte Winchester disk drive (expandable up to 100M bytes) and a 10M-byte streaming cartridge tape drive for backup. The system has between eight and 24 I/O ports and can accommodate up to 24 terminals. The system can communicate with IBM mainframe processors via IBM's Systems Network Architecture, the vendor said.

Like the earlier Syfa systems, Syfaplus uses Computer Automation's Sybol programming language and the firm's Syclops operating system.

Syfaplus costs between $19,000 and $20,000.

Computer Automation, 1800 Jay Ell Drive, Richardson, Texas 75081.

JOHN FLUKE MANUFACTURING CO., INC.
2400B

John Fluke Manufacturing Co., Inc. has announced the 2400B, an intelligent front-end processor for data acquisition and control and product testing applications.

The 2400B is said to interface with any mainframe, microcomputer or instrument computer at distances up to 4,000 ft. The unit can also be accessed from remote locations through modems and telephone lines.

A 16-bit, on-board CPU provides the system's stand-alone capability through a stored application program of up to 28K bytes of random-access memory, which may be downloaded from the host or stored permanently in erasable programmable read-only memory. That intelligence enables the 2400B to monitor numerous analog and digital inputs, such as voltage, ohms, thermocouples, real-time device strain, frequency, time intervals, totalizing, binary coded decimal and binary and contact closure.

Depending on the specific user application, the vendor said, options are available for up to 1,000 analog inputs, 1,024 digital I/Os and 128 analog outputs. The 2400B is user programmable and features a resident, high-level, English-like language.

The 2400B costs $4,390. System prices range from $5,400 to $100,000, according to user applications and requirements.

John Fluke Manufacturing, P.O. Box C9090, Everett, Wash. 98206.

DATA STORAGE

DYLON DATA CORP.
Model 1066A magnetic tape controller

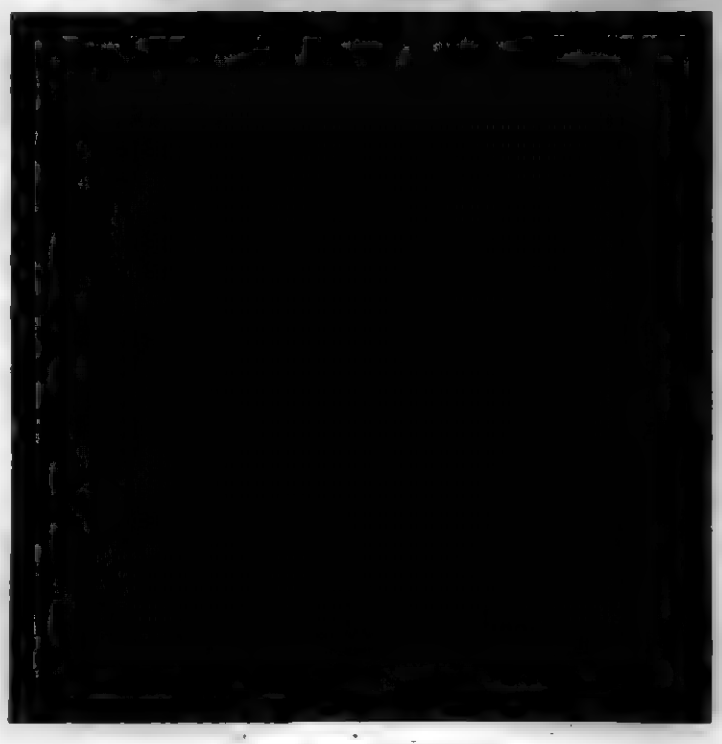
Dylon Data Corp. has introduced its Model 1066A magnetic tape controller for use with Hewlett-Packard Co. HP 1000, HP 3000 and HP 9000 series processors.

The 1066A is hardware- and software-compatible with the HP 7970E drive and requires no change to the driver software, the company said.

The tape controller features 45 in./sec and 75 in./sec operation, the vendor said.

It is priced at $4,995.

Dylon Data, 9561 Ridgehaven Court, San Diego, Calif. 92123.

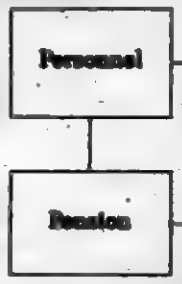


Whether you're looking for Payroll, Personnel, Pension Administration or Claims Processing software, Information Science's "Whole Person" software gives you a comprehensive system that provides superior technical features.

Systems for both Database and Non-Database

InSci's state-of-the-art payroll/personnel database system is integrated into a number of database management environments–including IMS, DL-1, and IDMS. Native mode, the system is designed to take full advantage of each specific database structure, eliminating clumsy, resource-draining interface programs.

In addition, InSci offers two non-database systems. One using a sequential file structure, the other using a VSAM access method.



INSCI INT
"WHOLE PERSON" SOFTWA
SYSTEM THAT MEETS AL
PROFES

Introducing On-line PAS

PAS–InSci's new Pension Administration System–is available as a complement to our payroll/personnel package or as an independent, stand-alone system. PAS automates most aspects of pension administration from ERISA reporting and compliance to benefits calculation, retirement counseling, vesting schedules and benefits statements.

Software for Health Insurance Claims

Our health insurance claims processing system permits your organization to self-administer group health, dental, and disability claims--providing significant cost savings while eliminating the need to keep duplicate information for insurance purposes.

The Complete Human Resource Package

We call it "Whole Person" software because it is the most comprehensive, technically advanced set of human resource systems avail-

SYSTEMS & PERIPHERALS

EMC CORP.
Pstor-300

The Pstor-300, a 300M-byte sealed media disk subsystem for Prime Computer, Inc. processors has been introduced by EMC Corp.

Based on a 315M-byte unformatted Winchester-type drive, the Pstor-300 is a rack-mountable unit, EMC said. A single module can be housed in a communications cabinet or under a tape drive. Up to three modules can be mounted in an EMC-supplied cabinet, providing up to 900M bytes of formatted storage.

A single Pstor-300 module is priced at $10,500 and includes formatting of the drive, according to user specifications, a Prime controller upgrade kit, cabling, mounting rails and installation.

When housed in an EMC-supplied stand-alone cabinet, a single module is $11,200 installed. Two modules, providing 600M bytes, are priced at $21,000 including cabinet; three modules, or 900M bytes, are $30,500.

EMC, 12 Mercer Road, Natick, Mass. 01760.

PRINTERS/PLOTTERS

SYNERGY PRINTER SYSTEMS, INC.
LW400, LW800

Synergy Printer Systems, Inc. has introduced the LW400 and LW800 line printers.

According to the vendor, the printers produce near-letter-quality printing at speeds of 400 and 800 lines per minute. They utilize an 80-yard cassette ribbon, an intelligent control panel and a four-character, alphanumeric display.

The price of the LW400 with a Dataproducts, Inc.- or a Centronics Data Computer Corp.-compatible parallel interface, acoustic cabinet and paper basket is $5,950. The price of the LW800 with the same features is $7,950. The optional RS-232 serial interface is $495.

Synergy Printer Systems, 4020 Fabian Way, Palo Alto, Calif. 94303.

GROUP THREE ELECTRONICS, INC.
Guardian Data HP1503, HP3003, HP6003

Group Three Electronics, Inc. has announced three line printers compatible with Hewlett-Packard Co.'s HP 3000 line of superminicomputers.

The Guardian Data HP1503 reportedly features a 96-char. Ascii set for DP printing at 150 lines/min and correspondence printing at 80 lines/min. It also has a 64-char. Ascii set for condensed printing at 200 lines/min. in uppercase letters only.

Standard features are said to include a forms-length selector switch, double-high characters, underlining and full-dot addressable graphics. Options include additional character fonts and bar-code and label-generation hardware, a spokesman said.

The printers require an RS-232 interface to the HP 3000, but do not require any software changes to the system, the spokesman said.

The HP1503 costs $4,740.

Two other models offer similar features to the HP1503, but have faster printing speeds. The HP3003, priced at $6,395, has a print speed of 300 lines/min. The HP6003, priced at $8,295, prints at 600 lines/min., the spokesman said.

Group Three Electronics, 3613 Manhattan Beach Blvd., Redondo Beach, Calif. 90278.

GRAPHICS SYSTEMS

NEW MEDIA GRAPHICS CORP.
Graphover 9500

New Media Graphics Corp. has introduced a color graphics generator called the Graphover 9500.

The Graphover 9500 is a color graphics generator that combines graphics coming from a computer with video coming from any videodisk, videotape or TV camera.

The Graphover 9500 offers features such as encoders, decoders, video and audio switchers, videodisk interfaces, graphics tablets, light pens and touch-screen controls.

Applications for the Graphover 9500 include interactive training, simulation, presentation graphics, point-of-sale and process control.

Available under the Government Services Administration, the list price of the Graphover 9500 is $9,850. Quantity discounts are available.

New Media Graphics Corp., 570 Cambridge St., Burlington, Mass. 01803.

POWER SUPPLIES

DATAPOWER, INC.
DP-7000 series

Datapower, Inc. has introduced a line of 750W switching-power supplies that are available in seven voltage-current output combinations ranging from 2V and 150A to 28V and 26A.

The DP-7000 series of power supplies delivers more than 2.5W of output power per cubic in., the vendor said. Seven voltage-current output models are available: 2V/150A, 5V/150A, 12V/62A, 15V/50A, 18V/41A, 24V/31A and 28V/26A.

The models are priced at approximately $650 each, according to the vendor.

Datapower, 3225 W. First St., Santa Ana, Calif. 92703.

See POWER page 78

able. InSci started the HRS industry back in 1965, and we've led the field ever since. Our technical experts have provided you features unmatched by any other company.

Modularized Design For Easy Maintenance. InSci "Whole Person" software was designed from the top down and is highly modularized, providing maximum flexibility. A single module or subroutine supports each specific function in the system.

User Exit Routines. Strategic areas built into the InSci system allow exits to override the standard system routines. This means you can add your own programs without changing database system codes. InSci also gives you source codes so you can go into the system directly if you desire and still receive maintenance.

Preliminary or final processing mode. InSci systems let you select the most efficient operating mode for each processing task. All changes can be processed in real-time, so they become effective immediately. Preliminary processing allows for simulating situations such as a payroll run without affecting the database. And, of course, InSci systems provide state-of-the-art security precautions, complete maintenance support and training.

ELECTRONIC SPECIALISTS, INC.
KLR portable line conditioners

Electronic Specialists, Inc. has announced its KLR series of portable line conditioners designed to protect sensitive computer equipment.

Available for 250W, 500W, 1,000W and 2,000W loads, the KLR line conditioners deliver 120V at 3% regulation for 90V to 140V input variations. Other features of the KLR series include input spike suppression, transformer surge suppression, wide-band prefiltering and isolated winding line noise elimination.

The 250W unit is priced at $292, the 500W unit at $391, the 1,000W model at $562 and the 2,000W model at $977.

Electronic Specialists, 171 S. Main St., P.O. Box 389, Natick, Mass. 01760.

BOARD-LEVEL DEVICES

EMC CORP.
ES-II

EMC Corp. has announced a 2M-byte, add-in memory card for the Prime Computer, Inc. Series 50 computer systems.

The ES-II was designed for use in any Prime system up to and including the P350. Using a 64K-byte, random-access memory component, the ES-II is hardware- and software-compatible with Prime memory cards and host processors, EMC said.

Other features of the memory card include on-board error check and correc-

FBA from page 73

IBM to breathe life back into FBA. The reason, Moore stated, is FBA is a much neater way of storing data.

CKD, FBA differences

CKD devices, explained Jeffrey Buzen, an analyst with the Lincoln, Mass., processor performance consulting firm of BGS Systems, Inc., allow users the option of placing most active files where they can be quickly accessed. But they also require users to pay a penalty in overhead.

Buzen explained that pointers and other housekeeping items that keep track of where data is stored on a CKD disk drive can become cumbersome. The problem is not so much the pointers themselves, Buzen said, as it is the tiny gaps that CKD devices require between fields.

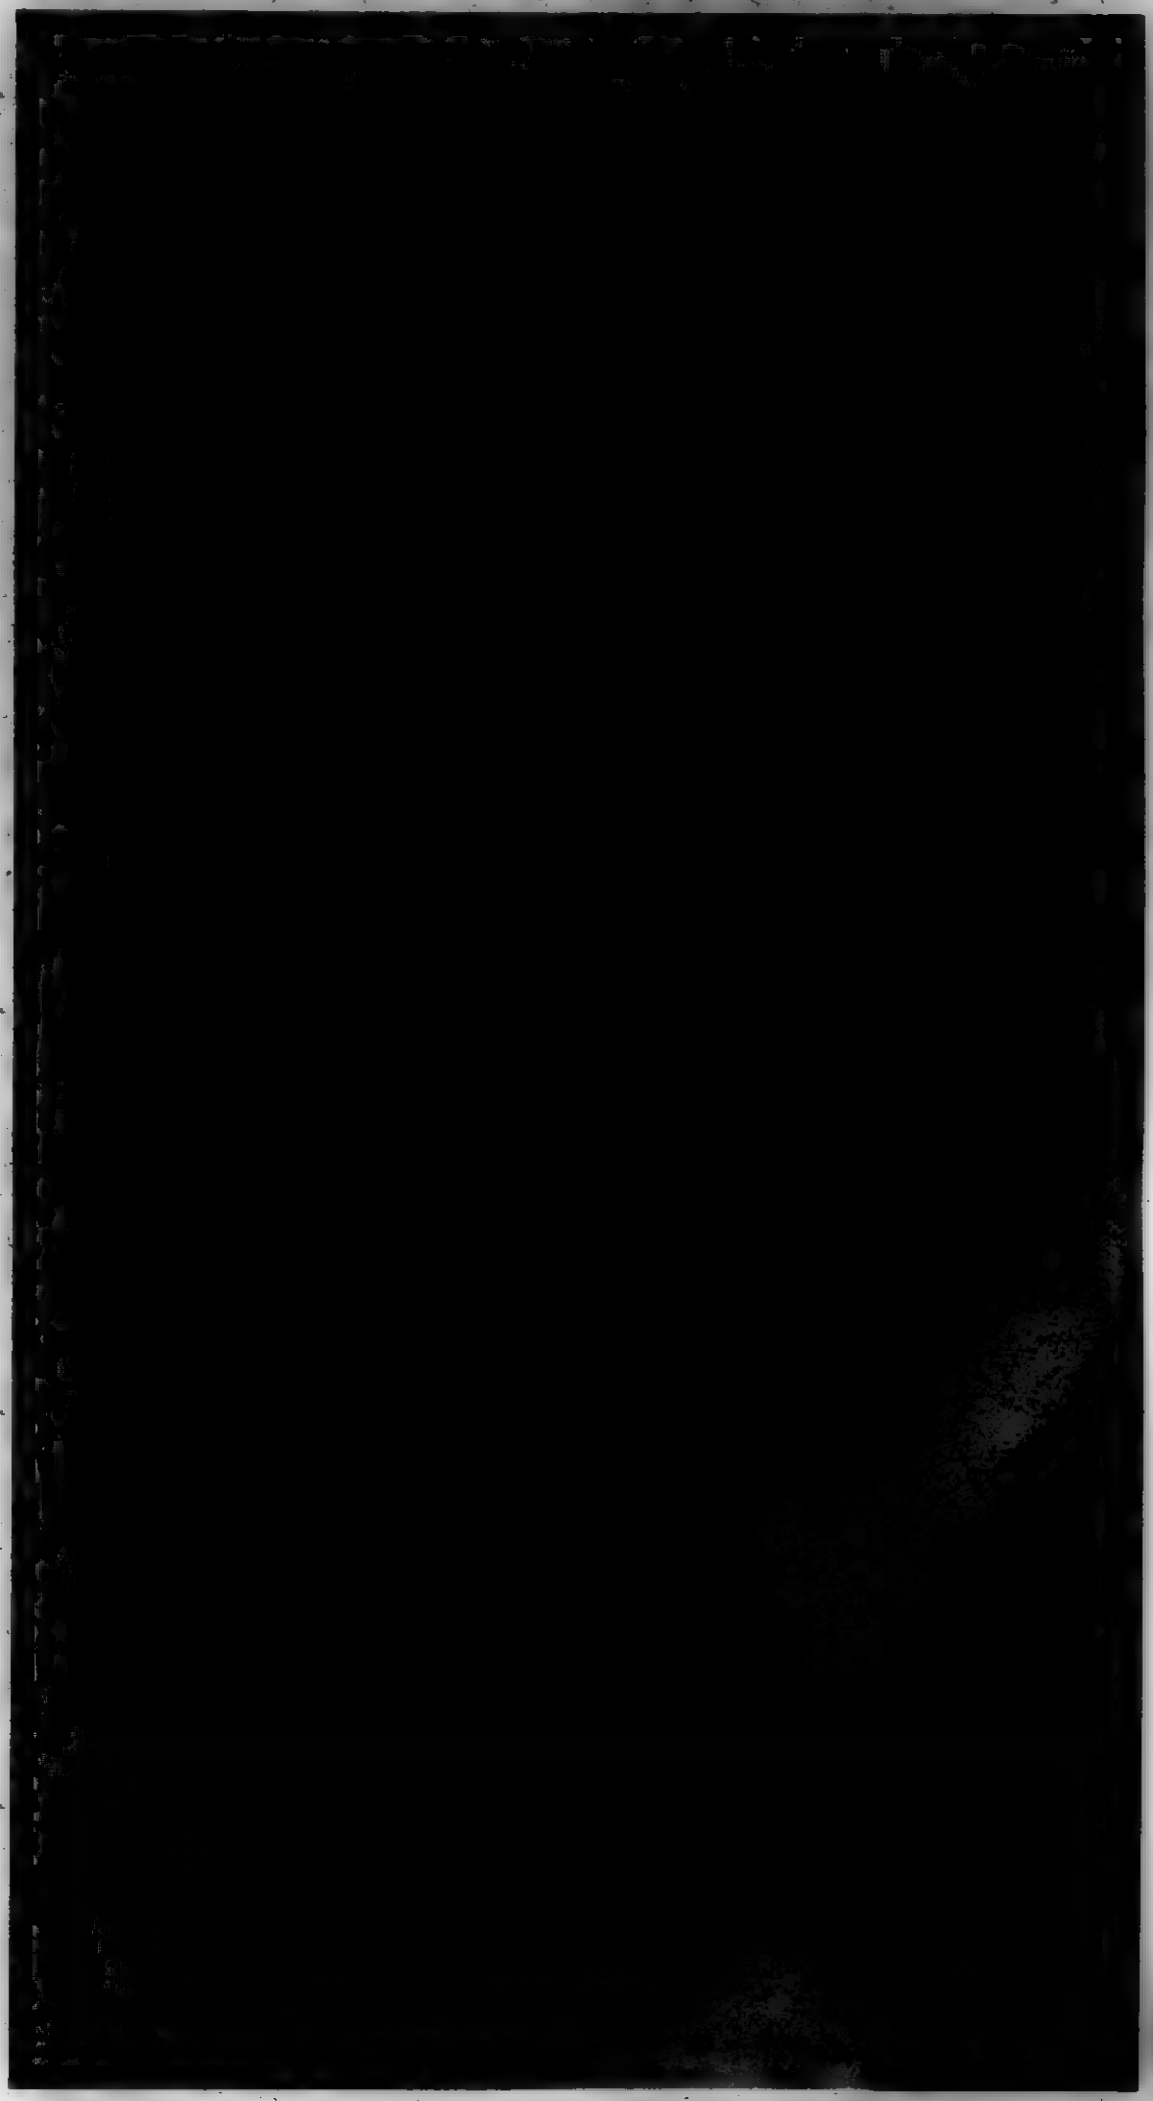
The gaps must be uniform in length; as the storage density is increased, the storage capacity lost by those tiny gaps also increases — almost to the point where the gaps take up more space than the actual data.

FBA, on the other hand, automatically stores data for users according to logic built into FBA devices and Vasas.

Noting that one of the problems with FBA has been the reluctance of CKD users to convert, Buzen said IBM could create a hybrid disk drive that employs both technologies.

With the flood of microprocessors on the market today, Buzen said IBM could easily develop specialized microprocessors to convert CKD data to an FBA format.

The result would be a high-capacity disk drive that, to the user, appears to be a CKD device. But under the surface, the unit would have all the trappings of an FBA drive.



"You can't just plank down a bunch of computers in an office and expect things to happen. You've got to prepare people for office automation. Give them all the support you can ...and more."

With Wang, you can get all the support you need. Whenever and wherever you need it.

Support that begins long before installation and extends for the life of the system.

So whether you need assistance in customer engineering, training, documentation, implementation, supplies or software, with Wang you get a response, not a referral.

A response from the people who've been in office automation longer than anyone else in the industry.

tion and support for interleaving and wide word memory modes.

According to EMC, the EB-II provides 2M bytes in a single slot, enabling the user of single chassis machines to expand memory up to 8M bytes.

The EB-II is available at a price of $12,000.

EMC, 13 Mercer Road, Natick, Mass. 01760.

APPLIED MICRO TECHNOLOGY, INC.
ST4505

Applied Micro Technology, Inc. (AMT) has introduced a standard graphics controller said to generate a display of 640 by 480 pixels.

The ST4505 is a 64K-byte memory board featuring user-selectable wire-wrap options, programmer-definable intensity, direction and size and a memory-mapping design.

Multiple ST4505 boards reportedly can be chained together to generate gray-scale or color outputs.

A Digital Research, Inc. CP/M-compatible software support package is provided on an 8-in. diskette.

The software reportedly emulates a standard plotting device by supporting plot, draw, label, character drawing and associated functions.

The ST4505 is shipped with software, source code, example Basic programs and technical manual and costs $450 in quantities of 50.

AMT, P.O. Box 3042, Tucson, Ariz. 85702.

PLESSEY PERIPHERAL SYSTEMS, INC.
Memory expansion

Plessey Peripheral Systems, Inc. has reconfigured the standard memory capacity for its Series 6200 22-bit computer system based on Digital Equipment Corp.'s LSI-11/23 board-level minicomputer.

The expansion features range from two 256K-byte memory boards to one dual-wide 512K-byte board. The expansion can free up one additional card slot for additional communications devices or peripheral controllers for the Models 6244 and 6245.

Memory capacities of Models 6247 and 6248 have increased to 1M byte from 768K bytes. The memory redefinition of the models provides an additional card slot in the bus.

Prices for the Model 6244 and 6245 remain the same at $10,485 and $12,650, respectively. Models 6247 and 6248 are increased to $11,885 and $14,050, respectively.

Plessey Peripheral Systems, 17466 Daimler, Irvine, Calif. 92714.

AUXILIARY EQUIPMENT

ADALOGIC
Gateway

Adalogic has announced a stand-alone computer password security device that reportedly can be used with asynchronous modems on dial-up or leased lines connecting to microcomputers, minicomputers or mainframes.

Called Gateway, the device requires entry of both a correct identification code and password before entry is permitted, a vendor spokesman said. If the correct codes are not entered in three attempts, the security device forces the modem to disconnect.

The user also can define a time limit for a successful logon attempt, after which time the device breaks the connection, the spokesman said.

Gateway provides up to 20 passwords and user identification codes.

The device connects between the modem and host computer to any RS-232 full-duplex port and reportedly operates at 300 or 1,200 bit/sec on dial-up lines and 300, 1,200 or 9,600 bit/sec on leased lines.

It is available for $395, the vendor said.

Adalogic, 1522 Wisteria Lane, Los Altos, Calif. 94022.

COMPUTER SECURITY INSTITUTE
Free security booklet

The Computer Security Institute is offering a free guide booklet on the topic of computer security.

The 12-page booklet, titled "Computer Security — A Manager's Guide (Pure and Simple)," was designed to provide company managers with basic background on the need for computer security, the vendor said.

The booklet can be ordered by sending a self-addressed, business-size envelope with 37 cents postage to Computer Security Institute, the vendor said.

Computer Security Institute, Department B-14, 43 Boston Post Road, Northborough, Mass. 01532.

INTEL CORP.
Speech transaction products

Intel Corp. has increased the power and added more natural responses to its line of speech recognition products.

The family of speech transaction systems includes the Speech Transaction Development System (ISBC 570 and Intellec Development System), the ISBC 576 Speech Transaction Board and the ISBC 577 chip set. The Model 576 can remember and adapt to changes in the operator's vocal pattern, the vendor said.

A number of application-independent functions have been added, including utterance, field, transaction, prompt and Help functions to support speech synthesis. The enhanced products can be integrated into other systems and complement other I/O devices, according to the vendor.

All are compatible with Intel open systems standards, as well as Intel's iRMX and Microsoft, Inc.'s Xenix-based System 300 family of microcomputers.

Prices are $4,900 for a single ISBC 570 development set, $2,900 for the ISBC 576 board and $600 for a minimum order of 500 units for the ISBC speech chip set, the vendor said.

Intel, 3065 Bowers Ave., Santa Clara, Calif. 95051.

FORUM 8

GCOS 3 TO GCOS 8 MIGRATION
DIALOGUE BETWEEN USERS

WEDNESDAY MARCH 14th AND THURSDAY MARCH 15th 1984
PAVILLON GABRIEL, 5 AVENUE GABRIEL 75008 PARIS, FRANCE

This international and highly technical seminar, intended primarily for information processing managers and systems software engineers will raise all the questions relative to GCOS3-GCOS8 migration, and will provide you with all the answers through solutions found by the users themselves.

The guest speakers, SR 2000 or SR 2300 users, are from the following large organizations:

Air Canada (Canada)
Caisse Régionale du Crédit Agricole de Rennes (France)
Credit Mutuel Ocean (France)
General Electric (Etats-Unis)
Groupe Bull (France)
Little Woods (Angleterre)
Societa d'Informatica per le Banca e l'Impresa (Italie)

Simultaneous interpretation in French, Italian and English will be provided.

A considerable part of the programme will be set aside for discussion, led by Mr Bernard FUSEY, Assistant General Manager CTR-Lyon, and Mr Georges LECLERE, Head of the Scientific Division of the french television network A2.

For registration form and further information or for telephone or telex registration, please contact:

Finally, someone who sees the forest. As well as the trees.

In their great rush to fill the office with personal computers, people lost sight of the ultimate objective. To work together more productively.

Then Sperry appeared.

With a remarkably simple solution. The Sperry PC.

It was personal, but not so personal that it would keep people from being part of a system.

It could run all of the software of IBM's PC.

It performed all the user-friendly functions people expected. It was, in fact, even friendlier than IBM's machine.

It had a more comfortable keyboard. A more dramatic display of graphics. And a high-speed "turbo" switch that allowed it to run 50% faster than IBM.

And it could keep people in touch with the most valuable resource an organization can have —the main computer.

No matter whose big system they have.

Sperry *or* IBM.

Or both.

The Sperry PC.

Admittedly, big picture.

But then, that's what happens when you look at the forest. As well as the trees.

See how the Sperry PC can work for you. Call 800-547-8362, toll-free. Or write us. Sperry Corporation, Computer Systems, Department 100, P.O. Box 500, Blue Bell, PA 19424.

MICROCOMPUTERS

Portable micro, cluster device out from IBM

By Tom Henkel
CW Staff

BOCA RATON, Fla. — IBM has added a portable version of its Personal Computer to its growing line of microcomputer offerings. At the same time, IBM announced a feature that reportedly allows up to 64 Personal Computer, Personal Computer XT or entry-level PCjr micros to be connected in a cluster.

Available March 1, the Portable Personal Computer will apparently only be offered in very limited quantities. Industry watchers speculated that IBM will give delivery preference to big national accounts over the firm's 1,400 retail outlets.

The unit weighs approximately 30 lb and uses the same Intel Corp. 16-bit 8088 microprocessor used in the desktop Personal Computer, Personal Computer XT and the PCjr.

The unit also supports IBM's PC-DOS Release 2.1 and Microsoft, Inc.'s MS-DOS operating systems. It comes in a 20-in. by 17-in. by 8-in. carrying case and features 256K bytes of random-access memory, expandable to 512K bytes. A standard 9-in. amber monitor is included, which can display graphics and up to 25 80-char. lines of text, according to a spokesman for IBM.

The Portable Personal Computer offers a 360K-byte half-height disk drive and adapter. A second half-height disk drive can be added to expand the total disk storage to 720K bytes, IBM said.

A Portable Personal Computer with 256K bytes of user memory, a 360K-byte half-height disk drive, display keyboard, carrying case and IBM's PC-DOS Release 2.1 operating system costs $2,795. A second half-height 360K-byte disk drive costs $425, IBM said.

Personal Computer Cluster Program

In addition, IBM announced the Personal Computer Cluster Program, a $92 program that allows users to connect as many as 64 processors. With the program, messages and information can be exchanged and shared between workstations. However, the workstations must be connected via a cable, IBM said. In addition, the Cluster Program allows workstations to share information on a fixed disk drive at one machine in the cluster, according to the IBM spokesman.

Since the Cluster Program license is required for each processor in a cluster, IBM is offering, in addition to the Cluster Program, the Five-Pack, which includes one diskette copy of the program, five licenses and five sets of publications to support the program.

The Five-Pack costs $400, IBM said. To support the interconnection of different IBM Personal Computers, IBM announced a series of options.

The IBM Personal Computer Cluster Adapter is required for each IBM Personal Computer, Personal Computer XT or Portable Personal Computer in the cluster. The Adapter costs $340 and fits into one of the full-size expansion slots in the microcomputer's backplain, according to the spokesman.

For attachment of a PCjr to a cluster, a special adapter, which attaches to the side of an entry-level PCjr, was also announced.

Currently, the entry-level model is the only one which can be connected in a cluster. The adapter costs $400, the IBM spokesman said.

IBM is also offering a Cluster Cable Kit, which provides the cables and connectors to connect two Personal Computers to

S1 gets kudos, but needs major endorsement

By Paul Gillin
CW Staff

The S1 operating system announced recently by Multi Solutions, Inc. [CW, Feb. 13] appears to incorporate nearly every major capability demanded by microcomputer software developers and then some. But while observers agree that S1 has impressive features, they point out that the software has yet to capture an endorsement from a major hardware vendor. That could be the most difficult hurdle to clear, they say.

Among the facilities developers claim for S1 is portability across most microprocessors, from 8-bit to 32-bit. The system supports up to 256 parallel processors, can read and write files to and from virtually all of the major micro operating systems, as well as Digital Equipment Corp.'s DEC Files 11, and it is fully machine-independent. A command processor allows commands to be abbreviated or changed so that the operating system can emulate virtually every other micro operating system, according to Charles J. Lombardo, chairman of Multi Solutions, based in Lawrenceville, N.J.

In fact, developers claim there is almost no capability that can't be added to S1. The reason is the system's modularity. Written in a high-level language called SL, the operating system can be ported to other hardware with three months or less of reprogramming, Lombardo said.

SL was developed by Robert R. Knight, a former Princeton University professor who has designed more than 60 compilers. Similar in structure to Pascal or C, SL performs "almost at machine-code level," making it fast and easy to compile, Lombardo said.

One observer who has seen the operating system in action concurred. "SL appears to be more flexible than C," said Mark Tebbe, a technical consultant at Arthur Andersen & Co. in Chicago. "It's also very easy to follow and maintain. If I had an SL compiler, I'd write in that before I'd write in C."

SL consists of only 12 statements and an automatic load linker to generate an operating system ranging from 2K bytes to 120K bytes in the full implementation. Because the operating system is modular, the designer can incorporate only those features that are needed, Lombardo said. Modules can be added to the operating system at any time, using the linker to create the links at runtime.

Some of the features developers claim can be added include multitasking, win

See S1 page 92

Multiuser DbaseII introduced for IBM micros now, Apples later

CULVER CITY, Calif. — Ashton-Tate has announced a multiuser version of its Dbase II data base management system for microcomputers.

A four-user data base manager running under Musys Corp.'s Turbodos operating system and able to manage 65,000 records, the multiuser software package operates over 3Com Corp.'s Etherseries local-area network, which is based on Xerox Corp.'s Ethernet.

Ashton-Tate President David C. Cole said that as "more and more local-area networks come on-line and get a reasonable following, we will adapt the product to them."

Ashton-Tate said support of Corvus Systems, Inc.'s Omninet, Novell Data Systems, Inc. Netware and Orchid Technology, Inc.'s PCnet networks is "soon to come."

A feature of the new product allows many users to share information, but only allows one user at a time to make changes. Price of a four-user data base manager was given at $1,000, with four-user update kits to permit later groups to join the data base network listed at $500. The product will be available on May 4.

Initially the software will run only on IBM Personal Computers, Cole said. In the fourth quarter, the product will be available for Apple Computer, Inc.'s Lisa II. Availability on Apple's Macintosh is also planned.

Ashton-Tate is headquartered at 10150 W. Jefferson Blvd., Culver City, Calif. 90230.

Appleline, cluster controller said to link Apples to IBM nets

CUPERTINO, Calif. — Apple Computer, Inc. has announced a coaxial attachment unit that allows Apple microcomputers to connect to an IBM or IBM-compatible network.

Called Appleline, the unit enables Apple micros to use existing coaxial cable installations and IBM 3270 cluster controllers servicing a mainframe computer network. Appleline reportedly can be used with the Apple Macintosh, Lisa and Apple III to provide IBM 3278 terminal emulation.

In a related announcement, Apple unveiled the Apple Cluster Controller, an alternate method for communications with IBM and IBM-compatible networks for organizations that have not installed IBM 3270 cluster controllers and 3278 terminals.

To utilize Appleline, Lisa users are required to use Apple's Lisaterminal data communications software; Macintosh users are required to utilize Apple's Macterminal communications software; and Apple III users are required to utilize Apple's Access 3270 software.

Appleline is priced at $1,295. The Apple Cluster Controller costs $4,500 for a three-port version and $7,000 for a seven-port version. The Access 3270 and Lisaterminal packages are priced at $150 and $295, respectively. Macterminal, priced at $99, will be available the first quarter of 1984.

Apple Computer is located at 20525 Mariani Ave., Cupertino, Calif. 95014.

MICROCOMPUTERS

SYSTEMS

AKA COMPUTERS, INC.
AKA PC; AKA Plus

AKA Computers, Inc. introduced two microcomputers compatible with IBM's Personal Computer XT.

The microcomputers feature an Intel Corp. 8088 microprocessor, 128K bytes of random-access memory (RAM), five expansion slots, two serial ports and a parallel port. The microcomputers can be expanded with four floppy disk drives and 256K bytes of RAM.

AKA PC costs $3,295. AKA Plus, with 10M bytes of hard disk storage, sells for $4,795.

AKA Computers, P.O Box 36247, Charlotte, N.C. 28236.

KAYPRO CORP.
Kaypro 4 enhancements

Kaypro Corp. has announced an enhanced version of its Kaypro 4 microcomputer that incorporates a built-in modem, improved display facilities, graphics and improved screen features.

The Kaypro 4's built-in 300 bit/sec modem automatically adapts the micro for communications and electronic mail applications and offers access to data bases, a spokesman said.

Screen features include a clearer display, highlighting, dual-intensity display segments and blinking cursor.

Improved graphics are made available through a monitor with a resolution of 100 pixels by 160 pixels, the spokesman said. For word processing, the Kaypro 4 incorporates a new 80-col. by 25-line display.

The enhanced version sells for $1,995, according to a spokesman for the vendor.

Kaypro, 533 Stevens Ave., Solana Beach, Calif. 92075.

STORAGE

DAVONG SYSTEMS, INC.
Mac Disk

Davong Systems, Inc. has announced a family of hard disk drives for Apple Computer, Inc.'s Macintosh microcomputer.

Called Mac Disk, the unit is available in six memory configurations: 5M, 10M, 15M, 21M, 32M and 40M bytes. The units will be shipped with all necessary cabling and adapters, software utilities and documentation. Prices range from $1,995 to $4,995, a spokesman said.

Davong Systems, 217 Humboldt Court, Sunnyvale, Calif. 94089.

AVCOM, INC.
Safe-Gard

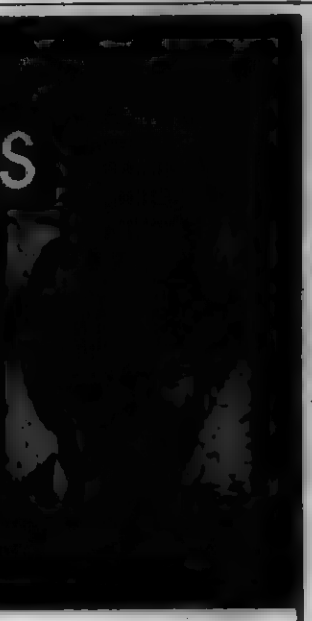
Avcom, Inc. has introduced Safe-Gard, a disk security system for the IBM Personal Computer, Personal Computer XT and compatible systems.

Using a custom-layered encryption algorithm, Safe-Gard diskettes are said to prevent programs from bit copying and also allow users to write-protect disks to avoid accidental erasure. Backup copies can be made but will work only on Safe-Gard disk, according to a vendor spokesman.

Two Safe-Gard diskettes cost $9.95 with quantity discounts available.

Avcom, P.O. Box 29153, Columbus, Ohio 43229.

8 Good Reasons to Attend the James Martin Seminar



1. James Martin has been writing THE BOOK on the Computer Industry for over 3 decades.
2. He is the most sought after consultant in the Computer Industry.
3. His predictions and recognition of major computer developments are unsurpassed.
4. With over 31 top-selling books, Martin is the industry's #1 selling author of all time. His book, *Application Development without Programmers*, is the Computer Industry's #1 selling book of all time.
5. James Martin has the unchallenged reputation as the world's finest lecturer in his field. Over 20,000 individuals worldwide have attended the James Martin Seminars. Many return year after year.
6. James Martin "... can lay fair claim to being the most influential DP guru of all time." – *ICP Interface*
7. A fast-moving, high-density, interactive 5-day program packed with information for all DP designers, management, and staff. Quite honestly, the James Martin Seminar is the industry's best educational value for the money.
   - Attend the seminar designed to dramatically increase your DP capability.
   - A major increase in productivity is attainable through the methods taught in this seminar.
   - 5 days with James Martin will dramatically alter your approach to DP.

Many DP organizations are beginning to break the cycle of low productivity, poor responsiveness, and high application backlog of traditional DP. Now is the time for you to act. Attend the James Martin Seminar this spring. Learn the new technologies and their application to your organization. You'll discover why James Martin is ....

8. ... The Man the DP Experts Listen To!

Check the appropriate box on the coupon for more information on James Martin's 1-Day Seminar, THE END USER REVOLUTION for executives and professionals everywhere who ought to be using computers more effectively. This 1-day seminar will be held on the first day of the 5-day seminar.

Call (213) 394-8305 or mail the coupon today for a detailed brochure.

IBM from page 83

form a cluster. The Kit costs $110. Three or more microcomputers can be connected by using multiple Cluster Cable Kits, IBM said.

IBM announced the Portable Personal Computer and Cluster Program through its Entry Systems Division, located at P.O. Box 2989, Delray Beach, Fla. 33444.

IBM offer comes as no surprise

BOSTON — For at least one industry watcher, IBM's announcement of a Portable Personal Computer and Computer Cluster Program did not come as a surprise.

Chris Christiansen, an analyst with The Yankee Group market research firm based here, noted that IBM has been expected to announce a portable version of the Personal Computer for some time.

Christiansen noted that the Portable Personal Computer, other than putting the IBM seal of approval on portable computers, does not offer anything that compatible portables offered by Compaq Computer Corp. and other vendors do not.

The next step, he said, both for IBM and the other portable manufacturers, is to develop a lap model of the Personal Computer.

Noting that the Portable Personal Computer is expected to be available in extremely limited quantities, Christiansen noted its introduction will probably have little short-term impact on non-IBM vendors of portables. Most portable vendors will, however, be forced to lower their prices, Christiansen noted.

Contending that IBM has been rumored to be readying a local-area network for its microcomputer lineup, Christiansen called IBM's Computer Cluster Program a stopgap measure until IBM can offer a local-area net.

Like the Portable Computer announcement, Christiansen said, the cluster technique is not a new technology.

Software Digest
THE RATINGS NEWSLETTER

A new, hard-nosed testing and rating service to give you rapid, reliable information on how IBM PC programs compare in 9 different ways:

- Ease of Start-up
- Ease of Learning
- Ease of Use
- Error Handling
- Performance
- Versatility
- Overall Evaluation
- Value for Money

REALISTIC TESTS

Competing programs are all tested exactly the same way, with practical application tests designed specifically for that type of software.

MULTIPLE TESTING

The tests are repeated 10 times for each program, by 10 individual testers with a typical range of backgrounds and varied levels of experience.

UNBIASED RATINGS

The test scores are averaged to further reduce the possibility of bias, and the ratings are determined objectively by formulas.

CONCISE REPORTING

The test results and ratings are presented concisely. With a minimum of words. And no advertising. Just useful, bottom-line information from the most methodical, consistent testing organization in the field.

EASY REFERENCE

All reports about competitive programs are in the same issue. Easy to find. Easy to understand.

TEN IMPORTANT ISSUES IN 1984

Each issue covers one category. And, because there are so many changes during the year, each of these 10 categories will be completely retested annually:

1. Word Processing
2. Data Management
3. Spreadsheets
4. Graphics
5. Time Management
6. Self-Improvement
7. Tax & Investment
8. Communications
9. Special Applications
10. Integrated Software

Want to know how Software Digest ratings are determined? Please turn this page ▶

Here's how Software Digest tested and rated 30 IBM PC word processing programs—a project that took two months and cost over $100,000. The testing of data management programs is currently being completed with a different series of tests designed just for that application. Each category of software will be tested with the same methodical thoroughness, consistency and impartiality.

Reproduced from the first issue of the Software Digest RATINGS NEWSLETTER.

THE SOFTWARE DIGEST RATINGS METHODOLOGY

Testing and Rating Procedures for Word Processing Programs

Testing Procedures

Our testing procedures for word processing programs consisted of three phases:

In the first phase (INSTALLATION), the reviewers installed the program following the instructions given by the software supplier. This generally included making one or more backup copies of the master disk, adding the operating system to the program disk, creating a data disk, and selecting the correct type of monitor (color or monochrome) and printer. The installation procedure was timed and comments noted.

During the second phase (THE "2-HOUR TEST"), reviewers were given exactly two hours to learn how to edit a simple letter with the program, plus whatever else could be learned within that period. This was the only phase with a specific time limit. A two-hour limit was chosen because it is about the maximum time a typical user would spend with a program before trying to use it.

In the final phase (EDITING/PRINTING), reviewers were given a prepared disk file containing a standard one-page letter with text to be changed, deleted, moved, copied, centered, underlined, and then printed. As with the installation procedure, editing and printing were timed. Thus, the test was designed to answer the question: "After spending two hours to learn this word processing program, how difficult and time consuming is it to produce a typical business letter?"

At the end of each phase, reviewers reported their observations on a detailed report form. Individual scores were recorded for the ease of performing a typical range of editing functions, as well as ease of installation, ease of learning, ease of use, speed of execution, error messages, error resistance, and overall evaluation.

Rating Procedures

Information provided by the tests was statistically summarized in eight rating categories described below. Each category had a possible score between 0 and 10 (10 being the highest rating).

Ease of Start-up Ease of getting the program "up and running." It included the average time required for installation (inverted and adjusted for upper and lower limits) and the average Ease of Installation score.

Ease of Start-up = ((10 − ((Installation Time − 5) / 45 • 10)) + Ease of Installation) / 2

Ease of Learning The average Ease of Learning score. It was a measure of how simple it was to learn to use the program, as determined by each reviewer.

Ease of Learning = Total Ease of Learning Scores / 10

Ease of Use Statistical mean of the average time required to edit and print the standard letter (inverted and adjusted for upper and lower limits), the average Ease of Use score, and the average Functional score (composed of a series of editing procedure scores).

Ease of Use = ((10 − ((Minutes to Edit − 15) / 105 • 10)) + Functional Score + Ease of Use) / 3

Error Handling A weighted composite of reviewer scores (50%) and our Technical Department's error-testing procedures (50%). Reviewer scores included whether the program "froze" (i.e., refused to respond to further user commands), whether data was lost, and the average scores for Error Messages and Error Resistance. The Technical Department procedures included tests for how the program handled specific situations: disk full, disk directory full, attempting to read a disk with the drive door open, reading and writing to a non-existent drive (e.g., Q:), writing to a write-protected disk, system memory full, printer cable disconnected, and printer turned off. Each program was also checked to see if it prompted users when they attempted to leave the system before saving the current text to disk.

Error Handling = (Freeze + Data Lost + Error Messages + Error Resistance + (4 • Lab Score)) / 8

Performance Statistical mean of the average Execution Speed score and the average letter score (i.e., how well the reviewers were able to correctly edit and print the final copy of the letter).

Performance = (Execution Speed + Letter Score) / 2

Versatility The program's power, above and beyond simple word processing functions, based on a checklist of 20 advanced features. One point was given for each of the 20 features on the following list which the program possessed, and the total was divided by two to place it on a 10-point scale.

Versatility = (Five or more printers specifically supported +
Hard disk compatibility +
User can reassign keys or build macro commands +
Shows preview of printing +
Decimal alignment +
Can edit one file while printing another +
Can insert stock phrases from disk file +
Deletions can be restored +
Creates standard ASCII files +
Split screens or windows +
Multicolumn formatting +
Virtual memory +
Footnoting capability +
Mouse compatible +
Math capability +
Index and/or table of contents creation +
Columnar block moves +
Soft hyphenation +
Text can be more than 80 columns wide +
Print selected page or range of pages) / 2

Overall Evaluation A weighted average of all of the preceding ratings and the average Overall Evaluation score, as follows:

Overall Evaluation = ((2 • Ease of Use) + Ease of Start-up +
(2 • Ease of Learning) + Performance +
(2 • Error Handling) + Versatility +
(2 • Overall Evaluation)) / 11

Value for Money An indication of what to expect for your money. The two variables were the Overall Evaluation rating and the program price. For the purpose of fair comparison, the retail price of each program was adjusted by subtracting $50 for each major accessory program included (such as list/text merge and spelling checker programs). These accessory programs were not tested and, therefore, played no part in the reviewer scores.

Value for Money = (Overall Evaluation + (10 −
(Adjusted Price − 50) / 45)) / 2

For more information about The Ratings Newsletter, please refer to the preceding two pages.

Software Digest, Inc., One Wynnewood Road, Wynnewood, PA 19096.

MICROCOMPUTERS

BOARD-LEVEL DEVICES

EDUCATIONAL MICROCOMPUTER SYSTEMS
M68K development package

Educational Microcomputer Systems has introduced its M68K hardware/software package, which allows the development and debugging of Motorola, Inc. 68000 programs on the IBM Personal Computer, Apple Computer, Inc. Apple II and Radio Shack TRS-80.

According to the vendor, the hardware is a standalone 68000 single-board computer with a 6-MHz or 10-MHz 68000 CPU, 20K bytes of static random-access memory, 16K bytes of erasable programmable read-only memory, two RS-232 serial ports, a 16-bit parallel port, five 16-bit counter timers and an expansion bus to allow for memory and I/O expansion.

The package starts at $795 for a 6-MHz version.

Educational Microcomputer Systems, P.O. Box 16115, Irvine, Calif. 92713.

PATHWAY DESIGN, INC.
Pathway Design/3770; Communications Adapter; Adapter Cable

Pathway Design, Inc. has introduced Pathway Design/3770, which transfers files to and from IBM hosts in Systems Network Architecture/Synchronous Data Link Control (SNA/SDLC) or Binary Synchronous Communications (BSC) networking environments by emulating 3770 remote job entry stations.

The product works with the IBM Personal Computer and the Wang Laboratories, Inc. Professional and can be enhanced to support the Digital Equipment Corp. Rainbow and Unix-based systems.

Pathway Design/3770 allows the microcomputers to send and receive data simultaneously by emulating a multilogical unit that supports six data streams.

The product supports host data compression, full-formatted printing, multiple-selectable devices and Ascii or Ebcdic line transmission, the vendor said.

The vendor also announced its Pathway Design/Communications Adapter, a multifunction, dual-channel circuit card that operates in conjunction with the vendor's software and the Pathway Design/Adapter Cable.

The Pathway Design SNA/SDLC and BSC products are priced at $595.

The Communications Adapter is $295, and the Adapter Cable is $50.

Pathway Design, 177 Worcester St., Wellesley, Mass. 02181.

AUXILIARY EQUIPMENT

PMC INDUSTRIES, INC.
Model 033

PMC Industries, Inc. has introduced an ac line transient/surge suppressor designed to protect microcomputers and microprocessor-based instrumentation.

According to the vendor, Model 033 is designed to sense and suppress very high-voltage transients, which can cause damage and data scrambling. It features suppression capabilities of 15,000A maximum surge current.

It reportedly works on any standard 120 Vac line and responds to transients and surges in less than 25 nsec.

Model 033 costs $135.

PMC Industries, 9353 Activity Road, San Diego, Calif. 92126.

MICROCOMPUTERS

MICRO SOFTWARE

CUBICOMP CORP.
Easel version

Cubicomp Corp. has introduced a new version of Easel, a graphics software package used to paint full-color images with a graphics tablet.

The package runs on Microsoft, Inc.'s MS/DOS Version 1.1 or 2.0 and requires 500K bytes of memory on an Intel Corp. 8087 coprocessor. It runs with the vendor's CS-5 solid modeling design system for IBM Personal Computers and compatibles.

Easel costs $2,450; the CS-5 graphics system, with graphics display generator, is $9,700.

Cubicomp, 3165 Adeline St., Berkeley, Calif. 94703.

FISCHER INNIS SYSTEMS CORP.
Watchdog

Fischer Innis Systems Corp. has introduced Watchdog, a software-based security product for the IBM Personal Computer running on IBM's PC-DOS Versions 2.0 and 2.1.

According to the vendor, users must provide passwords to verify their access authority when they turn on the computer or log onto the system. Information can be enciphered or scrambled, and the system administrator can order customized audit reports on user activity.

The Watchdog package, consisting of two diskettes with a system administrator guide and a user guide, is priced at $295.

Fischer Innis Systems, 4175 Mercantile Ave., Naples, Fla. 33942.

THE SMALL COMPUTER CO., INC.
Filepro NCR

The Small Computer Co., Inc. has announced Filepro NCR, a data base management system for NCR Corp.'s Tower multiuser microcomputer.

The menu-driven package allows the user to create electronic files, or it can automatically arrange user-defined fields on a screen or report, the vendor said. Data also can be transferred between files.

Other features include conditional processing, recalculations for complete files based on new data, automatic error checking, indexing and file selection functions and file search capabilities.

Up to 15 users can run programs at the same time on the same system in the same file. Security protection is provided at field, screen, file, user or system level. Minimum hardware requirements for Filepro NCR are a Tower with 512K bytes of internal memory, hard disk drive and terminal. It is available at an introductory price of $995.

The Small Computer Co., Suite 1900, 230 W. 41st St., New York, N.Y. 10036.

MICROSPARC, INC.
Lexicom Version 3.0

Microspare, Inc. has introduced a version of its Lexicom software, a file transfer utility for users of Apple Computer, Inc. microcomputers.

Lexicom Version 3.0 is said to create standard sequential files from

NETWORKING UNRAVELED FOR YOU!

Technology Transfer Institute's Seminars by THE EXPERTS ON NETWORKS

It might seem as though the technology for configuring networks these days has become a real nightmare. The truth is that the maze of choices simply needs to be put in the proper perspective. Should you use satellites, phone lines, public or private networks, value-added networks, broadband, baseband, fiber optics, all or some, and in what configuration? The list goes on and on. Besides the options, the jargon is enough to drive you crazy — LANS, MANS, VANS, X. this, X. that and who knows what else, not to mention keeping track of the emerging standards.

To assist you in putting all of these network technologies in their proper perspective, Technology Transfer Institute has assembled an amazing set of Network Pioneers to conduct the Spring '84 series of NO-NONSENSE SEMINARS.

TTI'S line-up of "EXPERTS ON NETWORKS" will help you unravel your networking dilemmas, be it performance, evaluation, queueing, protocols, configuration, planning or architectural concerns.

To get all the facts on the TTI seminars, give us a call or send the coupon today for your Spring '84 catalogue of network courses. Discover why TTI seminars continue to be "the standard in the field against which all others are measured."

S1 from page 83

dowing and bit mapping, graphics and utilities, support for IBM Isam and Vsam file structures as well as B-Tree and removable files. S1 supports all forms of memory management, including virtual memory, they say. Compilers are also available for most major programming languages and even for more esoteric languages like Modula, Snobol and Lisp.

Comments from the few independent observers who have seen S1 bear out the company's claims. "They've taken mainframe operating system concepts and implemented them in S1," said John Farley, manager of software development at IMS International Corp. in Carson City, Nev. Among the more attractive large machine concepts he cited are multiprocessing, communications and the availability of semaphores and locks. He added that he has seen no other micro-based operating system that combines those features.

"From my standpoint the product is phenomenal," Tebbe said. "If it doesn't become accepted, it will be because it doesn't get market recognition, not because of any technical shortcomings."

S1's potential problems arise from the fact that it still lacks a major endorsement, although Lombardo claimed one was imminent. "I'm just surprised if it's so wonderful that more people haven't made commitments to it," said Peter Marvit, senior analyst with Yates Ventures in Los Altos Hills, Calif.

Tebbe pointed out that the product's claimed portability may also act as a hindrance. "To be truly portable you have to sacrifice certain capabilities that different processors have," he said. "But if they had it on [an IBM Personal Computer] with a [Microsoft, Inc.] MS-DOS emulator, they could open a big door."

However, he noted that for a small, two-year-old company like Multi Solutions, a major endorsement promises to be difficult. "If I'm a hardware vendor, why should I buy the heart of my machine from a company like this when I can buy MS-DOS or Unix?" he asked.

Lombardo asserted that the portability of S1 will make it popular with chip vendors. "It takes five man-years to put an operating system on a new chip, and we can do it in nine man-months. They no longer have to build features like networking, multitasking and keyed fields into the applications because that's already in the operating system."

The Star of Team Xerox.

XEROX

The Star 8010 professional workstation has always been known as a computer of dazzling capabilities, especially in its graphics, information processing and document preparation.

Team Xerox

But what some people may not know is that the Star is also the key element in Team Xerox, a system of office machines designed to work together like a team.

When part of an Ethernet network, the Star can work with a wide array of word processors, mainframes, personal and business computers, printers, electronic mail and file services, facsimile terminals, communicating Memorywriters, other networks and, of course, other Stars. It also provides 3270 and TTY emulation.

Its full 17" bit-mapped screen lets you view two full pages simultaneously and open up to six documents at a time without covering up a previous document.

It's also the only workstation that can create and print documents in more than a dozen languages, including Russian and, for the first time, Japanese (Katakana, Hiragana and Kanji).

While other workstations may use Xerox innovations like the mouse, icons, windows, property sheets and combined text and graphics, the Star simply does more with them.

For example, the Star's extensive software is fully integrated, to allow you to work with text and graphics simultaneously. You can draw a flowchart right in the middle of a full page of text without having to resort to a separate program and limited buffer "scratchpad" or "clipboard."

In terms of capabilities, ease of use and overall value, the Star would have to be considered the stellar workstation in the industry.

When Computerworld delivers the goods on manufacturing systems this March 26th, you'll definitely want to be there.

Ad deadline is March 9th.

In response to the increasingly heavy involvement of DP/MIS people in computer-aided manufacturing (CAM) and computer-aided engineering (CAE), *Computerworld* is preparing a Special Report that focuses on CAM/CAE, manufacturing resources planning (MRP), robotics, inventory and shop floor control.

We'll also cover the effect these new technologies are having on traditional manufacturing operations. And on the delicate relationships between traditional DP departments and the factory automation specialists.

If you act before March 9th — your products or services can be represented. To reserve space in this issue, call one of the sales offices listed below or call Ed Marecki, National Sales Director at (617) 879-0700.

MICROCOMPUTERS

Continued from page 92

Apple's DOS 3.3 operating system. The files can be created from several types of files, the vendor said.

Lexicom 3.0 is available for $49.95. Current owners of any version of Lexicom can receive an update for $10 with return of the original disk.

Microspare, P.O. Box 285, Lincoln, Mass. 01773.

DIGITAL EQUIPMENT CORP.
Construction Management System

Digital Equipment Corp. has announced a portfolio of business software packages designed for small- to medium-size commercial contractors using DEC's Decmate II Business Computer System or Rainbow series of microcomputers.

A 10M-byte Winchester hard disk-based Construction Business Management System for the Decmate II reportedly enables contractors to manage 99 jobs, keep track of employees on weekly payroll lists and monitor more active subcontractor accounts than was possible with floppy-based systems. It costs $4,995 and will be available in mid-March.

The floppy disk-based Construction Management System for the Decmate II offers an entry-level automation tool to contractors, DEC said, and has modules for accounts receivable and payable, payroll and job costing. It is available now for $3,500.

Included in the portfolio are Comshare, Inc.'s Target, providing a part chart structure for orderly completion of complicated projects, priced at $329 and available now; and Contractor's Management Systems' Easyest, designed to develop job estimates, priced at $500 and available in mid-March.

DEC, 146 Main St., Maynard, Mass. 01754.

THE COMPUTER CO.
TRS-80 version of APL.68000

APL.68000, an APL interpreter from The Computer Co. that can address up to 16M bytes of main memory, is now available for Radio Shack's TRS-80 Model 16B 16-bit microcomputer.

APL.68000 is an advanced version of IBM's APL.SV interpretive programming language. Features include a system function and Quad-CC, which facilitates development of full screen applications, as well as an APL.68000 "run-time" version for third-party software development.

The TRS-80 16B version of APL.68000 is priced at $1,500, according to the vendor.

The Computer Co., 1905 Westmoreland St., Richmond, Va. 23230.

ARTSCI, INC.
Magic Office System

Artsci, Inc. has introduced the Magic Office System, an integrated office package for Apple Computer, Inc. and Franklin Computer Corp. systems.

The Magic Office System consists of three programs: word processing, an electronic spreadsheet and a spelling checker. The word processor displays the document as it will be printed, the company said. The spreadsheet is a Visicorp Visicalc-type program that will load Visicalc files.

The three products are integrated through a file folder and file cabinet display. Each data diskette is organized into a single file drawer, while multiple diskettes make up multiple drawers.

The system requires 64K bytes of memory, 80-col. display and two disk drives. It is priced at $295.

Artsci, 5547 Satsuma Ave., N. Hollywood, Calif. 91601.

SOFTWARE PUBLISHING CORP.
PFS:Proof

Software Publishing Corp. has introduced PFS:Proof, a proofreader for the IBM Personal Computer.

According to the vendor, PFS:Proof flags misspelled words in a document and provides correct spelling from its 100,000-word dictionary. It also checks for irregular capitalization, double words and typographical errors.

The program can be used with Software Publishing's word processor PFS:Write or any other Ascii text file, the vendor said. PFS:Proof is priced at $95.

Software Publishing, 1901 Landings Drive, Mountain View, Calif. 94303.

See TRS-80 page 98

MIGRATING TO MVS/XA THIS YEAR?

Don't be a lonely pioneer.

Much has been said about the complexity of the migration to XA. The destination is clear but the route is still hazardous. The good news is that you don't have to "go it alone" any longer. The experiences of others who have blazed the trail before you have been collected by ASI. Benefit from these experiences. Learn while these pioneers tell you where they found problems, and where and how they found the help they needed. They'll also tell you the effort they needed and the resources they used. ASI has a new series of courses available to help you plan your migration,and utilize the potential of XA. This resource is available to you today to help in your migration.

ASI's help does not end with the migration. Once you are there, consolidate your position by using the remainder of ASI's vast MVS/XA training curriculum to show your staff how to manipulate and take advantage of this new environment.

For details of our special introductory offer covering "MVS/XA Migration Considerations" and "Harnessing the Productivity Potential of XA" call or write ASI today.

Hewlett-Packa surge in office

Introducing the Person

The principle is simple. Boost the productivity of individual PCs. Your people, your department, even your entire company will follow suit.

The first boost occurred when we introduced the touchscreen HP 150 as an office and managerial workstation. This made personal computing so much easier and faster that individual productivity soared.

Now the Personal Productivity Center combines the flexibility of the HP 150 with the power of our HP 3000 family of distributed computer systems.

You can shape each Productivity Center just the way you want it by adding other office and computing products from our extensive range.

You can link managerial and secretarial work stations. Create impressive presentations, merging business graphics and word processing. Store them on large disc files. And print them out on laser printers and color plotters.

Your PCs also grow more productive by increasing the range of software they can run. In addition to leading PC programs like 1-2-3™ from Lotus™ and popular word processing packages, they can use HP 3000 business software like our exclusive DeskManager. This combines electronic mail, quick memo

rd touches off a productivity.

al Productivity Center.

writing, personal filing and calendar functions. And each PC can access data processing systems and large corporate data bases.

Personal Productivity Centers can communicate with similar networks in other parts of your company, as well as your mainframes. Each system can expand to handle more than 100 workstations. And you can grow without involving your programmers in any software conversion.

So if PCs alone are making your people more productive, just wait till you see them all working together. And you can see them right now by calling your local HP sales office listed in the white pages. Or write for complete information to: Hewlett-Packard, Dept. 03191, 19447 Pruneridge Avenue, Cupertino, CA 95014. In Europe, contact Henk van Lammeren, Hewlett-Packard, P.O. Box 529, 1180 AM Amstelveen, The Netherlands.

It could turn your whole company into a productivity center.

Productivity. Not promises.

HEWLETT PACKARD

1-2-3 and Lotus are trademarks of Lotus Development Corporation.

TOOLS from page 95

SOFTCRAFT, INC.
Btrieve, Btrieve/N enhancements

Softcraft, Inc. has enhanced its file management systems: Btrieve, designed for a single user, and Btrieve/N, which is used with networking systems.

Enhancements include new file characteristics, sorting capability, more efficient use of disk space and high-speed handling options, according to the vendor. The programs feature variable cache buffers, error control and automatic file recovery, the vendor said.

The programs run on the IBM Personal Computer, Hewlett-Packard Co. HP 150, Wang Laboratories, Inc. Professional Computer and Texas Instruments, Inc. Professional Computer.

Btrieve sells for $245; Btrieve/N costs $595.

Softcraft, P.O. Box 9802, No. 590, Austin, Texas 78775.

METASOFT CORP.
Benchmark packages; Word Processor Version 4.0; Spelling Checker Version 2.0

Metasoft Corp. has announced several business software programs and enhanced versions of its word processing and spelling checker programs for several microcomputers.

Four programs have been added to the vendor's Benchmark series. The Administrator is a directory program that reportedly integrates nine Benchmark application programs. It enables the user to perform configuration and disk formatting and copying procedures as well as interface with most Microsoft, Inc. MS-DOS applications programs and utilities, a spokesman said.

The Financial Planner is a programmable three-dimensional spreadsheet for business planning. The Data Manager is a data base program for storing business and technical information. Business and Presentation Graphics can display data in such formats as a clustered bar chart, a stacked bar chart, a horizontal bar chart, a pie chart, a line graph and an X-Y plot. It also provides the ability to draw freehand and generate arcs, rectangles, circles and text strings, the spokesman said.

Prices are: Financial Planner, $295; Data Manager, $295 to $395; and Business and Presentation Graphics, $295. Word Processor Version 4.0 will be priced between $295 and $350, and Spelling Checker Version 2.0 will cost $125, the spokesman said.

The programs run on the IBM Personal Computer and Personal Computer XT, Texas Instruments, Inc. Professional Computer, Digital Equipment Corp. Rainbow, NEC Corp. PC-8800 and Victor Technologies, Inc. 9000 microcomputers.

Metasoft, Suite 12, 6509 W. Frye Road, Chandler, Ariz. 85224.

WADSWORTH PROFESSIONAL SOFTWARE, INC.
Statpro for Lisa 2

Wadsworth Professional Software, Inc. has introduced a version of its Statpro series of integrated statistics, graphics and data management programs for the Apple Computer, Inc. Lisa 2 microcomputer.

According to the vendor, Statpro contains five modules for statistical procedures. The package runs on a Lisa 2 with 512K bytes of memory. It also runs on the Apple II with 64K bytes of memory, the Apple III with 256K bytes and the IBM Personal Computer and Personal Computer XT with 128K bytes of memory, the vendor said.

The package, scheduled for release in June, is priced at $1,995.

Wadsworth Professional Software, Statler Office Building, 20 Park Plaza, Boston, Mass. 02116.

APPLIED SOFTWARE TECHNOLOGY, INC.
Versaform

Applied Software Technology, Inc. has introduced Versaform for the Corvus Systems, Inc. Concept microcomputer.

According to the vendor, Versaform allows the nontechnical user to automate business application requirements using a form-oriented record.

Versaform, which runs under IBM's PC-DOS or Microsoft, Inc.'s MS-DOS operating systems, is also available for the IBM Personal Computer and Personal Computer XT. The package can also be used on Apple Computer, Inc. Apple II, IIe and III micros, as well as those manufactured by other vendors. The release is written under the UCSD P-system and costs $495.

Applied Software Technology, 170 Knowles Drive, Los Gatos, Calif. 95030.

CDEX CORP.
Training programs

Cdex Corp. has announced two training tutorials for IBM Personal Computer users.

Both products include four diskettes of interactive instruction and a reference of important keystroke sequences and operating system commands.

The goal of the course is an understanding of Basic programming, applications software, fundamental hardware concepts and operating systems. The programs are menu-driven, allowing the user to determine the depth of instruction and the pace at which it is given.

The programs are available at retail outlets for a fee of $69.95 each.

Cdex, Suite 200, 5050 El Camino Real, Los Altos, Calif. 94022.

ANNOUNCING
the premiere of
jr.®

Learning to use your *IBM PCjr* becomes easy and fun with jr magazine. Because jr keeps things simple, the whole family will *learn and understand while they enjoy themselves.*

jr will explain how the *PCjr* works and guide you step-by-step in setting up your system. Most of all jr will answer your most important questions month after month . . . like

- **What can I use my *PCjr* for?** jr magazine will teach you how to prepare household budgets, balance your checkbooks, do your taxes and organize schedules and lists.
- **What about the kids?** From kindergarten to college, jr helps the kids with educational programs in every subject area.
- **Are there more serious uses for *PCjr*?** Yes! You'll improve your own business skills by learning about word processing, spreadsheets and graphics.
- **What about having fun with *PCjr*?** Relax and enjoy all the latest games with your whole family.

Plus:

- **What programs should I choose for the *PCjr*?** jr magazine will tell you what programs on the market will run on the *PCjr*, and which ones won't. Plus what new programs are on the way. jr will evaluate them *before* you buy.

Apple wakes up to reality of IBM

INDUSTRY INSIGHT

PETER BARTOLIK
CW Senior Editor

After mistakenly believing they would storm the business market with the Lisa microcomputer product, Apple Computer, Inc.'s personnel have apparently woken up to the reality of doing business with businessmen.

They're still brash and still very bold. But they've definitely been humbled.

A year ago, it would have been akin to treason for an Apple man to express the idea that Big Blue could 'whup' the blue jeans-clad and long-haired crowd from California. But that's exactly what Apple Vice-President William Campbell admitted, with an IBM man sitting next to him, during a recent seminar hosted by *Fortune* magazine.

"IBM really kicked our tails in that marketplace," Campbell said with refreshing candor. Noting Apple has "not been a serious contender in the Fortune 1000 market," Campbell said the Lisa introduction a year ago "was an aborted attempt." With no mainframe access and no networking and communications capability, the Lisa was destined to fail.

Now Apple is aggressively going after the end-user market, seeking to enter the corporate environment by building up a cadre of supporters who become comfortable with computing via the recently introduced Macintosh. The revamped Lisa family will have a limited networking capability and some ability to pull data from a mainframe, he added.

■

After showing Apple's new ads for the Macintosh and the controversial 1984 ad that ran during the Super Bowl in January, Campbell revealed that Apple tried to pull off the futuristic film, but couldn't sell it all the time.

Thinking that the money for running the ad could be put to better use elsewhere, Campbell said that Apple tried to sell its commitment for 30-second and 60-second spots, but could only find a

IBM portable to impact mart

But Compaq chief expresses little concern

By Peter Bartolik
CW Staff

Compaq Computer Corp. posted earnings of $111 million in its first year after filling a void in the IBM line of Personal Computers with a transportable compatible computer that won much-prized shelf space next to IBM units at large computer retail stores. But IBM recently announced its own portable with a very competitive price.

"I don't think IBM took aim at any particular company, but it probably took note of our success," Rod Canion, president of Compaq, told *Computerworld* shortly after IBM's announcement.

The IBM portable was priced at $2,795 for a 256K-byte random-access memory version with one disk drive, $200 less than Compaq's general retail price for the Compaq Portable Computer.

Canion expressed little concern about Big Blue's move. "There's really nothing new that they've come out with," he said. "They seem to be quite a bit behind us; our first product was announced 15 months ago, and it's certainly behind our second generation product, the [Compaq] Plus."

Shelf space at premium

With retail shelf space at a premium, Compaq is generally regarded as the most successful compatible-manufacturer because it was able to win space in retail stores that deal in IBM Personal Computers. Canion conceded that IBM's latest move has the "potential" to tie up shelf space previously earned by competitors, but maintained, "we've invested a lot the last year in dealer relations and customer satisfaction; we've really become the standard for portables."

He added, "There definitely will be an impact [on available shelf space], and it will hurt those vendors that are not already accepted."

In light of reports that IBM will only ship a limited number of its new portable machines and the fact that the actual "street price" for the basic Compaq is below IBM's announced price, Canion said he believes the company is well positioned to remain competitive. The company is pres-

Outside firms training IBM users

By Robert Batt
CW West Coast Bureau

MENLO PARK, Calif. — In a departure from tradition, IBM has appointed four outside training companies to teach users the fundamentals of its Personal Computer systems.

The four firms — Applied Computer Consulting (ACC) in Oakland, Calif; Computerknowledge Corp. of Dallas; PC Support Center Ltd. in Honolulu; and Patricia Ritchie Associates of Burlington, Mass. — are training microcomputer users at selected IBM product centers across the nation.

According to Alan Hunt, manager at IBM's national marketing division in Atlanta, "This is the first time that IBM has gone outside the company to provide a service within the IBM organization. We decided to do it this way because we were not sure we could meet the volume of demand from our own resources."

The training provided by the four companies is designed to give business and professional users of the Personal Computer, Personal Computer XT and PCjr a basic grounding in the various hardware features and software applications of the respective machines.

Users may take introductory or advanced courses in the Lotus 1-2-3 spreadsheet package from Lotus Development Corp.; Visicalc, a program from Visicorp; Multiplan, a financial forecasting package manufactured by Microsoft, Inc.; and IBM's own DOS operating system.

According to the training companies involved, many of the students are first-time users, often from Fortune 1000-type firms.

"Actually getting your hands on the computer from the very beginning is the

IBM, CBS, Sears to offer joint home videotex service

NEW YORK — IBM, CBS and Sears Roebuck & Co. announced a joint videotex venture last week to develop a commercial service for home computer users. But the service is unlikely to be available for several years, according to a press release.

Shortly after the announcement, an IBM spokesman said "We will support NAPLPS, Ascii and probably other formats." NAPLPS — the North American Presentation Level Protocol Syntax — is the recently adopted U.S. videotex standard; it specifies the format of the bits that create the graphics displayed on the viewer's screen.

Based largely on Canadian technology, NAPLPS has been promoted in this country by AT&T and CBS. Within the past year, a software-based NAPLPS decoder for the Commodore Business Machines, Inc. Commodore 64 personal computer was developed by Avcor Ltd. of Toronto [CW, July 4, 1983]. Retail sales of the decoder, priced at $100 to $125, began recently.

Last week, Avcor's Marketing Vice-President Zal Press reported his company is developing a similar decoder for the IBM Personal Computer that is expected to be available in about three months. The price will be under $200. Avcor also plans to develop a low-cost NAPLPS decoder this year for the IBM PCjr.

At least four other companies, including two in the U.S., are developing and marketing software-based NAPLPS decoders for personal computers, Press added.

The possibility of using the Personal Computer as a videotex terminal may have been a major reason CBS teamed up with IBM and Sears. Earlier, in collaboration with AT&T, CBS sponsored "Venture One," a videotex trial in Ridgewood, N.J. But the terminal was an expensive, specially built television set supplied by AT&T.

The phone company is marketing a similar terminal in Miami, where Knight-Ridder Newspapers recently began Viewtron, the nation's first commercial videotex service. The Viewtron terminal is priced at $600, but reportedly costs much more than that to build.

There's a market for your product abroad.
You can reach the right people in the major computer markets throughout the world. The people who make the buying decisions—in countries already importing more than $3 billion in computer hardware, software and supplies.

CW International Marketing Services gives you one, efficient source for direct contact with the leading local computer publications in the world's major computer markets. How can we do this for you? We have a wide network of editorial offices around the world and provide first hand marketing information to our clients. Plus, we have over 10 years experience in the publishing industry.

We're a division of CW Communications/Inc., publishers of *Computerworld* and the world's largest publisher of computer-related newspapers and magazines.

CW International Marketing Services makes it easy.
We'll translate your ads for you and give you production services to meet the specifications of any or all the newspapers and magazines we publish or represent—and—we'll even bill you in dollars. What's more, when you place your advertising through CWIMS, you save the V.A.T. (value-added tax). It's as easy as advertising in your local publications.

We'll even help you with market facts, and, in the case of the People's Republic of China, we can arrange for you to give product and marketing seminars there! You can run your ads in our periodicals in these countries:

*Argentina	*Denmark	*Italy	*Norway	*Saudi Arabia	*Sweden

STC reports net '83 loss of $40.9 million

LOUISVILLE, Colo. — Storage Technology Corp. (STC) recently reported a net loss of $40.9 million for 1983, reflecting sharply reduced revenues and a $31.5 million expense resulting from the recent termination of a mainframe development project.

With its stock hovering at the $12 mark, down from a high of $40 two years ago, the losses reported for 1983 represent a per-share cost of $1.19.

STC reported that revenues for the year were $886.6 million, down 17.8% from the $1.07 billion reported a year earlier. In the fourth quarter, revenues were $226.9 million, down 19.1% from the fourth quarter in the previous year.

For the year, the company reported losses of $9.4 million, or 28 cents per share, from ongoing operations, and losses of $31.5 million, or 91 cents per share, from the ill-fated attempt to develop a high-range, IBM-compatible mainframe [CW, Feb. 6]. In the fourth quarter, losses from ongoing operations were $7.8 million, or 23 cents per share, and losses from the mainframe project were $27.6 million, or 80 cents per share, for a net quarterly loss of $35.4 million, or $1.03 per share.

In 1982, STC had posted profits of $64.7 million, or $1.88 per share, and fourth-quarter profits of $8.1 million, or 25 cents per share.

STC Chairman Jesse I. Aweida said the decision to cancel the mainframe project was disappointing but unavoidable in light of program delays, the reduced likelihood of successfully marketing the project and the additional funds that would have been required to complete it.

Class-action suit

STC has been served with a federal class-action suit filed by a member of the partnership which the company formed to raise funds for the project, charging the company fraudulently obtained an additional $10.6 million in funds just four months before the decision came to cancel [CW, Feb. 13].

The company has not publicly commented on that suit.

Commenting on the impact the 1983 losses might have on 1984 operations, Aweida said the company's creditors had been kept fully informed of the mounting losses. "Our credit needs are well within the resources available to us," he said.

Aweida added that products recently introduced by the company are being well received by customers and that he expects the products to continue to do well in the marketplace.

Canion urges compatibility with standard

By Patricia Keefe
CW Staff

HOUSTON — "Don't jump in front of a speeding train, and if you sleep in the same room with an elephant, make sure you are aware [short] before he is."

In this way, Rod Canion, Compaq Computer Corp.'s president and co-founder, talked about competing in an IBM-compatible microcomputer world at the recent PC World Exposition here. Compaq is one of the more successful makers of IBM-compatible microcomputers.

Canion said that IBM's Personal Computer is a de facto industry standard independent even of IBM, primarily because of the amount of business software written for it by third-party vendors. As a result, he predicted, IBM, too, will think twice about making any future architectural changes to its Personal Computer for fear those changes will make it incompatible with the mother lode of software written to run on the current Personal Computer architecture.

Canion said that while some vendors have chosen to ignore the standard and others merely "dabble" in it, Compaq's success comes from recognizing the standard. Canion said micro vendors should be 100% compatible with the standard; paying lip service with halfway "compatibility" is not enough.

Truly compatible to Canion means the capability to run all software as is, off the shelf; same keyboard and program layout; operating system; support for the same peripheral devices; and utilities and documentation commands.

"I don't think you should stand on the tracks in front of a speeding train [IBM] with a flag to stop it. Instead, you should climb on board and work your way [via compatibility/improvements] to the front," he said.

Some areas in which he suggested improvements could be made were cheaper graphics, a reduced footprint, networking and faster and more memory capacity and storage.

COMPAQ from page 99

ently doubling manufacturing capacity and is pushing the Compaq Plus with hard disk and 10M-bytes of memory.

Canion would not comment on whether the company intends to discount its first model to increase its attractiveness to consumers. "We will do what is appropriate," he said.

IBM's new product was announced just a few weeks after it won its first skirmish against previously ignored Personal Computer-compatible manufacturers.

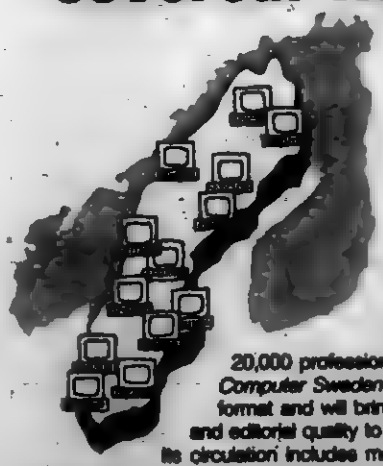
Late last month, IBM filed lawsuits charging Corona Data Systems, Inc. and Handwell Corp. with infringing on copyrighted routines used in the IBM Personal Computer, and both agreed to redesign their products.

"It is our intention to protect our copyright," IBM spokesman Ed Nanas told *Computerworld*.

Nanas said the settlement recently obtained by Apple Computer, Inc. in its copyright suit against Franklin Computer Corp. [CW, Jan. 23] did not affect IBM's decision to prosecute. But it did influence Corona to settle: "We decided that rather than fight the case, the best route was settlement," said Larry Lotito, a Corona spokesman.

Corona subsequently announced it would begin shipping a new read-only memory that it said does not infringe upon IBM copyrights.

We've got the Swedish computer community covered. Have you?



In 1982, sales of computer hardware, software and services reached $1.2 billion in Sweden. This market is expected to grow at an annual rate of 18% with the government and manufacturing industry being most effected.

And now our new sister publication, *Computer Sweden*, can bring your advertising message to 20,000 professionals in this expanding marketplace. *Computer Sweden* is published bi-weekly in a tabloid format and will bring *Computerworld's* high standards and editorial quality to the Swedish computer community. Its circulation includes managers, marketing directors, engineering management at computer hardware, software and service suppliers, educators, consultants, DP managers and technicians.

CW International Marketing Services is your one-stop advertising service in countries around the computer world. For more information about *Computer Sweden* or any of our other foreign publications, just fill out the coupon below.

DEC restocks exec team by promoting nine managers

MAYNARD, Mass. — Digital Equipment Corp. recently restocked its executive team by promoting nine senior managers to vice-presidential positions. Each has been with the company for 10 years or longer.

Promoted, effective Feb. 15, to vice-presidents, were:

■ John L. Alexanderson, 44, Peripherals and Supplies Group. Previously manager of that group, he joined DEC in 1969 and served in a succession of sales and marketing management positions.

■ Don K. Busiek, 48, Corporate Software Services. Since joining DEC in 1969, he held various management positions in field-service technical support and product support groups before assignment as manager of Corporate Software Services.

■ Gerald V. Butler Jr., 43, Computer Special Systems. After joining the company in 1966, he held various marketing, engineering and general management positions, including manager of PDP-15 engineering, and was most recently manager of Computer Special Systems.

■ David W. Grainger, 41, area manager — Western and Central states. Most recently area manager for the Western and Central States Management Center, he had served as regional manager for Northern Europe, regional manager for the Mid-Atlantic states and U.S. field-service manager since joining DEC in 1969.

■ Delbert E. Lippert, 41, Educational Services. He had been manager of Corporate Educational Services since 1974 and held a succession of field-service management positions since joining the company in 1967.

■ Charles E. Shue, 37, area manager — Northeast states. He joined DEC in 1970 and held various district and regional sales management positions and was most recently area manager for the Northeast Area Management Center.

■ Peter J. Smith, 39, Computer-Aided Engineering and Manufacturing. Formerly manager of that group, he joined DEC in 1970 and served in various marketing management positions.

■ Harvey L. Weiss, 40, area manager — Mid-Atlantic and Southern states. Most recently area manager for those states, he joined the company in 1971 and served as marketing manager of the Large Computer Group and product group manager of the Government Systems Group.

■ Richard H. Yen, 53, Far East Engineering and Manufacturing. He joined DEC in 1972 and served as general manager, Taiwan, and director of Far East Manufacturing before becoming manager of Far East Engineering and Manufacturing.

HP posts 12% increase in first-quarter profits, but costs rise 23%

PALO ALTO, Calif. — Hewlett-Packard Co. recently reported that profits for the first quarter of the fiscal year were $95 million, or 37 cents per share, up 12% from the $85 million, or 34 cents per share, reported in the corresponding period one year ago.

At the same time, however, total costs and expenses during the quarter were $1.1 billion, up 23% over the year-earlier report. John A. Young, president and chief executive officer of HP, said that incoming orders outpaced the expenses and are expected to generate increased sales growth.

For the quarter, the company reported sales of $1.2 billion, up 21% from the $1.06 billion reported a year earlier. The largest increase, 26.4%, or $144 million, resulted from sales of computer products; sales of electronic test and measurement equipment climbed 18.3%.

International orders also increased by 32% over the year-earlier figures, but part of that, about five percentage points, was due to HP's increase in equity from 49% to 75% in Yokogawa-Hewlett-Packard, a joint-venture company based in Tokyo, Young said.

TRAIN from page 99

only way we have found to ease the fear of computers that many users experience," explained Nancy Clano, president of ACC.

ACC conducts training sessions at IBM centers in five western states, listing one of its biggest customers as Pacific Gas and Electric Co. According to Al O'Connor, supervisor of administrative services for the utility, over 100 professional staff members have been trained, including six senior managers.

"As a result of the ACC courses, our people have been coming up with new ideas and ways to increase productivity and effectiveness, and we have expanded the use of our Personal Computers into areas where hitherto they were not used — for example — in presentation graphics," he claimed.

O'Connor said the Personal Computer training was instrumental in the formation of several microcomputer users groups within the company designed to act as forums for sharing new applications and ideas and for resolving problems.

At the IBM product center in Honolulu, the PC Support Center courses are geared a great deal toward managers and professionals working in financial areas, such as the controller's office.

Andy Friedlander, president of Monroe & Friedlander, Inc., a Hawaiian-based commercial and industrial real estate company, recently completed an introductory course there.

"In order to remain at the forefront in this business, we must stay on top of technological developments in the personal computer industry. I felt I would be left behind in my own company if I did not come to grips with computers. The introductory course on the [Personal Computer] gave me the confidence of knowing that I can learn a great deal very quickly."

For Computerknowledge, the IBM contract has created the opportunity for establishing business relationships in 56 Big Blue product centers in the eastern half of the U.S. According to company president, David Barrie, business has been so lucrative that the company is now designing courses to train users who plan to integrate their micros with the corporate mainframes. Contracts have been signed with Informatics, Inc. and Information Builders, Inc., with the first sessions due to begin in April.

According to one IBM user, multimillion-dollar publisher Prentice-Hall, Inc., the use of outside training companies is a decided advantage. "With a firm such as Computerknowledge, what you get is pure training. It trains people rather than promotes or sells products, and it is able to present the material in a way that is attentive to the level of user in the classroom," asserted John Kilcullen, market sales coordinator.

NEW COURSE ANNOUNCEMENT

BECOME AN IMS EXPERT

SysEd offers challenging "hands-on" training for motivated programmers who want to be real pros and are willing to work.

Our experienced instructors specialize in using real-life programs and design problems. Whether it's IMS Data Base Design, IMS/DB (DL/I) Application Programming, IMS/DC & Message Format Services Programming, IMS Recovery and Restart or IMS Utilities, they encourage students to bring in the specs of their own projects for discussion and analysis.

SysEd students spend one third of class time in actual hands-on workshop sessions with our 4341/II computer. There are six 3270 terminals dedicated to the class. Each student receives an original manual especially designed for each course. The manuals are comprehensive guides and programming models written especially for each course. They are thorough, clear, and well organized, and serve as reference manuals long after the course.

Classes are held at SysEd's fully equipped classroom/computer facilities in New York City and Chicago. Class size is limited so applications are accepted on a first come first serve basis.

Customized course offerings are also available for on-site sessions at company installations.

Other Technical Curricula include: CICS, IDMS, VSAM, and MVS.

For information, call Dave Shapiro (212) 889-3386.

Anacomp restructures $44.6 million loan

INDIANAPOLIS — Anacomp, Inc. recently restructured its $44.6 million loan, reported a $38.9 million loss for the quarter ended Dec. 31 and announced the termination of a top executive.

Five member banks restructured $44.6 million in revolving-credit loans into term loans and provided the company with an additional $6.2 million credit line. Anacomp was in danger of defaulting on the revolving-credit loan.

The restructured loan permits the sale of Anacomp assets. According to a company spokesman, Anacomp has raised $5 million from the recent sale of some assets.

The company's latest loss followed a $12 million loss in the third quarter, according to the spokesman.

Anacomp's fiscal problems reportedly are linked to its late delivery of its Continuous Integrated System (CIS), an interactive, on-line data base banking system.

Anacomp officials claim that CIS was delivered in December and is being used on a limited basis by the Provident National Bank in Philadelphia. Bank officials refused to comment on the system.

In early February, John J. Flanigan, the company's chief operating officer, was terminated and his position eliminated. Ronald D. Palamara, chairman, president and chief executive officer, assumed responsibility for the company's daily operation, the company spokesman said.

To all reps: Price changes on following items effective immediately: No. 10-11A, 10-114A, 10-AL.

Chris: The latest offer looks better, although it's still not what we were hoping for. Try for another compromise.

Just got the word from Gary: increased our share by 6%. If trend holds, we'll pass competition by third quarter!

Smartcom II communications software, currently available for IBM PC, DEC Rainbow 100, Xerox 820-II and Kaypro II.

Smartmodem 1200 for all computers with an RS-232C interface; Smartmodem 1200B plug-in board for the IBM PC.

Microcomputer communications? Get control of the situation with

Hayes

Microcomputer communications can present the DP/MIS staff with a tangle of mis-matched hardware, user-hostile software, and a situation that can quickly get out of hand.

Hayes can help you avert that chaos, with a telecomputing system designed expressly for microcomputers.

A system so advanced, it's downright simple. Economical. And requires no handholding from you.

Hayes. The computer's telephone. Our Smartmodem 300™ and Smartmodem 1200™ connect to any desktop computer with an RS-232C port. They operate with rotary dial, Touch-Tone® and key-set telephone systems. At full or half duplex. And both feature self-test capabilities, as well as indicator lights and built-in speakers for monitoring calls.

The lower-priced Smartmodem 300 is ideal for local data swaps and communicates at 300 bps. A built-in speed selector on Smartmodem 1200 automatically detects transmission speeds (110, 300 or 1200 bps).

Smartmodem 1200B™ is also available as a plug-in board for IBM® Personal Computers. And Hayes manufactures the Micromodem IIe® for Apple® II, III, IIe and Apple Plus computers, as well. It comes packaged with Smartcom I™ communications software.

Speaking of software, more programs are written for Hayes modems than for any other. And that impressive list includes our own incomparable communications software. Smartcom II™ Complete, menu-driven software for the IBM PC, DEC Rainbow 100,™ Xerox 820-II™ and Kaypro II.™ Even first-time communicators will find success with Smartcom II. Screen prompts guide users in the simple steps it takes to create, send, receive, list, edit, name and re-name files.

Tasks like simultaneously receiving, printing and storing data—completely unattended—are easily managed with Smartcom II, because it takes full advantage of Smartmodem's capabilities.

The program reduces lengthy dial-up and log-on sequences to a single keystroke. It stores communications parameters for 25 remote systems.

Plus, there's an on-line help feature that explains prompts, messages and parameters.

Our reputation speaks for itself. Hayes has five years of solid leadership in the microcomputer industry. Nationwide availability through retail computer stores. Trouble-free factory service and call-in assistance. A limited two-year warranty on all hardware. And the most efficient telecomputing system available. Anywhere.

If you're involved in linking micros or setting standards for configurations, remember this. Everything your people need to know about communications can be summed up in one word: Hayes.

Smartmodem Specifications
Low Speed Data Formats (Smartmodem 1200 and Smartmodem 300 Series): binary, asynchronous: 7 or 8 data bits; 1 or 2 stop bits; odd, even or no parity (0-300 bps).
High Speed Data Formats (Smartmodem 1200 Series): binary, asynchronous: 7 data bits; 1 or 2 stop bits; odd, even, or fixed parity or 8 data bits; 1 or 2 stop bits; no parity (1200 bps).
Dialing Capability: Touch-Tone® and rotary dial pulse dialing. Command buffers 40 characters.
Commands (unnecessary with Smartcom II software): A: Immediate answer. AA Repeat last command. C: Transmit carrier. D: Dial command, including pause dialing, waiting for second dial tone, auto-dialing and other features. E: Local echo. F: Full/half duplex. H: Switch hook. M: Audio monitor. O: On-Line. P: Pulse dialing. Q: Quiet mode. S: Register read/write mode. S+?? "Set" commands speed, escape code character, number of rings to answer on, etc. Z: Clear operational parameters above. T: Touch-Tone dialing. V: Verbal result codes.
Result Codes (can be suppressed with mode Q): Command line ok. 1/Connect: Carrier detected. 2/Ring: Phone is ringing. 3/No Carrier: Carrier lost or never heard. 4/Error: Error in command line. 5/Connect 1200: Carrier detected at 1200 bps. (Smartmodem 1200 only)
Audio Monitor: Tone-lock speaker with volume control.
Data Switch: On-off switch, power jack, RS-232C connector, modular phone jack connector, volume control.
Operation: Full or half duplex.
Data Rate: 0-300 bps and 1200 bps for Smartmodem 1200; 0-300 bps for Smartmodem 300.
Interface: RS-232C.
Intelligence: Z80™ microprocessor with 4K byte control program for Smartmodem 1200; Z8 microprocessor with 2K byte control program for Smartmodem 300.
Modulation: Compatible with Bell System 103 or 212A; compatible subset or answer mode for Smartmodem 1200; Bell System 103 compatible subset or answer mode for Smartmodem 300. Receive Sensitivity: -45dBm for Smartmodem 1200; -28dBm for Smartmodem 300.
Transmit Level: -10dBm.
Registration: FCC registered for direct connect to the communications system. Connects with modular jacks (part 68, FCC rules).
Power Needs: 0.1 Amps/105VAC, 60Hz, 0.9VDC output.
Size: 2.5" x 5.5" x 9.0"

Micro marketing strategies analyzed for '80s

NEW YORK — IBM believes microcomputer consumers "are best served by having the widest range of [distribution] options available to them," a company executive said during a recent seminar here sponsored by *Fortune* magazine, at which several players in that marketplace stressed the value of marketing strategies.

Charles E. Pankenier, director of communications for IBM's Entry Systems Division, made that remark at *Fortune's* seminar, "The PC Revolution in Business — Marketing Strategies for the '80s." Joining him at the podium were representatives of Apple Computer, Inc., Lotus Development Corp., Computerland Corp. and International Data Corp. (IDC).

Joseph L. Levy, vice-president of corporate marketing for IDC, said consumers "don't want to be computer experts . . . our job is to forget about some of this technology we're so in love with."

'A gamble'

IBM's Pankenier said IBM's decision to jump into the micro market "was a gamble with some risk involved." Well conditioned to selling large systems to technical managers, Big Blue had to deal with "a new type of product, new channels of distribution and a new audience," he said. To reduce consumer apprehension about computers, IBM introduced the Charlie Chaplin advertising character to "warm up" people both to the product and to the company, Pankenier said.

A variety of distribution channels will serve consumers, he added, but vendors have to convince end users that they need the product. "Up to now [IBM's Personal Computers] have been bought; from here on out they will have to be sold . . . our job is to take technology and turn it into a utility," he said.

William V. Campbell, vice-president for sales and former vice-president of marketing for Apple, said his company is seeking to enter the large business market by sidestepping the established DP departments. "We're not going after the MIS director; we're going after people, and we're calling them knowledge workers," he said.

Commenting on Apple's 100-day, make-it-or-break strategy to sell the recently introduced Macintosh, Campbell said Apple is seeking "mainstream acceptance" with an easy-to-use product that will provide an alternative to IBM. By selling the product to "knowledge workers of the future — college students" and to professionals who would like a productivity aid on their desk, Apple does intend to "be accepted to some extent by the office market," in the long haul, he said. That acceptance will focus on the Lisa products, and "Mac is the building block to that."

Christopher Morgan, vice-president for communications at Lotus, said his company identified a distinct profile of users, with the majority being middle managers and professionals in all companies. He said Lotus spent what is believed to be a record amount in advertising to launch the highly successful Lotus 1-2-3 product and hopes to continue the trend with the just-announced Symphony by accomplishing "one major task — to make a complex-appearing product be as simple and as straightforward as possible."

Dealing with consumer perceptions was also addressed by C. Roger Lewis, vice-president of marketing for Computerland. He said Computerland had determined that most consumers do not know what to expect from a computer retail store. "It's the role of the manufacturer to create demand . . ."

HAVE YOU BEEN BLIND COMPUTER WITH THE

NEC's Advanced Personal Computer offers the sharpest color graphics of any personal computer.

NEC's Advanced Personal Computer offers the widest range of quality graphics.

One reason the APC is better is that it lets you do more kinds of graphics than any other personal computer.

In fact, it gives you the kind of graphics you'd expect only from a much more expensive computer.

With the APC, you can produce color transparencies, color slides, or output to a variety of printers and plotters.

You can even do Computer Aided Design (CAD).

Our screen is graphically better.

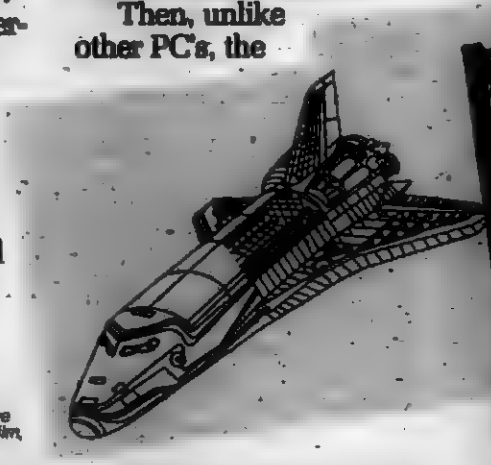
Seeing is believing. And one look at our color screen will prove it's the best.

But it's no accident. It starts with the NEC 7220 graphics processor, the most advanced graphic chip available.

Then, unlike other PC's, the

Graphics are being used more and more by businesses every day. They give companies a clearer picture of their place in the market. They make for more effective presentations. And with slides and color transparencies, they can let a room full of people see the same thing at once. Although most people see the value of graphics, very few are aware of the personal computer that lets them create the best color graphics.

It's the Advanced Personal Computer from NEC.



This slide was produced from the screen using Videograph™ software, an inexpensive Screen Shooter™, and Polachrome™ 35mm film, in less than 5 minutes. For less than $1.00!

SUPERSHORTS

London-based Thorn EMI Information Technology Ltd. has formed Thorn EMI Computer Software, Inc., headquartered in Costa Mesa, Calif., which will publish and market personal computer software for business and home use in the U.S.

■

Xerox Computer Services will provide on-line remote time-sharing services to Gendex Corp. of Milwaukee, a manufacturer of dental X-ray equipment. The services will include integrated financial applications for the planning and management of manufacturing and distribution. Gendex recently acquired the dental X-ray business formerly owned by General Electric Co.

■

Direct, Inc. has signed a service contract with Xerox Corp., naming Xerox as an authorized contractor for Direct's installed base of integrated personal computers in the U.S.

■

Comstcom of Concord, Calif., has been awarded a contract to supply AT&T Information Systems, Inc. with DS-1 voice and data multiplexers. AT&T will offer Comstcom's D/I MUX as an enhancement to its product line under the name DS-1 Channel Multiplexer.

■

Cray Research, Inc. has sold a Cray-1 S/1000 computer system, valued at $7.1 million, to Sandia National Laboratories, a multiprogram research and development organization that operates a no-fee, no-profit contract for the U.S. Department of Energy. The system will be the third Cray system installed for Sandia and the second such system installed at Sandia's Livermore, Calif., location.

■

Auto-trol Technology Corp. has announced the formation of Auto-trol Development Ltd., a limited partnership to fund the development of a comprehensive software system for process plant design. The $7 million private placement was managed by Hambrecht & Quist, Inc. of San Francisco.

■

Burroughs Corp. has announced an agreement in principle with the University of Michigan's Graduate School of Business Administration to provide approximately $5 million in hardware, software support and services for a new computer network. The school will contribute $6 million in new facilities and equipment. The projected installation date for the new network, which will be tied into two existing university computer networks, is September 1984. Burroughs will also sell micro workstations at "substantially reduced prices" to faculty, staff and students.

■

Modular Micros, Inc., a subsidiary of Modular Computer Systems, Inc. (Modcomp), has discontinued production and marketing of the Zorba portable computer. Modcomp will continue to service the Zorba portable personal computer through its nationwide service organization.

TO THE PERSONAL BEST COLOR GRAPHICS?

Context MBA™ runs in high resolution color on the APC. But it can only run in one color on the color monitor of the leading brand.

APC graphics option has its own dedicated memory, so there's never a tradeoff between color and resolution.

Software will make you a big-time producer.

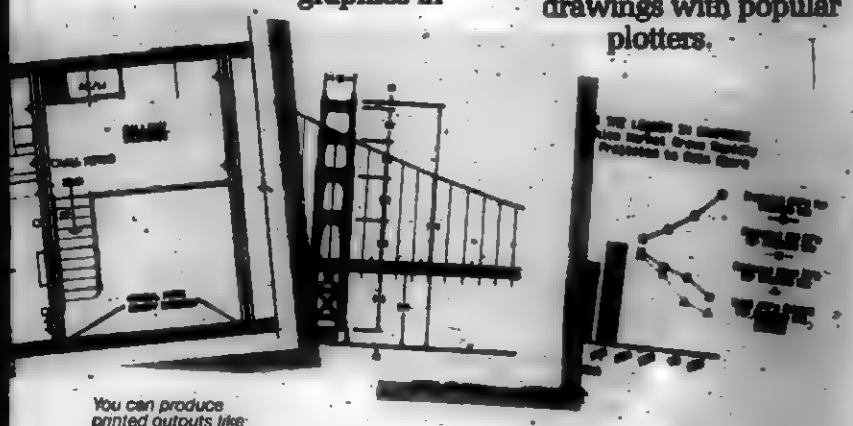
Better hardware alone isn't enough. You also need better software. And NEC provides that, too.

Take Graphplan™ for example. Graphplan can take spreadsheet format data and produce customized business graphics on paper. Instantly.

Graphwriter™ will let you produce professional color graphics in over 20 different formats. Then turn them into transparencies or hard copies using the most popular pen plotters.

Videograph™ makes creating free-form color images for slide presentations easy and inexpensive.

Autocad™ lets architects, engineers and designers create sophisticated graphics and designs, then produce precise drawings with popular plotters.



You can produce printed outputs like these with the APC.

This software combined with the APC hardware will give you the best graphics you can get on any personal computer.

For the complete picture, call NEC.

For product literature on any of NEC's APC graphics capabilities, call 1-800-343-4419.

Designers can use Autocad™ to make the design process faster and easier.

In Massachusetts, call 1-617-264-8635.

And find out why more and more graphics users with vision are saying "NEC and me."

POSITION ANNOUNCEMENTS

Excellence In Action

That's what you'll find at DRC. Our reputation for excellence has been established over the years by our team of highly-skilled professionals, men and women who are acknowledged experts in their fields. Working as a close-knit group, we provide an atmosphere that stimulates creativity and encourages personal growth. If you're frustrated by big-company bureaucracies or the limitations of a small company environment, consider DRC. We have the talent, the facilities and resources that add up to excellence in action.

Our **Software Engineering and Management Group** provides technical and management services to DOD agencies responsible for planning, acquiring, operating, and maintaining weapon systems software. These services include systems design analysis, quality assurance methods, software, configuration management, modeling, costing, requirements analyses, and overall plans and programs.

We have immediate and ongoing requirements for degreed Software Engineers with 2-10 years' defense-related experience in one or more of the following specialties:

- **Software standards development**
- **Software quality assessment**
- **Configuration status monitoring**
- **Cost/Schedule/Manpower estimating**
- **Computer resources support planning**
- **Software req's analysis/specification**
- **Independent verification & validation**
- **Software project management**

You will be applying your expertise in the following high-technology areas: C^3, avionics, undersea & missile systems, software metrics and software nuclear safety; using a wide range of state-of-the-art tools including PLS/PSA, SREM, PASCAL, CMS-2, ADA, DATATRIEVE, and PDL, together with VAX-11/780, DEC Rainbows, and IBM PC's.

Our **Information Systems Department** is involved with exciting, state-of-the-art software development in support of our DOD Systems engineering efforts.

We have immediate and near-term requirements for degreed programmers, analysts, technical specialist and project managers, with 2 to 20 years of experience, preferably in a DOD environment, in one or more of the following areas:

- **Data base systems design & development**
- **On-line management information systems**
- **Decision support systems**
- **Packaged and Turnkey applications**
- **Operating system support**
- **Graphics**
- **End User Facilities**

Our facilities and equipment are designed to provide you with an environment that encourages technical growth. You'll be working with the following hardware and state-of-the-art software systems:

- **Hardware—Honeywell DPS-8, 8/52 and 8/70; VAX-11/780; IBM PC's; Tektronix 4052, 41XX**
- **Software—Operating Systems; GCOS, VMS, MS-DOS; DBMS; IDS II, ORACLE; On-Line; DMI V/TP; Languages; COBOL; PASCAL; FORTRAN**

If you want to work with and be the best, come join in the excellence at Dynamics Research Corporation. Only qualified, experienced candidates should send their resume, in confidence, to Matt McKechnie, Dept. C227 , at the address below, or call him at (617) 658-6100 Ext. 2855 for additional information. **We do not currently have any entry level openings. U.S. Citizenship is required for all positions.**

Dynamics Research Corporation
60 Concord Street, Wilmington, Massachusetts 01887
An equal opportunity employer, M/F.

D.P. Professionals

Career Oriented?

Consider Puget Power

Based in Bellevue, Washington, Puget Power, one of the largest investor-owned electric utilities in the Pacific Northwest, is looking for dedicated, creative D.P. Professionals.

Business Applications Analysts
Operations Analysts
Technical Support Analysts

Experience:

COBOL	IMS
CICS	JCL
MVS	JES 2
Model 204	TMS
Large Main Frame	DMS

We offer the stability of a private utility with a challenging opportunity to achieve with a talented, highly motivated team. Our compensation is competitive with an excellent benefits program.

Please send your resume with cover letter in confidence to: Scott Bradshaw, Staff Coordinator/Management, Puget Power Building, Bellevue, WA 98009. Resumes accepted for this position only. Principals only please. We are an equal opportunity employer male/female/handicapped.

PUGET POWER
Meeting the challenge of change.

COMPUTER SYSTEMS PROGRAMMER
GS-334-12/13
($28,374 to $45,406)

The Parklawn Computer Center (PCC) located in Rockville, Maryland is seeking an experienced systems programmer for a challenging full-time permanent position. PCC is a large MVS shared DASD, teleprocessing installation running WYLBUR, TSO, CICS, ADABAS, MODEL 204, and JES2 RJE on multiple 3081-class processors. The incumbent will install and maintain JES2/RJE, tune operating system software and perform other system programming design and development tasks. Programming experience in assembler and at least one high-level language is mandatory. Experience modifying JES2 is required. College level courses in computer science or related fields or equivalent experience are also required. Civil Service status is required. Further information regarding qualifications may be obtained by calling Ms. Brenda Dixon at (301) 443-4003; or interested candidates may submit an SF-171 to:

MS. BRENDA DIXON
FDA Personnel
5600 Fishers Lane
Room 4B-28
Parklawn Building
Rockville, Maryland 20857
An Equal Opportunity Employer

Systems Analyst/ Operations Supervisor

Broad-scoped role to challenge all your systems and operations talent.

We have an excellent career opportunity for an all-around and highly qualified professional who can supervise a two shift facility computer operation and can assume diverse responsibility for design, programming and operations functions.

You will design, program and implement medium-scale systems; direct, train and develop programmers and operators; perform hardware evaluations/selection of software packages; and effectively allocate hardware, human and software resources.

Position requires related systems/programming experience that reflects proficiency in systems design/development and supervision of operations. You must be able to work independently and have strong leadership ability, as well as excellent problem-solving/communications skills. Knowledge of COBOL II, RPG, and PL/1 is essential and familiarity with SPL, OS JCL and MRJE communications is desirable.

As a progressive manufacturing facility of a major Fortune 100 company located in central N.J., we have the resources to offer you a progressive and productive career. Find out more by sending your resume with salary requirements to:

CW-84566, Computerworld
Box 880, Framingham, MA 01701
An Equal Opportunity Employer

Systems Engineers
Software Architects and Developers

Freedom to make a difference

We have openings in the following areas of expertise:

- ☐ Communications planning
- ☐ Communications protocols
- ☐ Computer networking
- ☐ C³
- ☐ Database management
- ☐ Digital services
- ☐ Distributed signal processing systems
- ☐ Local area networks
- ☐ Market definition for new technologies
- ☐ Measurement systems
- ☐ Network optimization tools
- ☐ Network planning
- ☐ Operations automation
- ☐ Packet switching
- ☐ Performance measurement and analysis
- ☐ Software development tools
- ☐ Subjective testing
- ☐ UNIX™ Operating System
- ☐ UNIX System applications

These openings are at our facilities in New Jersey, Ohio and Pennsylvania.

Having an impact, doing important work, creating something significant–even memorable–there's no feeling in the world quite like it.

AT&T Bell Laboratories offers you an excellent opportunity to make this kind of technical contribution...

Because of the variety and interdisciplinary nature of our work.

Because of the considerable resources placed at your disposal.

Because of the caliber of the people around you.

Because of the freedom to pursue your own approaches to problems.

And because we will soon be free to take the knowledge behind the most extensive and sophisticated communications network in the world and apply it in new ways–to new markets.

With the development of new and expanding projects, we are seeking people who can evaluate alternative architectures, perform competitive analyses, assess service viability, define, implement and measure systems or develop strategies to get products to market.

If you have a Master's or PhD in Systems Engineering, Computer Science, Electrical Engineering, Mathematics, Physics, Statistics or Operations Research with hardware and/or software experience–or a BS in these fields with a minimum of 5 years highly relevant experience –and are looking for a chance to make a difference, please send your resume to:

Director, Technical Employment,
AT&T Bell Laboratories,
Dept. 63/4909/84
150 John F. Kennedy Parkway,
Short Hills, New Jersey 07078.

An equal opportunity employer

AT&T Bell Laboratories

The Network of Tomorrow... Today at UNINET

While other companies are anticipating and planning for tomorrow, we are already there.

UNINET, a UNITED TELECOM company, is offering true state-of-the-art opportunities in the further development of our Fourth Generation Public Data Network. This network employs a fully distributed microprocessor architecture based upon 80186 and 80286 processor modules in a four-level bus hierarchy.

We offer the unique opportunity to apply your expertise in support of the design and development of a Public Data Network that achieves sophistication in high-level protocols and data switching rates unattainable under previously available technologies. We see this as a major breakthrough in providing a practical solution to today's business communications problems.

NETWORK SCIENTISTS

Immediate opportunities for applied research exist in the areas of:

- **Packet and message switching strategies**
- **High-level network protocols including routing and congestion**
- **Incorporation of satellite facilities into backbone services**
- **Evaluation of theoretical topologies**
- **Analysis of algorithms**
- **Network management and control**
- **Protocol translation schema**

UNINET offers an environment which encourages creative applied research and development addressing the most current opportunities in data networking. Candidates possessing advanced degree in Computer Science and Mathematics with significant experience in network architecture and network design are encouraged to apply.

DATA NETWORK SOFTWARE ENGINEERS

Immediate opportunities exist for the development of:

- **Network Configuration and Control Systems (VMS)**
- **Network and Access Control Systems (RMX)**

Candidates should have a strong background in the implementation of CCITT packet network protocols or network management and control protocol. Applicants desiring positions in network access engineering should possess detailed knowledge of X.3, X.28, X.29 and X.25 as well as synchronous DTE protocols. SNA experience is considered desirable. Degreed computer scientists with formal software engineering experience are encouraged to apply.

If you feel that your expertise can assist us in the further development of our future network, we invite your inquiry into the positions available. UNINET offers an excellent environment for career advancement and rewards.

For immediate consideration, forward your statement of qualifications in confidence to:

COMPUTING SCIENCE FACULTY POSITION TRINITY UNIVERSITY SAN ANTONIO, TEXAS

Tenure-track position at the rank of Assistant Professor of Computing and Information Sciences. Ph.D. in Computer Science or equivalent required. Starting date is August 1984. Salary is commensurate with background and experience. We teach a total of 9 hours per semester in computer science courses at both the graduate and undergraduate levels, conduct research, advise students, and serve on appropriate committees.

Department currently consists of nine full-time faculty and some part-time lecturers; chairs the 6/8 and 8/8 degrees; has 215 undergraduate majors and about 60 graduate students; was founded in 1968 and supplies all of Trinity's service coursework in computer science in addition to the major programs. Computing facilities include IBM 3081 with 6 MBy, 3 billion characters of disk storage, more than 40 time-sharing terminals devoted to faculty and student use, several minicomputers, well equipped microcomputer laboratories, and a graphics laboratory.

Trinity University was founded in 1869 and is now located on a beautiful 100 acre campus in San Antonio. Enrollment is approximately 2700 students. San Antonio is widely recognized as one of America's unique cities. Population is approximately one million. San Antonio has a warm climate and is noted for its scenic beauty, places of historical interest and diverse cultural influences.

Send resume and letters of recommendation to Dr. M.L. Rogers, Department of Computing and Information Sciences, 715 Stadium Dr., San Antonio, Texas, 78284. Deadline for application with letters of recommendation: March 31, 1984.

Trinity University is an equal opportunity/affirmative action employer.

Programmer/Analyst
System 36 - Model 8

A midwestern division of an international corporation has recognized the need to develop an integrated on-line information system to provide management, operation, sales, and service departments with timely and relevant data. The substantial growth of the M/36 department has created the need for several new employees that are interested in becoming part of a challenging and rewarding project. This project will require experience on an IBM System 36, or series 1.

- 8/36 PROGRAMMER/ ANALYST
- SERIES 1 PROGRAMMER/ ANALYST
- Develop, test, and implement new or enhanced systems and programs.
- Develop and maintain systems and user documentation.
- Excellent corporate benefits and fringes offered.

Experienced Only

PROGRAMMER/ANALYST

Excellent opportunity available in the Sunbelt for an experienced Programmer. Our rapidly expanding savings and loan has an immediate opening for an individual with 2-3 years direct programming experience. Familiarity with COBOL, Burroughs B2000 series and THRIFT financial systems preferred. College degree a plus.

We offer an excellent benefits package and salary commensurate with experience. Please send resume with salary history to: South Savings and Loan, P.O. Box 888, Shreveport, LA 71166, Attn: Gail Simpson.

You Know That...

General Electric Information Services Company provides the largest commercially available teleprocessing network in the world.

But Do You Know This...

We're Pioneers in Personal Computer Integration

GE Information Services has made a big commitment to the acquisition of IBM PC's and to the integration of personal computers with our remote computing services. This marriage of network-oriented remote services and personal computers into cohesive applications systems has created exciting career opportunities for these professionals:

- IBM PC Project Manager with PC/Mainframe integration experience
- MVS/XA Software Systems expert
- IMS/DC Systems Internal Specialist
- Communications Integration Specialist

We're IBM Mainframe Applications Specialists

Our IBM based service interfaces with our worldwide network to provide large business users the opportunity for improved data processing productivity and utility. Our environment includes VM MVS, 3081s, 3033s, and 4300s. We would like to talk with you if you:

- Are an experienced Fortran, Pascal or Assembly applications specialist with a background in structured programming techniques such as office and health care systems.
- Are a Database Specialist with a background in IDMS, Focus, and CICS/VS, are skilled in database design, development and implementation, and have experience in large, complex information systems.

We're Communications Systems Experts

We design, develop and maintain the hardware, software and communications software of today's and tomorrow's worldwide network. We're interested in professionals with experience in:

- IBM based systems: ACF/NCP and IBM SNA
- Real-time mini and micro operating systems design
- Assembly and Fortran
- Honeywell and IBM operating systems development and testing; analysis and support
- Communication protocols; compiler writing

We're Advanced Engineers, Performance Analysts & Project Planners

We're interested in talking with you if you are a:

- Hardware Engineer with knowledge of chip technology, communications networks, image processing and micro hardware and software development
- Performance Analyst with analytical and measurements skills and a background in IBM performance analysis and system tuning under MVS or MVS/XA
- QA Deployment Specialist with knowledge of hardware and software configuration plans.
- IBM Hardware Configuration Management Specialist to support our engineering development facility.

We're Innovators in Marketing Strategy

We're positioning ourselves as a major provider of enhanced data communications. We're interested in talking with:

- Data Communications Marketing Strategy experts with proven strategic implementation experience in:
  - International communications
  - VAN and LAN
  - Private networks

We're the Developers of a Unique Honeywell-Based Operating System

With tremendous computer power, our 35 DPS 870s operate internationally to provide distributed transaction processing, shared applications and database management support. It's a major product area in which you can apply your expertise as a:

- Senior Systems Engineer responsible for high level hardware design and full life cycle project activities.
- Mid-level Systems Programmers with experience in multiple hardware environments.
- Programmers who have a background that has prepared them to participate in writing new computer languages.

We're Software Product Developers

With over 2000 proven software packages on our shelf, we're one of the leaders in software product development. We're engaged in the development of a common communications capability for value added, private, local and distributed networks; office communications and international financial services. We have opportunities for:

- Senior Technical Products Specialists with backgrounds that include network architecture, protocol conversion and packet networks.
- Analysts with solid background in modeling and business experience in the telecommunications industry.
- Senior Product Planners who have successfully participated in the initial planning through product completion cycle.

We're Technology Implementers

We will continue to play a major role in the future of business information solutions. If you would like to be a part of this exciting effort and share in the rewards of being a GE Information Services employee, we'd like to talk with you. Send your resume and salary requirements in confidence to: Professional Staffing (H-6883), GENERAL ELECTRIC INFORMATION SERVICES COMPANY, 401 North Washington Street, Rockville, MD 20850.

HOME OF THE BOLD

Home Of The Bold...not just a catchy phrase, but the watchword of our thinking in these exciting times. In 1981 we had 11 employees. Now that figure is over 750 and we have emerged as a leading innovator in the design, development and manufacture of advanced digital telecommunications switching equipment. With our dynamic expansion plans, we have truly outstanding opportunities for exceptional technical professionals who are not afraid of challenge, commitment and success. The following positions are immediately available at our suburban Dallas facility:

CALL PROCESSING
Design and development of real time telephone, attendant, trunk control and call processing software.

MAINTENANCE/DIAGNOSTICS
Design and development of configuration, control and diagnostic software for distributed processing systems.

OPERATING SYSTEM
Design and development of real time operating systems software for distributed microprocessor based systems.

SWITCH ADMINISTRATION
Design and development of administration, data base and message accounting software.

SYSTEM INTEGRATION AND SUPPORT
Hardware and software test and integration on system level. Interface with customer and field operations.

HARDWARE DESIGN
Design experience should include microprocessor communication interfaces, peripheral controllers and memory systems. Familiarity with Z80, Z8000 or other microprocessors, as well as dynamic Ram components is a must.

All positions require a BS/MS CS, EE, Math or related discipline. Experience with Assembly language and/or "C" highly desirable.

We can offer competitive salaries, extensive company-paid benefits, and excellent potential for professional recognition and advancement. For prompt consideration, please send your resume in confidence to:

HELP WRITE A BOLD NEW CHAPTER IN TELECOMMUNICATIONS HISTORY

DEVELOP YOUR FUTURE AT CANDLE CORPORATION

CANDLE CORPORATION is a multi-national high technology company and developer of OMEGAMON®. We have several exciting opportunities for qualified individuals to join our expanding team of professionals.

Sr. MVS Software Developers

If you have a desire to get away from SMP installs and third shift system outages that interrupt your sleep or want career advancement without getting into management, then build your future by developing quality systems software at Candle.

Qualified applicants will have strong IBM Assembler programming skills and good knowledge of the internals and performance consideration of the MVS operating system.

Please call or send your resume to: Joe Weinstein, 2 Gannett Drive, Suite E-1, White Plains, NY 10604. (914) 694-1949.

Technical Support Specialists

We're seeking support specialists to be the technical interface between Candle and its customers. Requirements include extensive knowledge of MVS and either IMS or CICS operating systems experience. Knowledge of performance and tuning concepts also desired along with excellent communication and presentation skills.

Please call or send your resume to: Barry Weinstein, 777 Third Ave., 22nd Floor, New York, NY 10017. (212) 593-6300.

CANDLE offers an excellent compensation and benefits portfolio as well as an opportunity to work with some of the top software professionals in the world.

We also have other similar positions available in our So. California offices. Please contact Joel Prescott, 10960 Wilshire Blvd., 8th Flr., Los Angeles, CA 90024. (213) 478-8277.

To succeed in the future you must learn to speak its language.

Everyone involved with computer software will come to know *Ada*. The U.S. government, the largest consumer of software in the world, has already selected *Ada* as its language of preference. Widespread use of *Ada* throughout industry and business is assured.

OUR COMMITMENT TO EXCELLENCE

Martin Marietta is committed to a future of computer software excellence. And *Ada* is part of that future. For us, it's more than a new language, it is a new beginning. But our commitment to becoming the software center of excellence requires exceptional people—people who don't wait for the future, but work to create it.

STEP INTO THE FUTURE

Martin Marietta is now looking for software professionals to move ahead with us, to step into the future and help lead the way. There are already many opportunities to work with *Ada* as we explore its many applications. We have even started intensive on-site education for our employees, including a full-time, 13-week introductory program.

So, if you want to succeed in the future, come to where we already speak its language.

WE CURRENTLY HAVE THE FOLLOWING POSITIONS FOR SOFTWARE PROFESSIONALS AVAILABLE:

[illegible]
Microprocessor firmware design, Intel 8086 type assembly language experienced required.

[illegible]
CAD software development; VLSI and LSI design and implementation; VAX/VMS experience preferred.

[illegible]
Control system design and robotics, including control system analysis, software design, programming, test and integration, and fabrication.

[illegible]
Communication System Engineering, Military Command and Control, and Voice Data Communications. Design and implementation of microprocessor based communication network architectures. Includes communication system analysis and requirements generation for Message Handling, Accountability, Integrity, Security, and Switching, Local Area Networks (LANS), C^3 Systems, MMI, and System Control Monitoring.

[illegible]
Experience in mathematical modeling and analysis of C^3 and C^3I systems, communications traffic models, security models and data acquisition.

[illegible]
Experience in spacecraft flight software, RF software, mission operations software, real-time process control software, and real-time closed loop simulation applications.

[illegible]
Systems programming (internals) experience on virtual memory operating systems and real-time executives for both mini-computers and large mainframes. Performance monitoring and management experience of particular interest. UNIVAC, DEC, HP, IBM, MODCOMP, and SEL experience is desired.

[illegible]
Developing and maintaining technical baselines for software configurations.

[illegible]
Expertise in requirements specification, DBMS selection, design programming. Experience in DBMS languages, theoretical and conceptual DB analysis, and DB security.

[illegible]
Experience in architectural selection, distributed systems, human-machine interface, display technology, computer security, fault tolerant architecture (Assessment, Validation, Software Development, Modeling.)

[illegible]
Flight software algorithm development, implementation, and checkout.

[illegible]
Experience with IBM and/or UNIVAC COBOL based systems highly desirable.

[illegible]
Artificial Intelligence design with LISP programming experience.

[illegible]

[illegible]

If qualified for any of the above positions, please send a confidential resume to: Martin Marietta Denver Aerospace, P.O. Box 179, L1311, P592, Denver, CO 80201. No agencies please, we prefer talking to the individual.

MARTIN MARIETTA

Can an Information Systems Analyst build a career on world-class aircraft engines?

Yes!

If they're GE's T700s, F404s and F101s there's an important and direct career relationship. Because we're a high tech organization that believes in applying the most advanced system and programming technologies at all stages of a highly sophisticated manufacturing operation.

Deal authoritatively with design assignments

You'll be involved in the design and implementation of new or improved manufacturing information systems of key importance to our operations. The work requires an ability to define and interpret needs; and the capability to apply innovative solutions to complex problems. You'll also be concerned with determining computer hardware/software feasibility and compatibility with operational and planned systems; integrate assigned systems activities with other Information System, Computations and functional personnel.

Be prepared to lead

Solid credentials are needed. You should have a degree, preferably in Computer Science (or equivalent work experience); demonstrated project leadership; and well developed communications skills.

Your experience must include a thorough grasp of mini-micro computer applications and structured DB techniques. You should also present prior applied Cobol experience and have held major responsibility for the design, programming, testing and implementation of business systems on large/small scale general purpose computers; PRIME computer experience especially desirable.

Besides stimulating work...

what can you anticipate? Strong technical support...a salary base tied to these upscale responsibilities...comprehensive benefits...and career mobility within a highly successful organization.

Whom to contact

Send resume with salary history to Mr. Warren Green, Ref. 34-W, General Electric Aircraft Engine Business Group, 1000 Western Avenue, Bldg. 1-4509, Lynn, Mass. 01910.

An equal opportunity employer

AT FAIRCHILD WESTON: INDIVIDUALS HAVE PROJECT RESPONSIBILITY

Look to Fairchild Weston if you seek the individual challenges, responsibilities and rewards of seeing projects through from start to finish. For 30 years, we've been the leader in EMR telemetry, signal processing and data acquisition systems. Our technological excellence and innovation have resulted in steady sales growth, creating exciting career opportunities for experienced engineering and/or computer science professionals.

The following positions require U.S. citizenship, and extensive background investigations may be conducted:

SOFTWARE Q.A. ENGINEER

An exciting career opportunity exists for an individual experienced in software quality assurance. We seek a person with strong leadership skills to develop and head our software Q.A. function. Experience with real-time software specifications, design, development and documentation desired. Experience with software Q.A. mil-standards required. The successful applicant will develop and implement a Q.A. program for our system software products. A BSEE or BSCS or applicable experience preferred.

SOFTWARE SPECIALISTS

Positions require experience in the design and implementation of large scale real-time systems utilizing structured methology. Experience with VAC-11, RSX-11M or VMS operation systems and assembly language/FORTRAN required. Knowledge of signal processing, graphics, data base implementation or large scale netted computer systems is highly desirable. Project leader position requires prior experience with proposal generation and cost estimating.

Fairchild Weston offers top compensation, liberal fringe benefits, relocation assistance, and a casual but challenging work environment.

Sarasota is a beautiful beach community on Florida's Gulf Coast. Sarasota enjoys a respected school system, attractive residential communities, a low tax structure, no state income tax, and a year 'round recreational climate.

For confidential consideration, please submit your resume, including salary history, to: Tom Salmon, Manager, Professional Employment.

SPECIFY YOUR PLACE IN THE FUTURE OF TELECOMMUNICATIONS

AT&T Information Systems is the end-to-end service organization created to handle the vast data processing and communication needs of the "new" AT&T. Performing tasks never before attempted, on an unprecedented scale, the organization is expanding rapidly, taking on new roles, and creating an environment for career growth like no other in the world!

We are extending the technology of MIS and system support, applying new sophistication to marketing and service management. We have literally scores of openings, at many levels, in many fields, based in New Jersey. And the building of this organization and the full development of its capabilities will go on for years.

We've put together this check-list application, so you can quickly, and easily, tell us your areas of expertise. We'll then be in a position to inform you of job matches as they occur—immediately, or in the months ahead.

Don't delay. The completed application, attached to your resume, could launch you on a rewarding career based on the future of telecommunications. Send to Box CW-B4583, Computerworld, Box 880, Framingham, MA 01701. (We regret we cannot pay agency fees.)

SAUDI ARABIA

ABWA Corporation, a Data Processing Facilities Management Contractor offers opportunities to qualified professionals for positions in Riyadh Saudi Arabia.

ABWA needs highly qualified and motivated personnel, knowledgeable with the DOS/VSE environment, and experienced in teleprocessing and Database Management using such products as CICS/VS and ADABAS/NATURAL.

ABWA offers an excellent compensation package that includes housing, car, medical care, insurance, schooling for children, eight weeks vacation and air fare.

The following positions are offered:

SENIOR SYSTEMS ANALYST

This position requires a degree in Computer Science or equivalent and 8-10 years practical experience in all phases of systems analysis from initial contact through design and implementation. Emphasis is placed on the thorough knowledge and practical experience in structured methodologies, teleprocessing and database techniques. Organizational skills and the ability to manage small project teams essential.

SENIOR SYSTEMS PROGRAMMER

This is a senior position for Operating Software Maintenance and requires a degree in Computer Science with at least three years experience in DOS/VS and CICS/VS internals. The prime responsibility consists of maintaining a 70 plus terminal.

Network utilizing CICS/VS, operating under ACF/VTAM with NCP, NPDA, and NCCF. Proven ability in Assembler and System Tuning a must, experience in ADABAS, ICCF, STAIRS or ATMS III desirable.

SENIOR PROGRAMMER

Requires a degree in Computer Science or equivalent work experience in Business Application Systems. Technical requirements include experience in teleprocessing and database, preferably CICS/VS and ADABAS. Position requires practical experience in structured methodologies and ability to assume responsibilities such as minor analysis, design and documentation. The ability to organize personal workload and work independently required.

COMPUTER OPERATORS

Position requires a minimum of two years experience in a DOS/VSE, CICS/VS operating environment supporting a large scale teleprocessing network. Responsible persons are required to rotate on a 2 shift basis.

USER TRAINERS

Position requires a degree as well as past experience in teaching or training and a minimum of three years experience in either programming, analysis or computer operations. Fluency in Arabic and English, both written and oral an absolute must. Responsibility will include training users in the use of Application Systems and providing liaison between users and the systems development group. Some limited travel to various locations within the Kingdom is required.

If you wish to be considered for a position with ABWA Corporation please send your resume indicating the position for which you are applying along with salary history to:

Join The Team That Created The Elegant NS16000

An elegant approach led to a very elegant solution — National's NS16000 microprocessor and its product family. The revolutionary top-down architecture delivers 32-bit power, and memory management capabilities on par with the latest mainframes. The upward-compatibility will accommodate a shift from 16- to 32-bit hardware. In essence, the NS16000 performs more like a computer than a chip, and we think that's a very elegant package.

A "Software-Intensive" Effort.

The NS16000 microprocessor is the spring-board for an entire family of products currently being developed at National's Microprocessor Systems Division. The key to their success lies in the development of software that enhances the NS16000 family's performance, applicability, and elegance. From development through marketing, our "software-intensive" effort is rapidly gaining momentum as we develop demand-paged UNIX® systems based on Berkeley 4.1bsd and 4.2bsd for National's NS16032 and NS32032 microprocessors. We are also working with Bell Labs to define a version of SYSTEM V, . . . ,etc., for NS16032 and NS32032. These developments are creating opportunities for software professionals with UNIX and IBM PC® experience to join us in the following areas:

Sr. Software Engineers: Compiler Development

You will be involved in developing compiler code optimizers for "C", Pascal, FORTRAN, etc., to take advantage of the NS16000 elegant architecture. Your background should include two to five years' experience in compiler development; UNIX experience is desirable.

Sr. Software Engineers: Language Tools Development

You will be involved with developing assembler, linker, or debugger. Requirements include two to five years of language tools development experience, including knowledge of "C", Pascal, FORTRAN, and UNIX.

Sr. Software Engineers: UNIX System Architect

You will be involved in defining the future UNIX system products for NS16032 and NS32032. Two to five years' experience in UNIX kernel and system development is desired.

Sr. Software Engineers: UNIX Kernel Development

You will work on porting Berkeley 4.2bsd to NS16032 and NS32032 based microcomputer systems (including a popular PC configuration with NS16032 and NS32032 add on boards). Two to five years' experience in UNIX kernel development is desired.

Sr. Software Engineers: Networking

You will work with developing/porting networking software under Berkeley 4.2bsd on NS16032 and NS32032 based microcomputer systems. Two to five years' experience in networking protocol design and development is desirable.

The Rewards Of Elegance.

The elegance and power of the NS16000 will become evident as more software is developed for it. And those who develop that software will reap the rewards, personally and professionally. That's definitely something to think about if you're ready to take on the challenge of our opportunities.

To learn more about National's Microprocessor Systems Division, send your resume to National Semiconductor, Dept. MS, P.O. Box 62499, Sunnyvale, CA 94088. We are an equal opportunity affirmative action employer. Principals only please.

NS16000
Elegance is everything.

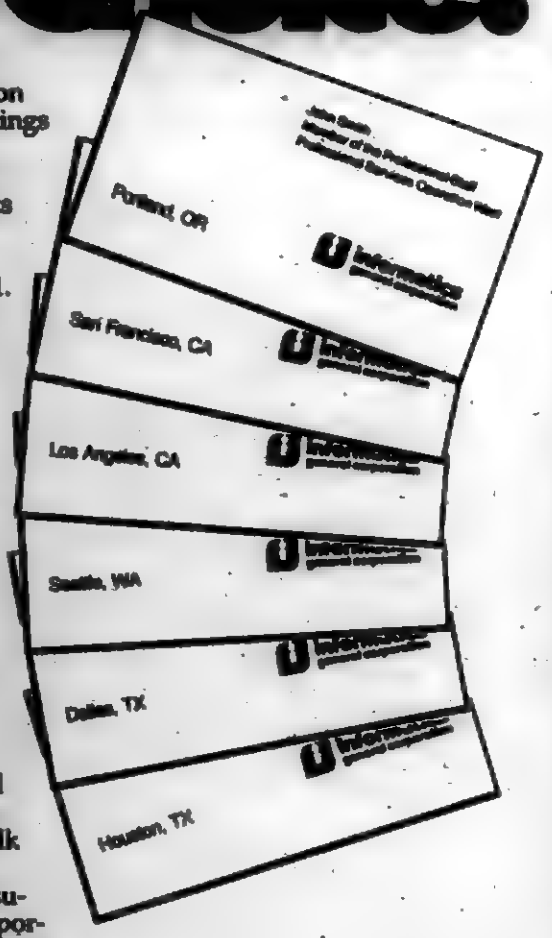
Consultants, Analysts and Programmers

Your Choice.



You can join Informatics' Professional Staff at the location of your choice. We have openings for DP Professionals with growth-oriented technical and consulting skills. Requirements include at least two years of experience on large-scale IBM systems using COBOL or PL/1. It's a plus if you also have experience in IMS, MARK IV or CICS.

Informatics has completed twenty successful years of providing professional services for systems development and consulting projects. Present activity includes development assignments on major state-of-the-art systems for a variety of application areas. The most advanced development techniques are emphasized for all assignments.

If you are interested in a professional career, pick a card for the location of your choice. Call toll free 800-527-4631 to talk with us. In Texas, call collect 214-669-0831. Or send your resume to Informatics General Corporation, 9441 LBJ Freeway, Suite 410, Dallas, TX 75243. We are an equal opportunity employer.

Programmers

MVS SYSTEMS PROGRAMMERS

Burroughs Corporation's Systems Development Group has many challenging opportunities for highly motivated, results-oriented MVS Systems Programmers who want to break free from routine and channel their creativity into exciting new dimensions.

Your software experience (CMS, CICS, TSO, VTAM, NCP or RACF) will be fully utilized supporting the development of new Burroughs networking software on an IBM 4341/2. You will be responsible for operating systems maintenance, systems software troubleshooting, implementation of operating procedures, and all other related areas of system software.

Qualified candidates should possess 3-5 years' systems programming experience and a BS/MS degree in Computer Science or related technical field.

You will be located in our Downingtown facility, in west suburban Philadelphia. We offer attractive benefits, competitive salaries and a cooperative, relaxed atmosphere conducive to personal and professional growth. For immediate consideration, send your resume in confidence to:

NEW MEXICO

SYSTEMS SOFTWARE SPECIALISTS

SANTA FE, nestled against the *Sangre de Cristo* mountains, is one of the most attractive places to live. With a mild climate, this growing city of 50,000 is rich in history, culture, art, and outdoor recreational opportunities.

The New Mexico Information Systems Division is recruiting professional **SOFTWARE SPECIALISTS** to support its rapidly expanding multiple processors environment. Openings currently exist for systems software supervisors and systems programming personnel in the MVS, VM, and Teleprocessing areas.

The operating environment of the State of New Mexico's central computer installation includes two IBM processors running MVS and VM. Both SNA and non-SNA communications support CICS and VM/CMS.

APPLICANTS should have extensive knowledge of IBM software and assembler. MVS applicants must possess extensive knowledge of MVS, JES2, and TSO; and VM applicants should have similiar backgrounds in VM/CMS, preferably utilizing VCNA and VRNA.

Depending on the position and your qualifications, salaries range from $24,012 to $39,120. A comprehensive benefit package is included, and a four-day work week and flex time are also offered.

For **IMMEDIATE** and **CONFIDENTIAL** consideration, please submit your resume to:

COMMUNICATIONS SOFTWARE PROFESSIONALS

GO WITH NUMBER ONE

Since its founding in 1972 Prime has been the leading innovator in the computer industry. In October of that year our first product the Prime 200, was the world's first minicomputer to use all MOS memory. In 1976 we announced the Prime 400 Central Processor, the world's first 32-bit virtual memory large scale minicomputer. In 1979 we offered the world's first commercially available token-based ring network with RINGNET communications software. In 1980 our Prime 850 was the first 32 bit supermini to feature multistream architecture. And today our 9950 is one of the most powerful multi-user virtual memory superminis on the market.

During 1984 we're planning significant expansion for our Software Communications organization. They will be responsible for advancing the state-of-the-art in areas including Networking, Telecommunications, Distributed Operating Systems and IBM interface. In Local Area Networking we're using PRIMENET, ETHERNET, IEEE 802 and IBM Token Ring. In Packet Switch or Packet Data Networks we're working with TELENET ©, TYMNET, DATA PAC © and UNINET. As we continue to introduce new software communications products to the marketplace we will also be expanding our Marketing Support and Customer Service organizations as noted below.

Specific openings exist in the following areas:

RESEARCH AND DEVELOPMENT

Senior Technical Consultant

This individual will be responsible for leading the architecture and design of new networking products in Communications Software Engineering. Specific areas of experience should include protocol design in OSI layers 3 and above as well as network management. Previous involvement with national or international networking standards organizations would be a consideration as the technical direction of PRIME networking is closely aligned with these efforts.

Software Engineer

Individual will be involved in design coding and testing of new network terminal subsystem in PRIMENET development section. Specific areas of responsibility will include security-related mechanisms for access control, usage accounting, etc., and dynamic operational control interfaces. Previous development experience with networking, terminal subsystems or Primos is required.

Senior Software Engineer

Several openings exist for engineers to develop test beds for the testing of new communications products. Prior experience with SNA, X.25, 3270 BISYNC or software for microprocessor based controllers is a plus.

Senior Software Engineer

An excellent opportunity for an IBM systems programmer to move from data processing to software development. Requires prior experience with VTAM or CICS and knowledge of SNA.

Principal Software Engineer

Use your knowledge of 3270 BISYNC or other synchronous communications for our product development. Experience in high level languages, especially PL1 is a plus.

Senior Software Engineer

Opportunity for engineer experienced with X.25 protocol to do network product development. Experience with X.28 PAD implementation would be desirable.

For the above positions, please send resumes to Dale Walsh

MARKETING SUPPORT

SNA Product Support Specialist

As a senior systems specialist with a heavy SNA background and strong managerial skills, you will be responsible for leading the SNA product introduction from a technical standpoint which will include presentations, network designs, benchmarks, and controlled release worldwide.

Extensive customer and senior management interface requiring excellent verbal and writing communications skills.

Qualified candidates must have a technical degree and 8 to 10 years of general communications experience.

For the above position, please send resumes to Paul White.

Education Representatives

Responsible for developing and conducting training courses for Prime's products. Modify and develop instructional programs taught to customers and employees. Travel: 10% to 25%. Computer industry teaching experience desired. BS/BA or equivalent.

Openings available up to and including Sr. level in the following area:
- Communications (X.25, BISYNC, SDLC/SNA)

For the above positions, please send resumes to Mary Purviesh.

CUSTOMER SERVICE

Communication Systems Specialists

Responsible for high level technical support to our world-wide customer base. At least 2 to 5 years communications support or programming with experience in X.25 standard, LAN, IBM 3270 protocol and IBM SNA, Remote Job Entry (RJE), FORTRAN, PL/1, BSCS or related degree and strong oral and written communications skills.

For the above positions, please send resumes to Adrian Byrd.

Our concern for our employees is reflected in our outstanding compensation and benefits package as well as our on-site health centers that provide a full range of fitness activities.

Please forward your resume to the appropriate recruiter, Dept. CW227, Prime Computer, Prime Park, Natick, MA 01760. Prime is an affirmative action employer seeking outstanding individuals.

PRIME Computer

THE ONE YOU'VE BEEN WAITING FOR.

Computer Corporation of America

Database Positions In Denver

Since our founding in 1965, Computer Corporation of America has become a recognized leader in the research and development of data management systems, data communications, distributed database, and man-machine interfaces. Our strong commitment to advancing the state-of-the-art in database technology through research - often using entirely new techniques and exceptionally sophisticated software solutions - has resulted in several commercial products, including **MODEL 204**, the most powerful and fastest growing DBMS for IBM mainframes.

Now, CCA has opened a major new branch in **Denver**, including a Western Region Education Center and a Research and Systems Group. Our expansion creates exciting **ground floor opportunities** for Database Consultants, Software Analysts, Programmer/Analysts, Computer Scientists, and Project Managers.

COMPUTER SCIENTISTS

Computer scientists with experience in database management systems are needed to apply advanced data management technology to a variety of projects. Knowledge of database machines, database security, network communications and query languages desired. Experience with large DoD projects a plus. Requires an advanced degree in Computer Science.

DATABASE SUPPORT

Large Applications Systems

We have a variety of challenging opportunities for Database Consultants, Systems Analysts and Programmer/Analysts to support the design, development and implementation of large, complex applications systems utilizing **MODEL 204**. Duties include advising customers on the application of advanced data management techniques including database design, data dictionaries and distributed data management. Experience with a commercial DBMS in a large IBM environment required; background including large DoD projects highly desirable.

DISTRIBUTED DATABASE MANAGEMENT SYSTEMS

A Project Manager, Lead Systems Analyst and several Systems Analysts/Programmers are needed to design, develop and implement a production distributed database capability for an interactive IBM environment with **MODEL 204**. Experience in the design and development of large software systems in an IBM environment is required. Training in DBMS technology and experience using a commercial DBMS is essential. Knowledge of IBM system internals, VTAM, and SNA a plus. BS/MS in Computer Science is preferred.

All positions require U.S. citizenship, and may involve special background investigation. Recent experience on Government/DoD state-of-the-art programs is an asset.

Send your resume, specifying position of interest, to Kathleen Hubbard, Dept. CW 227B4, Computer Corporation of America, 4 Cambridge Center, Cambridge, MA 02142.

An Equal Opportunity Employer M/F

Senior Executive

SOFTWARE DEVELOPMENT

Medstat Systems, Inc. is a company specializing in providing computerized decision support systems for Fortune 250 companies for controlling their medical insurance costs. We presently have an opening at the senior executive level for an individual to direct software development and bring new products on line.

Responsibility:
Total responsibility for planning, organizing and executing the development and enhancement of the company's new software products. Day to day management of all products and development teams.

Requirements:
- Outstanding performance record required. Proven track record for developing software products on schedule
- 5 years relevant management experience
- 8 to 10 years experience in a product development/production environment
- Knowledge of data structures
- Experience in interactive programming (using Fortran preferred)
- Background in statistics, simulation, modeling, CAI or medical economics preferred.

Other senior level software development positions are also available:

In addition to an excellent opportunity for professional growth, we offer a highly competitive salary and comprehensive benefit package. Please send your resume with salary history to: Victor Sztangel, MEDSTAT Systems, Inc., 3135 S. State Street, Suite 107, Ann Arbor, MI 48104.

New 1984 Salary Data

No doubt, during 1983, you knew that many firms took a hard line on awarding salary increases—or, in some cases, even enacted across-the-board cuts.

Yet, on the other hand, did you know that salaries for some computer professionals soared right on through the uncertain business outlook?

Computer salaries are up.

The new, *1984 Computer Salary Survey and Career Planning Guide* is based on contacts with more than 44,000 computer professionals and 35,000 organizations. Not only are salary averages for fifty-eight positions reviewed (including ten new ones), but high and low compensation ranges are also provided.

Included are positions in programming, software, systems design, data base/data communications, Edp auditing, operations, computer sales, marketing, marketing support and management.

In addition, the new Survey details seven ways to maximize your chances of getting ahead through a proven, seven-step system that has helped thousands of computer professionals advance their careers.

Free to computer professionals.

The new 32-page Survey is available to you without charge. Since 1968, this annual report has helped approximately a quarter of a million computer professionals understand current trends in technology and compensation, realize how and where they fit in and what they need to do to reach their full potential.

You owe it to yourself—especially if most of your career lies ahead—to call or write today.

Call today for your complimentary copy.

Call the Source Edp office nearest you for a free copy of our new 32-page report. We'll mail a copy to you in strict confidence, without obligation.

Lockheed-Georgia Company

DATA PROCESSING SPECIALISTS

The Lockheed-Georgia Company, world-renowned leader in aviation technology offers challenging careers in the following areas:

IBM MVS SYSTEM SOFTWARE SPECIALIST

Position requires a minimum of three (3) years experience in support of large IBM mainframe or compatible computers using the latest IBM software. Must be able to perform SYSGEN's, apply maintenance using SMP/E, trouble shoot system problems and performance tune and measure in a TSO environment. Assembly language proficiency mandatory.

HARDWARE - IBM, 3081 X 32, IBM 3380, STC 8650, 3800, 1403, 3705
SOFTWARE - MVS-SP1, ACF VTAM, NCP, TSO/SPF, CICS, VS/COBOL, VS/FORTRAN, RACF

IBM VM SYSTEM SOFTWARE SPECIALIST

Position requires a minimum of one to two years experience in installation and maintenance of VM/SP and related products including RSCS, APL, ADRS, GDDM, PROFS and ISPF. Assembly Language coding is desirable and knowledge of SDX/VSE or other guests systems running under VM would be a plus. Experience is not required in all areas.

HARDWARE - IBM 43 XX, 3270, 3274, 8870
SOFTWARE - VM/SP, APL, GDDM, PROFS, ISPF, SDX/VSE

IBM IMS/VS SYSTEMS PROGRAMMER

Position requires experience as an IMS applications programmer using COBOL plus two years experience as an IMS/VS system programmer with proficiency in the following areas: Installation, SYSGEN, Maintenance, Problem Determination, Debugging, Performance Measurement and Tuning, OS JCL, SMP/4.

IBM IMS/VS DATABASE SPECIALIST

Position requires a minimum of two years experience in technical support of IBM/DL/1 in IMS/VS environment. Must be able to design data bases, define control environment, apply maintenance, and trouble shoot system problems. Proficiency in BAL required.

HARDWARE - IBM 3081 and 3033; 3380 and 3350 direct access.
SOFTWARE - MVS/SP, IMS/VS, DL/1 ADF, VS/COBOL

IBM COMMUNICATIONS SPECIALIST

Position requires a minimum of three years experience in installing and maintaining ACF/VTAM and ACF/NCP with bi-sync and SDLC devices. Must be proficient in assembler language coding, network planning and debugging.

HARDWARE - IBM 3081, 3083, 3705, 3274
SOFTWARE - MVS/SP1 ACF/NCP, ACF/VTAM, NSF

The Lockheed-Georgia Company offers excellent salaries, comprehensive benefit program including Company-paid relocation to the Atlanta area. For immediate confidential consideration, please forward resume to:

Software Design Engineers

If you like technology, you'll love Texas Instruments in Dallas or Lewisville.

Join the Equipment Group of Texas Instruments in the design and production of state-of-the-art electronics systems and subsystems such as radar, missile guidance, electro-optics, communications, navigation and intelligence systems. Our continued innovation in every realm of the government electronics business has made Texas Instruments a leader.

As a result, we're creating new career opportunities for qualified software design engineers. You'll work with a team that works on complete systems — not just components. You'll have the chance to broaden your technological capabilities and be recognized and rewarded for your accomplishments.

Right now, we have immediate openings for experienced software design engineers in the following areas:

- Real-time electro-optics projects (mid-level positions)
- Tool and language development (ADA and Pascal experience preferred; mid-level positions)
- Artificial intelligence software design
- Systems analysts for VAX/VMS operating systems
- CAD/CAM programmers
- Speech recognition applications designers

All positions require U.S. citizenship, a four-year technical degree and at least two years of related experience.

Now is your chance to make your career move to the dynamic Sunbelt and enjoy the Texas environment and lifestyle. Dallas and Lewisville (just outside of Dallas) have year-round recreational activities, lakes, major league sports, museums and theatre. The Dallas area boasts one of the lowest costs of living of any major metropolitan area in the nation and Texas has no state or city income taxes.

For immediate consideration, send your resume in confidence to: Ed Haynes/ Texas Instruments/P.O. Box 226015, M.S. 3186/Dallas, Texas 75266.

U.S. citizenship is a firm requirement for all Equipment Group positions.

FEDERAL EXPRESS... PREPARING FOR TOMORROW

We're expanding our commitment to high technology with the new Hybrid Department within the user divisions of Line Haul Operations - Information Systems for Maintenance and Engineering. Here, you will find the opportunity to contribute to the future of Federal Express, and to your career future, within Systems Development, Systems Operations, and Program Engineering functions. If you are looking for deep involvement in progressive technology, Federal Express is the place to be. Our people have the use of seven IBM 3081 and Wang mainframes and approximately 5,000 terminals. Positions are immediately available for the following:

RESEARCH & DEVELOPMENT GROUP
SENIOR TECHNICAL RESEARCH ANALYST

You will analyze through the use of sophisticated state-of-the-art, computer-based models and other operations research methods, broad and complex division problems and projects utilizing voice, video, data and text technologies. You will also provide Senior Management with recommendations of solutions and best alternatives; and provide a broad base of consulting capabilities to the division. A Bachelor's degree or equivalent is required in Math, Operations Research or Computer Science and six years experience in a quantitative field with at least four years experience in operations research. A Master's degree in Operations Research or Computer Science is preferred.

SYSTEMS DEVELOPMENT GROUP
SENIOR SYSTEMS DESIGNER

You will design and transform user requirements and provide technical advice and expertise to Line Haul Operation management on all aspects of user application systems, as well as state-of-the-art information of related industry data processing application systems. Six years experience in Data Processing with at least four years experience in systems development is required. A Bachelor's degree in Computer Science, Math, Engineering, or Business, and complex systems experience in IBM/Wang systems is preferred. Previous experience with airline business applications systems in a maintenance and engineering environment would receive preferential consideration.

SENIOR PROGRAMMER/ANALYST

You will design and transform user requirements into an application program for information systems, work on highly complex projects and provide technical leadership for user personnel for automated processing. Position requires five years programming experience including working knowledge of FORTRAN and COBOL and a Bachelor's degree in Computer Science, Math or Engineering is preferred. Previous experience with airline business applications systems in a maintenance and engineering environment is preferred along with experience on IBM/Wang systems. You must also have ability to communicate technical information to user.

Both positions require experience in FORTRAN, SAS, PL1, EMPIRE, and YELL-A-GRAF.

SYSTEMS OPERATIONS GROUP
SR. SYSTEMS MAINTENANCE COORDINATOR

You will maintain, enhance, document and implement existing application software. Five years experience in systems development, maintenance and enhancement is required. A Bachelor's degree in Computer Science, Math or Engineering and previous experience with airline business applications systems in a maintenance and engineering environment is preferred.

PROGRAMMER/ANALYST

You will design and transform user requirements, maintenance and enhancements to our application program for information systems, work on highly complex projects and provide technical leadership for user personnel for automated processing. Three years programming experience including working knowledge of FORTRAN and COBOL is required. A Bachelor's degree in Computer Science, Math or Engineering and previous experience with airline business applications systems in a maintenance and engineering environment is preferred. Must be able to communicate technical information to user.

COMPUTER OPERATIONS TECHNICIAN

You will maintain and operate computer equipment and provide technical assistance to users within the Line Haul Operations Division on IBM and Wang equipment. Three years experience in Data Communication networking or computer operations is required along with experience in system design and technical knowledge of computerized system analysis. An Associate's degree in Computer Operations is preferred.

SYSTEM ENGINEERING GROUP
PROJECT MANAGER-PROGRAM ENGINEERING

You will plan, organize, direct and control the engineering and testing of sophisticated software, hardware, and communication networks within Line Haul Operations to ensure compliance with corporate strategies for voice, video, data and text systems.

A Bachelor's degree or equivalent in Computer Science, Math or Engineering, and six years data processing experience with three years in hardware, software and communications engineering is required. Data base, testing, and data protection experience is preferred.

ENGINEER/SENIOR ENGINEER

You will perform the design testing activities relevant to hardware, software and communication implementation for Line Operations. A Bachelor's degree or equivalent in Computer Science, Math or Engineering is required. Two years experience in systems hardware/software support is necessary for the position of Engineer and four years experience in systems hardware/software and communications is required for the position of Senior Engineer for voice, video, data and text.

DATA BASE & PROTECTION ANALYST

You will be responsible for developing, maintaining and editing all existing Line Haul Operations developed data bases and ensure protection for the Systems. Three years programming experience with one year in Data Base Protection is required. Knowledge of MAS data processing techniques is desirable. We prefer you have a Bachelor's degree in Computer Science, Math or Engineering.

Bring your special talents to Federal Express. We offer an excellent salary structure and complete benefits. Opportunity for advancement is frequently available due to continued growth and a strict promote from within policy. Write us a letter indicating your experience and salary history. Enclose your resume if you have one.

TO EXPEDITE CONSIDERATION, PLEASE CLEARLY INDICATE THE POSITION IN WHICH YOU ARE INTERESTED ON YOUR REPLY ENVELOPE.

California State University System

Associate Director, Telecommunications

The California State University (CSU) system consists of a central Headquarters and 19 diverse campuses which serve the higher education needs of 315,000 students. The system carries out its instructional and public service mission on a statewide scale with a $1 billion annual budget. The Headquarters Division of Information Systems (DIS) is seeking a dynamic, seasoned manager for a newly created position at the State University Computer Center located in the mid-Wilshire area of Los Angeles. The Division performs system-wide planning and coordination activities for all facets of information processing services, manages the CSU Data Communication Network, and operates a large control computer complex.

This position reports to the Director, DIS and will be responsible for planning and development of a future statewide telecommunications network to meet voice, data and video communication needs, in cooperation with campus and State government offices. The successful candidate will have had experience in analysis and design of voice/data/video systems and in planning integrated systems. A record of technical and managerial competence is essential, including outstanding oral and written communication skills, and the ability to work with diverse people in a large, highly decentralized enterprise.

Minimum qualifications include a Bachelor's degree or equivalent in telecommunications or engineering-related discipline and five years of professional experience in telecommunications networking which includes 2 years of major management responsibility in this area. A Master's degree in a related field is desirable.

This is a challenging opportunity to contribute significantly towards a CSU goal of the highest priority. If you have had technical design/engineering experience, managed large scale planning/development projects and are looking for an opportunity at ground level to lead in the development of an integrated network, then you should consider joining us. Salary is commensurate with qualifications and experience. Resumes must be received in Personnel Services by March 19, 1984. Apply to:

PROGRAMMER/ ANALYST CAREER OPPORTUNITIES

Seattle

Safeco is one of the top 25 diversified financial corporations in America. Our data processing center offers our employees a state-of-the-art, quality work environment with the stability and commitment of management to develop our people — Safeco's greatest resource.

Qualifications should include 2 to 4 years experience of insurance, business or accounting applications in a COBOL, OS/MVS, IMS/DL-1, IBM 30 XX environment. Knowledge of RAMIS also a plus, as is IBM PC experience.

Responsibilities will include all aspects of system development life cycle. These are permanent positions offering uniquely varying assignments. Job rotation is based on personal motivation and expressed interests.

Safeco's headquarters overlook the picturesque campus of the University of Washington and its adjoining lakes and mountains. We offer excellent salary, complimented by a comprehensive company paid benefits program. For more information about an exciting opportunity in America's most liveable city, send your resume to: Ms. Karen Hedine, Safeco, Safeco Plaza, Seattle WA 98185. EOE.

Direct contact will receive preferred handling.

SAFECO

Codex Communicates Success.

For over 20 years, Codex has communicated success. In data communications. In computer networking. In career opportunity. You can be an essential contributor to our continued success. Join us in one of the following positions.

Principal Support Engineer

You will be responsible for both pre-and post-sales support of the T1 Mux, to insure total customer satisfaction with advanced Codex communications solutions. To qualify, you should have a BSEE plus a minimum of 5 years of sales support experience. An in-depth knowledge of T1 Carriers, PBX interfaces, product design and data communications systems problems is essential. Excellent communications and interpersonal skills are a must.
Contact Paul Johnson.

Manager—Systems Integration & Applications

You will manage the day-to-day department operations, both technical and administrative, of the Systems Integration and Applications group. The group's primary function is to insure the technical integrity of communication systems that meet specific customer needs. The engineers in this group have responsibility for the design, integration, installation, and acceptance of major communication systems; pre- and post-sales, engineering support (consulting); and custom engineering of systems products or specials. Minimum of 5 years of applicable experience in the telecommunications/data communications field which must include at least 3 years of managerial experience.
Contact Paul Johnson.

Engineer—Systems Integration & Applications

You will provide the engineering support necessary to successfully integrate and install major communication systems. Individual has opportunity to provide pre- and post-sales engineering support, and design and support customer specials (RPQs). Individual will primarily work in conjunction with a project engineer. Minimum of 3 years experience in the telecommunications/data communications environment. BS in Engineering/Computer Science or equivalent in years of experience. Knowledge of protocols; exposure to datacomm applications, field service or application engineering experience a plus, but not necessary.
Contact Paul Johnson.

Development Manager

In this vital position, you will have full responsibility for LAN product development. Specific duties include product planning, design and implementation, plus department staffing, budgeting, and development. The preparation of specifications, proposals and strategies is also required. To qualify for this leadership position, you must have at least a BSEE or BSCS with a minimum of 8 years experience in software development which must include at least 2 years of project leadership. Familiarity with hardware, multiprocessors, data communications protocols, packet switching, LAN, or IBM SNA is highly desirable.
Contact Bob Lippman.

Principal Software Engineer

You will work with Codex professionals in the development and enhancement of communications software for network processors. Specific duties include coding programs and tools in "C" and Assembler languages, performance benchmarking and analysis of UNIX™ operating systems and working with users to ensure the optimum performance of internal communications software. To qualify, you must have a BSCS or its equivalent, plus at least 7 years of programming experience utilizing a high level language (e.g. PASCAL). An in-depth knowledge of UNIX™, "C" Language, and proper coding and documentation techniques is essential.
Contact Bob Lippman.

Please forward your resume to CODEX CORPORATION, Dept. 200-227, P.O. Box 567, Canton, MA 02021, to the attention of the appropriate individual.

and other cities across the U.S.

Careers are yours for the making.

HP offers more than a job. You can reach the top of your field right across the nation. But you'll need to be creative, enthusiastic and have the business maturity and technical know-how to interface effectively with end user decision makers.

Two areas of opportunity for Experienced Field Sales Representatives:

Technical Computer Sales

These positions are responsible for selling HP's technical computer products to scientific, technical and manufacturing customers in your assigned territory. Besides degree or equivalent, 2 years' successful CAE/CAD/CAM or manufacturing minicomputer sales experience is desirable.

Commercial/Business Computer Sales

These positions are responsible for selling large-scale minicomputers, primarily to the manufacturing market. As well as managing the existing customer base in your assigned territory. Besides degree or equivalent, 2 years' successful business computer sales experience is desirable.

Invest in your future... long term.

We rank high among major computer companies in terms of sales growth, earnings, product innovations and employee retention. This means career stability... year in and year out. It starts with in-depth training for up to 10 months, covering every aspect of the business... from learning the HP product line to the most sophisticated sales techniques. You'll quickly gain hands-on experience working with senior HP people.

With HP you'll reap the benefit of rapid production, delivery and installation, plus strong pre-and post-sale technical support. Because our credo is "productivity - not promises."

Consider the HP advantages.

Besides excellent compensation and benefits, you'll find your career progression with us a lot smoother than what you've experienced in the past. For immediate consideration, please send your resume with salary history, indicating your preferred city.

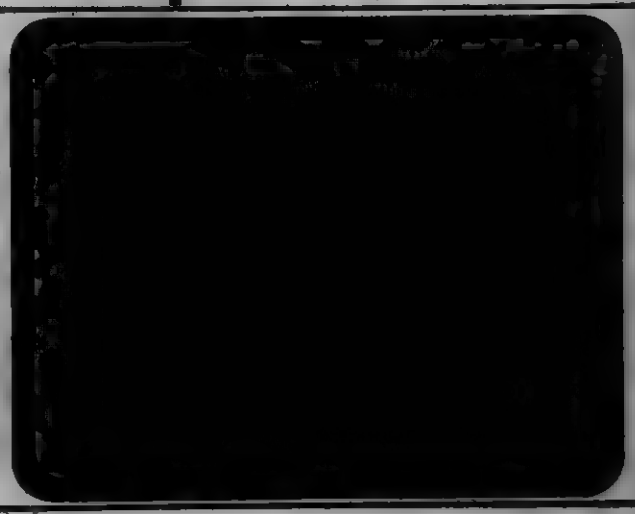
Professional Master's Degree Computer and Information Science

Advance your career in information systems through Dartmouth's distinctive professional program. Our two-year program is designed to equip you to take a leading role in planning, designing, and developing effective business solutions to business problems.

In the CIS Program, you will study current methodologies for planning, analysis, and design; strategies and issues in the management of information systems; business organization; project management; database systems; networks and distributed processing; professional communication. Learn from guest lectures by practicing managers of information systems, case studies, and professionals-in-residence. An internship is required of each student.

If you have previous experience in the computing field but want to be equipped to assume more responsibility and leadership, consider joining us next year. For more information, write: Program in Computer and Information Science, Dept. C, Nathan Smith Building, Hanover, NH 03755.

Dartmouth College



DATA PROCESSING PROFESSIONALS

THE FUTURE IS HERE TODAY

ERLANGER MEDICAL CENTER, located in Historic Chattanooga, TN, is beginning the second phase of its long range data processing plan. Several growth opportunities are available for dedicated Data Processing Professionals interested in the professional challenge of implementing state of the art on-line, data base systems utilizing COBOL programming and transaction processing technology. Our newly constructed Data Center includes dual 12 MEG Burroughs B7900's, minicomputers, microcomputers, and office automation systems. We offer the opportunity to expand your technical and professional skills in a progressive health care setting.

OUR REQUIREMENTS are for individuals with 2 to 4 yrs. experience on medium to large scale batch and on-line systems. We seek above average skills in communication, organization, sensitivity to end user needs and a stable employment history. Burroughs and Health Care backgrounds are a plus.

APPLICATIONS DEVELOPMENT MANAGER - This is a fast track management position requiring you to carry out concurrent implementation of several vendor packages. You will need a strong project management background and be skilled at developing detailed project estimates and budgets. Responsibilities will include the supervision of approximately 12 analyst and programming personnel. You will provide both technical expertise and functional specifications for data base and batch processing applications in a COBOL environment and be responsible for timely completion of assigned projects. Heavy user contact is required for developing user requirements, documentation and in establishing technical and user training.

SYSTEMS ANALYST - You will serve as liaison between users and the Data Systems Dept. Responsibilities include specification, design and installation of financial and patient care systems. You will oversee analyst programmers in projects through implementation. Four yrs. experience as a system analyst with hands on implementation experience with custom and application packages involving data base and data communications and the ability to handle multiple projects. A Bachelor's degree and programming background are desirable.

ANALYST PROGRAMMER - Assignments include detailed program design, coding, testing and debugging as well as documentation and implementation of batch and on-line systems. You will assist in systems specifications, design tasks, and end user training. At least 2 yrs. of heavy experience in COBOL program design, coding, and testing. Familiarity with Assembler language programming, micro and mini computers a plus.

COMPUTER OPERATIONS SUPERVISOR - Your responsibilities will be to cover our dual B7900 computer processing activities on your shift. This will involve assuring effective data control, personnel and work scheduling, developing and maintaining standards and procedures, operator run instructions, and other related duties. A minimum of 4 years of operations experience is required, 2 of which must have been in a supervisory roll.

YOUR FUTURE will hold outstanding technical opportunities and challenges. In addition to a mild four season climate, the warm hospitality and historic traditions of the South, you'll find a comprehensive benefits package that recognizes your individual achievement and performance. Tennessee has no state tax and ranks among the lowest in annual cost of living.

IF YOU'RE READY for the challenge, send your resume to:

Accountemps puts the pro in edp PROductivity.

There's no longer a reason for data processing work to fall behind—Accountemps professionals are available on a moment's notice. Specialists in systems analysis, programming, computer operations, data entry and even word processing.

Accountemps specialists are the ideal solution when work starts to pile up—when employees are sick or on vacation—or when specific projects must be completed quickly and cost effectively. And because they're slightly over-qualified, they need little or no orientation. They get right to work and finish the job right the first time—and quickly too.

A call to any one of 80 offices in the United States, Canada and Great Britain will bring you the help you need immediately—for a day, a week, a month or longer—whenever you need them—evenings or weekends.

accountemps.

ST. ANDREWS PRESBYTERIAN COLLEGE
Director of Computer and Information Services

Located in Laurinburg, North Carolina, St. Andrews Presbyterian College is a four-year, liberal arts, coeducational, residential college with an enrollment of approximately 700 students.

DESCRIPTION OF POSITION:
The College is in the process of upgrading its computer center both in terms of hardware and software. As such, the college is advising a highly qualified individual to direct the implementation of this upgrade.
The director will supervise the computer center manager and programmer as well as have responsibility for a staff of work-study students. The director's major responsibilities will include, but are not limited to, the following:
(1) development and implementation of user education programs for Administrative users; (2) oversee the day-to-day operations of the computer center; (3) long-range planning of the college's computer needs; (4) budgetary control of the computer center.

EQUIPMENT AND SOFTWARE:
Current equipment consists of one PDP11/60 system and one recently installed PDP11/44. Existing plans call for the PDP11/60 to be converted to a PDP11/44. One system is expected to serve 48 terminals for student instruction and the other system will serve administrative needs. The college, through the assistance of a consultant, is in the process of reviewing administrative software.

QUALIFICATIONS:
Candidate should hold a graduate degree, or have a minimum experience of three years in a senior position. Candidate should be experienced in the operation of the PDP11 family of computers and RSTS/E operating systems.

SALARY:
Salary will be very competitive and commensurate with qualifications.
Send letter of application, resume and letters of recommendation by March 15, 1984 to:

Jerry Surface, Business Manager
St. Andrews Presbyterian College
Laurinburg, North Carolina 28352

St. Andrews Presbyterian College is an equal opportunity employer.

$80,000/YR.—CICS PROGRAMMING

Acquire one of the most demanded & rewarding programming skills in months instead of 2 years. A complete & practical guide to CICS Command Level Programming. It's based on CICS latest release 1.6, written in COBOL, with special emphasis on VSAM. Brand-new 2nd edition, contents printed in two colors, handsome mylar-coating cover. 150 examples illustrate use of CICS commands. 15 sample CICS programs address all major applications. Sample programs include: Menu, Add, Update, Delete, Browse, Multi-record display/update. Print 24x80, 66x132, any-size report. Message Routing, Screen Formatting, VSAM alternate index design, setup and handling, Dynamic table manipulation, Audit Trail Indication and more

Gifts these savings— and more
It's hard to believe the learning can be so easy until you try it. In hours you can start creating BMS maps. In days, you can start writing Pseudo Conversational CICS programs. You'll cut your learning curve at least in half. Many programmers report even greater savings. Some CICS techniques are especially hard. When you're stuck for the technical problems, you'll be thankful you have this book. All CICS techniques and problem areas are thoroughly covered. You'll find the topics on: Production abend handling, Test system debugging, Dump reading, Trace table usage, CEDF monitor, CSMT, CEMT commands, CICS internal tables setup & effects on application programs, Terminal Paging commands, complete procedures to install a CICS transaction and more. Why spend hours searching for the right technique — when this book gives them to you already written.

Tips on moonlighting on CICS projects
Consulting will be the trend of the 80's for CICS due to great shortage of experienced CICS programmers. An average CICS contract programmer makes $30-$45/hr. Some CICS consultants even make $1000/day (1983 Datamation)! Moonlighting on CICS projects is very rewarding. A typical 18-screen system can mean $15,000-$25,000 cash. This book contains 11 pages of tips on moonlighting like: how to market your service, locate the contracts, write a proposal, make a presentation, quote the right prices to beat consulting firms and draw a contract agreement without a lawyer. Written proposal & sample contract agreement are included for your convenience.

Try this book at our risk
How much is this book worth to you? It's hard to say until you try it. That's why we want you to use it for 10 days. If you're not completely satisfied, simply return it at our expense for a prompt full refund. If we brought 10 copies, none would be sold. Over 90% of programmers who bought this book are satisfied with it. See how much time it saves you. How it leads you to the gold mine of programming. That's how sure we are that once you use it, nothing could make you part with it. This book will pay for itself over and over, year after year. But act now. Send $34.95 for 1, $29.95 ea. for 2, $27.95 ea. for 3, $26.95 ea. for 4 & over (plus $2.00/copy for P&H) on check or M.O. to: CCD Online Systems, P.O. Box 750750, Dallas, TX 75379. Allow 1 to 2 weeks for delivery.

MANAGERS

Midwest opportunities listed exclusively with our firm:

MANAGER, END-USER COMPUTING
for very large CMS/TSO network. Background in commercial or in-house corporate time sharing organization is sought. $50-60K base salary.

COMPUTER SYSTEMS PROFESSIONALS

Participate In Challenging Projects At Our Advanced Technology Research Center

As a dynamic part of a Fortune 100 corporation, Babcock & Wilcox enjoys a worldwide reputation for technological innovation and excellence. These immediate opportunities are at our modern R&D facilities in Alliance, Ohio, a pleasant and uncrowded Midwest city.

SYSTEMS & SOFTWARE GROUP SUPERVISOR

The heavily experienced professional we seek will supervise development and implementation of Applied Mathematics/Scientific Programming and Business Systems. You'll also propose and manage projects in support of an engineering staff. A PhD in Applied Mathematics is preferred, with at least 10 years experience, including some supervisory background. Excellent oral and written communications skills are required.

OFFICE AUTOMATION AND PERSONAL COMPUTING SPECIALISTS

In these diverse positions, you'll be involved with evaluation, implementation and support of office automation equipment. You'll also have the opportunity to develop your expertise in supporting VAX Systems Software. You should have at least 5-8 years of related background including personal computer evaluation and applications, and word processing on PDP-11 or VAX equipment. Excellent oral and written communications skills are required as is a BS/BA in Math, Computer Science or a related discipline.

VAX SYSTEMS ENGINEERS

If you are a Fortran Senior Systems Programmer with VAX VMS background, these positions offer you the opportunity to enhance your digital communications skills. Your at least 5-8 years of experience should include hardware/software configuration. You will have the opportunity to develop voice communications expertise. A degree in Math, Computer Science or EE is required.

Salary and benefits are excellent as is the potential for career development. For confidential consideration, please send your resume to: Roseann Taylor, Division Personnel Manager, ALLIANCE RESEARCH CENTER, Babcock & Wilcox, Research & Development Division, 1562 Beeson Street, Alliance, Ohio 44601. An Equal Opportunity Employer M/F/H/V.

Babcock & Wilcox
Research & Development
a McDermott company

COMPUTER SYSTEMS ENGINEERS

The Upjohn Company, a leading pharmaceutical company with headquarters in Kalamazoo, MI, has two highly challenging opportunities for Computer Systems Engineers.

The first position requires a Bachelor of Science degree in Electrical Engineering, Physics, Computer Science or a related field, and a minimum of four years' recent experience in the design and implementation of data acquisition projects. Good interpersonal and communication skills are essential. Knowledge and use of analytical instrumentation found in the pharmaceutical business is desirable.

Duties will include systems design, electronic device development, software design, and implementation of laboratory automation systems used for data acquisition.

The second position requires a Bachelor of Science degree in Computer Science with a heavy content of computer logic programming, plus two years' experience as a systems programmer. VM CP and CMS system knowledge and experience are required, along with a thorough working knowledge of the 370 Assembler language. VM related program product and PL/1 language experience is desired.

You'll assist or perform VM CP and CMS operating systems generation and maintenance for multiple large scale processor configuration; install and support various program products which run under CMS; participate in software and hardware planning and user consultation where advanced operating system or program product knowledge is required.

In both positions, you'll become active members of a small team of professional designers in the challenging computer systems engineering field. Your varied assignments will involve both hardware and software solutions to unique problems found in this field.

Kalamazoo is a mid-sized southwestern Michigan community offering a mix of cultural/recreational opportunities that include lakes, nearby colleges, and a four-season climate. In addition, The Upjohn Company offers a competitive salary, and benefits that include generous relocation assistance.

For confidential consideration, please call from outside of Michigan toll free 1-800-253-8900 and ask for extension 3-5757; or call from Michigan collect 616-323-5757 to request that a specialized employment application be sent to you immediately. Please refer to ad number 15812-E when calling.

NATIONAL UNIVERSITY OF SINGAPORE

INSTITUTE OF SYSTEMS SCIENCE

We require Teaching and Development staff in the following areas:

- OFFICE AUTOMATION
- PROJECT MANAGEMENT • LOCAL AREA NETWORKS
- INFORMATION RESOURCE MANAGEMENT
- SYSTEMS DEVELOPMENT METHODOLOGIES
- MICROCOMPUTER-BASED INFORMATION SYSTEMS

THE JOB:

You will be working in small teams to develop short intensive courses aimed at upgrading the skills of executives, users, I/S managers and I/S professionals from organizations in Singapore and South East Asia. You will also participate in teaching a post-graduate Diploma course in Systems Analysis. In addition, you will have opportunities to engage in consultancy and applied research.

ISS provides a stimulating environment for state-of-the-art practitioners from a variety of backgrounds to interact and develop through close teamwork.

THE INSTITUTE:

Established in 1981, the Institute's objective is to promote the rapid development of leading edge computerization both in the public and private sectors, and to participate in the development of Singapore as a regional center for software and development and services. Technical leadership is exerted through quality management education, advanced technical training, consulting services and applied research. ISS has excellent educational and computer facilities.

SINGAPORE:

Singapore is well-known as a commercial, financial, industrial and communications center in South East Asia. Vigorous economic growth persists, and it has the second highest per capita income in Asia after Japan. American and British expatriates have consistently rated Singapore as one of their 3 overseas postings.

APPLICANTS:

Applicants should have a strong practical background in at least one of the areas mentioned and be motivated towards a job involving a substantial portion of development and teaching of leading edge material.

Applicants for positions at a more junior level, should have at least 3-5 years of experience.

COMPENSATION:

Salary to $66,000/year is commensurate with experience. Benefits include an additional 23% Provident Fund contribution, heavily subsidized accomodation, medical and leave benefits, passage assistance and baggage allowance, settling-in allowance and children's education allowance. (U.S. $1.00 = $2.13 approximately).

Application forms and further information on conditions of service may be obtained from:

"A COMPUTER LEASING COMPANY'S FINANCIAL STABILITY IS VITAL."

We said that in 1973, when Randolph became a subsidiary of The First National Bank of Boston . . . and we say it again, because it is still true and even more important today.

As an important part of The First National Bank of Boston, one of the nation's oldest and leading financial institutions, Randolph has a built-in financial stability that continues to be unique in the third-party computer leasing industry.

LEASING COMPUTERS IS OUR ONLY BUSINESS.

Randolph specializes in leases for IBM 3081, 303X and 4300 computer systems and peripherals . . . firm evidence that we plan to perpetuate our computer leasing activity.

Our people have an average of 18 years experience in the DP industry . . . from 360's to 3081's. They know all about alternative financing to be sure, but they also know their way around a DP department and the hardware in it.

WE SPECIALIZE IN SOLVING PROBLEMS.

Machine installed on a rental basis? Long wait for delivery? Stuck with a lease on your old machine? Own a 3081 but need cash? Whatever your problem, we can tailor a lease that will fit your exact needs and let you start saving money right away.

SAVE $80,000 EVERY MONTH FOR THE NEXT 5 YEARS.

You can lease the same 3081 that IBM rents for more than $180,000 per month from Randolph for less than $100,000 per month. If you're renting an older machine, we can save you even more—and you'll get about 4 times the throughput in the bargain.

WHEN IS THE BEST TIME TO TALK TO RANDOLPH?

The sooner the better. But it's never too late, even if you already have a machine installed.

Our 19 years in computer leasing gives added assurance that Randolph will continue as the leader in the computer leasing industry . . . continue to live up to the terms and conditions of our agreements . . . provide upgrades . . . fulfill all of our commitments.

LET RANDOLPH HELP YOU GET THE SYSTEM YOU NEED NOW, *NOW.*

We've already done it for many of the Fortune 500 companies . . . and we can do it for you. Call Joseph B. Kelly, Jr., Executive Vice President, 800-243-5302.

Will the real lessor please stand up!

Who do you want to deal with during your computer lease?

An investor? An insurance company? A consortium of banks? Or your leasing company!

As computer experts, we understand your individual equipment requirements. Hartford Computer Group doesn't sell your leased equipment to an investor who will not understand or care about your requirements.

When you sign a lease with Hartford Computer Group, you deal only with us. We maintain complete ownership and control of your leased equipment and can therefore give you the *flexibility* you want in a computer lease. We can do this only by refusing to participate in tax-advantaged leasehacks that give investors control over your leased equipment. Tax-advantaged leases allow for little or no flexibility!

We give you Hartford Computer Group. Want to lease computer equipment? Want to upgrade your computer equipment, renew your lease, or change your leased system completely? With no outside investors or participants to inhibit your transaction, Hartford Computer Group is free to offer the ultimate flexibility in customer service.

You deal with one company, before and after the lease begins, the real lessor... Hartford Computer Group!

Your questions about our unique computer leasing program are answered in our brochure. Write or call for your copy.
